

until to-day the price has decreased to such an extent as to bring the package within the reach of every grocer. The advantages of the fancy package are many. It is made of vari-colored papers, parchment lined, and is all air-tight.

Mr. Kraut found it necessary for some time to carry on an educational propaganda among the coffee roasters here, before he could get them interested. Gradually he won them over by proving to them the practicability of the bag and by appealing to their sense of the artistic. When once they found that their customers appreciated the new package its use was permanently adopted. Mr. Kraut then established a New York office and ever since the business has grown by big strides. To-day he is making packages to order for the largest coffee concerns in the United States, carrying out individual ideas and catering to different tastes.—*Spice Mill* (U. S.).

\* \* \*

Among other exceptional transactions, says the *London Commercial Record* of 12th ultimo, we have heard this week of a sale of a good Coorg Coffee crop (or a part of it) at 52s. 6d. c.i.f. Considering that only a few days ago coffee from this estate fetched 58s. c.i.f., the drop is an extreme one and can only be attributed to exceptional circumstances. . . . The realisation of such a low figure, we fear, will be a revelation and an unpleasant one too to most East Indian coffee-planters who, so far, appear to have lived in the firm belief that fancy prices would readily be paid for their yields. They are hardly to be blamed for their error, for there are plenty of people in the London coffee trade whose business it seems to be to mislead the coffee growers and paint the present and future positions of our market in glowing colour, for the sole purpose of attracting these fine coffee sorts to our markets and put commissions into the consignees' pockets. Needless to say, planters, like all human beings, love to listen to assertions and statements corresponding to their own wishes and ideas and are always prepared to condemn a warning as an exaggeration emanating from a pessimist. For the sake of the planters we wish they were right, but we are afraid, that the pessimist who has from the beginning pointed to lower prices will prove correct. London has not been particularly successful in its operation in East Indian crops, purchased on arrival terms, <sup>hereby</sup> held on the spot for higher values, and is therefore just, <sup>directly</sup> adverse to touching East Indian coffee this season, absolutely safe prices. There is an abundance of <sup>you will</sup> everywhere. The present supplies of Brazilians point <sup>ful for</sup> crop of about 12 million bags, against an estimate <sup>air</sup> about 7½ millions, and some people put the coming crop down to no less than 15 millions. What is to become of all the coffee? Holders are getting discouraged and over-anxious to avail themselves of the slightest improvement of the market to dispose of their stock. Prices are gradually declining, and nothing points at the moment to a reaction.

\* \* \*

**American Stocks.**—Total stock in United States November 1, 2,594,941 bags, against 1,833,652 bags November 1, 1901. Brazil stock in the United States November 22, in store and afloat, 2,660,621 bags, against 2,320,817 bags at the same time last year. Other than Brazilian, 221,360 bags against 286,688 bags last year.

Brazil coffee in New York November 22, 2,240,711. Stock in New York in other coffees November 17, 199,146, in San Francisco, 19,348 bags and in New Orleans, 2,866 bags.

\* \* \*

The Nicaraguan Government, from the proceeds of the tax of one cent a pound levied in gold on the exports from the coffee crop, has paid the interest due in January, 1903, on the bonds of 1884.

\* \* \*

Last year the quantity of coffee landed at Hamburg by sea amounted to about two million qs., of the value of upwards of 150 million marks. The quantity of coffee imported last year was the largest on record, owing mainly to the extraordinarily abundant crops in Brazil. Prices, however, in most cases have dropped so heavily that, in spite of a plus-importation of 120,000 qs. last year, the value, as against 1900, upwards of twenty-two million marks less. Two years ago the average price of the total importation of coffee into Hamburg was 91½m. per q.; last year it was only 75¼m. The highest price for coffee was paid in the years 1877 and 1890, being then 172½m per q. Since 1890 it has fallen continuously, and last year it reached the very lowest figure yet recorded. Singapore supplied last year the dearest sort of coffee; only 680 qs. arrived, but they realised 144m per q. Africa furnished a very small quantity of Egyptian coffee, which was sold at 140m. per q. German East Africa sent 2,149 qs. at an average price of 108m., which in quantity and value exceeded the importation of the preceding year. The remainder of Africa shipped 8,517 qs. into Hamburg, the West African being disposed of at 61m. per q.

## TEA NOTES.

**Helopeltis.**—After visiting the Kelani District last March, Mr. E. Ernest Green, Ceylon Government Entomologist, wrote in June giving Further Observations on Helopeltis. Mr. Green's investigations have shown him that much more work is necessary before an adequate knowledge of the pest can be acquired. He finds that the breeding habits of the insect vary at different times of the year, and will necessitate different modes of treatment. More accurate observations of the insect throughout the year, and from different elevations and localities, are requisite. Mr. Green is inclined to think that Helopeltis never entirely disappears, though there are two periods of comparative inactivity: the first, from the middle of March to the middle of June; the second, during September, October, and November. The conditions (climatic or other) that govern the periodicity of attack have not yet been properly determined. On the other hand, the practical immunity of the indigenous varieties of tea remains established; and here the term "indigenous tea" refers both to the Indian varieties and to the direct progeny of Indian plants grown in Ceylon.

Mr. Green writes that his recent investigations show that, at the Spring period of inactivity, the formerly advocated system of plucking to the initial leaf will have little or no effect in checking the pest. A similar condition may possibly obtain during the Autumn period. It is, he says, most important that the egg-laying habit of the insect (*i.e.* the quantity of eggs being laid, and the position in which they are deposited) should be accurately determined for every month in the year. It may then be possible to formulate some logical scheme of plucking to suit the varying habits of the insect. For the present Mr. Green recommends the abandonment of close plucking, remarking:—"There is no doubt that that system tends to produce a brush-like formation of small shoots particularly suited to the tastes of the *Helopeltis*. A free succulent growth should be encouraged." At the same time nothing should be allowed to interfere with the campaign against the insects themselves.

The average loss through *Helopeltis* has been estimated at 200 lbs. per acre. Putting the profits on that tea at 12 cents per lb., this means a loss of Rs.24 per acre, a figure that would cover, several times over, the cost of catching the insects. It should be specially noted that the collection of insects is particularly important during the period of partial inactivity, for at such times the females contain the maximum number of eggs. Mr. Green suggests breaking up the area into blocks of from 10 to 20 acres, divided from each other by narrow but compact belts of trees. The insect does not fly high; its flight is weak, and, when on the wing, it is carried from place to place more by the wind than by its own wing-power. It would be possible to fight the pest in such isolated blocks one by one. In districts suitable for this, economic roses and plants might be employed for the belts. For the larger trees Para rubber, Cocconut, Nutmeg, and Kola Nut suggest themselves. For the undergrowth Croton Oil, Annato, Castor Oil or Tapioca might be used. Or, Mr. Green observes, the screens might consist of trees and plants, the clippings of which would be suitable for green manure, or *Erythrina*, with *Crotalaria* as an undergrowth. The tea-plant itself, allowed to run up, would form a good undergrowth, and might be used for seed production.

Mr. Green concludes with a suggestion that four estates be selected from different localities, and that the prunings of two bushes from each district should be sent to him every month, say, on the 15th. Bushes that show the most recent signs of injury should be chosen, or, if the pest appears to have gone into retirement, bushes from the most lately attacked fields. The whole top of the bush should be cut off, as in pruning to a level, the prunings from each bush collected and tied up separately in sacking or jute hessian (slightly damped). Living specimens of the insects (about fifty from each estate) packed in the tea sample boxes, should be sent by post.

We mention this last suggestion with no idea that South Indian tea-planters should trouble the Government Entomologist in Ceylon, but merely in order to show them what course they should be prepared to adopt when some entomologist in India is in a position to undertake similar investigations to those that are being conducted by Mr. Green.

\* \* \*

**Mosquito-Blight.**—Mr. H. H. Mann has given the following list of the jungle plants on which the blight insect has been reported to feed, though in most cases, he remarks, the

information has never been confirmed. These are follows:—

1. **BAMBOO.**—The insect has often been said to live in bamboo but I have never been able to confirm this.

2. **TUN TREE (*Gedrela toona*).**—This has often been accused of harbouring the tea-mosquito, and the blight is often found especially seriously under the shade of tun trees. It has never been seen, however, to puncture the leaves of this tree.

3. **RUBBER (*Ficus Elastica*).** has been reported to be attacked by the blight insect in Java. The insect is commonly more serious under the rubber tree than on the rest of an estate, but I have never seen the tree actually attacked in India.

4. In 1895 Dr. Watt noticed a species of *Polygonum* attacked very similarly to tea in the Assam jungles, but as the insect was not discovered the question remains doubtful.

5. **WILD PAN (*Piper*).** has often been said to be attacked by mosquito-blight, and one writer goes so far as to say, "It is very fond of the pan plant." There is, however, no really authentic evidence of its being found actually feeding on this plant.

6. **MAESA INDICA** (called *Malmuriya* in Sylhet, *Bilauni* in Nepalese) is punctured very similarly to tea, but Dudgeon has shown that the blight insect is quite different from that of tea.

7. **COCOA and CINCHONA** are both attacked in Ceylon, and the latter also in India.

8. **TITA-FHUL (*Phlogocanthus thysiflorus*).** has been found by me with the young insects upon it in the Darjeeling jungles, in which it is very common.

9. Among other casual attacks, the following may be mentioned:—*Eugenia* has been injured in Ceylon: Mr. Ilbert, of Morarji Sibsagar Assam, reports having *Hibiscus* plants injured by it. Mr. Harcourt found it on the Chilauni tree of the Darjeeling Hill and on *Fuchsias*; and Mr. Nosworthy pointed it out to me at Gillingham, on *Geraniums*.

Mr. Mann adds:—"I do not believe that any other records of attack are in existence."

**American Stocks.**—The stock of tea in warehouse at New York was 39,958,636 lbs. on October 31, 1902, compared with 21,258,645 lbs. on October 31, 1901. Before the end of January the stock will probably be largely reduced, as retail and wholesale reserves are said to be very small.

The Collector of Customs in Boston reports the following tea statistics for that port for the month of October:

Remaining and entered in October.		Pounds.	Value.
Balance October 1, 1902	...	924,483	\$161,75
Amount entered	...	610,851	99,85
Quantity and value	...	1,535,334	\$261,60
Withdrawals in October	...	128,744	\$ 23,09
Balances October 31, 1902	...	1,405,590	238,51
* * *			

**No Refunding of Tea Money.**—The Treasury Department at Washington, after consultation with Deputy Collector Couch, of New York, has reversed its former ruling refunding duty paid on tea remaining in bonded warehouses, and has left the matter open for a future decision, which it is thought will be adverse to the refunding of any money except on the direct authority of Congress. The reversion of the Government serves as a stoppage of refunding and hence vetoes any taking out of tea in large quantities before January 1, as this means to expedite the delivery of tea after the going off of the duty with the beginning of the New Year.

\* \* \*

**Tea Culture in the Caucasus.**—ODESSA, November 25th.—The experiments in tea culture made in the Caucasus during recent years have proved eminently successful, and the Minister of Agriculture and Imperial Domains is now taking steps to establish the Industry on a sound working basis, which will assist its rapid development. The climate and other conditions are all in favour of the new enterprise. The experiments so far made have been thoroughly practical and exhaustive. They were carried out by

a few of the largest Russian tea merchants, and by experts acting for the Ministry of Imperial Appanages. The latter Department will next year import expert tea cultivators from China, India, and Ceylon to act as instructors on the Caucasian plantations.

The yield of Caucasian tea this year was thirteen-and-a-half tons. It was of three qualities, and sold as follows to the wholesale dealers:—Appanage tea: First quality, 4s. 4d. per pound; second quality, 3s. 4d. per pound; and third quality, 2s. 7d. per pound. The privately-grown tea brought, for first quality, 3s. 5d. per pound; second quality, 2s. 7d. per pound; and the third quality, 2s. 2d. per pound.

The realisation of such prices would appear to prove that the Caucasian tea is really of good marketable value, and there is nothing to prevent its culture assuming vast proportions in that highly-favoured Province. Hitherto the experiments have been confined almost entirely to the Government of Kutais, but many other districts are equally favourable to high-class tea culture.—*London Standard*, December 2nd.

\* \* \*

M. Prudhomme, Director of Agriculture in Madagascar, believes that tea can be cultivated in almost the whole of the island, but especially on the East Coast, which is moist and rainy. There may be some slips between the cup and the attempt to fill it with tea from Texas and Madagascar, but it shows the keen desire exhibited on all sides to cultivate tea where climatic conditions render it possible.

\* \* \*

In his new book, "Across Coveted Land," just published by Macmillan, Mr. A. H. Savage Landor, referring to Sistan, the half-way house between Quetta, in British India, and Meshed, in Persia, says that a greatly developed Indian tea trade will, in all probability, pass through it some day. Mr. Landor, in his interesting chapter on this subject, believes that only an understanding with Russia is needed to procure for Indian teas a most profitable market, not merely in Central and Western Asia, but all over Europe.

\* \* \*

The customers of the retailers in a city near New York, containing 35,000 inhabitants, are in receipt of a letter which reads as follows:

DEAR MADAM: We are sending you to-day a sample of our famous Ceylon tea. Try this tea, and we are sure you will pronounce it the most delicious that you have ever tasted.

It is only put up in sealed foil packages, which are packed where grown, on the Island of Ceylon, thereby preserving its fine flavour, and aroma, and avoiding the dust, dirt, and impurities incident to tea sold in bulk.

The sample we are sending you will make ten cups of tea; as you should use only one teaspoonful for two cups, instead of one teaspoonful for each cup, as required of other teas. You will readily appreciate the economy in using a tea which goes doubly as far as other teas, a half-pound package of ——— Ceylon tea, at 30 cents, going as far as a full pound of others.

You will find ——— Ceylon tea for sale at your grocer's. If you always want to be sure of obtaining the best tea, ask for, and insist upon having, this delicious, pure, and most economical of teas, ——— Ceylon.

Respectfully yours,

The samples were in a very neat foil package, and, when tested, proved to be a meritorious grade of Ceylon tea. The explicit caution as to the use of the article caused the recipients to brew the tea carefully, and the result was a beverage far different from what it would have been had the same quantity been steeped as is customary where China or Japan tea are used.

The *American Grocer* inquired of the local grocer whether this form of advertising paid. His reply was: "Sometimes it does, sometimes it doesn't." We imagine much depends upon the article sent as a sample. The principal fact is that it indicates a co-operative spirit on the part of jobbers that shows a deep interest in promoting, for mutual advantage, the trade of its customers. Such a practice became general it would be a nuisance to retailers and consumers.

## GUATEMALAN COFFEE.

Shall we ever receive a really reliable report as to the damage inflicted on the Guatemalan Coffee crop during the recent earthquake? In two papers of nearly the same date we find

### *This Picture :*

The latest news from Guatemala confirms the earlier report, which it will be remembered was quite sensational in character. It now appears that the volcanic eruption has done very great damage to the coffee plantations. However, nothing seems able to prevent the further slumping of the market for Rio and Santos coffee, which has lost ground since the news of the Guatemala disaster was first received.

### *And This :*

A. Lazo Arriaga, the Minister from Guatemala to the United States, has received from his Government letters and telegrams stating that the reports published in this country about the loss of life and property caused by the eruption of the Santa Maria volcano are exaggerated. While it is true that a part of the present coffee crop is lost the despatches say it is generally expected that most of the plantations of the affected district will recuperate.

Those who have read our previous notes on the same subject will realise that all the accounts yet given differ so materially that it is impossible to gauge the accuracy of any.

## BOARD OF TRADE RETURNS.

*November 1902.*

The following tables show the Imports, Consumption, and Exports of the undermentioned articles for the 11 months November 30 in the present and 2 previous years, compiled from the Board of Trade Returns, with stock in U. K. on November 30 :—

## THE NORTH-EAST MONSOON ON THE NILGIRIS.

[From a Correspondent.]

The monsoon of 1895 was a regular bye-word as regards its severity, as it produced a larger rainfall than had ever been known on these Hills, averaging on the Estates round Coonoor and Kotagiri about 117 inches, and this year bids fair to rival it with over 100 inches up to date (17th), of which nearly three-quarters has fallen within the last three months.

In 1895 it was the Kotagiri road that was badly breached by the heavy rain, 17 inches of which fell in a single night, if I remember right. This year the heaviest fall has been 8 inches within the twenty-four hours, and it is the Coonoor

ghaut which is completely blocked for traffic both by cart and rail. Consequently all cart traffic has had to get to Coonoor and Ootacamund by the Kotagiri ghaut, a calamity which has never happened before.

It is not only the amount of rain that is out of the ordinary, but the way we have been getting it has not been as it usually is. As a general rule, in the N.-E. monsoon nearly all the rain falls at night, and the days are most often bright and fine, but this time the days have been abnormally cloudy, and we have been continually enveloped in thick mists, in fact, far more like what we experience during the S.-W. monsoons. This has been very trying, not to say disastrous, to us in two ways. Firstly, it has made it very difficult to pick the crops, numbers of the resident coolies being repeatedly ill with fever, owing to their getting chills from being soaked to the skin nearly every day, the local coolies have shown a great reluctance to coming to work in the rain, and consequently rates for picking have been necessarily very high, and competition for labour exceedingly keen. Secondly, as there has been so little sunshine to boast of, it has been almost an impossibility to dry the coffee sufficiently for despatch. Every year we get a few complaints from the Curers that some consignments of crop have reached them wetter than it should be, but this we expect during occasional bursts of bad weather. They evidently do not think it worth while making that complaint this year, but they do complain, and very naturally too, of parchment being sent to them half germinated, as it has been in a few cases!

There has been another and most serious loss brought on by the unceasing rain, and that is the large amount of crop that it has caused to drop. Not only ripe cherry but also a great deal of half ripe too has split with the excessive moisture and fallen. One planter estimated that one-fifth of his whole crop was on the ground! On some places coolies have been able to glean a whole bushel in one day off the ground, without taking a single bean from the trees themselves! Owing to all these losses, estimates have been reduced all round, and with prices steadily declining week by week, our outlook is indeed a gloomy one. All that remains for us to do is to try and hold on, and trust in Providence.

### NOTES.

#### The Clearing House Struggle.

The latest news about this matter is that the Clearing House has rescinded Rule 3, pending re-organisation, which it is hoped will take effect in July.

#### Indian Cinchona.

The exports from British India during the *six* months ended September amounted to

	1902.	1901.	1900.
Lbs. ...	1,058,458	884,225	1,525,617

#### German Quinine.

The exports of quinine, quinine preparations, etc., from Germany during the eight months ending August amounted to—

	1902.	1901.	1900.
Kilos ...	134,400	136,900	120,800

#### Java Quinine.

The exports of quinine from Java during September amounted to 287

cases, 206 of which were shipped to New York, 37 to Japan and 44 cases to Singapore. From January 1 to September 30 the shipments have been—

	1902.	1901.	1900.	1899.	1898.
Cases ...	1,121	1,307	1,487	1,467	854

#### Coffee Seed.

*Apropos* of the letter that appears in our correspondence column we may remark that we know of one planter who is picking a bush of the *ordinary* seed coffee over *four* times, and is putting down P, B & T separately, to see how they turn out, and the flat beans in another lot. Nothing like practical experiment!

#### Heavy Rain in Mysore.

On the 16th ultimo, just too late for our final number in 1902, a Mudigere correspondent wrote us:—"It may interest you to know that we have been having awful weather. One estate got 6 inches of rain in one day, and another had 12 inches in the week. Some estates are in full picking while others have hardly got any crop in, and have very little ripe, which is fortunate in this weather, with clouds and rain about and no sun.

#### Tea and Empire.

A writer in *Chambers's Journal* remarks:—"Tea has been the means of rescuing parts of India from a state of nature that was neither attractive nor profitable; it has saved Ceylon, one of the most interesting and valuable of British possessions, from a worse fate even than that which foreign bounties have inflicted on the West Indies; it has provided the Imperial Exchequer with enough funds, if need be, to pay for the construction yearly of three or four ironclads.

#### Tea Prospects.

The *Englishman* recently remarked:—"During the last few weeks prices have advanced steadily, and for the first time for many years the tea-planter sees before him the possibility of a profit instead of a loss. We are, however, never likely to see common teas over 6 pence per lb. for any length of time and perhaps a rise in the price of cheap teas is hardly desirable as the effect would be falling off in consumption which would put a stop to the projects for expanding the Indian tea market and would prove disastrous. One has heard of a storm in a tea cup and laughed at it, but the storm that has raged now for the past years in that useful article of domestic use has already engulfed some planters, and many more have been and are still in troubled waters. Let us hope that the hard-worked, plucky planter may ere long see the end of his troubles, and that brighter times are in store for him.

#### Cinchona.

The first-hand stock in Amsterdam on November 30 consisted of 3,734 packages Government culture and 14,641 packages private culture. The shipments from Java during November amounted to 965,000 Amsterdam lbs. (1,060,000 Eng. lbs.) against 1,185,000 Amsterdam lbs. last year and 1,490,000 Amsterdam lbs. in 1900. The total for the eleven months 11,843,000 Amsterdam lbs., against 11,333,000 and 9,650,000 Amsterdam lbs. in 1901 and 1900 respectively. According to the Board of Trade Returns for the first eleven months

1902 and two previous years the movements of bark in the United Kingdom were as follows :—

		1900.	1901.	1902.
Imported...	...	cwts. 38,720	40,051	36,454
Value ...	...	£86,272	£113,336	£88,195
Exported ...	...	cwts. 42,973	24,222	21,744
Value ...	...	£112,682	£65,178	£52,358
1902.				
Imports of Quinine and Quinine Salts	...	...	ozs. 1,199,854	
Value ...	...	...	£61,560	
Exports of Quinine and Quinine Salts	...	...	ozs. 345,161	
Value ...	...	...	£15,625	

Imports, Deliveries and Stock of Bark in London :—

LETTERS TO THE EDITOR.

COFFEE SEED.

DEAR SIR,—Can you or any of your readers give me the following information about Seed coffee ?

Is it necessary to have only the flat bean, or do the peaberries give equally good plants ?

Seed coffee, as usually sold, contains peaberry, triage (*i.e.* broken or cut) and malformed and elephant beans, and the seed is *all* put down in nurseries without being “garbled” and above kinds of beans taken out. *Probably* the sickly plants in the nursery are from the beans, but I have not yet met anyone who has ever experimented in this way. I presume a given quantity of Seed coffee, carefully picked over, is worth double the quantity of “ungarbled” and would be glad to hear from someone who can give information on this point.

Your, etc.,  
“NURSERY.”

TEA AVERAGES.

Price Currents—Tea.

DEAR SIR,—In the number of *Planting Opinion* to hand this week (issue of 13th instant) I see you give the average of the Wynaad Tea Company’s Perengodda Factory as 6¼d. Of course where a part of Invoice is withdrawn it is impossible to give correct average, but at prices given, the average works out to 7.11d., the actual results, according to advice from England, being nearly 7½d. And in the same list Walker’s Achoor, which tea is manufactured here, is given as averaging 7d., whereas at figures given the average works out 7.27d. It is unlikely that in this matter I am more unfortunate than others but I find that the averages given for our tea are nearly always at least ¼d. below what they should be.

VAYITRI,  
17th December, 1902.  
Yours faithfully,  
H. WADDINGTON,  
*The Wynaad Tea Company, Ltd.*

[The averages are those given by Messrs. Gow, Wilson & Stanton, of London.—Ed., P. O.]

GENERAL ARTICLES.

BOMBAY TEA COMPANY (LIMITED).

A Meeting of the Shareholders was held at Birmingham on Saturday the 15th ultimo. Mr. Corrie Grant, M.P., presided, and stated that Mr. William Evans, the late managing director, had resigned his position, and had surrendered 19,707 preferential shares and 13,867 ordinary shares, both fully paid. This was the result of the work of a Committee of independent shareholders formed in the beginning of 1901, of which he (Mr. Corrie Grant) was chairman. At the Annual Meeting of the Company in June last, he proposed the appointment of a Committee of Investigation to inquire fully into all matters connected with the working of the business, and the promotion and formation of the Company. That motion was defeated by a narrow majority, but the Committee continued their labours, and the result he now presented to the Meeting. On November 7 he handed in Mr. Evans’ resignation, and the shares given up, to the Board of Directors. The Board approved of what had been done, and cordially thanked the Committee and himself as their chairman for the great services they had rendered to the Company. He was then invited to become a director, and accepted the offer until, at any rate, the Company was again in clear water. He was also requested to become chairman of the company, and to this he also agreed. The Committee throughout had made no charge for their services, and simply received their out-of-pocket expenses. These they proposed to ask their shareholders to repay. Resolutions were passed receiving and approving the statement of the chairman, and confirming the election of Mr. Grant as director and chairman without remuneration.

SOUTH CAROLINA TEA.

Mr. Charles R. Shepard says, in a letter, dated “Pinehurst,” Summerville, S.C., November 22, to the *Ceylon Observer* :—

Some kind soul has caused to be sent to me copies of your issues of October 20th and 22nd wherein your “funny-man” has disported himself at my expense and to my very considerable amusement. It was about my turn and I should not complain; for I have throughout the past Summer intensely enjoyed the Indo-Ceylon green tea controversy as conducted in those valuable journals, the *Tropical Agriculturist* and the *Indian Gardening and Planting*. Incidentally I would state my surprise that the old Indian process of lightening the colour of green tea by panning or attrition (described by Dr. A. Tschirch in 1892) should have been overlooked by so many of your able scholars and planters for so long a time, and adulteration at least contemplated!!

The Pinehurst Experimentation has received so much notice from the Press of this and other countries that it has become almost impossible for me to correct the frequently erroneous statements as to its object and results, and has compelled me to ignore personal attacks.

But as I am indebted to the Ceylon Tea Industry and especially its mouth-piece, the *Tropical Agriculturist*, for so much valuable information, I deem it proper to call your attention to some errors into which you have inadvertently fallen, and which in your desire to continue as a faithful historian you may choose to publish. The Pinehurst undertaking has been experimental from the start until now; at first and until within a few years at my own expense, but latterly it has received generous and welcome aid from the U. S. Department of Agriculture after official investigation had shown that its object was not commercial, but an attempt to prove the feasibility of establishing a new and profitable industry in the Southern States, with all of the attendant benefits. It should be superfluous to inform you that the experiments although on a small scale (none of my gardens are larger than a few acres in extent), have been directed so as to cover as many sorts of tea-seed and as different types of soil and exposure as possible. It was expected that success—measured pecuniarily—might attend very few of the experiments, but it was hoped that some of them might result favourably. I will leave to your own judgment whether the following returns for this season may be regarded as promising, especi-

ally as the limit of production does not yet appear to have been reached:—

Old Rose Garden, Assam hybrid seed, 392 lbs. dry tea from 83/100 acre, or at the rate of 472½ lbs. to the acre, or over 7 oz. to the bush.

Lincoln Garden, Darjeeling seed, 554 lbs. dry tea from 190/100 acre, or at the rate of 290 lbs. to the acre, or over 2 oz. to the bush.

South Fraser Garden, Chinese seed, 503½ lbs. dry tea from 2 acres, or at the rate of 250 lbs. to the acre, or 1½ oz. to the bush.

I will not exhaust your patience with comparisons with Asiatic production.

Yield of Pinehurst tea for 1902 (don't laugh, please) about 8,500 lbs. It is neither expected nor desired to exceed double that amount (don't be alarmed, please).

As to that little, cheap rotary sterilizer for the Green tea manufacture, it does its work so well that the product sells very readily in the American market at a price which my respect for your feelings forbids me to quote.

In concluding this too lengthy note, I would ask you to favour me with any further notice that you may deign to bestow on this modest undertaking, even though it may be some fireworks from your aforesaid "funny-man."

## TEA IN CANADA.

The *Canadian Grocer* publishes the following:—

TORONTO, November 20, 1902.

A fairly active business has been doing in Indian and Ceylon black and green teas during the week and the prices of these are gaining strength here on the reports of hardening markets in London, England. Higher prices are now asked, as cables from London on November 15 and 17 show an advance of ¾d., or 1½c. on black teas at and below 6d. Finer teas are, in some cases, stronger, and those of good flavored that were quoted at 10d. are now worth 11½d. to 1s. 1d. Similar teas that were worth, 7d. are now held at 8½d.

MONTREAL, November 20, 1902.

Low-grade Ceylon and Indian black teas have advanced about 1½c. during the past few days, and the tone of the market is firmer. There is a good demand for Ceylons, and shipments this week to country points have been quite heavy. Several arrivals of Japan teas at this market are reported and a fairly good business is doing at continued firm prices. Green teas are still firm.

TORONTO, November 27, 1902.

The primary market this week has been strong for all grades of Indian and Ceylon greens and black teas, and prices have advanced for these and also for China and Japanese greens. Cheap Indian blacks are up 2c. from the low point and cheap Ceylons are up about 1½c. and the prices may shortly reach the parity of 7d for leaf teas. Indian and Ceylon Pekoes and Pekoe Souchongs are from 6¼ to 7½d., and are strong, the finer grades of Orange Pekoes are scarce, and desirable catchy teas are in small supply. China teas have not been as high for years. The Japan market has closed, and anything offering of the third and fourth crop is poor stock. Prices for these are higher than for the earlier teas. There is also an active demand for greens from 6¼ to 7½d., in Indians and Ceylons.

## TEA CULTURE IN TEXAS.

### FURTHER DETAILS OF SCHEME.

The *Beaumont Journal* remarks:—

Some time ago Beaumont was visited by two representatives of the United States Department of Agriculture for the purpose of making a superficial investigation of this section with a view of finding a suitable location for making an experiment with growing tea in Texas. It is believed that the gentlemen were very favourably impressed with the country about Beaumont and a study of the soil and climate requirements leads further to the opinion that Jefferson county will prove suitable for making the tea experiments and further, that it will result successfully. When Congressman Cooper visited Washington recently he improved the opportunity to call upon the chief of the bureau to plant industries and inquire the progress of this matter. He did not receive a definite reply at the time but was informed that the department would furnish

him all information as soon as possible. In this connection Congressman Cooper has received the following very full report of the matter. Contained in the letter is a very explicit proposal of the Government will make and the matter is in some respect to the people of this section to take hold of and further the plan:

WASHINGTON, D. C., October 28, 1902.

HON. S. B. COOPER,  
Beaumont, Texas.

SIR,—Referring to your personal inquiry, made a short time ago, in regard to plans for work on tea in Texas, I have to say that we have been carefully considering various plans in connection with this work, and have been waiting to be in a position to give you some definite facts before writing you.

I may say that it is the desire of the honorable secretary of agriculture to make a commercial test of the possibilities of growing tea in Texas. It is recognized that there are large tracts of land in many parts of the southern states adapted to this kind of work, but the important question of labour has always been a question. The work at Summerville, South Carolina, has demonstrated, we think, the possibility of growing tea commercially, but there is still much to be done before capital can be interested in the project on any extensive scale. Our idea is, that to achieve the best results the department should secure the co-operation of the people of Texas, an effort being made to establish a model tea farm and factory; and, after the work is on its feet, to allow private parties to continue it, providing it is found profitable. The Government is precluded from making any improvements on land that it does not own, or lease for a period of years. The Secretary does not think it advisable for the Government to purchase land for this sort of work; he thinks that land sufficient for the purpose ought to be donated by interested parties. This will keep up an interest in the work which could not be maintained in any other way. The plan is to start with a fifty acres with opportunities for increasing this to one hundred acres if it is thought desirable to do so. A one hundred acre plantation, properly managed and in the right locality, should yield in from six to eight years, ten to fifteen thousand pounds of tea annually. Of course the first two or three years there will be little in the way of yield, as it takes about three years for the plants to reach sufficient size for first plucking.

Briefly, the following outline of a plan has been prepared for this work:

1. Land to be furnished to the department free of charge, under a guaranteed tenure of not less than ten years.
2. Such labour as may be necessary in clearing the land and putting it into condition for planting to be furnished to the department free of charge.
3. Teams and ordinary farm implements such as plows, harrows, etc., to be furnished to the department free of charge.
4. One-half the cost of all ordinary labour necessary in establishing and maintaining fifty acres of tea-plants to be furnished to the department free of charge.
5. All buildings necessary for the work to be furnished to the department free of charge.
6. The department will furnish an expert superintendent who had experience in growing and manufacturing tea.
7. The department will furnish all necessary machinery used in the manufacture of tea.
8. The department will furnish all seeds and plants.
9. The department will pay one-half the cost of ordinary labour necessary for the growing of plants and the handling of the product.
10. The product from the gardens will become the property of the donors of the land, but will be handled and sold subject to conditions which may be mutually agreed upon.

### EXPLANATIONS.

The tea gardens should be located with due respect to soil, climate, rainfall, and labour, particularly colored labour. The plants should be so made as to begin with not less than fifty acres with possibility of extending to 100 acres within a few years, if it is thought desirable. The buildings required for the first two or three years will be small. After that, when the tea begins to come in in quantity, a suitable factory building will have to be erected. Such a building for a 100 acre plantation probably will not cost more than \$10,000. The full equipment of such a building with machinery, etc., for the handling of the yield of 100 acres will probably cost

\$4,500 to \$5,000. This portion of the expense will be borne by the Government.

In a few days we shall have two of the department's agents visit Texas, with a view to looking over the territory and deciding on the best point to locate. We want, of course, to make this work a success, and to do so the best location should be secured. As already indicated, labour plays an important part in the work. Proper soil and sufficient rainfall are also important considerations. Rainfall, however, we consider less important than the other features mentioned, if it is practicable to secure irrigation. The ideal location would be where there is plenty of cheap labour, where the soil is sufficiently rich to grow good crops of cotton or corn and where the rainfall exceeds fifty or sixty inches annually, or in lieu of this where irrigation water can be obtained in plentiful supply.

Thanking you for the great interest you have shown in this work,

I remain, very respectfully,  
B. T. GALLOWAY,  
Chief of Bureau.

TEXAS, U.S.A., October 25.

### BRAZILIAN CACAO.

A Consular report says:—The cacao market has been steady at average prices, and the demand fully equal to the supply. No crop in this country is subject to such fluctuations as cacao, and for this reason comparisons with previous crops are valueless.

The total shipments from the Amazon for the first six months of 1902 were:

					Tons.
January	...	...	...	...	314
February	...	...	...	...	310
March	...	...	...	...	409
April	...	...	...	...	408
May	...	...	...	...	562
June	...	...	...	...	587
July	...	...	...	...	300
Total	...	...	...	...	2,800

Something more than one-third was taken by the United States, and the balance by Europe. France, as usual, is the largest consumer, with Holland second. The trade with the United States is, however, increasing, and before long that country will doubtless consume the bulk of the cacao product of South America.

### PACKET QUININE.

#### SALES AT INDIAN POST OFFICES.

In his report for 1901-02 the Postmaster-General remarks:—

*Sale of Quinine at Post Offices*—It will be seen that there was a net increase of over 375 lbs. in the supplies obtained during the year, and that no less than six circles, out of the twelve, contributed to this result. The improvement was due mainly to the increased supplies procured in Bombay, Madras, and the Central Provinces. The increase in the first named circle is attributed to measures recently taken to popularise the drug, and in the Central Provinces, to the reduction in the price of a packet from three pies to two pies; while in Madras the increase is due to the extension of the system during the year to our post offices in the Mysore State. Of the three other circles which show better results, Burma is best, and here, too, the larger supplies obtained are ascribed to a reduction in the retail price of the drug from four pies to three pies per packet. The circles which show a falling-off are principally those forming the Province of Bengal, namely, Bengal, Bihar, and Eastern Bengal; and in all these the smaller supplies procured are attributed to the prevalence of more healthy conditions. It may be noted that notwithstanding the decrease in the present instance, Bengal still holds its position as the circle where the total quantity of quinine obtained for sale at post offices is largest.

### THE CULTIVATION OF CHICORY.

A memorial on the cultivation of chicory has been forwarded to Mr. Hanbury and is being laid before the agricultural societies of Yorkshire. The memorial sets forth that between the year of its introduction in 1840 and the year 1860 the growth and cultivation of chicory root in Yorkshire and neighbouring counties was not only an important item of agriculture, but was a source of considerable profit to the farmer. The quantity grown in England was then about equal to the quantity imported from abroad. In the year 1860, however, a Customs duty of 6s. per cwt. was placed on imported chicory, and an excise duty of 3s. per cwt. on home-grown chicory; and in the year 1863 these duties were increased to 26s. 6d. and 21s. 9d. per cwt. respectively; and in the year 1864 the Excise duty on English chicory was further increased to 24s. 3d., but no increase was made on foreign-grown chicory. The memorial states that as a result of such duties during the period from 1860 to 1872 the importation of foreign chicory largely increased and the growth of English chicory diminished, and stood in the relation of four tons of the former to one ton of the latter. After the year 1872 the importation of foreign chicory further increased, and the growth of English chicory further diminished, until last year for every one ton grown in England fifty-eight tons were imported from abroad. The memorial further points out that chicory is the only dutiable article grown in this country (the registration on wheat being confined to imports only), and that in the year 1901 the whole of the quantity of English chicory on which duty was paid was eighty-nine tons, and that the revenue obtained therefrom is small and costly to collect. It is further urged that the reduction of the home Excise duty of a halfpenny per pound on present returns shows a loss of 412*l.* only. This, it is argued, would do much to revive the industry and help to restore the prosperity formerly enjoyed. If the trade revived to reach the total of 1872, the loss would only be 6032*l.* The memorialists, therefore, invite the favourable consideration by the Board of Agriculture of their memorial with a view to a remedy for a system which they think has proved to be at once disastrous to the English farmer and favourable to our Continental competitors.

### THE CUP THAT CHEERS.

Daniel K. Young writes in *Tea, Coffee and Sugar*:—

The good monk was sad.

And forsooth he had full reason to be sad.

For as he lay under the grateful shade of the broad spreading oak, his mind, in spite of himself, would revert to yesternoon service in the chapel. And not only yesternoon, but, alas! every noon service for, oh, he could not remember how long. The good Abbot and all the other brothers were beginning to think that he was being mastered by the Devil, if indeed he did not already have some wily imp secreted somewhere about his anatomy. Scourgings and penances had failed of effect and at last he was compelled to admit that the flesh was weaker than the spirit. Was he really doomed to everlasting punishment because he could not conquer his weakness?

That very day had he clothed himself in a haircloth shirt, which being next to his hide would have brought such irritation to a rhinoceros as to have made him roar with anguish. Up to the time of going into chapel for noonday service he had not had a moment's peace from it. Yet no sooner had the good and holy Abbot begun to drone out the service than that cursed drowsiness had once more come over him. When the chant was reached his eyes closed despite his efforts to keep them open. When the reading began his head had dropped lower and lower on his chest until, just as the Abbot had finished, he was letting forth such snores as were heard in the farthest end of the chapel. When the nearest brother, in charity awakened him, he had given such a snort that the walls appeared to shake.

And so it had been for many days.

The spirit was willing but the flesh was weak.

As he lazily watched the goats browsing on some bushes he noticed that they appeared to be particularly fond of some ripe red berries that looked like cherries, which they were greedily devouring. Just now he remembered that this was not the first time he

had noticed this fondness of the goats for these same, and it had seemed to him that they always appeared to be more frolicsome after eating of them. So would he watch to-day and see if it were so. And of a certainty, after the goats had eaten of their full of the berries they did gambol and skip about the hill as they had not done before. His curiosity was aroused and gathering a handful he essayed to eat, but they were hard and unpalatable. But perchance they might make a good soup, so he carried a quantity of them back to his cell, and with the help of the skillet and fire, boiled them long to make them tender. But this brought no better luck than the first trial.

#### THE BREW IS MADE.

Several, however, had fallen in the fire and soon a peculiar aromatic perfume filled the apartment. Examination showed that it came from the berries that had been burning. Perchance they would be edible roasted and so he roasted a handful on the stones before the fire. Soon they gave off such an aroma that, fearing the other monks might perceive it, he opened his window and cleared the air of his cell. The berries now had a pleasant taste but were somewhat bitter. Determined to pursue his investigation farther he pounded some of them to powder and made a soup of them. And, Behold! the water turned a rich golden brown and the soup was delicious, for this was the first brew of coffee which was known to the world.

Delighted with the discovery, he next morning imbibed a large skillet full of the liquid and went in to the noon service with fear and trembling, knowing full well what it was to sleep and to snore, and that he must again expect a bad half hour with the Abbot after service.

But what was his surprise and the astonishment of all the other brothers to find that he not only did not fall asleep but attended every word of the service with the most reverent attention. He rubbed his eyes to find out whether he were really awake or dreaming. But no, there was no desire for sleep. He was wide awake.

After service all the brothers gathered together around him and praised God that his scourgings and penances, the peas in his shoes and the haircloth shirt on his skin had brought about a miracle. So they must all chant a Te Deum that God had wrought such a wonder in their midst. Even the Abbot did reverence to him as the most favoured of them all.

And so each morning thereafter for a week did he drink of the brew and no longer found it troublesome to keep awake at service. About that time, one unfortunate morning, the Abbot, making an unexpected round of the cells, came upon our poor monk in the full operation of brewing his draught. Here was a Devil's draught indeed! It was even the colour and consistency of wine! Was this giving his whole life to the service of God? Was this drinking of spiced water in accordance with their solemn vows? Truly, only hard and merciless scourgings and long fasts and penances could wipe out this most abominable sin. And this, too, by one who had received the especial and undoubted benefit of the only miracle which had been vouchsafed to the monastery in four years. Back to the haircloth shirt and the peas in your shoes and nothing to eat until this sin be washed away at the noonday service. And so the cursed liquor was thrown out of the window.

#### NO COFFEE, NO PEACE.

That very day, as a punishment from God, the good monk once more aroused the whole assemblage with his stertorous snoring and when awakened gave such a peculiarly horrid and awful snort as made the holy Abbot fairly jump while in the very pulpit.

Here was it all explained. The monk had been able to keep awake and take to himself the credit of a miracle through a compact with the Evil One, who had given him this Hellish brew to drink before the service. More scourgings and penances and fastings.

But his palate had tasted real coffee, and not postum cereal or any of the vile decoctions which have since been sold under that sacred name. The habit was not so easily to be overcome and so about the third day the Devil's dram was brewing again. Suddenly there was a noise in the court, and the culprit, leaving the brew on the fire, ran out to see what caused the disturbance. At about this time, as Fate would have it, the Abbot, in walking through the hall, had his olfactory nerve greeted with that same aroma which he had noted before and boldly pushed open the door of the recreant's cell. Lo! there was the Hellish brew in the skillet on the fire and

the room was filled with the delicious odour of genuine Mocha coffee.

Now the Abbot was a just man and a pious, and not wishing to do an injustice to anyone, he determined to test for himself the fascination of the awful temptation. For how otherwise could he put himself in the other's place? For himself, he knew that he was proof against the strongest and wildest tricks of the Devil. So with a smile of mingled contempt for the poor weak brother and conscious superiority for himself, he sipped from the skillet, with the usual result that one sip did not convey to his mind the enjoyment which the full draught which followed was sure to do. When the last drop was drained he lowered the skillet from his lips for the purpose of replacing it on the fire and stealing quietly out knowing full well that the friar would ask no questions of anyone and might think that the evil spirits had stolen his precious liquor to tantalize him, but as his eyes looked over the edge of the dish, there was the sleeper standing before him and thirstily watching the whole performance.

#### DRINK OF ANGELS.

For a moment each gazed at the other in silence, and there are some profane historians who positively assert that the monk winked his left eye at the Abbot and that the latter returned the salutation with a wink of the right eye, but of course any such assertion is false and an invention of the evil minded. We are, however, assured that the good and holy superior, putting his fatherly hand on the shoulder of the weaker brother, thus addressed him:

"Dear brother, I was desirous of doing full justice to you, and not wishing to put your eternal soul in jeopardy, was determined to discover for myself whether you stood on the brink of perdition. This could only be done by imbibing a portion of the liquor which you were brewing. I have gladly taken the risk for your dear sake, and am now minded that peradventure it may not be a concoction of the Devil but may truly be a gift from the angels. Now we will put it to the test and sprinkle some holy water in the fire. If it be from the Devil he will surely take some definite shape, and you with yonder poker and I with this stool will be prepared to give him a great and noble battle."

So with fear and trembling the reverend father sprinkled some holy water on the fire, and both stood ready to smite the demon should he appear. But nothing happened except a little sputtering in the embers, and so was it proven that the drink came from the angels and not from the Devil.

The two good brethren fell into each other's arms and the Abbot whispered in the ear of the monk:—

"Dear brother, to-morrow thou shalt brew enough for us twain."

### CULTIVATION OF "CASTILLOA ELASTICA" IN JAVA.

Dr. Spire contributes to a French journal devoted to tropical planting\* a comprehensive report on the planting of Mexican rubber (*Castilloa elastica*) in the Dutch East Indies, based on personal observations made in the Summer of 1901, from which it appears that considerable interest in this species exists in that region. He mentions, by way of introduction, former reports on the same subject by Dr. P. Van Romburgh, of the botanical garden at Buitenzorg, Java, who has been much interested in watching the development of the *Castilloa* in that colony, and to which credit is given for some of the details presented here. Dr. Spire is unable however, after a study of Th. F. Koschany's monograph on the *Castilloas*, to determine which species has been planted in Java.

An interesting fact is that all the *Castilloa* plantations in Java have resulted from two trees planted as seedlings in 1883 by Mr. Holland, a coffee-planter near Buitenzorg. These began to fruit in 1886, and in December of that year 136 plants from seeds yielded by them were placed in the botanic garden at Tjikeumeuh, in an open field, about 10½ feet apart, in two lines forming the letter V. In the third year twelve of these seedlings bore fruit, and in the fourth year the more thrifty of them were 55½ feet high, and had a girth of 41 inches. In 1901 there were 131 of these trees standing.

\* *L'Agriculture pratique des pays chauds*, Paris. 1-6 (May-June, 1902) pp. 689-698.

ing, measuring from 50 to 65 feet high, and 31 to 53 inches in circumference, breast high. Their crowns form sufficient shade to prevent the growth of weeds, though the ground is spaded up every year. A second planting was made in the garden in March, 1888, when 56 seedlings were set out  $17\frac{1}{2}$  feet apart. A marked difference in the size of these trees is now apparent, those standing near a lane being much larger and more thrifty than those further from the open space, though Dr. Spire fails to mention the character of the growth, if any, in contact with the smaller trees. These trees range from  $32\frac{1}{2}$  to 40 feet in height. The same conditions apply to a third planting, made in 1899.

In May, 1901, Dr. Van Romburgh caused some of the above *Castilloa* trees to be tapped, for the benefit of Dr. Spire. The Malays use for this purpose an implement similar to a butcher's cleaver, with which gashes, 5 to 8 centimetres [= 2 to  $3\frac{1}{4}$  inches] long, and about 5 millimetres [=  $\frac{1}{2}$  inch] deep, are cut in the bark, obliquely, on opposite sides, and converging to a common line, from which the latex may be gathered. The cutting extends up the trunk as high as 3 to 4 metres. Two of the trees had been bled before, and the resulting scars were so thick that they interfered with the fresh tapping, but at least, 150 gashes were cut in those two trees that day. The sap flowed freely into a tin pail supported by a hook beneath the lowest cut, and to provide against any loss, large banana leaves were placed at the base of the trunk to catch any sap that might go astray. The latex was at times very white, and again of a brownish cast, while some incisions brought out only a blackish humour which exuded very slowly. The flow did not appear to depend upon which side the tree was cut.

The pails of latex, together with what was collected on the banana leaves, were taken to the laboratory and kneaded in water, next passed over a fine copper sieve, and then put away to settle. In time the rubber floated, the remaining watery material being drawn off from the bottom from day to day. At the end of the eighth day the cake of rubber was removed and placed under a press to remove any remaining water. Returning to the field on the day following the tapping, the man in charge collected from the wounds on the trunks any shreds of rubber that had resulted from the spontaneous coagulation of latex, which, when cleaned, were as valuable as that prepared mechanically.

In general practice the collection of the latex is performed wholly by Malays, an overseer assigning to each worker a certain number of trees which he must visit each day. At least  $\frac{3}{4}$  catty [= about 1 pound] of Caoutchouc must be delivered daily, for which the worker is paid 10 cents, gold, without regard to the hours of labour. The men are watched closely to prevent the reckless tapping of the trees and their ultimate destruction. When brought to the factory the latex is cleansed by women in running water, then exposed to the air, but in the shade, for three or four days to dry, and finally sacked for shipment. The cost of collecting, cleansing, drying, and sacking, amounts to about 3 florins a picul [= \$1.21 for 132 pounds]. A *Castilloa* tree eight years old should yield an average of 175 grammes [=  $\frac{3.9}{100}$  pound] of rubber. In 1900, 2,849 *Castilloas* yielded 7 piculs [= 924 pounds] which sold for 2,100 florins [\$844.20]. A neat little income is derived from the sale of seeds, the usual price being 6 francs per kilogramme (3,000 or 4,000 seeds). They are packed in layers of charcoal dust and will keep for twenty days. Many seeds are shipped from Loebang, particularly to Sumatra, where the culture of *Castilloa elastica* has been begun on a large scale, as at Tebbing Teuggi Deli, near the north-western extremity of the island.

To return to the details of the tapping done under Dr. Van Romburgh's supervision, the weight of latex obtained from six of the trees tapped on two days was as follows:—

		1st Day.	2nd Day.	Total.
First two trees	..	grams. 28	130	158
Second two trees	...	.. 220	290	510
Third two trees	...	.. 125	205	330
Total...	...	373	625	998

The result in dry Caoutchouc was 340 grammes for the first day's tapping and 600 grammes for the second, or a total of 940, equal to slightly over 2 pounds, of a quality then valued at 5 florins per kilogramme [= 91 cents a pound]. The two trees indicated in the table as giving the largest yield were planted in 1884, and are not elsewhere mentioned in Dr. Spire's article

Dr. Spire learned from Dr. Van Romburgh that in 1886 there were planted at the botanic station at Tjidjerock 60 *Castilloa* seedlings, supplied by Mr. Hoffland, already mentioned. Half were planted in moist and swampy land, and the remainder in a high and dry location. The former did not thrive, and were transplanted. In 1891 they all fruited and 20,000 seeds were gathered. The details of planting are not given, but in 1893 there were 10,000 trees standing as the result. Later plantings were made from seeds from the same source, so that by 1900 there were about 26,000 trees standing, but none had been tapped at last accounts.

In August, 1901, Dr. Spire visited the *Castilloa* plantations at Pamanoeakan. On the premises of Mr. Van Gent, and situated near his coffee factory, was a tract planted to rubber in argillaceous, ferruginous soil, which had been burnt over at one time with a view to erecting buildings there. The plants were about 10 feet apart, but had attained an average height of 2 metres and the crowns were touching each other. In the same vicinity another and larger tract of 50 bouws [=  $87\frac{1}{2}$  acres] had been planted for 19 months. At the same date the proprietor had planted *Castilloa* seedlings along paths in his coffee estate, and these had attained an average height of 4 metres. At one time a thousand *Castilloa* trees on his plantation had been attacked, apparently by some fungus growth, and were removed and burned.

Dr. Spire also visited the plantations of Mr. Dinet, at Loebang, where *Ficus elastica* and *Castilloa* were growing mixed, about 18 months from planting. The young rubber, set in ground covered with cocoanut palms, had not thriven well, especially the *Castilloa*, which only in a few cases had grown up to 2 metres. This slow growth was attributed to the hardness of the ground caused by the interlacing roots of the palms, and the owner was attempting the difficult task of eradicating the latter. Mr. Dinet was convinced in favour of growing the two kinds of rubber together. The *Castilloa* grows much more rapidly than the *Ficus*, but does not interfere with it. The altitude here is only a few metres above sea-level. Experiments in planting *Castilloa* in the neighbourhood of Korwang, at an altitude of 3,500 feet, were unsuccessful.

And the state plantation of Guttapercha, at Tjipetir, 2,000 feet above the sea, Dr. Spire noticed some *Castilloas*. One tract, planted 18 months before, showed satisfactory growth, and on another, trees 28 months old measured from 55 to 60 inches high. About 100 eight-year old trees were as well developed as those at Tjikeumeuh. In some of the coffee and cinchona plantations in the eastern part of the island a few specimens of *Castilloa* may be found, which, though receiving no attention, have developed well. One, six years old, was  $42\frac{1}{2}$  feet high and  $32\frac{1}{2}$  inches in girth.

Herr Rudolf Schlechter, of Germany, who visited Sumatra last year, in an account of his trip in *Der Tropenpflanzer* (Berlin), mentions two plantations of *Castilloa*—that of Mr. Runge, Deli, Moeda, and one at Haut Tador. In the first named the two-year old trees were 12 feet high and at 3 feet from the ground measured 11.8 inches in circumference. At Haut Tador he saw 50,000 *Castilloa* plants in a nursery, awaiting the rainy season, to be planted with *Ficus*. At Boeloe there were 76 *Castilloas*, one planted in 1898 measuring 17.7 inches in circumference. The latex was abundant, but charged with resin.

## PROFITS FROM A RUBBER PLANTATION.

The *India Rubber World* is often in receipt of inquiries regarding actual results attained in rubber culture, as a basis for estimating possible profits. The answer that must be made in all cases is that none of the extensive plantations thus far formed on a commercial scale are yet old enough to have become productive, but that the planters have been induced to embark in the business by what has been observed of the rate of growth and production of a few trees at a place, in many localities, and under varying conditions. Mention has been made more than once in the *India Rubber World* of a rubber plantation in the state of Chiapas, Mexico, from which shipments of rubber have actually been made. About thirteen years ago a Mexican planter set out a number of rubber trees (*Castilloa elastica*) as a shade for cacao, which grew so rapidly that in time the cacao was practically starved out, and of those trees some 5,000 are now standing, in a vigorous condition. A few years ago Mr. O. H. Harrison, engaged in coffee-planting

in Chiapas, bought this property, including adjacent lands containing wild rubber trees, for \$12,000, Mexican. Within eight months he had sold in London enough rubber from the wild and cultivated trees to pay the purchase price for the property. This formed the basis for La Zacualpa rubber plantation. A like amount of rubber has been sold from the property each year since, and more land has been purchased, the cost of the whole having been met by the proceeds of the rubber sold. During this time there has been no outlay for labour in caring for the cultivated trees, beyond the collection of rubber. The land having been paid for, the proceeds of rubber sales will be devoted to dividends on La Zacualpa shares. Mr. Harrison reports that these trees yield an average of at least 2 pounds of rubber a year—tapped once—and is convinced that a good profit could be made with a yield of half as much, which would give from 200 to 300 pounds of rubber per acre, according to the number of trees. The new planting on La Zacualpa plantation has been done with seeds from the productive trees referred to, so that no doubt can exist as to the variety this is being planted.

## DISTRICT ASSOCIATIONS.

### SHEVAROYS.

Extract from Proceedings of the adjourned Quarterly Meeting of the S. P. A., held in the Victoria Rooms, at 1 P.M., on Monday, the 15th December, 1902. PRESENT:—Messrs. W. I. Lechler, J. C. Large, W. Rahm, C. G. Lechler, and R. Gompertz, *Honorary Secretary*.

1. Notice calling the Meeting was taken as read.
2. Read and passed accounts showing a balance in hand on the 30th ultimo of Rs.599-15-4.
3. *Resolved*, that as this Meeting is held so late, the next Committee Meeting should be held on the 12th proximo instead of on the 5th.
4. Read letter of 6th December from Mr. Travers Drapes regretting that he is unable to attend the Meeting, but hoping the Association will see its way to taking up his case.
- Resolved* that the matter be allowed to stand over until Mr. Drapes is able to attend a Meeting himself.
5. *Resolved*, that this Meeting approves of Honorary Secretary's visit to Madras in compliance with Planting Member's telegram asking a delegate from each Association to meet him and discuss the New Labour Bill.
6. Honorary Secretary stated that he had, on behalf of this Association agreed to the limit of Rs.30 for advances to coolies, and explained the arrangements made by the delegates with the Planting Member—principally that he should propose that Act XIII of 1859, and the new Act should run concurrently, if possible, and also that the new Act should apply only to such Districts as might ask for it through the U. P. A. S. I. Also (in Section 14) that instead of "food" subsistence allowance of half pay or two annas per day whichever is less, should be substituted.—*Approved*.
7. Read letter from Collector saying that printed forms of crop estimates etc., had been applied for, and would be distributed to planters as soon as they were received.—*Recorded with satisfaction*.
8. Read correspondence with D. F. O. *re* Bamboo Passes, the price of which the D. F. O. has raised to two annas per head doal.
- Resolved*, that Honorary Secretary's action in appealing to the Board of Revenue, and requesting that the whole of the correspondence might be submitted to it for final orders, is approved.
9. Read Mr. Nicholson's proposal to pay maistries 3 pies per cooly per day, instead of any monthly wages, that no maistry should receive a larger advance than Rs.200, and that instead of measuring cherry by the bushel, a box containing  $1\frac{1}{2}$  bushels should be employed.
- Resolved*, that in the opinion of this Meeting the system of payment of maistries is worth a trial, and that Honorary Secretary be requested to issue a circular to all members asking if they will adopt it; but this Meeting does not approve of fixing a limit to maistries' advances, or employing a box, instead of a bushel, to measure cherry.

The following letters were read and recorded :

1. Letter from the Deputy Tahsildar, giving notice of sale of land near Vellalakadi,

2. Secretary's Circular No. 74/02, dated 13th November, 1902, asking certain questions about wood used for packing tea, and dimensions of boxes; and wanting to know if he shall offer coffee to the Chief Supply and Transport Officer.

3. Circular No. 75/02, dated 15th November, 1902, stating that Bengal Chamber of Commerce decline to take any action *re* adulteration of coffee.

4. Circular No. 76/02, dated 18th November, 1902, forwarding extracts from letters from Messrs. Acworth and Windle *re* proposed coffee cess.

5. Circular No. 77/02, dated 19th November, 1902, forwarding criticisms on the proposed Labour Bill from North Wynaad and the Nilgiris.

6. Circular No. 78/02, dated 20th November, 1902, stating that Chairman says majority vote for limitation of advances to Rs.20, but a minority wish it to be Rs.30, and thinks we should adopt their views.

7. Letter from the Secretary advising despatch of 20 reply post-cards soliciting orders for Book of Proceedings of 1902.

8. Circular No. 79/02, dated 20th November, 1902, giving Travancore Government's statistics of cultivation, exports, and imports of cardamoms.

9. Circular No. 80/02, dated 20th November, 1902, stating that Rangoon Chamber of Commerce will take no steps to prevent adulteration of coffee.

10. Circular No. 81/02, dated 21st November, 1902, forwarding letter from Mr. Acworth proposing Committee for sale of tea in India.

11. Circular No. 82/02, dated 22nd November, 1902, stating that Bengal Chamber of Commerce see no use in moving for metric system, pending its adoption in England.

12. Letter from the Secretary stating that our 164 was unnecessary.

13. Letter from the Secretary stating that subscriptions to coffee fund are to be sent to him.

14. Circular No. 83/02, dated 27th November, 1902, giving Chairman's opinion, and that of various Associations, *re* limitation of advances, and New Labour Bill.

15. Circular No. 84/02, dated 28th November, 1902, stating that Mr. Acworth proposes that U. P. A. S. I. should try and get certain articles, connected with Tea Manufacture, exempted from duty as in Ceylon.

16. Circular No. 85/02, dated 29th November, 1902, stating that the Secretary is informed that orders passed on his letter, *re* French import duties, will be sent to him in due course.

17. Circular No. 86/02, dated 29th November, 1902, stating that Secretary's letter, *re* import duty on seeds, has been referred to Government of India.

18. Circular No. 87/02, dated 3rd December, 1902, forwarding proposals from Mr. Acworth *re* Labour Bill, and suggesting that delegates should meet him in Madras.

19. Letter from Mr. Leeming asking for a copy of Mr. A. G. Nicholson's letter *re* the Labour Question.

20. Circular No. 88/02, dated 8th December, 1902, asking for final votes about limitation of advances to coolies.

21. Copies of letters and telegrams about Labour Bill handed to Honorary Secretary, S. P. A., by Mr. Acworth at Madras.

22. Letter from Messrs. Arbuthnot & Co., stating that administrator of the late Mr. Ricketts cannot agree to the coffee cess, but perhaps the Trustees may, to whom Messrs. Arbuthnot & Co. have sent our circular.

23. Circular No. 89/02, dated 12th December, 1902, stating that Secretary will send important circular *re* Labour Bill to Mr. Acworth in Madras to distribute to delegates who may meet him on the 13th.

24. Circular No. 90/02, dated 13th December, 1902, stating that application for a grant of Rs.15,000 for Brazil delegate will be forwarded to Government of India.

25. Circular No. 91/02, dated 13th December, 1902, stating that Government of Madras has forwarded Resolution *re* French import duties to Government of India.

26. Circular No. 92/02, dated 15th December, 1902, stating that Mr. Acworth regrets having posted a wrong letter by mistake.

27. Seven later replies to our circular about the coffee cess.

28. A number of books and papers received during the month were laid on the table.

ROBT. GOMPERTZ,  
*Honorary Secretary, S. P. A.*

## KANAN DEVAN.

Proceedings of Quarterly General Meeting held in the Munaar Reading room on Saturday, the 29th October, at 3-30 P.M., 1902. PRESENT:—Messrs. A. F. Martin (*Chairman*), E. E. Williams, R. W. Cole, T. C. Forbes, H. L. Pinches, C. B. Holeman, — Hunt, A. J. Wright, K. E. Nicoll, W. O. Milne, R. F. Thorp, Baron J. von Rosenberg, J. C. Swayne, C. E. Hancock, J. A. Richardson, E. R. Howlett, T. R. Mathewson, G. H. Danvers Davy, J. M. Bridgeman. Mr. H. S. Holder (*Honorary Secretary*). Visitors: Messrs. J. B. Corry and J. A. Turnbull.

## AGENDA.

1. Proceedings of last Meeting.
2. Proceedings of Committee Meeting.
3. Labour Law and Limitation of Advances.
4. Proposed Committee for Mr. Knight's Exploiting South India Scheme.

5. Export Duty on Coffee.
6. Revision of Rules.
7. Proposed Tea Cess Committee.
8. Local Labour Rules.

1. Proceedings of last Meeting were read and confirmed in Meeting.

2. Proceedings of Committee Meetings held on the 3rd September and 21st October were read in Meeting.

Mr. Forbes proposed that the proceedings of the Committee as read, be adopted, and confirmed by the Meeting. Seconded by Mr. Pinches and carried.

3. The Meeting then went into Committee.

\* \* \*

4. Committee for Mr. Knight's Exploiting South India Scheme.—Read U. P. A. Circulars in this connection. The Honorary Secretary was instructed to write to the Secretary, the U. P. A., expressing the approval of this Association of the suggestion that Mr. H. M. Knight, Mr. George Romilly, of Wynaad, together with a member of the firm of Messrs. Parry & Co. should constitute the Committee for the carrying out of the scheme.

5. Export Duty on Coffee.—Read letter from the Dewan, dated the 27th August, refusing to abolish the Export Duty on Coffee; also letter from Mr. Buchanan advising that the Dewan be again approached.

Baron von Rosenberg spoke on the subject, pointing out the hardship of the tax as at present.

Baron von Rosenberg moved that the Honorary Secretary be instructed to write to the British Resident stating all facts in connection with the above subject and asking his advice in the matter.

Seconded by Mr. E. E. Williams and carried *nem. con.*

6. Revision of Rules.—Baron von Rosenberg moved an amendment to the effect that the para. in Rule II beginning with the words "provided such proposal ..... to," ..... acceptance of them" be expunged. Seconded by Mr. Richardson and carried.

Mr. Richardson then moved the adoption of the New Rules which was carried unanimously.

7. Proposed Tea Cess Committee.—Read circulars. The Committee's action in asking that the two members allotted to South India should be planters met with general approval.

8. Local Labour Rules.—The Honorary Secretary stated that the Labour Committee had not been able as yet to fix a Meeting but hoped to arrange one very shortly.

\* \* \*

The Chairman, Mr. A. F. Martin, said that owing to the long periods of absence from this District which his work now rendered unavoidable, he would take this opportunity of intimating to members that he intended to resign the Chairmanship at the next Meeting.

Papers laid on the table:—

- U. P. A. Circulars to date.
- I. T. A. do.
- Planting Opinion.
- Indian Gardening.
- Letter Book.

(Signed) H. S. HOLDER,  
Honorary Secretary, K.D.P.A.

## INDIAN TEA ASSOCIATION.

## THE BRITISH IMPORT DUTY.

Extracts from Abstract of Proceedings of a Meeting of the General Committee held on December 16.

PRESIDENT: Mr. Lockhart Smith (*Chairman*), Mr. W. Warrington (*Vice-Chairman*), Messrs. T. McMorran, G. Pickford, R. R. Toynbee, and Mr. T. Traill.

Letters of 21st and 28th November, from the Secretary, Indian Tea Association, London, were brought up for final consideration and disposal after previous circulation.

The most important question dealt with in these letters was that of the British Import Duty. The London Committee were considering the best means of approaching the Chancellor of the Exchequer with respect to it; and they suggested that the Calcutta Committee should see if action could also be taken in India.

In the proceedings of the Meeting held on the 2nd December, it was stated that the Committee felt it would be hardly advisable for them to take action in India in the first instance. They still adhered to this opinion thinking that any agitation which would be likely to succeed would have to be initiated in England. They would be glad to support the London Committee in any steps that might be decided upon; and would be prepared again to represent the question to the Government of India, if necessary. But any such representation would, they considered, be more effective if made early in the New Year, than it would be if it were submitted now. These views were to be conveyed to the London Committee.

Considered a letter No. 6652-S.R. of 13th December, from the Secretary to the Government of India in the Finance and Commerce Department, with reference to the proposed tea cess. It was in reply to the Committee's letter, dated 28th November, which was mentioned in the proceedings of the Meeting held on the 2nd December. Mr. Baker stated that the objections received by Government were only three in number, and could not be considered to be either weighty or widely entertained. The Government of India had accordingly decided to proceed with the necessary legislation.

It was decided by the Committee to publish the letter for general information; and to send copies of it to the different local Associations.

The Committee discussed the question of the representation of Indian Tea at the Louisiana Purchase Exposition of 1904, and decided to approach the London Committee as to the action to be taken.

Considered a letter, dated 5th December, from the Hon. Mr. G. L. Acworth, Peermad, Travancore, with reference to the importation of Ceylon tea waste into India. Mr. Acworth referred particularly to Bombay, and asked if it would be possible to have all tea consigned for Persia *via* Bombay, inspected at that port. If this were impossible he thought the Ceylon Association might be approached with a view to inspection in Colombo of all tea shipped for India or Persia. He added that the tea waste was not shipped by European planters in Ceylon.

Before the receipt of Mr. Acworth's letter the Committee had been considering the general question of the importation of Ceylon tea into India, and were endeavouring to obtain certain statistics respecting it. In view of this they decided to inform Mr. Acworth that, pending the result of their enquiries, they were not prepared to comment upon his proposal.

A letter, dated 12th December, from the Collector of Customs, Bombay, upon the same subject was to be recorded.

## MARKET REPORT.

[Per Mail advices of December 12th, 1902.]

## COFFEE.

The London Commercial Record says:—There is little change to report in this market, small supplies and a dull demand being still the predominant features. Plantation Ceylon was chiefly withdrawn, and the business in East India was almost entirely confined to small transactions in Coorg of early import. New crop Costa Rica met some enquiry so far as the better qualities were concerned, but Central American descriptions are without material alteration. Santos freely offered, and to do business a decline of 1s to 2s per cwt. was submitted to. There have been slight fluctuations in

the market for Brazil "futures," but the closing rates show little variation from those ruling a week ago; yesterday Santos for December delivery sold at 27s 1½d to 27s, March at 28s 3d to 28s 1½d, and May at 28s 9d to 29s per cwt. We quote:—

London ...	Santos ...	March delivery ...	28s 3d.
New York ...	No. 7 Rio...	"	4.85 cents.
Hamburg...	Santos ...	"	28¾ pf.
Havre ...	Santos ...	"	34½ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1902.	1901.	1902.	1901.
Tons ...	24,378	11,856	42,800	44,332
	HOME CONSUMPTION.		EXPORT.	
	1902.	1901.	1902.	1901.
Tons ...	15,822	18,780	14,160	27,944

The preceding figures exhibit—

In the Imports a decrease this year of	...	Tons.	1,532
Home Consumption a decrease of	...	...	2,958
Export a decrease of	...	...	13,784
Stock an increase of	...	...	12,722

Auctions this week have gone off as under:—

CEYLON.—*Plantation*—Of 43 casks 2 tierces 8 barrels 10 bags only 9 packages sold—small 37s to 40s, low middling greenish 73s 6d.

EAST INDIA.—Of 581 bags offered only 90 bags sold—*Neilgherry*, small 45s 6d, low middling 48s 6d to 50s 6d, peaberry 46s 6d; *Coorg*, peaberry 57s to 62s.

JAVA.—106 bags *Liberian* bought in.

COSTA RICA.—Of 444 bags offered 320 bags sold—new crop: small 32s 6d to 46s 6d, fine ordinary greenish 45s 6d, low middling to middling 53s to 58s 6d, bold 70s to 72s, peaberry 54s to 64s; old crop: middling grayish 60s, peaberry 44s to 46s 6d.

SALVADOR.—68 bags sold—low middling greenish foxy 48s 6d.

NICARAGUA.—274 bags half sold—small 31s to 36s, good ordinary to low middling 42s to 49s, peaberry 40s.

GUATEMALA.—680 bags mostly sold, middling pale grayish 50s, common bold 58s.

COLOMBIAN.—Of 214 bags catalogued about 50 bags sold—small 36s, low middling 45s 6d to 46s, peaberry 46s.

MEXICAN.—271 bags sold, small 39s, middling 51s 6d, fair bold 58s 6d, peaberry 47s 6d to 55s.

ECUADOR.—Of 171 bags damaged offered 70 bags sold, bold palish 28s 6d.

BRAZIL.—Of 2,238 bags washed Dumont Santos 1,125 bags sold, small 33s 6d to 37s, medium 36s 6d to 44s, bold 39s to 51s 6d, peaberry 37s 6d to 53s. Of 245 bags Washed Santos, landed terms, 107 bags sold, small 37s 6d, medium 40s to 41s, peaberry 41s. Of 1,223 bags Santos, quay terms, only 23 bags sold, good bright pale greenish 33s 6d. 74 bags Washed Rio bought in.

#### Receipts in Rio and Santos.

Rio Exchange 12d, previous day 12d.

HAVRE, December 11.—Good average Santos December opened quiet at 33½f. and closed quiet at 33½f., March opened at 34½f. and closed at 34½f., May opened at 35f. and closed at 35f., July opened at 35½f. and closed at 35½f., September opened at 36f. and closed at 36f.

HAMBURG, December 11.—Good average Santos December opened quiet at 28¼pf. and closed quiet at 28pf., March opened at 29pf. and closed at 28¼pf., May opened at 29¼pf. and closed at 29¼pf., July opened at 29¼pf., and closed at 29¼pf., September opened at 30¼pf. and closed at 30¼pf.

NEW YORK, December 11.—Closing prices of No. 7 Rio were as follow:—

	Dec.	Jan.	Feb.	Mar.	April.
Dec. 10 ...	4.55	4.65	4.75	4.85	4.90
Dec. 11 ...	4.60	4.65	4.75	4.85	4.95

## TEA.

INDIAN.—There was again a reduction in the amount printed, which was 23,300 packages, against 36,500 at the date of our last report, and 48,900 at this time in 1901.

Competition was more general and prices may be quoted somewhat higher for all descriptions, a marked rise being noticeable for the lower grades, compared with the offers made in the sale-room the previous Monday. Sweet common leaf now shows an improvement of about 1½d per lb. from the lowest point, but is yet barely up to the quotations current at this time last year, in spite of the stronger statistical position and the brighter outlook. Trade in the country is still disappointingly slow, the disposition being to await further developments rather than pay the advance until forced to do so. Home consumption for the past five months marks an expansion of 8 million lbs. over the similar period in 1901.

In view of the Christmas holidays, it is proposed to hold no auctions after Thursday, the 18th instant until Wednesday, 31st idem.

For 21,000 packages on garden account 7¾d per lb. was obtained contrasted with 7½d per lb. for 39,600, and 7½d per lb. for 47,300 in the two foregoing seasons.

CEYLON.—Catalogues included 16,500 packages, whereas, on the 2nd instant, 17,000 were submitted, and 20,800 a year ago.

There was a good general inquiry. Pekoe Souchongs and Pekoes of ordinary character here and there fractionally hardened, while medium to fine leaf kinds met a steady demand at former rates to an occasional advance. Broken Pekoes received attention, especially the lower sorts, which went firmly. Fine and finest sold a little irregularly, but, on the whole, without material change in value. The average is a little over 7¾d per lb. On the 4th instant it was 7½d and in 1901 slightly over 7½d.

JAVA.—Sales comprised 556 packages of direct import, which were taken up freely at full prices.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From December 1 to 9, 1902	...	6,617,666 lbs.
Do. do. 1901	...	6,105,676 "

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India ...	19,804	3,542	23,346
Ceylon ...	14,007	2,538	16,545
Java ...	531	25	556
Total ...	34,342	6,105	40,477

Also 334 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated December 12th, 1902, says:—

#### QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1902-1903 ...	849,538	646,711	41,118
1901-1902 ...	825,282	641,977	37,235
23,407 pkgs. INDIAN	Total 41,016 packages were offered in public auction this week.		
17,053 " CEYLON			
556 " JAVA			

The lighter quantity brought forward this week has already exercised a beneficial effect upon the market, and the slack feeling which was so noticeable in the early part of last week has not only entirely disappeared, but has given place to a distinctly firmer tone with a slight improvement in prices generally.

Although the quantity advertised for next week is slightly heavier, auctions are likely to be upon a decidedly moderate scale, and as in all probability there will be a cessation of sales at any rate until the last day of the year, buyers should have about a fortnight's rest, and thus be enabled to dispose of a large proportion of their recent purchases before the resumption of auctions after the holidays.

INDIAN.—The quantity brought forward was unusually small, viz., 23,407 packages, against 37,810 last week, and 46,198 the week before. The light auction met with better attention, and the weakness noticed last week has disappeared, prices showing a distinct recovery with good general competition.

There is not much change to note in the quality of arrivals, the outturn so far, being hardly up to what it was last year, although musters indicate a better Autumn crop.

Revised Customs figures showing the Imports of Indian and Ceylon tea from 1st June to end of September:—

Bengal Presidency (including Calcutta and Chittagong) ...	41,992,147	1902. lbs.	41,444,259	1901. lbs.
Madras Presidency (including Travancore)	1,425,041	44,046,049	1,249,417	43,193,254
Bombay Presidency ...	628,861		499,578	
Ceylon Tea ...		39,219,292		34,651,521

TRAVANCORE has now become an important feature in the market, this district being always well represented in the auctions, while its teas have benefited very materially from the recent advance in quotations. Some of the teas grown at a high elevation are showing improved characteristics, and are commanding attention both from home and foreign buyers.

Week's av. of New Season's tea sold on Garden Account 1902, 21,223 pkgs., av. 7.61d. 1901, 39,646 pkgs., av. 7.55d.

New Season's tea sold on Garden Account 1st June to date 1902, 621,967 pkgs., av. 7.22d. 1901, 615,839 pkgs., av. 8.06d.

CEYLON.—The auction was again moderate, and influenced probably by the small Indian sale met with better attention from the Trade, teas up to about 9d being somewhat dearer. Finest kinds, however, sold with a slight irregularity.

Average for week 7.76d., against 7.49d in 1901.

Ceylon tea sold on Garden Account 1st January to date, 1,061,088 pkgs., av. 6.80d. 1901, 1,084,151 pkgs., av. 6.85d.

JAVA.—The small sale passed off at firm rates.

## COCOA.

The auctions on Tuesday passed with a generally dull tone, with prices in some instances quite 1s per cwt. lower; of 3,119 bags brought forward about 1,850 bags sold. Of 394 bags Trinidad catalogued, 140 bags found buyers at valuations—middling to good 61s to 63s. The large supply of 1,658 bags new crop Grenada went off slowly, but nearly all sold, prices being fully 1s per cwt. cheaper; good to fine quitted at 59s to 60s 6d and common to fair at 56s to 58s 6d. Of 902 bags Ceylon only 80 bags sold under the hammer—good fair to good Estate 65s to 70s, and smalls 45s to 50s 6d per cwt. 80 bags Samana and 85 bags Guayaquil retired unsold.

Private sale embrace—100 bags Guayaquil-Caraquez at 65s, fine Arriba at 78s, a small lot of Samana at 56s, and about 300 bags Ceylon at 54s for collected, and 64s to 70s per cwt. for medium to good Estate.

## PEPPER.

BLACK.—The market is firm. For arrival 50 tons Singapore January-March shipment (s.) have been sold at 6d, closing buyers at the price, with sellers at  $\frac{1}{16}$ d over. On the spot sales of fair Singapore have been made at  $5\frac{1}{16}$ d to 6d.

At auction on the 10th instant 85 bags Singapore were bought in at 6d, also 150 bags Aleppy at  $5\frac{7}{8}$ d ( $5\frac{3}{4}$ d refused). 539 bags Penang sold, "without reserve," at lower prices—weight 3 lbs. 13 ozs., dust  $5\frac{5}{8}$  % per gallon, at  $4\frac{7}{8}$ d, and weight 3 lbs.  $5\frac{1}{2}$  ozs., dust  $7\frac{3}{8}$  %, at  $4\frac{3}{4}$ d per lb.

WHITE—is firm but quiet. For arrival some business has been done in Singapore near at hand at  $9\frac{5}{8}$ d; January-March shipment is quoted at  $9\frac{1}{16}$ d. On the spot business has been done in fair Singapore at  $9\frac{1}{16}$ d to  $9\frac{3}{4}$ d, and fair Penang at  $9\frac{3}{16}$ d per lb.

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price  $1\frac{1}{2}$  &  $2\frac{1}{6}$ .

# CONQUERS PAIN

At public sale on Wednesday 52 bags Singapore bought in at 10d to 10½d, also 50 bags Penang at 9½d per lb.; 245 bags Siam taken out without mention of price.

### GINGER.

COCHIN—is rather easier. 119 cases 451 bags were offered, of which 10 cases 221 bags sold—dull small cut, lined, 48s, small to boldish Calicut rough 34s to 35s, and shrivelled pickings (D's) 33s 6d per cwt.

JAMAICA.—20 barrels good middling washed bought in at 44s per cwt.

### CINCHONA.

In auction 26 serons Crown bark were offered and sold. Good bright, partly mossy, but small and broken, Loxa quill sold at 9½d, and coarse broken 7½d. Four bales bright Huannco realised 9½d per lb.

At the auctions of Java Cinchona held at Amsterdam on December 11, 8,799 bales and 382 cases were offered. Of this quantity, 8,139 packages were sold at an average unit of 6.25c. per half-kilo., as compared with 6.05c. per half-kilo. paid at the auctions on November 6. The following were the approximate quantities of quinine sulphate purchased by the principal buyers: the English and American factories, 12,202 kilos.; the Brunswick factory, 5,678 kilos.; the Mannheim and Amsterdam factories, 5,178 kilos.; the Frankfort-on-Maine and Stuttgart factories, 5,656 kilos.; and various buyers, 5,890 kilos. The prices paid for manufacturing-bark ranged from 12c. to 63½c. per half-kilo., and druggists' bark from 4c. to 67c. per half-kilo.

### QUININE.

Quinine has been more active this week, and values are slightly higher. Spot stuff was sold early in the week from second hands

at from 11½d to 11¾d, and subsequently at 11¾d, but sellers now at 1s. March delivery has sold at 1s to 1s 0½d per oz.

The exports during the nine months ending September amount to—

	1902.	1901.	1900.
Kilos. ...	155,700	155,900	137,700
Marks ..	6,539,000	6,548,000	6,197,000

In reference to our report of the Java quinine-tender of November 26, it should be stated that the average price obtained for the 300 kilos. sold was 16½fl., against 16½fl. at the October auctions, and not 17¼fl. as given in our last report, that figure being the price obtained at the September tender.

### CARDAMOMS.

Cardamoms proved a dragging market and prices declined 1d to occasionally 2d per lb. on the medium and higher grades. Split and seeds were about steady. The following prices were paid:—Ceylon Mysore, medium and bold pale, 2s 5d to 2s 11d; bold medium pale, 1s 9d to 2s; small and medium pale, 1s 5d to 1s 7d; medium and bold brownish, 1s 6d; small and medium brownish, 1s 2d to 1s 5d; small brown, 11d. Bold pale splits, 2s 3d to 2s 5d; medium splits, 1s 5d to 1s 7d; medium and bold yellowish, 1s 10d; very small palish, 11d; brown splits and pickings, 11d. Lean native wild Ceylon, 7d; decorticated seeds, 1s 4d to 1s 6d per lb.

### VANILLA.

A consignment of about 300 kilos. of vanilla, cultivated in German East Africa, arrived in Hamburg a short time ago. The beans are said to be of fine dark chocolate colour, and are commencing to crystallise. They are of various lengths, and are reported to compare favourably with the best Bourbon quality.

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 16th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Coorg.

POLLI BETTA, 7th January.—

*Weather*—Intensely cold for two days, then a sudden change back to warmish weather with East wind. During the past two days rain threatened, but, beyond a few drops, it came to nothing. *Crop*—In some cases, estimates have been picked with more to come. In others, crop is  $\frac{1}{2}$  and  $\frac{2}{3}$  through. Trees are coming very well out of the heavy crop on them and crops next season ought to be fairly good. *Labour*—Plentiful. *General health*—The changes in the weather have given rise to coughs, colds, and fevers.

### THE NEW YEAR.

#### TEA PROSPECTS.

THE chief markets for Indian tea are the United Kingdom and the United States. Our remarks will, therefore, be mainly directed to a review of prospects in these centres. Towards the close of the old year a trade paper in London remarked :—"Latest telegrams from Calcutta and Colombo point to very moderate supplies for the rest of the season; the present lull is healthy after the very sharp and sudden rise, and a slight reaction is only natural, but we are not going to see again for some time to come the ruinous rates that were ruling a month ago." We believe this to be a correct view, but was it a mere accident that the words appeared in the course of remarks on the sales of *China* tea? India was at the time placing large quantities on the London market, yet prices had advanced  $\frac{1}{4}$ d to  $\frac{1}{2}$ d. Ceylon was offering supplies "unequal to the requirements of the trade." Not very long ago another London report stated in respect to China teas :—"The position now

is getting healthy. The stock of Congou is only three-quarters of a million over last year, and from the end of October last year until the end of the season we received about 7,000,000 lbs. of low-priced Congou under, say, 6d. per lb., while for the remainder of the present season we are not likely to 1,000,000 lbs. more from China. Probably we have just enough good tea to last out for present demands, unless America still draws heavily on our now depleted stocks; but we cannot but think that the present low rates for sweet old-season's Monings and Panyongs, say from 3d. to 4d., must improve in value." Of Indian teas it was said at the same time :—"The future outlook is highly favourable to importers, and prices are likely to harden if supplies are kept within reasonable bounds. Fine and Finest teas received most attention." Of Ceylons :—"As Colombo shipments for the past month were much below those at this time last year some further improvement in quality is anticipated, while the present increased stock is soon likely to be turned into a material deficiency." We need only add that since the above reports were published, up to the present time, the course of prices has justified the prognostications made.

There is one little cloud on the horizon outlined in the reports, and this is, the fact that everything points to a continued demand for China teas. If prices improve, there is obviously a risk of larger shipments; and these must tend to bring rates down again. China's competition is at present more important in the United States than in British markets. This brings us to a point that is somewhat remarkable. The one great defect in the organisation of the British-grown tea-trade in London is a lack of active progressive co-operation. Precisely the same defect has been observed in the States. What planters should aim at is an organisation of producers and importers, bent upon seeing that tea receives fair play, is pushed for all it is worth, and is not subjected to extravagant charges. What appears to be aimed at in New York, is an organisation of tea-dealers. This, also, is desirable, but only if faced by another organisation, representative of the interests of producers and wholesale sellers. A New York paper has observed that "it is remarkable, and the more's the pity, that tea men prefer to live on detached, so to speak, from one another." That in union is strength is conceded everywhere but the axiom is not practiced in the American tea world, and, quite naturally, not standing in an united manner the interests of the trade fall in

the division existing, as witness the humiliation of tea at the hands of Congress, which despite the earnest wishes of tea men retained the duty on tea months longer than on other commodities. Experience in London has amply demonstrated the fact that there are occasions on which the interests of importers and retailers are the same, as well as other occasions on which they are in conflict. What our American contemporary refers to is a special matter in respect to which the interests of all concerned in the tea trade should be identical. What it urges is that a national Association is a conceded desideratum of the trade and that the movement to form one has met with general approval. Still, it seems to be as far from realization as when it was first broached, nearly a year ago. The preliminaries have been attended to but the power to breathe life into the embryo organism seems to be lacking. The formation of such an Association would certainly have a great influence on tea prospects in the United States—for good or for evil, according as the interests of producers were well or ill represented.

In the United Kingdom also producers of British-grown teas should see that their interests are safeguarded. It would appear that in the natural order of things demand for tea will improve, prices will harden; but this progress is always liable to receive a check, and it can never attain its maximum speed so long as special efforts are not made on behalf of the industry. This is the time to give the industry a little impetus; conditions are favourable, and a timely bit of help might assure a rapid development. The levy of a Tea Cess should afford tea-planters in India an excellent opportunity of increasing their influence and strengthening their position in the markets of the world. If in the attempt to open up new markets things are left to drift in the old, progress will not be so rapid as could be wished. To a very large extent, in short, prospects are dependent upon the actions of planters themselves, and we trust that, at the opening of a new year, all will exhibit a keen interest in schemes for the advancement of an industry which is now in a fairly healthy condition and only needs a little assistance to enable it to become much more prosperous. The things needed are co-operation and organisation. A good plan selected, all should combine to push it along.

#### COFFEE NOTES.

**Brazil Coffee Crop and Flowering.**—At the average percentage observed during the last two weeks, says *Tea, Coffee and Sugar* of the 3rd ultimo, 66 per cent. entries up to the end of the crop ought to yield 5,000,000 bags, giving a total of about 11,000,000, or allowing for 1,000,000 bags corresponding to last crop, but entered since 30th June say, 12,000,000 bags. This, we believe, may be regarded as the maximum, the probabilities being that this figure will not be reached. For the last six years the date of receipt of half crop fell in October and November alternately. The October flowering is reported to have been in most districts very fine and to have taken well.

Total stock in United States December 1, 2,622,849 bags against 1,833,652 bags December 1, 1901. Brazil stock in the United States December 5, in store and afloat, 2,670,212 bags against 2,385,034 bags at the same time last year. Other than Brazilian, 230,777 bags, against 279,448 bags

last year. Brazil coffee in New York December 6, 2,198,933. Stock in New York in other coffees December 1, 211,632, in San Francisco, 16,571 bags and in New Orleans, 2,574 bags.

**The New York Market.**—Market dull and working lower. It is the old story of excessive supply and speculators' attempts to resist natural conditions. Enormous blocks of coffee are held by disappointed manipulators, with the result that their movements are at the bottom of any wide fluctuation. The Brazil crop is large, with promise of a still greater production following. On the spot, demand is slow, with prices about as last quoted.

**Coffee Shade.**—Secretary Wilson, of the U. S. Department of Agriculture, in his annual report (1902) says:

"The coffee industry of Porto Rico has been injured by the presence of too many shade trees in the plantations, owing to the belief of the planters that heavy shading is necessary. A study of the flourishing coffee industry of Guatemala establishes the facts that coffee of the highest grades can be grown entirely without shade, and that the diminution of shade lessens the ravages of the Central American leaf-disease.

"The general opinion that the foliage and fruit of the coffee shrub are benefited by shade is erroneous, but the shading of the ground is often a cultural advantage. The nitrogen-collecting powers of leguminous shade trees have also contributed largely to the good effects commonly ascribed to shade, so that the selection of the best leguminous shade trees and soiling crops is of much importance to the coffee-planter."

The Pacific Coast (American) consumption of coffee is about 15,000 bags per month, and the mild Guatemala coffee is used principally.

In the last five years consumption in the United States has increased from 500,000,000 lbs. to 1,000,000,000 lbs., an increase that is, in fact, phenomenal. Doubtless, the increasing cheapness of coffee has much to do with this happy result and also the practical elimination of adulterants, to say nothing of the general spread of knowledge how best to brew the "cup that cheers but not intoxicates."

Cable advices from A. Tromell & Co. say that there were 3,000,000 bags of Santos coffee yet to be marketed this season making the Santos crop for the season 1902-03 about 8,000,000 bags.

**Retail Prices in America.**—The New York correspondent of the *Australian Grocer* recently said:—"There is a feeling that grocers generally have for the past two or three years charged much more than a legitimate profit on coffee." We watch closely such retail price lists as come under our notice, and from these we long ago drew the conclusion that low prices had had much to do with the expansion of demand for Coffee in the United States. There are high prices as well as low, but this is easily explained by the difference between the wholesale rates for, say, Java and Rio.

**Milling coffee in a Roaster.**—A coffee man in New York was telling the other day of a novel factory operation he had just seen.

It was the milling of green coffee in a roasting establishment which contained no milling machinery. The work was done in the roaster, a one-bag Burns-Gas machine, and the proprietor was getting results which pleased him greatly.

The machine was needed for roasting only a part of the time, and it was found that instead of letting the cold machine stand idle it could be made good use of for cleaning green coffee. Each bag to be treated could be tumbled as long as desired. The cleaning by sifting was perfect; the friction of the coffee on itself and on the numerous lifting blades was considerable; and an excellent chimney draft gave a good air current for carrying off light dust.

The coffee was fed to the machine by a bucket elevator, the same as for roasting, and when sufficiently "milled" was discharged directly into a bag by the convenient spout at the front. There was no lifting, shoveling or waste; and the whole operation struck the coffee man as a very clever use of a spare cylinder.—*Spice Mill.*

\* \* \*

**November Coffee Movement in the U. S.**—Sales on Coffee Exchange, 1,348,250 bags. In October, 567,500 bags.

Arrivals in United States, 528,240 bags (467,629 bags Brazil); Europe, 1,165,590 bags. Total in the United States for five months, 1902-3, 2,980,648 bags, (2,642,462 Brazil) and for Europe, 4,336,758 bags against 4,603,168 bags for same period 1901-02.

Deliveries of coffee during November in the United States 500,332 bags (438,190 Brazil) against 706,981 in November, 1901; Europe, 739,881 bags, against 828,759; United States and Europe, 1,240,213 bags, against 1,535,740 bags in November, 1901. Total 5 months, 1902-03, 2,796,313 bags (2,377,191 Brazil); Europe, 3,900,523 bags and 6,696,836 United States and Europe.

Receipts at Rio and Santos November, 1,206,000 bags against 1,620,000 bags in November, 1901. Total shipments from Rio 345,000 bags, against 462,000 bags in October; from Santos 794,000 bags against 1,127,000 in October, 1902.

### TEA NOTES.

**Tea in Tunis.**—The British Consul reports that the consumption of tea in Tunis is small, and the duty is high. The natives consume a certain amount of green tea, but the use of tea among the Europeans is growing rapidly. "Five o'clock tea" is becoming common. At present the French know little of other than China teas at a very high price, 5fr. per half-kilo. (3s. 7½d. per lb. English) being the usual retail quotation. Mr. Consul-General Berkeley adds:—"A development in this trade seems well within the reach of ordinary effort and attention on the part of sellers."

\* \* \*

The following figures of tea exports taken from the Calcutta Customs' daily entries and received periodically from Chittagong are issued by the Indian Tea Association:—Quantity of tea entered for export to United Kingdom for the second half of December, 1902: Calcutta, 4,385,918 lbs.; Chittagong, 1,365,700 lbs. Quantity entered during the corresponding period last year: Calcutta, 5,236,245 lbs.; Chittagong, 2,559,900 lbs. Total from 1st April, 1902, to 31st December, 1902: Calcutta, 111,629,068 lbs.; Chittagong, 19,050,000 lbs. Total 130,679,668 lbs. Total from 1st April, 1901; to 31st December, 1901, 135,577,430 lbs.

\* \* \*

Some members of the tea trade in the United States expect to see an advance in prices of tea after the duty comes off on January 1, but the greater number believe that the heavy withdrawals will affect the market injuriously. It should be remembered that the quantity in store is much the largest in the history of the trade. It is more than 50,000,000 lbs., or enough for about seven or eight months' consumption. And

there are still three weeks' arrivals to be added, whatever they may be.

\* \* \*

An American paper remarks:—Wherever there are bonded warehouses there also is tea, piles of tea, cartloads of tea, waiting until the tax rolls off the staple with the rising of the sun of the new year. It is surprising how much tea is stored in places where ordinarily it is in very small supply.

\* \* \*

Tea-drinking is said to be increasing in men's clubs of New York. Afternoon tea has become a feature of several of the clubs.

\* \* \*

**New York Imports.**—The imports of tea at the port of New York during November were 13,000,000 pounds, a large total, which brings the amount of tea in warehouse in New York to 50,000,000 pounds. This is an extraordinary quantity and the wonder of it is that storage could have been procured for it all. And there is more to come. Certainly no tea famine threatens the United States. Interesting to note also are the rejections of tea by the tea examiners. So careful have the selections been recently that there has been little occasion to refuse entre to tea so that even some suspicion received foundation that a relaxation had set in the examiners' vigilance. A special surprise was the rejection of 2,500 pounds of Ceylon Green which has been heralded as particularly prepared for the American market. This, we understand, is the first time the tea has met with the tea examiner's veto.

\* \* \*

**Withdrawing Tea in the U. S.**—Following is the circular relating to the delivery of tea from warehouse on and after January 1, 1903, issued to all customs officers by Acting Secretary of the Treasury H. A. Taylor:

"The attention of officers of the customs is invited to Section 10 of the Act approved April 12, 1902, entitled, 'An Act to Repeal War Revenue taxation and for other purposes,' repealing, to take effect on January 1, 1903, Section 50 of the War Revenue act of June 13, 1898, which imposed a duty of ten cents per pound upon tea imported from foreign countries. As under said Act of April 12, 1902, tea in warehouse not more than three years on January 1, 1903, can be withdrawn free of duty, and as the demand for immediate delivery to the trade will no doubt be very great it is hereby decided that the examination and delivery from warehouse of such tea be expedited as much as possible."

\* \* \*

Samples of Ceylon tea are being distributed free to consumers in some inland towns and cities in the States. The samples are accompanied by explicit directions as to the brewing, a most important point, for Ceylon, like India tea, is much stronger than ordinary China and Japan leaf and makes many more cups to the pound. It is pointed out by the distributors of these samples that, as the samples are packed where the teas grow, they escape contamination by dirt, dust, and other impurities, unlike teas sold in bulk. This is a rap at the grocers which is undeserved. Caddy-stored tea, such as is found in the average grocery store, has no more chance to be contaminated than packet teas. That is why the caddies are used.

\* \* \*

**The Largest Plantation.**—The largest tea plantation in the world is on the Sinagar Estate in Java, which covers about 15,000 acres of land, of which 8,500 acres are devoted to the cultivation of tea and coffee. The estate produces more than 1,000,000 lbs. of the finest tea a year, and altogether it has yielded more than

80,000,000 lbs. The estate, run by Europeans, has a capital of \$300,000, and it pays dividends of 9 and 10 per cent. annually. It has paid as high as 24 per cent., and has never failed to pay well. Its annual wage account amounts to \$100,000, and in addition it furnishes its own employes with medicine and rice. The men who are employed regularly are paid 7 cents a day and rice. The women get a Dutch cent a pound for picking. This is equal to four-tenths of one cent and some make as much as 25 cents a day, while others make 10 cents or less.—*Tea.*

### COFFEE IN DISTANT LANDS.

**Porto Rico.**—In a very interesting account of what American rule has done for Porto Rico, given to Collier's Weekly by Gov.-Gen. Hunt, he states that coffee has flourished there for 150 years, and says :

"Good coffee lands, well cultivated, will produce at least 4 quintals of coffee annually per acre. This is a very conservative estimate. With this production and a price of \$10 per quintal for coffee we have \$40 per acre. A quintal of coffee can be laid down at the seaport for exportation at a total cost of \$7 for production and transportation. At a total expense of \$28 per acre there should be left a minimum net gain of \$12 per acre for coffee, even at the very low price commanded by the Porto Rican berry at present. Brazilian coffee is cheaper than that grown in Porto Rico, but it is inferior in quality. It is said that the best coffee served in Vienna and Madrid comes from Porto Rico. Europe bought over \$3,000,000 worth last year.

The United States does not yet know of the excellence of its own insular drink, but there are hopeful indications. In 1901 the value of coffee sent from Porto Rico to America was \$4,305, but last year \$28,188 worth came to New York. As an after-dinner coffee the Porto Rican is unsurpassed, and it cannot fail to be very popular before long."

**Queensland.**—A correspondent writes to the *Grocer*:—The area under productive coffee-trees in 1901 was 370 acres, and that under non-productive trees, 177 acres; the increase in the productive area was 87 acres. The yield for the year was 130,293 lbs. It was in the north that coffee cultivation was most closely followed. There were in that division 472 acres under coffee out of a total for the whole of 547 acres. It is estimated that the present production is equal to 45 per cent. of the requirements.

In all instances where coffee is being grown and properly cultivated, paying returns are being obtained. The conditions of soil, climate, temperature, and rainfall are eminently suitable for coffee culture in Queensland. The conditions obtaining admit of its successful cultivation on the comparatively level lands, and at all elevations down to sea-level, and give the planters an advantage over those in countries where the higher levels, steep hills, and more inaccessible places have to be sought to obtain the necessary conditions—advantages especially noticeable in the direction of cultivation and transport, and the by no means to be despised advantage of a healthy and congenial climate.

Cairns, the principal of the coffee-growing centres of North Queensland, comprises both high and low land. The climate is perfect for coffee, the average temperature for the year being from 62 to 65 degrees Fahr., the minimum being about 36 degrees Fahr., and the maximum about 95 degrees Fahr. The rainfall average is 98.34 inches. Several estates on the lower lands, varying in elevation from 50 feet to sea-level, are doing well. The majority of clearings are,

however, on the tablelands of the ranges some few miles inland. Kuranda, the central township, is reached by rail from Cairns, after a journey of an hour-and-a-half through most picturesque scenery. The railway line winds up the range among hills, crossing gorges, and passing waterfalls, reaching an altitude of some 1,100 feet at Kuranda itself. The climate of this tableland is clear, cool, and invigorating. Slight frosts are experienced in winter occasionally in exposed situations, but no trouble is met with in this way upon coffee clearings judiciously selected and carefully opened. The water-supply is plentiful, and machinery for coffee curing in several instances is worked by water-power. The quality of the coffee produced here is high. At Kuranda a coffee grower has opened a factory, and manufactures tins, and disposes of a large proportion of the products of the locality.

A market for the staple exists in the State, where there are several manufacturers who buy up the coffee in the raw or parchment state. With the federation of the colonies that has been recently effected, a larger market still has been opened to this product of North Queensland, with a protection against the imported article. The consumption of the Australian continent is at present very much in excess of the production and, will continue to consume all the local produce for many years. In the open markets of the world the coffee of North Queensland, though only small quantities have as yet been offered, owing to the local demand, is rapidly gaining in favour, and the generally high quality readily acknowledged. For buyers who, having no hulling machinery, desire only the clean bean, there are mills in the town of Cairns where the hulling and cleaning is done at a cost of ½d. per lb., after which the coffee is worth from 9d. to 1s. per lb., according to grade and quality.

### NOTES.

**Coffee in France.** During 1901 France imported Coffee to the declared value of £3,640,000, as against £3,672,000 in 1900.

**Ceylon Tea Shipments.** The tea shipments for December were 9,000,000. The estimate for January is 9½ to 10 millions.

**Tea in Switzerland.** During 1901 Switzerland imported Tea to the value of £45,000. Of this, China teas represented £36,000; Indian, £6,900; and tea from other countries, £18,000.

**Calcutta Tea Sales.** At the auctions held on Monday 31,387 packages passed under the hammer. The tone of the market was lively, and, generally speaking, there was strong bidding for the commoner grades. Broken Pekoes in the lower range were certainly in greater request.

**Cacao and its Enemies.** A planter writes to the *Ceylon Observer*:—Cacao disease is rampant on some of the cacao trees in native gardens on an old foot path to Matale at the end of Trincomalee Street. Perhaps His Excellency will appoint a Commission to take steps to prevent native gardens being a source of peril to cacao estate owners. His Excellency loves Commissions.

**Vanilla from German East Africa.**

The *Chemist and Druggist* of 13th ultimo says :—A consignment of about 300 kilos. of vanilla cultivated in German East Africa, arrived in Hamburg a short time ago. The beans are said to be of the fine dark chocolate colour, and are commencing to crystallise. They are of various lengths, and are reported to compare favourably with the best Bourbon quality.

**Japan Tea.**

Kobe and Osaka:—

The following are statistics of Exports of Tea from the ports of

	1900.	1901.
	lbs.	lbs.
Green, pan-fired ...	7,546,161	7,495,826
basket-fired ...	4,096,737	4,348,016
Sundry ...	4,282,899	5,850,128
	15,925,797	17,693,970

The value of the whole in 1900 was £363,905; in 1901, despite the increase in quantity, only £359,819.

**"Pure Ceylon."**

A Travancore tea-planter, on his way home, wrote from on board a mail steamer in Colombo harbour to say :—"From what I have seen since coming on board it appears to me to be a great pity that native traders should be allowed to sell such rubbishy teas to passengers as they do. I have seen tea purchased by passengers in Colombo at 1s. 3d. a lb. as 'pure Ceylon tea,' which would not fetch more than about 18 to 20 cents in the Colombo market." It is an old story. Some of the "pure Ceylon tea" offered in Colombo is as spurious as are some of the pseudo-sapphires that are to be had there.

**Tea in Persia.**

Chief among British and Indian imports to Khorassan and Seistan is tea. According to the Ag. British Consul, this is and should continue to be a safe monopoly. There is said to have been a large accumulation of Indian tea in Meshed at the end of 1900-01, and the tea trade during 1901-02 is described as not having been as brisk in consequence as in recent years. The taste for tea is strongly developed, even among the poorer classes of Persians, and there is always likely to be a strong demand. The value of the tea imported by Bunder Abbas, Bushire, and Seistan routes in 1901-02 was £50,267, but a considerable proportion of the tea by the two first routes is said to have been Chinese tea for exportation to Trans-Caspia and Turkistan.

**Importation of Cacao into Samoa Prohibited.**

In view of the danger resulting from the importation of diseased cacao plants, beans, and pods into Samoa, the German Government passed on September 6 the following ordinance : "The import of cacao seed and cacao plants from Ceylon and the Dutch Indies is prohibited. The import of cacao seed and cacao plants from other countries is admissible only after previous sanction of the Government. Cacao seed and cacao plants imported from the countries named, and from others without previous sanction of the Government, will be destroyed. Reimbursements of damages caused through this destruction will not be granted. Any person who, contrary to the direction of this ordinance, introduces cacao plants or cacao seeds into Samoa will be fined up to 2,000 marks (\$476), or punished with imprisonment up to three months."

**Tea Prospects.**

We note that the *Ceylon Observer* holds that there can be no question of the strong statistical position occupied by black tea as the year closes. Stocks in London are low, and a good demand may well be anticipated with the opening of the new year. Shipments from India—according to the latest figures—are 4 million lbs. behind those for last year, and no less than 14 million lbs. less than in 1900; while the exports from Ceylon are expected to close for 1902 at about 3 million lbs. behind the shipments for 1901. As regards Green teas, there is considerable activity in manufacture, especially in the low-country; but it is a question if this will increase in view of the better demand for our Black tea. Here, at any rate, is the opinion of a well-informed mercantile authority :—"With better prices ruling for Blacks there will be less inducement to make Greens, and I will be rather surprised if the total quantity of Green tea, made in Ceylon in 1903, exceeds 7½ to 8 million lbs."

**GENERAL ARTICLES.****LONDON TEA CLEARING HOUSE.****THE RULES OF THE INNER COUNCIL OF WAREHOUSEMEN.**

The *Times of Ceylon* gives the following interesting information :—

1. Dock Companies at present carrying on the business of warehousing Tea in Bond and tea warehouse keepers (including any Company or partnership) at present carrying on the said business and including Monastery Bonded Warehouse Company, Limited, and who undertake in writing to abide by and observe the rules and bye-laws of the Clearing House for the time being in force, shall be entitled to become members of the Tea Clearing House. Every member or Company, or partnership represented, shall pay in advance on the 1st July in each year, an annual subscription of £20. After the Committee of Management (as hereinafter defined) shall have been elected, any person, Company or partnership entitled and desiring to become a member, shall apply to such Committee, who shall take such steps as may be necessary for his or their admission. Each of the said Dock Companies shall be represented by two persons, each of whom for all purposes hereinafter mentioned shall be deemed a member. Two of the Committee (other than the representatives of the Dock Companies) shall retire at the end of each year and be eligible for re-election.

2. The affairs of the Clearing House shall be conducted by a Committee of Management, consisting of not more than eight persons, four of whom shall be members appointed by the said Dock Companies and four shall be elected in general Meeting from the other members, by whom in general Meeting vacancies caused by retirement of any of their representatives shall be filled. Every member of the Committee shall hold office so long as he remains a member of the Clearing House or until resignation, retirement, or removal. Any member of the Committee may be removed therefrom by the members of the Clearing House in general Meeting, and any vacancies in the Committee may be filled up in the manner above provided, but the Committee may act notwithstanding any vacancy or vacancies.

3. A Company or partnership being a member may vote at general Meetings, and act generally in any way in which a member can act, by any Director, Manager, Agent or member of the partnership appointed for the purpose. Any person so appointed shall also be eligible for election on the Committee of Management.

4. The Committee of Management may meet for the despatch of business, adjourn, and otherwise regulate their proceedings as they think fit, but not less than four members shall form a quorum. The Committee shall have power to elect one of their number to be their Chairman, either generally or at any particular Meeting. Questions arising at any Committee Meeting shall be decided by a majority of votes, or referred as provided in Clause 16 hereof.

5. The Committee may acquire and take suitable offices and

premises for the transaction of the affairs of the Clearing House, and may appoint and dismiss officers and servants, and fix the amount of their remuneration. The Committee may also from time to time make such bye-laws not inconsistent with the rules for the time being of the Clearing House as they may think fit for the regulation of the Clearing House, and may from time to time rescind or vary the same.

6. The first general Meeting of the members shall be held forthwith. Subsequent general Meetings shall be held at least once in each year, at such time and place as may be prescribed by the Committee. The Committee may call a general Meeting at any time, and they shall call a general Meeting whenever a requisition in writing, signed by four or more members of the Clearing House requiring a general Meeting to be summoned, and stating the business for which the meeting is to be summoned, shall be delivered to them or left at or sent by post to the chief office of the Clearing House.

7. If the Committee within seven days after the date when such notice ought to have been received by them do not issue notices calling a general Meeting in accordance therewith, for a day not more than twelve days after the same date, the requisitionists, or any other members amounting to the required number, may themselves at any time within a further period of twelve days convene a general Meeting for the business described in the requisition.

8. Five days' notice at the least (exclusive of the day on which the notice is served or deemed to be served, but inclusive of the day for which the notice is given) specifying the place, the day, and the hour of meeting, and the business to be transacted, shall be given to every member either personally or through the post in a prepaid letter addressed to such member at his registered address. Every member shall have a registered address within the United Kingdom, and in default thereof shall not be entitled to receive any notices from the Clearing House. Accidental omission to give any such notice or the non-receipt of such notice by any member shall not invalidate any Resolution passed or proceeding had at any Meeting.

9. No business shall be transacted at any general Meeting unless ten members be personally present when the Meeting proceeds to business. At an adjourned Meeting the members present shall form a quorum. The members present shall choose some one of their number as Chairman of the Meeting. All questions at a general Meeting shall be decided on a show of hands by a majority of the members present in person, each member having one vote only. In case a poll be demanded, the members shall be entitled respectively to such number of votes as shall have been allotted to them or the Companies or partnerships represented. The allotment of votes shall be made by the Committee annually during the first week in July, and shall be based upon the proportionate amounts of tea warehoused by the several members respectively during the preceding season, and on a poll no question shall be decided on a less majority than two-thirds.

10. All expenses not covered by annual subscriptions shall be borne and paid by the members rateably according to the number of votes to which they are respectively entitled on a poll in the year during which such expenses become payable. Any surplus shall be, in the discretion of the Committee, either divided among all the members in like proportion, or may be retained and invested in such manner as they may think fit.

11. Every member shall charge on tea by ships reporting on or after the 1st day of July, 1888, and on new season's China tea arriving before that date, the respective rates, charges, and rents, and adhere to the terms and conditions specified in the schedule to these rules, and shall not be at liberty to depart therefrom in any way, subject to the following allowance, *viz.*: a discount not exceed 10 per cent may be allowed on the said rates, charges, and rents, or any of them, being importers' charges. No other discount, no money gratuities, and no advantages, direct or indirect, shall be offered or allowed by any member, or his agents or employes, to any merchant, broker, employe, agent, or other person in connection with any matter or thing in anywise relating to the Tea Clearing House, agreement; but any member shall be at liberty to allow any difference in premium on insurance of teas warehoused or deposited with him beyond 3s. 6d. per cent. per annum, paid for the same goods if on an annual policy, or a proportionate difference according to tariff rates if on a short time policy. All payments under this latter head to be notified to the Committee and entered

in a book kept for the purpose, which shall be opened at all times to the members.

11a. Subject and without prejudice to the provisions contained in Rule 11, no member shall be at liberty, either directly or indirectly, to offer, pay, or allow, or to permit to be offered, paid, or allowed any commission or other similar payment or allowance to any person not in his permanent and exclusive employ, or in the case of a Company or partnership not in the permanent and exclusive employment of such Company or partnership, or to any importer or shipper, or person acting for any importer or shipper for or in respect of or in connection with the soliciting, introducing or obtaining the delivery, consignment, warehousing, deposit or handling of any teas to, with or by him or them, the said member or Company or partnership as the case may be.

12. Any person, Company, or partnership in the tea trade, other than the first subscribers, desiring to become a subscriber to the Clearing House, shall apply to the Committee, who may either accept or reject him or them. The annual subscription shall be deemed to be payable in advance on the 1st July in each year, and shall be one guinea, until otherwise declared by the Committee.

13. A discount not exceeding five per cent. on buyers' rent chargeable under the schedule to these Rules shall be allowed to any subscriber in lieu or on account of Fire Insurance. The rates for sampling and carding as specified in the schedule, and also the five per cent. discount on buyers' rents shall not be increased or varied for five years provided the Clearing House continues in operation for that period. No discount or any allowance whatever on buyers' rent shall be given or made directly or indirectly to any non-subscriber.

14. No subscriber shall be entitled to warehouse or deposit tea with, or employ in connection with tea, any Dock Company or Tea Warehouse keeper, who is not a member of the Clearing House, or to purchase or sample any tea from the warehouse of any non-member.

15. Any member or subscriber breaking or failing to observe any of the rules or bye-laws of the Clearing House for the time being in force, shall be liable to expulsion from the Clearing House by Resolution of the Committee. An expelled member or subscriber may be re-admitted on such terms as may be determined by the Committee.

16. Any of the rules for the time being in force, or the table of rates, charges, and rents, and terms and conditions specified in the schedule, and subscriptions, may be rescinded or varied by a general Meeting of members of the Clearing House. The Committee of Management shall decide all questions that may arise under or in connection with these rules, and as to the meaning or effect thereof, and all questions in relation to the working or management thereunder, and their decision shall be absolute and final, without appeal of any kind; and in the event of any question coming before the Committee on which the Committee may be equally divided, the question shall be referred to Mr. Henry Attlee, of No. 10, Billiter Square, London: or in case of his inability to act, the Governor for the time being of the Bank of England, or his Nominee, whose decision shall be final.

THE SCHEDULE TO THE RULES.—CHARGES ON TEA.

To apply to all parcels by ships reporting on and after 1st July, 1888, and to new season's China tea arriving prior to that date:—

	PACKAGE WEIGHING GROSS.													
	160 lbs. to 199 lbs.	130 to 159.	90 to 129.	80 to 89.	60 to 79.	45 to 59.	35 to 44.	17 to 34.	16 lbs. and under.					
	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.
Landing and Housing Rate	2	3	1	10	1	6	1	4	1	3	1	0	0	10
Management Rate	2	9	2	3	1	10	1	8	1	5	1	2	1	0
Bulking and Taring	2	0	1	8	1	5	1	3	1	2	0	11	0	8
Bulking Taring or Weighing net separately	1	6	1	3	1	0	0	11	0	10	0	8	0	6
Rent, per week	0	10	0	4	0	0	2	0	0	2	0	0	4	0

*Note.*—The Management Rate shall apply to all teas put up for Public Sale.

The above rates are chargeable on the average gross weight of each break. When the fraction of the average weight is half a pound or more, the higher rate will apply. Thus: The average of a break being  $79\frac{1}{2}$  lbs. gross, the whole break will be rated at  $80\frac{1}{2}$  lbs., but the average being less than  $79\frac{1}{2}$  lbs. the whole break will be rated at  $60\frac{1}{2}$  lbs.

Prime Warrants 2s. each, exclusive of Stamp.

Weight Notes 2d. each.

Commutation of Rent to be allowed as under:—

A first prompt under the Management Rate at 8 for 13 weeks.

At second, or subsequent prompt, under the Management Rate, or any prompt under the Landing and Housing Rate, at 10 for 13 weeks.

The Order, however, to entitle a person to any such commutation must be lodged prior to the expiration of the first week of the 13 in every case.

All taring, except average taring of China, Japan, and Java teas to be charged for in addition to the Landing and Housing or the Management Rate.

Customs attendance at re-weighing to be charged net. Stamps also net. Carding  $\frac{1}{4}$ d. per package. Minimum charge 1d. Trade Sampling per ch. 3d., half-ch. 2d., box 2d.

17. In the month of July, 1898, the Committee shall cause to be prepared a statement showing the total gross weight of tea of all sorts warehoused by each member during the preceding twelve months or season, and showing also the quantity warehoused by the respective members in excess of or short of the allotted proportion as shown in the schedule to these Rules (which is prepared on the average receipts of four seasons or years as shown therein), the same being reduced to a common denominator of half-chests or units of 72 lbs. each, and further showing the amount of such excess or deficiency calculated at the rate of 7d. per half-chest or unit.

18. Every member shall furnish the Committee with such information, in such form and at such times as the Committee may require, for the purpose of enabling the above-mentioned statement to be prepared.

19. A copy of the aforesaid statement shall be given or sent as as soon as practicable to each member at his registered address. Any member shall be entitled at any time within seven days after the date when a copy of such statement has been given to him or left at his registered address, or if sent by post ought to have been delivered in due course of post, to make any objection or objections to such statement or any item or items therein. Every such objection shall be considered and dealt with by the Committee, whose decision shall be final except in the case of the Committee being equally divided, when the question shall be referred and decided in the manner provided by Clause 16 of the original Rules.

20. If no objection be made within the prescribed time, or if an objection or objections shall have been made, then when the same shall have been withdrawn or adjudicated upon as provided in Rule 19, the statement, with any modifications which may be necessary by reason of any objection or objections having been sustained, shall be signed by the Chairman for the time being, and when so signed shall be binding on all the members.

21. When the aforesaid statement has become binding, every member whose quantity of tea warehoused as appearing in the statement, shall exceed or fall short of the percentage appropriated to such member by such apportionment, shall in the one case be bound to pay to the Committee on demand the amount of the excess, and shall in the other case be entitled to receive the amount of the deficiency, such amounts being calculated as provided by Clause 17 of these additional Rules. Provided nevertheless that no member shall have any claim against the Committee, or any member thereof personally for any sum payable or alleged to be payable to him under this rule.

22. All sums payable under Clause 21 of these rules shall, upon non-payment thereof upon demand by the Committee, be recoverable by the Committee or their assigns from the party or parties in default in an action against them as for moneys had and received by such party or parties to the use of the said Committee, and in any such action proof of such demand made by the Committee shall be sufficient to and shall entitle the said Committee to judgment against the party or parties in default. The Committee shall, upon receipt or recovery of such sums, pay the same to the

members entitled thereto, or, in the event of the whole of the money not having been received at any time when the Committee may deem desirable so to do, a *pro rata* payment may be made in proportion to the amount in hand.

23. In the event of any Dock Company, wharfinger, or warehouse-keeper, applying for admission to the Tea Clearing House, such application shall be referred to the members at a special or general meeting for their decision thereon, and on the terms on which such admission if assented to should be allowed.

24. The Committee shall have power in their discretion to vary or suspend the operation of any of the last seven rules, in whole or in part, as may seem to the Committee equitable or expedient to meet the special circumstances of any member, and may from time to time in like manner vary or suspend in part the operation of the rules for such period on such terms as they may think expedient to meet cases of individual hardship or inconvenience.

[Rules 17 to 24 were approved 2nd November, 1896, under the following Resolution:—

Subject and without prejudice to the existing rules of the Tea Clearing House, the following additional rules are agreed to, which shall, in the first instance, apply to season July, 1897, to June, 1898, inclusive.]

## TEA IN PARIS.

Under the heading "Paris at Five O'clock," Mrs. Alec Tweedie described last week in the *Pall Mall Gazette* the craze for tea-drinking in the gay city. In the course of her article Mrs. Tweedie said: "There has been several revolutions in Paris; but none more complete than the revolution of the tea cup. Tea cost forty francs a pound at the time of the *coup d'état*, and was only indulged in on rare occasions by the wealthy. Afternoon tea was almost unheard of ten years ago in Paris, and yet to-day it is the fashion everywhere.

"There is no doubt about it: afternoon tea is a particularly British institution. Rich and poor alike enjoy that stimulating beverage between four and five o'clock, and look upon it as a necessity of existence. This has been the custom for years, ever since the duty went down and the imports from China went up; but until lately Britain has stood alone as a drinker of afternoon tea.

"Is the present craze in Paris the outcome of the International Exhibition of 1900? Is it the result of the British invasion at that time, which clamoured for afternoon tea, a habit followed by other weary sightseeing folk, who in their turn found it so refreshing that they have kept to the habit? Or is it that fashionable Parisians dine so much later now-a-days, they find refreshment of some sort is necessary between a twelve o'clock déjeuner and an eight o'clock dinner? Whatever the cause, the revolution is complete, and Paris has succumbed.

"In many of the fashionable hotels a notice is posted in the hall intimating that the band will play from four to six o'clock, when tea will be served. The idea of smart hotels is being quickly followed by smaller shops, and bills announcing in English, 'Five O'clock Tea' may be seen on every side. So completely have Parisians adopted our custom, they speak of the meal as 'le five o'clock,' the word 'tea' being often omitted altogether.

"The revolution in tea has gone even further. We have lately stayed in three delightful old French châteaux, where nothing is more noticeable within the last few years than the decline of coffee and the ascendancy of tea. Formerly everyone took 'café au lait' at their early breakfast in their own rooms; now tea is almost as universally drunk as coffee. Formerly everyone drank café-noir after déjeuner and dinner; now, apparently, only half of the people do so. Formerly coffee was excellent, it was a treat to go to France for the sake of the coffee alone; but this is changed. So many people have given up drinking coffee, and those who take it black so often drown its flavour with liqueurs, that a cup of really good coffee is now the exception and not the rule. The tea has improved as much as the coffee appears to have deteriorated.

"The afternoon tea custom which has started in Paris has spread to the country house. Every afternoon we found the valet de chambre brought in his silver tray with tea-things arranged upon it as in England. The daughter of the house deftly dispensed her wares, and the other noticeable differences between England and France were—the tea was weaker, the lumps of sugar larger, the teapot always had a silver strainer hanging from its spout to hold back the leaves, and instead of eating the cakes dry

premises for the transaction of the affairs of the Clearing House, and may appoint and dismiss officers and servants, and fix the amount of their remuneration. The Committee may also from time to time make such bye-laws not inconsistent with the rules for the time being of the Clearing House as they may think fit for the regulation of the Clearing House, and may from time to time rescind or vary the same.

6. The first general Meeting of the members shall be held forthwith. Subsequent general Meetings shall be held at least once in each year, at such time and place as may be prescribed by the Committee. The Committee may call a general Meeting at any time, and they shall call a general Meeting whenever a requisition in writing, signed by four or more members of the Clearing House requiring a general Meeting to be summoned, and stating the business for which the meeting is to be summoned, shall be delivered to them or left at or sent by post to the chief office of the Clearing House.

7. If the Committee within seven days after the date when such notice ought to have been received by them do not issue notices calling a general Meeting in accordance therewith, for a day not more than twelve days after the same date, the requisitionists, or any other members amounting to the required number, may themselves at any time within a further period of twelve days convene a general Meeting for the business described in the requisition.

8. Five days' notice at the least (exclusive of the day on which the notice is served or deemed to be served, but inclusive of the day for which the notice is given) specifying the place, the day, and the hour of meeting, and the business to be transacted, shall be given to every member either personally or through the post in a prepaid letter addressed to such member at his registered address. Every member shall have a registered address within the United Kingdom, and in default thereof shall not be entitled to receive any notices from the Clearing House. Accidental omission to give any such notice or the non-receipt of such notice by any member shall not invalidate any Resolution passed or proceeding had at any Meeting.

9. No business shall be transacted at any general Meeting unless ten members be personally present when the Meeting proceeds to business. At an adjourned Meeting the members present shall form a quorum. The members present shall choose some one of their number as Chairman of the Meeting. All questions at a general Meeting shall be decided on a show of hands by a majority of the members present in person, each member having one vote only. In case a poll be demanded, the members shall be entitled respectively to such number of votes as shall have been allotted to them or the Companies or partnerships represented. The allotment of votes shall be made by the Committee annually during the first week in July, and shall be based upon the proportionate amounts of tea warehoused by the several members respectively during the preceding season, and on a poll no question shall be decided on a less majority than two-thirds

10. All expenses not covered by annual subscriptions shall be borne and paid by the members rateably according to the number of votes to which they are respectively entitled on a poll in the year during which such expenses become payable. Any surplus shall be, in the discretion of the Committee, either divided among all the members in like proportion, or may be retained and invested in such manner as they may think fit.

11. Every member shall charge on tea by ships reporting on or after the 1st day of July, 1888, and on new season's China tea arriving before that date, the respective rates, charges, and rents, and adhere to the terms and conditions specified in the schedule to these rules, and shall not be at liberty to depart therefrom in any way, subject to the following allowance, viz.: a discount not exceeding 10 per cent may be allowed on the said rates, charges, and rents, or any of them, being importers' charges. No other discount, no money, gratuities, and no advantages, direct or indirect, shall be offered or allowed by any member, or his agents or employés, to any merchant, broker, employé, agent, or other person in connection with any matter or thing in anywise relating to the Tea Clearing House, agreement; but any member shall be at liberty to allow any difference in premium on insurance of teas warehoused or deposited with him beyond 3s. 6d. per cent. per annum, paid for the same goods if on an annual policy, or a proportionate difference according to tariff rates if on a short time policy. All payments under this latter head to be notified to the Committee and entered

in a book kept for the purpose, which shall be opened at all times to the members.

11a. Subject and without prejudice to the provisions contained in Rule 11, no member shall be at liberty, either directly or indirectly, to offer, pay, or allow, or to permit to be offered, paid, or allowed any commission or other similar payment or allowance to any person not in his permanent and exclusive employ, or in the case of a Company or partnership not in the permanent and exclusive employment of such Company or partnership, or to any importer or shipper, or person acting for any importer or shipper, for or in respect of or in connection with the soliciting, introducing or obtaining the delivery, consignment, warehousing, deposit or handling of any teas to, with or by him or them, the said member or Company or partnership as the case may be.

12. Any person, Company, or partnership in the tea trade, other than the first subscribers, desiring to become a subscriber to the Clearing House, shall apply to the Committee, who may either accept or reject him or them. The annual subscription shall be deemed to be payable in advance on the 1st July in each year, and shall be one guinea, until otherwise declared by the Committee.

13. A discount not exceeding five per cent. on buyers' rent chargeable under the schedule to these Rules shall be allowed to any subscriber in lieu or on account of Fire Insurance. The rates for sampling and carding as specified in the schedule, and also the five per cent. discount on buyers' rents shall not be increased or varied for five years provided the Clearing House continues in operation for that period. No discount or any allowance whatever on buyers' rent shall be given or made directly or indirectly to any non-subscriber.

14. No subscriber shall be entitled to warehouse or deposit tea with, or employ in connection with tea, any Dock Company or Tea Warehouse keeper, who is not a member of the Clearing House, or to purchase or sample any tea from the warehouse of any non-member.

15. Any member or subscriber breaking or failing to observe any of the rules or bye-laws of the Clearing House for the time being in force, shall be liable to expulsion from the Clearing House by Resolution of the Committee. An expelled member or subscriber may be re-admitted on such terms as may be determined by the Committee.

16. Any of the rules for the time being in force, or the table of rates, charges, and rents, and terms and conditions specified in the schedule, and subscriptions, may be rescinded or varied by a general Meeting of members of the Clearing House. The Committee of Management shall decide all questions that may arise under or in connection with these rules, and as to the meaning or effect thereof, and all questions in relation to the working or management thereunder, and their decision shall be absolute and final, without appeal of any kind; and in the event of any question coming before the Committee on which the Committee may be equally divided, the question shall be referred to Mr. Henry Attlee, of No. 10, Billiter Square, London: or in case of his inability to act, the Governor for the time being of the Bank of England, or his Nominee, whose decision shall be final.

THE SCHEDULE TO THE RULES.—CHARGES ON TEA.

To apply to all parcels by ships reporting on and after 1st July, 1888, and to new season's China tea arriving prior to that date:—

		PACKAGE WEIGHING GROSS.																
		160 lbs. to 199 lbs.		130 to 159.		90 to 129.		80 to 89.		60 to 79.		45 to 59.		35 to 44.		17 to 34.		16 lbs. and under.
		s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	d.	d.

rately	...	1	6	1	3	1	0	0	11	0	10	0	8	0	6	5	3	
Rent, per week	...	0	1	0	0 $\frac{3}{4}$	0	0 $\frac{1}{2}$	0	0 $\frac{1}{2}$	0	0 $\frac{1}{2}$	0	0 $\frac{1}{2}$	0	0 $\frac{1}{4}$	0 $\frac{1}{4}$	0 $\frac{1}{4}$	

*Note.*—The Management Rate shall apply to all teas put up for Public Sale.

The above rates are chargeable on the average gross weight of each break. When the fraction of the average weight is half a pound or more, the higher rate will apply. Thus: The average of a break being 79½ lbs. gross, the whole break will be rated at 80/9 lbs., but the average being less than 79½ lbs. the whole break will be rated at 60/79 lbs.

Prime Warrants 2s. each, exclusive of Stamp.

Weight Notes 2d. each.

Commutation of Rent to be allowed as under:—

A first prompt under the Management Rate at 8 for 13 weeks.

At second, or subsequest prompt, under the Management Rate, or any prompt under the Landing and Housing Rate, at 10 for 13 weeks.

The Order, however, to entitle a person to any such commutation must be lodged prior to the expiration of the first week of the 13 in every case.

All taring, except average taring of China, Japan, and Java teas to be charged for in addition to the Landing and Housing or the Management Rate.

Customs attendance at re-weighing to be charged net. Stamps also net. Carding ¼d. per package. Minimum charge 1d. Trade Sampling per ch. 3d., half-ch. 2d., box 2d.

17. In the month of July, 1898, the Committee shall cause to be prepared a statement showing the total gross weight of tea of all sorts warehoused by each member during the preceding twelve months or season, and showing also the quantity warehoused by the respective members in excess of or short of the allotted proportion as shown in the schedule to these Rules (which is prepared on the average receipts of four seasons or years as shown therein), the same being reduced to a common denominator of half-chests or units of 72 lbs. each, and further showing the amount of such excess or deficiency calculated at the rate of 7d. per half-chest or unit.

18. Every member shall furnish the Committee with such information, in such form and at such times as the Committee may require, for the purpose of enabling the above-mentioned statement to be prepared.

19. A copy of the aforesaid statement shall be given or sent as as soon as practicable to each member at his registered address. Any member shall be entitled at any time within seven days after the date when a copy of such statement has been given to him or left at his registered address, or if sent by post ought to have been delivered in due course of post, to make any objection or objections to such statement or any item or items therein. Every such objection shall be considered and dealt with by the Committee, whose decision shall be final except in the case of the Committee being equally divided, when the question shall be referred and decided in the manner provided by Clause 16 of the original Rules.

20. If no objection be made within the prescribed time, or if an objection or objections shall have been made, then when the same shall have been withdrawn or adjudicated upon as provided in Rule 19, the statement, with any modifications which may be necessary by reason of any objection or objections having been sustained, shall be signed by the Chairman for the time being, and when so signed shall be binding on all the members.

21. When the aforesaid statement has become binding, every member whose quantity of tea warehoused as appearing in the statement, shall exceed or fall short of the percentage appropriated to such member by such apportionment, shall in the one case be bound to pay to the Committee on demand the amount of the excess, and shall in the other case be entitled to receive the amount of the deficiency, such amounts being calculated as provided by Clause 17 of these additional Rules. Provided nevertheless that no member shall have any claim against the Committee, or any member thereof personally for any sum payable or alleged to be payable to him under this rule.

22. All sums payable under Clause 21 of these rules shall, upon non-payment thereof upon demand by the Committee, be recoverable by the Committee or their assigns from the party or parties in default in an action against them as for moneys had and received by such party or parties to the use of the said Committee, and in any such action proof of such demand made by the Committee shall be sufficient to and shall entitle the said Committee to judgment against the party or parties in default. The Committee shall, upon receipt or recovery of such sums, pay the same to the

members entitled thereto, or, in the event of the whole of the money not having been received at any time when the Committee may deem desirable so to do, a *pro rata* payment may be made in proportion to the amount in hand.

23. In the event of any Dock Company, wharfinger, or warehouse-keeper, applying for admission to the Tea Clearing House, such application shall be referred to the members at a special or general meeting for their decision thereon, and on the terms on which such admission if assented to should be allowed.

24. The Committee shall have power in their discretion to vary or suspend the operation of any of the last seven rules, in whole or in part, as may seem to the Committee equitable or expedient to Meet the special circumstances of any member, and may from time to time in like manner vary or suspend in part the operation of the rules for such period on such terms as they may think expedient to meet cases of individual hardship or inconvenience.

[Rules 17 to 24 were approved 2nd November, 1896, under the following Resolution:—

Subject and without prejudice to the existing rules of the Tea Clearing House, the following additional rules are agreed to, which shall, in the first instance, apply to season July, 1897, to June, 1898, inclusive.]

## TEA IN PARIS.

Under the heading "Paris at Five O'clock," Mrs. Alec Tweedie described last week in the *Pall Mall Gazette* the craze for tea-drinking in the gay city. In the course of her article Mrs. Tweedie said: "There has been several revolutions in Paris; but none more complete than the revolution of the tea cup. Tea cost forty francs a pound at the time of the *coup d'état*, and was only indulged in on rare occasions by the wealthy. Afternoon tea was almost unheard of ten years ago in Paris, and yet to-day it is the fashion everywhere.

"There is no doubt about it: afternoon tea is a particularly British institution. Rich and poor alike enjoy that stimulating beverage between four and five o'clock, and look upon it as a necessity of existence. This has been the custom for years, ever since the duty went down and the imports from China went up; but until lately Britain has stood alone as a drinker of afternoon tea.

"Is the present craze in Paris the outcome of the International Exhibition of 1900? Is it the result of the British invasion at that time, which clamoured for afternoon tea, a habit followed by other weary sightseeing folk, who in their turn found it so refreshing that they have kept to the habit? Or is it that fashionable Parisians dine so much later now-a-days, they find refreshment of some sort is necessary between a twelve o'clock déjeuner and an eight o'clock dinner? Whatever the cause, the revolution is complete, and Paris has succumbed.

"In many of the fashionable hotels a notice is posted in the hall intimating that the band will play from four to six o'clock, when tea will be served. The idea of smart hotels is being quickly followed by smaller shops, and bills announcing in English, 'Five O'clock Tea' may be seen on every side. So completely have Parisians adopted our custom, they speak of the meal as 'le five o'clock,' the word 'tea' being often omitted altogether.

"The revolution in tea has gone even further. We have lately stayed in three delightful old French châteaux, where nothing is more noticeable within the last few years than the decline of coffee and the ascendancy of tea. Formerly everyone took 'café au lait' at their early breakfast in their own rooms; now tea is almost as universally drunk as coffee. Formerly everyone drank café-noir after déjeuner and dinner; now, apparently, only half of the people do so. Formerly coffee was excellent, it was a treat to go to France for the sake of the coffee alone; but this is changed. So many people have given up drinking coffee, and those who take it black so often drown its flavour with liqueurs, that a cup of really good coffee is now the exception and not the rule. The tea has improved as much as the coffee appears to have deteriorated.

"The afternoon tea custom which has started in Paris has spread to the country house. Every afternoon we found the valet de chambre brought in his silver tray with tea-things arranged upon it as in England. The daughter of the house deftly dispensed her wares, and the other noticeable differences between England and France were—the tea was weaker, the lumps of sugar larger, the teapot always had a silver strainer hanging from its spout to hold back the leaves, and instead of eating the cakes dry

many of the people preferred to tremper them—that is to say, dip them in their tea and eat them soaked with that beverage.

“When visitors came to call, tea was immediately offered, as it is in Russia. Until lately Russia was the only country which ran us anywhere close in the matter of afternoon tea; but then in Russia tea is going on all day long, and the samovar is in constant requisition. In Russia, however, the tea is served in tumblers, without milk, a piece of lemon being added to bring out the flavour. Russian tea is excellent; but then the very finest China tea goes to Russia, where the colour and the aroma are as much considered as these qualities are by a connoisseur of good wine.

“Paris has not copied the Russian way of drinking tea, but has adopted our thoroughly British institution and mode of enjoying that beverage at five o'clock; and at five o'clock every afternoon the smart folk of the city may be seen enjoying their tea as to the manner born.

“Paris has been besieged, and has capitulated in favour of afternoon tea.”

Mrs. Tweedie's inquiry whether the tea-drinking habit of the Parisian is the outcome of the exhibition of 1900 has brought a reply from Mr. Edward F. Langdale, one of the tea representatives at the exhibition. He says: “Most assuredly, yes. And I hope that by virtue of the office I held at the exhibition I may claim to give my opinion so decidedly. Acting under the influential auspices of their respective tea Associations, and by the authority of the Indian and Ceylon Committee of the Royal Commission, Paris Exhibition, 1900, the representatives of the tea interests of India and Ceylon were able to do good work at the exhibition itself, and, what is more important, to lay the foundation in Paris of a trade or business which is, I believe, becoming the permanent one of which Mrs. Alec Tweedie has now so agreeably treated.

“Tea interests, generally, are now in such a precarious state that all who are closely concerned with them are naturally grateful when the Press gives its powerful aid to find fresh outlets for the present over-production of tea. The following Press notice was written in 1900, and the opinions therein expressed are, I think, now being verified:—

“‘Nothing of this kind has ever been done before in Paris, or has succeeded so well. The attempt to sell tea to the public at previous exhibitions has usually ended in disappointment. The object of the Association, to popularise tea, is evidently being attained; the tea has become popular, and a nucleus has now been formed for a business which should be continued after the exhibition is at an end.’

“Mrs. Tweedie also asks if the ‘craze’ is the result of any British invasion of the exhibition?

“I do not think so, for my own experience, so far as regards the Indian tea courts, was that our fellow-countrymen were more conspicuous by their absence than by their presence. The tea courts were the resort daily of some of the best French society, members of which were known to say that the Indian tea courts were the most chic of any in the exhibition, and that the Grand Prix should have been awarded for the manner in which the tea was served, as well as for the goodness of the tea itself.

“As a further proof that the taste for tea in France became more general at the time of the exhibition, many people, particularly those from the provinces, bought small packets of tea to take home with them. These sales direct to the public were most encouraging for the prospects of tea, for they showed the desire of the purchasers to try and cultivate a taste for it. Also, they showed visitors to the exhibition that good tea is obtainable at as low a price as from 3 to 4 francs a pound instead of at such a prohibitive one as from 8 to 12 francs, which I often saw marked up in the shops in Paris.

“By the enterprise of India and Ceylon, particularly of Ceylon, tea is now often obtainable in the cup at many of the cafés, but the knowledge how to make it properly has yet to be gained. There are also dépôts and tea-rooms, run mostly by English people. One, very tastefully decorated, is an offshoot of the exhibition, and is situated nearly opposite the British Embassy. The proprietor is a French gentleman who evidently believes in the ultimate success of tea-drinking in France. If only tea-rooms after the kind of those of our Aerated Bread Company's shops could be dotted about Paris, the middle classes would probably be secured, and then, in course of time, the masses, who are as yet much averse from tea, and treat it as medicine. There is however, one danger ahead which cannot be ignored—that is

that the French Government might increase the Customs duty still as high, I believe, as 1 franc 25 cents per pound, and thus blight the hopes of importers of tea into France. Their hopes must rest on the Chambers of Commerce of France and England, between which two bodies there is evidently an excellent good feeling and understanding. At the time of the exhibition there was some talk of the duty on tea being increased. ‘Hinc illæ lachrymæ!’”

Another correspondent writes: “It is not in Paris that a taste for tea is spreading. A week or two ago I happened to be in Rheims, and noticed that there was quite as much tea as coffee exposed to view in the grocers' windows. But, in provincial France at least, there is still evidently a prejudice against tea grown in the British dominions. I am not enough of an expert in tea to tell from its appearance where it is grown. But perhaps you will allow me to quote some of the labels under which tea is sold in Rheims—a town, it should be remembered, which has a large English population.

“One sample was thus described: ‘Thé de l'île Bourbon. Ce thé par son arôme et sa finesse est sans rival, ayant le goût du thé anglais de Ceylan, il lui est supérieur. (The italics are in the original.)

“Another sort is ‘Thé d'Annam grosses feuilles fort en théine. Se recommande pour boissons hygiéniques.’

“A third variety is described as ‘Royal Souchong.—Thé noir, très digestif.’

“It is quite possible that all three are Indian or Cingalese blends masquerading under popular titles. May I, as an Anglo-Indian not in any way interested in the tea trade, suggest to Mr. Langdale that Rheims, an important town in which Englishmen are already strongly represented in the cloth and champagne trade, might be a good scene for a crusade in support of Indian tea? The ‘tea-habit’ is already formed, but the Reimois is educated to believe that tea grown in the French colonies is superior to the product of our gardens, which is very much as if an English grocer were to advertise ‘gooseberry’ as superior to the wine of Sillery or Ay.”

## RUBBER IN AFRICA AND SOUTH AMERICA.

The following extracts are taken from an article by Emile Bonnechaux, explorer, published in *Le Vieux Corsaire*:—

With the extending use of rubber and its thousand and one applications, a serious question presents itself. Will the forests producing rubber and bind weed become exhausted? Several trips to Madagascar and two voyages to Brazil for the purpose of exploring the forests may permit me to express an opinion on this subject. I believe that certain species will disappear in Africa, Madagascar, and Brazil—in fact, in all the regions producing rubber now exploited.

*Landolphias* will disappear both in Madagascar and on the continent of Africa, by reason of the barbarous methods of extraction employed by the natives, which consist in tapping the bind weed close to the place where it issues from the ground, dividing it afterwards into sections about 20 inches in length, from which the milk is drained by placing the sections upright in a gutter of split bamboo supported above the receiving pail by two wooden forks. The *Euphortiacée intisy* will also be exterminated in the Southern part of Madagascar. The *intisy* yields a milky juice, as rich as that furnished by the *Hévea brasiliensis*, but it is impossible to obtain it pure, as the natives allow the juice to flow to the ground, where it at once makes an amalgam elastic only in name. Besides, in their greed to obtain the maximum yield, the natives do not hesitate to tap even the tubercles of the roots, thus killing in one moment what nature has taken a century to produce.

Other varieties will also disappear. But there is one not indigenous to either Africa or Madagascar, which will not. It lives in the forests which are included between 8° north latitude and 8° south latitude. It is a native of Brazil, Peru, Bolivia, Ecuador, Colombia and Venezuela. The species is called *Seringa* in the Brazilian tongue. The botanical name is *Hévea*, one of the large family of the *Euphortiacées* which comprises a dozen varieties. The product of these trees is known on the markets of Europe by the name of *Pará fin*, from the town of *Pará*, near the mouth of the Amazon through which all the gum passes. The denomination *Pará fin* is

however, incorrect. The State of Pará produces some rubber, but the greater part comes from the district of Amazonas, from Peru, etc.

In these countries, the *Hévea* has fortunately been protected. The extractors have every incentive to preserve the trees from injury, in order to insure an annual yield, which I estimate at from \$290 to \$347 for one hundred days of actual labour. Some affirm that the gatherers average from \$8 to \$10 per day. This estimate is exaggerated. The exploitation of the *Héveas* and other rubber trees of South America supports some 100,000 people. One can judge from this of the importance of this industry. The rubber tree is carefully treated here. Already the two States of Brazil, Pará and Amazonas, have regulations for the distribution of lands. Both have taken measures to protect their natural resources, in order to preserve the immense revenues obtained from them. Manaus, the capital of the State of Amazonas, a town of 60,000 inhabitants, alone receives 48,000,000 francs (\$9,264,000) revenue from the export duty.

I can affirm with certainty that the States of South America included within these latitudes have inexhaustible riches, if they continue to protect them. Brazil and Peru in particular would alone be able to satisfy the consumption of the entire world in rubber. The time is not come for the exhaustion of these immense treasures. Although we penetrate now to the very sources of the large rivers, only the great arteries easily accessible have been explored; the small affluents, which, in my opinion, are even richer in rubber, are yet unknown. Yet it must be acknowledged that Brazil is less known in France to-day than Central Africa. The whole world has had its eyes turned towards the Dark Continent. The boundless forests on the other side of the Atlantic contain forests accessible to anyone desiring to go there. Marseilles is the port plainly indicated to become the headquarters of this trade and an important market for rubber.

Why should we not go to Brazil, to Peru, and bring gums of the first quality, so necessary for our new industry—motorcycles and automobiles? The English and the Germans do this and are making fortunes. I know of one German house in Manaus which has realised from commissions alone more than \$20,000 profit. There is also an opening for a French line of navigation. One English house—Singlehurst Brocklehurst, of Liverpool—had, twenty-five years ago, a few sailing vessels coasting along the eastern shore of South America, which touched at Pará. To-day, under the name of the Red Cross Line, this house has made a fortune. Within the year, the Germans of Hamburg have successfully established a line touching at Havre; the Italians have inaugurated a line from Genoa, touching at Marseilles. The French should learn the lesson.—*India Rubber Trades' Journal*.

## WORKING RUBBER ESTATES ON THE AMAZON.

BY ASHMORE RUSSAN (LONDON).

According to the papers before me, the properties on the Javary and its affluents numbered twenty-seven, with 2,500 *estradas* opened out and 250,000 trees (more or less) ready for tapping, the approximate area of the whole being given as 768,116,600 square metres, or about 300 square miles. This is believed to be one of the finest estates in the Amazon region. According to the documents, it comprised everything necessary in the shape of houses, stores, sheds (*barracoes*), etc., for the collectors. There were three steam launches—two of 40 tons and one of 10 tons; two iron lighters, and nine boats and canoes. All these adjuncts were apparently taken over by the French company. The amount of rubber produced from these estates is known to have been very large. I have before me the production for each year from 1891-92 to 1897-98. During the worst year (1891-92) the estates produced 215,927 kilos., and during the best year (1892-93), 348,920 kilos., the total for the seven years being 2,053,492 kilos., or 2,053 metric tons, an average of about 293 metric ton per annum, of the annual value, taken at the low average figure of £300 per ton, of £87,900, or say, about \$439,000. I know of no reason why these figures should not be taken as correct.

The net profits are given in this statement as 19.73 per cent. on the turnover, in addition to which there is 10 per cent. commission on the gross value of the goods supplied for the keeping of the

working staff. The Comptoir Colonial Français was formed, I believe, in 1899, and got to work early in 1900. It is now, as Mr. Witt has pointed out, in bankruptcy and so with other younger Company.

The experienced Brazilian *seringueiro* knows how to work these estates to advantage. He knows how to checkmate the 'river' thief; how to prevent his rubber cutters from selling elsewhere. If necessary to his own existence and success, he can, and will, remove the offender from the face of the earth. The foreigner lacks the experience, and even if he has lost all respect for the sixth commandment, he dares not break it in Brazil.

There is little more to be said. Good foreign labourers, Chinamen or Japanese, who will work for a wage at anything they are set to do, seem to me essential to the success of the foreign company working rubber properties in Brazil. I may add here that Barbadian niggers and their like are useless. Needless to say, the foregoing observations do not apply to the exploitation of rubber estates, in Africa, Mexico, Peru, parts of Bolivia, Venezuela, Colombia, or any other rubber-producing country where fairly efficient labour can be obtained for a comparatively small wage.—*India Rubber World*.

## VILLAGE JUNGLE FIRES AND INSECT PESTS.

The question of the injury done by forest-fires to the community at large has proved for many years past a highly controversial one, not India alone, but the wide world over, and the subject is now attracting the attention of our American cousins who are taking up the matter in their customary go-ahead fashion and with characteristic thoroughness. It is not, however, this side of the question nor the destruction of valuable forests by the forest-fire proper that will be dealt with here. This note concerns the smaller and humbler areas of scrub forest which exist scattered practically throughout the country adjacent to the cultivated lands of the villages. These areas are annually, as is well-known, either intentionally or accidentally burnt over in the hot weather, the principal object being to get up a crop of sweet young grass as soon as possible after the burst of the monsoon to give the cattle a much-needed feed. There are some, I believe, who consider this practice a most reprehensible one and strongly advocate its being stopped. With their arguments we need not concern ourselves here. I would strengthen the defence side of the question with a theory which requires quite as much consideration as, and may in the future require even more, as does the production of new grass for the famishing and sadly-reduced cattle. From observations made during the last few years the writer is of opinion that this annual firing of the jungles immediately adjacent to the cultivated lands has a direct bearing upon the safety, and therefore upon the percentage of outturn of the crops themselves, since it is more than probable, that many of the more dangerous of the crop insect pests are thereby kept in check to some extent. Records and observations on such matters are still very few and far between in India, but instances are already fairly numerous where an insect spends one or more of its annual life cycles, or generations, feeding upon the crops in the fields, retiring to some true shrub or herb in the neighbouring patch of jungle and living upon that after the fields have been cut over and whilst they are lying fallow. Over large areas in the country the cultivated lands are in this latter condition during the hot weather months. The ground is baked and parched and but little insect life, and certainly not that portion, which lives and feeds upon succulent green crop plants, is to be found on it. The parched up land scorched under a fiery sun, affords no shelter to the plant-loving insect and the condition of affairs is inimical, in many cases, to the eggs of such insects. What then has become of the myriad forms of insect life which the first burst of the monsoon will see swarming over these now dried up arid lands? If we move into the scrub forest alongside, and provided we know what stage of its life cycle the insect is in or the form it will have in this particular generation (for the form in the jungle may differ totally in appearance from the shape of the same insect in its crop feeding cycle of life) we shall find many of the pests collected on the trees or herbaceous plants, perhaps in the egg stage or as grubs, pupæ, or perfect insects. They may be quiescent, awaiting the succulent vegetable diet the ensuing rains will surely

bring them, or they may be absorbing food and slowly maturing with a view to laying their eggs in the fields as soon as the young plants make their appearance above the soil. Whatever may be the stage of life they are in, it is in every case a preparatory one and in which the insect is slowly preparing itself and gathering its strength to be ready for the onslaught in the fields as soon as the favourable conditions ensue.

Numerous instances might be quoted of insects with this double form of residence. One will suffice as an illustration.

The pest known as the Rice Sapper (*Leptocorisa acuta*) is to be found all over the East attacking rice. It is one of the true bugs and lives by sucking the juices out of the rice plant by means of the beak or proboscis of which its mouth consists. It is a common pest in the rice fields in the rainy months, feeding at first upon the stems, and later on, going up to the young forming grains in the ears and sucking out the milky juices therefrom before the grains harden. In ears so treated only the husk remains. The insects are sometimes so numerous that the ears bend down beneath the weight of the bugs feeding upon them. Cases are on record where large areas of grain have had to be left uncut since they consisted of husks only, the insects having sucked out all the juices from the young forming grains. The rice sapper passes through several life cycles in the fields, but at least one brood hatches in the adjacent jungle to which the insect betakes itself when the crops are reaped and the fields are lying fallow. Many similar cases exist. This then would seem to form a strong argument for the annual firing of all scrub jungle in the vicinity of cultivated land, as by so doing it is certain that a portion of the individuals of the life cycle or cycles passed in such places would be got rid off. Similarly I would treat in the same manner all neighbouring high grass areas. If the grass is cut and stacked for thatching purposes, fire should be run over the area when the grass has been removed as is done, to give an example, in the case of the thatching grass areas in Chittagong and the neighbouring hill tracts.

—E. T. STEBBING, in the *Pioneer*.

## PRODUCE AND PLANTING.

Most of us remember how in Gilbert and Sullivan's *Pirates of Penzance* the chorus of policemen just before setting out on the task of capturing the pirates, and showing no undue haste over the performance, sing a chorus beginning "We go, we go." The Major-General to whom they address themselves thereupon remarks, "Yes, but confound you, you don't go." The situation suggests that of the tea community who are crying out "We combine," or "We wish to combine," but somehow nothing comes of it. Doubtless the difficulties are great, and it was too much to expect that all the conflicting interests concerned would sink their differences of opinion and evolve a workable scheme at once. But is any scheme of combination likely to come into effect, or rather is a genuine effort being made to protect the interests of tea-growers from the forces now at work against those interests? It would seem that the policy of doing nothing in particular is in favour. It is hoped that matters will mend of their own accord. A slight improvement in the position seems to strengthen this view, and so we imagine everything will be permitted to rub along much as before, and later on, should the storm threaten to overwhelm, there will be a further flutter of excitement and talk of combination ending in naught. When a crisis is at its height there is usually a strong feeling in favour of an attempt to change the conditions under which the crisis was possible. But let the excitement subside and the position again becomes normal, and the feeling passes away. There is always the comfortable doctrine to fall back upon that it is unwise to interfere with the ordinary laws of economics, and as no one seems quite sure whether this is a fallacy or not, the majority give the firm believers in the doctrine the benefit of the doubt, and join the noble army who are prepared to wait the course of events, at any rate, until the next spell of hard times, when probably they will grumble louder than before and do nothing. It is a secular illustration of the old saw about "when the devil was sick, etc."

From the opening of the tea season of 1902 until the middle of October 38,000,000 lbs. of China tea were shipped to the United States, while 28,000,000 lbs. went to Europe, 12,000,000 lbs. to England, and

2,000,000 lbs. to Australian ports. The exports to America were greater this year than in any of the three preceding years, so that those who are engaged in the work of popularising Indian and Ceylon tea have plenty to do. Fifteen years ago China and Japan had the entire United States tea market, but since then India and Ceylon have not only captured a portion of it, but tea-drinking has become more popular in America, and the scope for increasing the consumption of tea is consequently much wider. It is a market the winning of which is worth a strenuous and persistent effort. In Ceylon planters are fully alive to the opportunity offered by the St. Louis Fair of 1904. The Hon'ble John Barrett, Commissioner-General for the Fair, was in Colombo at the departure of the last mail. He had an interview with H. E. the Governor at Queen's House in regard to the Exhibition, and the full sympathy of His Excellency in the project was enlisted. A public Meeting was held in the Ceylon Chamber of Commerce to meet Mr. Barrett, and then the possibilities and scope of the Exhibition were thoroughly expounded.

Tea-drinking is becoming the fashion at some of the New York clubs. The *Sun* of that city says: "Two city clubs have recently made a feature of afternoon tea by having it ready at a certain time every day and preparing to serve with it the kind of refreshment likely to be asked for. It is already a feature of life in a number of clubs in that the men who drink it are not even laughed at by their enemies. They arouse no more comment than if they had ordered a cocktail. One need only consider this situation to realise the extent to which the habit of tea-drinking has increased in this city in recent years."

"Coffee, like other things, is not always grown where the advertisements say," observes an American paper. "When the grocer is asked for a pound of Java or Mocha coffee he pours out several hundred dark brown beans, which probably were raised in Brazil, where at present the greater part of the world's supply is grown. The little island of Java, in the East Indies, and the little town of Mocha, with its 5,000 inhabitants, on the banks of the Red Sea, in Arabia, have now, in fact, if not in name, given way to the great South American Republic. Travellers in the State of São Paulo, in the southern part of Brazil, tell of enormous coffee plantations, some of which contain more than a million coffee trees. At Buenopolis, for instance, is a plantation which is said to be the largest in the world, and which has 5,000,000 trees. The coffee tree, when wild, grows as high as 20 feet, but, when cultivated, it is only half as large, with evergreen leaves and white flowers in the blossoming season. The fruit is a pod containing one or two beans. The pods are spread out on an open field to dry, and often these drying grounds cover nearly a square mile. When thoroughly dry the pods are run through machinery, which separates the beans into two kinds, those flattened on one side and those of complete spherical shape. The first is called Java coffee and the second Mocha. The coffee raised on these great plantations of Buenopolis is sent by rail to the port of Santos, on the Atlantic coast, where it is shipped to all parts of the world. Brazil produces each year about 660,000 tons, although the world's consumption is estimated at only 600,000 tons. There is thus at present an over-production of the coffee bean."—*H. & O. Mail*.

## TEA GROWING IN AMERICA.

In his Annual Report (1902) submitted to the President, Secretary Wilson, of the U. S. Department of Agriculture, says:—

"The work on the growing of American tea was continued during the year at Pinehurst, Summerville, S.C., in co-operation with Dr. Charles U. Shepard. Dr. Shepard now has at his place about 100 acres in tea gardens, and his factory is well equipped for carrying on work on a commercial scale and for accurate scientific experiments. With a view to bringing about a clear understanding as to the relationship of the Department to this work, a proper form of agreement has been prepared and entered into by the Department on the one hand and Dr. Shepard on the other. By the terms of this agreement the Department is able to secure the use of the extensive plant of Dr. Shepard for experimental purposes, and will profit by the results from the extensive work

that he is carrying on. During the year careful attention has been given to methods of reducing the cost of the production of tea with very satisfactory results. Improved factory methods have also been put into operation, with the result that better grades of tea are now being turned out than ever before. To aid in this work, Dr. Shepard has secured during the year the assistance of an expert tea taster in New York, who has sampled his various grades and thus made it practicable to determine not only the kinds of teas which have proved of the highest quality, but the effects of different methods of picking and handling.

"As pointed out in my last report, the yield of tea in Dr. Shepard's gardens last year was about 4,500 pounds, and this year there will be about 9,000 pounds of marketable tea. Some of the gardens have proved very prolific and profitable, while others have given very light yield of tea, having poor quality. All these facts, of course, will enable the Department to profit in further exploiting the work. With a view to increasing the interest in this crop, a tea farm will be established in Texas if suitable land and co-operation can be secured. Agents of the Department are now on the ground looking into the question, and the outlook is very favourable. Whether or not tea growing in this country can be made a commercial success will depend, in large measure, upon most rigid attention to the details connected with the field and factory work. It is not expected that any large profits will be made, but it is believed that by proper and judicious management sufficient profit will result to encourage the planting of the crop in many parts of the South, especially where there is cheap labour available. Proper labour, of course, constitutes one of the most important factors in this matter; but, unfortunately, there are many places in the South where hands now idle might be turned to some use in this direction.

### COFFEE PRICES TOO HIGH?

WASHINGTON, November 29.—Over-production of coffee everywhere has resulted in breaking the price paid to the producer to the lowest figures heretofore known, particularly in Brazil. For some time past quotations for cargoes have been steadily ranging downward. Within a week cargoes of No. 7 Rio, the standard grade, have sold in New York at  $5\frac{1}{8}$  cents a pound, the lowest price ever quoted.

Nevertheless, these low wholesale rates have not brought about any appreciable reduction to consumers of coffee. The retail prices are practically the same that prevailed in 1896-97, when the wholesale price of No. 7 Rio standard coffee in New York was almost exactly double the quotations of to-day.

The Treasury officials deem it extraordinary that a fall of more than 50 per cent. in the primary cost of all coffees has not carried with it a similar or at least some reduction in their retail price. Consumers have apparently received no benefit from the break in the primary markets.

Dealers explain the matter by asserting that the higher priced grades of coffee in general use in the United States are very much superior to the common Santos, Rios, etc., quoted at the ports of entry at the present cheap rates. They talk about gilt-edged brands of Mocha, Java, etc., which are said to cost much more in the primary markets.

Treasury officials think that statistics contradict this explanation. As a matter of fact, not one grocer in fifty throughout the Union ever has a pound of genuine Mocha or Java in his store from one year's end to another.

As none of the so-called Mocha and Java high grade coffees is produced in the western hemisphere, here is a suggestive grouping of eight months of American coffee imports:

	Pounds.
From all America .....	627,359,088
From all the rest of the world .....	21,859,882

Total imports, eight months ... 649,218,970

Five-sixths of all the coffee imported comes from Brazil alone. Only one-thirtieth is imported from all Europe, Asia, Africa, and Oceanica. Only the small quantity of 3,897,256 pounds came from all Oceanica, in which lies the native island home of Java coffee.

Conceding all the imports from the Old World to have been of the Mocha and Java varieties, the total would be no more than a few days' supply for the 80,000,000 American coffee-drinkers. But

much of the imported Old World coffee is not of those grades and is inferior to the average South or Central American coffee.

It is estimated that 200,000,000 pounds of the coffee consumed in the United States is labeled Mocha and Java by the coffee merchants, wholesale and retail. In view of the foregoing, the question where does all this vast tonnage of so-called Mocha and Java coffee come from?

So far as true Mocha is concerned Treasury officials say little or none of it enters American ports. The quantity of genuine Java imported is very small. Of course there is no smuggling because coffees come in free.

In short, the foregoing exhibits prove conclusively that ninety-nine one-hundredths of the alleged Java and Mocha coffee annually disposed of in the United States are just clean, well-cured and carefully graded South and Central American products, and nothing else, now quoted in New York at no more than  $5\frac{1}{4}$  to 7 cents.

Experts assert that the very best grades of coffee naturally should now be selling for 25 cents or less a pound.—*The Sun*.

The *Merchants' Review* comments on the above thus:—

Alas, as Falstaff remarked, how this world is given to lying. Here is a newspaper man, with the help of some Treasury officials and an alleged coffee expert, trying to make the grocers out to be a set of extortioners, and not a word said about all the sugar that is distributed below cost and all the flour that is sold at the narrowest of margins above cost. Lord, how this world is given to lying!

The Washington telegram in the *Sun* represents the imports of high grade coffee as very small, and the impression is sought to be conveyed that the bulk of the coffee-supply of this country is selling in this port in the green state at from  $5\frac{1}{4}$  c. to 7 c. Lord, how this world is given to lying!

Leaving the realm of romance, and resorting to the dry and matter-of-fact statistics prepared by Uncle Sam's own Treasury Department, we find that for the nine months of the calendar year ending September 30, 1902, about one-fifth of the total supply of coffee for this country came from places other than Brazil, all producers of high grade coffee. The East Indies sent us 16,000,000 lbs. of an average value of 11 c. per lb., Holland sent 1,462,182 lbs. at  $11\frac{1}{2}$  c. per lb., United Kingdom sent 1,183,645 lbs. at 13 c. per lb., Central America sent 42,109,871 lbs. at  $10\frac{1}{2}$  c. per lb., South America, barring Brazil, sent 47,581,858 lbs. at 7 c. per lb., Mexico sent 27,000,000 lbs. at about  $9\frac{1}{2}$  c.

These are respectable quantities and the prices, be it observed, are the prices quoted at places of exportation, and are less transportation, brokerage, bagging, and insurance charges. Even the average value of the large quantity of Brazil coffee imported during the nine months was slightly more than six cents per pound. Laid down in New York retail grocery stores in the roasted state, a mixture of all the Brazil grades of coffee would cost nearer twenty cents than six and leave little margin for profits, and yet this Washington authority insinuates that the best brands of West Indian coffee are purchasable in this city from  $5\frac{1}{4}$  c. to 7 c. per lb. Lord, how this world is given to lying!

It is perhaps not known to the compiler of the Washington telegram and his "expert" that coffee costs something to handle in its green state, that the cost of roasting is fully  $\frac{3}{4}$  c. per lb. and that the loss in weight during the roasting process is fully 15 per cent., which must be added to the price. Then there are storage charges, insurance and brokerage and bagging charges, which leave the importer and the wholesale dealer only a reasonable profit. If they sought more the active competition in the trade would prove an insurmountable obstacle. So far as the retailer's profit is concerned it could be argued with considerable force that the losses on sugar and flour must be balanced by liberal charge on something else, as coffee, tea, and spices. As a matter of fact coffee does not bear as large a profit as it ought to under the circumstances.

The No. 7 Rio, upon which the *Sun's* correspondent harps so much, has been low in price for several years, and on several occasions proprietary brands of roasted coffee made up principally of the low grade Brazils have been used as "leaders" in this city, selling from 10 c. to 14 c. per lb., but as the experiment was rarely repeated it is to be assumed that New Yorkers preferred a better-drinking coffee and were willing to pay the higher price asked for the superior kinds.

## TEA IN CANADA.

The *Canadian Grocer* reports :—

TORONTO, December 4, 1902.

The outside tea markets continue strong for both blacks and greens. Latest London samples show that that market is from 1 to 1½c. above Toronto in Indians and Ceylons. Indian greens are scarce and in demand at from 7¼ to 9½d.

MONTREAL, December 4, 1902.

Ceylon black teas are 1 to 1½d. higher for all grades, both on the London and Colombo markets. China greens continue very firm; the market for all green teas is now closed and advices state that it was stronger at the close than at any other time. Many orders were received after the close, but there was no possible chance of their being delivered. On the local market China greens are scarce. No. 2 hysons have become scarce on the primary market, owing to the fact that a number of contracts have been made in Canada and the United States for the produce of those States making green teas, and a number of States making blacks are now turning their attention to greens. Hence, in view of the larger production, lower prices are expected in green teas. One or two large invoices of China greens have changed hands during the past week or so, and the demand is still good. Indian teas are still low. There is not much demand, though it is expected that on account of the higher prices in Ceylon blacks a better movement will be given to Indian grades. Japans remain very firm under light supplies. A letter received here on Monday, dated November 7, says that arrivals from the interior were small. All teas of sound liquor and good appearance were hardly obtainable.

## TEA COMPANY'S MEETING.

THE WYNAAD TEA COMPANY, LIMITED.

The eighth Annual Meeting of the shareholders of the Wynaad Tea Company, Limited, was held at the offices of the Company, 7, Mining Lane, E.C., on Monday, the 15th ultimo.

The chair was occupied by Mr. J. C. Sanderson, Chairman of the Company.

The Secretary read the notice convening the Meeting and the auditor's report.

The Chairman, in moving the adoption of the report and accounts, said :—

I wish to express the regret of the Directors at the unsatisfactory result of the past season's trading, but as everyone connected with the produce markets is aware, the values of all articles during the past twelve months have ruled exceedingly low; in fact, there has been over-production in most articles of produce. But our Company has been unfortunate in the fact that our crops have all turned out far below Mr. Walker's estimates. The coffee crop was a complete failure, only five tons odd being gathered. Tea gave 60,000 lbs. less than the estimate, while pepper was about three tons below. Had the original estimate of fifteen tons coffee, 190,000 lbs. tea, and twenty tons pepper been reached, the Company would have earned about £2,000 more. Turning to the accounts you will see the amount put to block account is smaller than last year, viz., £582, but the cultivation and crop charges appear large compared to the crops gathered. I must, however, explain it is impossible for the Manager in India to cut down cultivation expenses in the middle of a season, because field work must be carried out when once it is arranged for, in fact the coolies must be employed when once labour contracts have been entered into. With regard to the London expenses; they are, as usual, very small, the largest item being for interest on debentures and the sum we owe Messrs. R. & J. Henderson. These cannot be reduced, and must be met. As to the future, the Directors have every reason to hope the current season will turn out more prosperous. It is, of course, useless to depend upon estimates, judging from past experiences, but we believe we shall secure larger crops. The coffee crop, which is an early one, and is being now gathered, Mr. Walker puts at 15 tons, the tea crop at about 190,000 lbs., more than 50,000 lbs. of which we have already sold at an average of 7d. per lb., and we have a further 20,000 lbs. arrived and ready for sale next month, while the quantity of tea manufactured at the factory to November 22nd is about 112,000 lbs., this being fully 20,000 lbs. in excess of last year to same date. The pepper crop is about 17 tons, and we hope in a short

time to dispose of this at the same figure we sold the last crop at. With regard to markets, the outlook for coffee is not encouraging, as the continued over-production of Brazil coffee has flooded the market with Santos, but the outlook for tea is more cheerful, partly because consumption has increased, and is increasing, and, further, because the season in Northern India has ended with a large deficiency, as compared with last year; a more satisfactory reason, however, is the quality of our tea shows a marked improvement since Mr. Walker placed Mr. Waddington in charge of the factory. He has proved that good tea can be produced on our estates. I now move the adoption of the report and accounts.

The Resolution was seconded by Mr. Labouchere.

In reply to a question from Mr. Miller, Mr. Labouchere stated that, as compared with other neighbouring estates, theirs was far ahead. Since Mr. Waddington had been in charge he had been making finer tea.

Mr. Rynhart expressed his disappointment at the result of the year's working.

In reply the Chairman stated that the Directors could neither control the markets nor the seasons, and as they (the Directors) held a large stake in the Company they felt the unsatisfactory results more than anyone. They had been manufacturing tea for other people in the neighbourhood, and were deriving a small income from this. The amount was shown in the report.

The report and accounts were then adopted.

On the proposal of the Chairman, seconded by Mr. Leslie, Mr. Labouchere was re-elected a Director.

The reappointment of the auditor was proposed by Mr. Goodwin, seconded by Mr. Miller, and unanimously agreed to.

The Chairman then proposed a vote of thanks to the Manager and Staff in India, and remarked that the Managers had been able to produce a better class of tea, and he could not speak too highly of all that they had done.

The Resolution having been seconded by Mr. Miller was unanimously agreed to.

The proceedings closed with a vote of thanks to the Chairman, proposed by Mr. Leslie and seconded by Mr. Rynhart.

## THE TEA FACTORY OF THE FUTURE.

Mr. Claude A. Lowe writes in the *I. P. G.*—

The general idea of this article is to present, in an orderly and more or less comprehensive form, the probable future development of the modern tea estate and factory, showing, in some detail and parallel, the various difficulties and inconveniences of present day practice, and the methods likely to be evolved in the near future to override and abolish them.

It has already been pointed out in the editorial and correspondence columns of this journal, that such nostrums as a comprehensive reduction of output—even if all concerned were agreeable to join in the movement—would merely result finally in throwing wide the door to the gleeful competition of foreign teas from China, Java, and elsewhere; and even the more obviously practical endeavour to devote a large capital to opening out new markets, while meeting with opposition from some planters of exceptional experience and ability, gives no substantial guarantee to the planter that the price of his commodity will permanently rise to the old scale of high profits. Looking at the subject from the consumer's point of view, it will require no great imagination to suppose that the members of the great army of working classes in Great Britain, who have got accustomed to obtaining their weekly pound of tea for one price, will refuse to submit to a rise in the same; rather it will probably be found that the grocer who caters for them will be willing, as has happened before with other products, to sell the same quality of tea at the former price without profit for a time, in order to retain or increase their custom for general groceries.

Even from the planter's point of view, the position under existing circumstances would be no firmer in the long run, as, given an increased demand, who is to prevent companies or individuals who own undeveloped land, from extending their gardens? Certainly not the Tea Association, and it is not probable that Government will step in with a veto on the subject, and lay themselves open to the charge of fostering the China trade at our expense.

We thus come by a process of exhaustion to the old question of reduction of working costs, but even here, under existing conditions, a deadlock must soon be reached, as it cannot be doubted that many concerns which continue to pay good dividends, are accomplishing the same as the result of stringent economies, many of which they will be unable to maintain without ultimately bringing about either directly or indirectly a deterioration in the asset value of their estates.

That stress of circumstances has brought about a series of permanent and practical economies is undeniable, and that these same economies have been most immediately beneficial where practised on large concerns combining several estates under one supreme local authority, is equally evident to the seeing observer; it is therefore highly probable that the greater the concentration on a central local office under a really capable Superintendent, the higher will be the economic efficiency attained.

From this point to the Tea Trust or Combine is but a step, and now that we are hearing and reading so much about Trusts and Combines in every branch of commerce, it can hardly be doubted that, sooner or later, the eyes of the monied world, roaming around in search of new outlets for idle capital in bulk, will alight on the confusion of conflicting interests and antiquated farming procedure of the vast tea districts, struggling or sleeping under the protecting arm of the British Raj.

That really serious opposition could be maintained in the face of a movement to acquire whole provinces\* in the tea districts is questionable, when we look at the backing off and wrangling that takes place every time the Association calls for combined action on any subject; indeed the mere attempt to fight a really formidable corporation would in itself be suicidal, as one of the first logical effects of consolidation under enormous capital would be the local abolition of the Planters' Association as at present constituted, and therefore any isolated estate would be entirely at the mercy of a conscienceless and invisible power.

[\* It is probable that no attempt at consolidation which did not aim at acquiring at least the whole of such a province as Cachar, Sylhet, Darjeeling or the Dooars would be effective, as it would be a *sine qua non* that the means of communication should be under the Company's control. —C. A. L.]

Even without this huge and wholesale combination, the near future must show a modification of the principle in self-defence, and combine at least whole districts under their own respective centres, in order to produce a certain uniformity of method, and reduce the number of individual units to a comprehensive whole.

Let us enquire now why even on adjoining gardens under one ownership, one so frequently finds factories set up within a couple of miles of one another. It appears when all the *pros* and *cons* are sifted, that the real difficulty resolves itself into a question of locomotion. Because leaf packed into large baskets and carted in a slow bullock gharry or on coolies' backs, heats and turns red on arrival or soon after, therefore another factory must be built and a special staff and plant of machinery must be maintained. There are as secondary reasons, the difficulty of managing the withering, and the size of the plant required to deal with what is considered to be an unwieldy quantity of leaf, both of which may be summed up under the head of want of courage and enterprise on the part of those concerned.

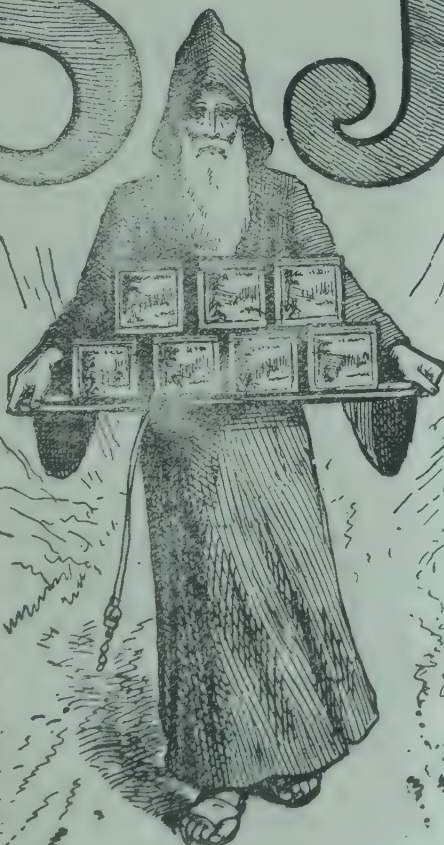

We will now, however, proceed to consider these objections in detail, and find how they can be overcome in a combination of estates under one ownership working towards a central factory from a radius of eight or ten miles in every direction.

The question of the actual working of the land is not likely to change very considerably. It is possible that machinery may to a modified extent be used for cultivation, but actual plucking must, for obvious reasons, be always carried out by hand, the only likely change is that the estates will be re-divided into lots of about five hundred acres, and each placed in charge of one European who will be responsible under the Chief Superintendent for cultivation and quality of leaf alone, having nothing whatever to do with the sale or manufacture. We will, therefore, take the factory of the future and consider, as first in order, the question of transport.

#### TRANSPORT.

The two methods of rapid transit available for use on tea lands at present, are the narrow gauge railway, and the wire rope tramway; but seeing that in the majority of cases the ground in the vicinity of tea estates is cut up by nullahs and jhoras, and in some districts is actually mountainous, the railway system would be not only cumbersome, but prohibitive in first cost. There remains,

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacobs Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

**RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,**

And all Aches and Pains usually treated by outward application.

**IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.**

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/1½ & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

however, the wire rope tramway, which is able to make a bee-line for any desired point, irrespective of the contour of the land over which it has to pass. This latter is worked on various systems at the present day, chief among which are (1st) that in which the carrying rope is also itself a traveller; (2nd) the carrying rope is a fixture, and the trolleys hanging therefrom on running wheels are hauled by a lighter endless rope passing round a pulley at the end station and so back to the winding engine, and (3rd) that in which the trucks carry their own electric motor, or are hauled as trailers by a single motor, collecting its current from a fixed wire or pair of wires as it travels along. The second system, known as the "Bleichert" system has at present the greatest vogue, and there are hundreds of miles in working order in various parts of the world to-day, but I am inclined to think that where power is cheap, the third system of electric traction will be the system of the near future.

The motive power for this and all the other factory machinery will be generated on one or two of the rivers or large streams which, more often than not, are running to waste near every tea district, for want of sufficient profitable work to justify the expenditure of the necessary capital to exploit them.

Having got our wire rope tramway laid to the centre of each sub-garden, or a convenient point therein, the signal will be given from the factory as convenient, to call in the labour; the leaf being weighed will be emptied into a travelling belt, which will convey it into a small chamber, where it will be chilled to just a low enough temperature to prevent any possibility of heating within the next twenty minutes or so. In the same chamber, it will be fed into tipping cages, divided horizontally into compartments not deeper than six inches each, so that when the trolley is turned upright, the leaf at the bottom cannot be crushed by that above. All the trolleys being thus filled with cool leaf, the train will be pushed out into the open way, and set going at a high speed direct to the factory. Here it will be received, not as often now, on a muddy floor, but into the topmost loft direct, and the carriages detached from their motor, will be run off here and there by the attendant boys, and tipped down the various shutes in obedience to the requirements and orders of the European Superintendent in charge of the automatic leaf spreaders. Having thus got our leaf into the centre of the web, let us before going into further details of its treatment, consider the general construction of the factory itself.

#### THE FACTORY.

The factory of the future will, of necessity, be a very different concern to the present day two or three storey affair, with, as often as not, wide spreading closed verandahs, especially designed to catch the sunshine on their iron roofs, and heat up the very rooms which it is most desirable to keep cool; small withering lofts which render extra outside withering houses absolutely necessary, and from which latter, in wet and cold weather, the leaf has to be gathered up, doubly handled, and brought into the factory loft under the influence of the fans to get it withered at all.

The new factory will make allowance for the maximum of leaf within its own compass, or, at any rate, arrange for storing it harmlessly till there is room for it on the withering machines; it will scarcely be less than sixty to sixty-five feet high to the eaves, allowing in each bay for 15 feet for the ground floor, and two withering lofts or rooms of at least twenty feet high each, and a receiving loft, though this latter may easily be accommodated in the depth of the roof.

The factory *in toto* will consist of four, five or more bays, converging radially into a central house, in which will be situated the fans and air shaft in use for the whole of the withering apparatus, and for general punkah work and ventilation. The building itself, from floor to ridge, will be constructed of iron and steel throughout, the withering loft, floors, and walls being further lined with some non-conducting and combustible material, such as *papier maché*, manufactured by the Company in India from local timber, and intermixed with grain mica recovered from the local river beds, or with crude asbestos fibre: the whole being coated with some one of the so-called "Abestos" paints, even now coming to the front as fire-protectors.

The several bays will probably not exceed sixty to sixty-five feet in width, and will each contain, as aforesaid, two withering rooms twenty feet in height running their entire length, and fitted with the necessary withering apparatus, hereafter to be described, with its feeding, discharging, and ventilating gear complete.

The lower floors will, in all cases, be devoted to the manufacture of tea, and the various accessories of the trade, store rooms, and other heavy work. The rolling and drying departments would probably occupy a whole floor each, fermenting another, and box-making in all its branches a fourth. Space would also be found in the building for a repair shop fitted with all the necessary machine tools, and also wood working machinery, and paper-moulders and presses to reduce the cost of outside building operations in those parts where, at present, expensive Chinamen are employed.

Such being the general outlines of the building, we will turn our attention in another chapter to a tentative forecast of the machinery likely to be employed therein.

(To be continued.)

#### JUDGE SLOWLY.

It is not always an easy matter to judge correctly of the quality of things. Less than one in a thousand of us is capable of accurately estimating the worth of a picture; not more than one in a hundred the quality of a horse. In general, judgments rapidly made are of small value. "Did you ever notice," recently inquired a visitor to an English University town of his companion, as they sat together on a verandah, "that queer-looking old fellow with the idiotic face, turned-up coat collar, and boots seven sizes too large, who passes here every morning at eleven?" "Many a time," replied the other, "He is Professor of Comparative Grammar to the University of —, and speaks fourteen modern languages, to say nothing of his mastery of Greek, Latin, and Hebrew." The incident will serve to show the futility of superficial judgment. Many judgments which pass unchallenged are none the less deplorably wrong, more especially in matters which require a practical test. Who can say positively whether a certain medicine has the power to cure some particular malady or not without giving it a trial?

When the friend of Mr. Michael Fitzpatrick of 66, Forbes Street, Woolloomooloo, Sydney, N.S.W., advised him to take Mother Seigel's Curative Syrup for the cure of indigestion, he backed his advice with some excellent reasons—excellent because his judgment of that remedy was based upon actual experience of its merit. Says Mr. Fitzpatrick in a letter written on the 20th June, 1902: "For many years I suffered terribly from indigestion and biliousness, and spent pounds and pounds on doctors' medicines and so-called cures; but without avail. In those days I had no appetite, and the little food I ate turned sour on my stomach, causing severe attacks of heartburn. I was also troubled with pains in the chest, violent headaches, and habitual constipation. In fact, at one time or other I suffered from most of the symptoms which characterise a sluggish liver and impaired digestion. My worst affliction, however, was a total inability to obtain sufficient sleep. I would go to bed feeling worn-out and sleepy, but as soon as my head touched the pillow my brain would become unnaturally active, and I would think of every kind of subject, and roll and toss about between the sheets, listening to the Fish Market Clock as it chimed hour after hour, until all my nerves were in a quiver. Then I would rise and walk the floor, backwards and forwards, the greater portion of the night. For years I had been in this wretched state when one day a friend fortunately called to see me. I was trying the hot-water cure at the time, and was just in the act of drinking a cupful of steaming liquid. He asked me what I was taking it for. I described my troubles to him, and in reply to a further question informed him that I had not, so far, gained any relief from the hot-water treatment. He advised me to abandon it and try Mother Seigel's Curative Syrup instead. He gave me such excellent reasons for doing so that I accepted his advice—advice which, I am thankful to say, has had the very best results. After taking only one small bottle I felt very much better. As I continued to take the Syrup, so did I continue to improve in health, and in less than two months my cure was accomplished. That was three years ago, and I have remained in good health ever since, which proves conclusively that it is not mere passing relief that Mother Seigel's Curative Syrup affords to sufferers from indigestion, but permanent cure. Now I am careful never to be without a bottle of the Syrup on hand, as I take a dose occasionally to counteract the ill effects of my sedentary occupation—for I am a bootmaker by trade—and for this purpose I find it acts like a charm."

MARKET REPORT.

[Per Mail advices of December 19th, 1902.]  
COFFEE.

The London Commercial Record says:—There has been no improvement in the tone of this market during the week, and the moderate supplies at auction were only partly disposed of. There was very little demand for Coorg, which was chiefly withdrawn, but Naidoobatum was quitted at lower prices. Some new crop colory Costa Rica met with fair competition, and prices were steady. The prices accepted for Santos mark a further 1s per cwt. decline. The public market closes to-day for the X'mas holidays, and will re-open on Tuesday, 6th January, 1903.

Brazil "futures" have been dull, and closing rates show a decline for the week; owing principally to ample receipts and heavy American liquidations; yesterday 3d of the decline was recovered, business being done in Santos for March delivery at 27s 4½d to 27s 6d, May at 28s to 28s 3d, July at 28s 9d, September at 29s 1½d, and December at 29s 9d per cwt.

London	...	Santos	...	March delivery	...	27s 6d.
New York	...	No. 7 Rio	...	"	...	4.80 cents
Hamburg	...	Santos	...	"	...	28 pf.
Havre	...	Santos	...	"	...	33½ francs.

To-day's auctions comprised 30 cases East India, 18 barrels 7 bags Jamaica, 309 bags Nyassaland, 112 bags Costa Rica, 75 bags Coban, 757 bags Vera Paz, 364 bags New Granada, 307 bags Ecuador, 22 bags Nicaragua, 216 bags Guatemala, 500 bags Bahia, and 250 bags Santos. The auctions went off at steady prices for all good samples, but common qualities moved off slowly; Vera Paz 6d to 1s per cwt. lower.

Brazil futures opened steadily, and improved on Bear covering and buying orders.

Transactions include:—March at 27s 6d to 27s 7½d, May at 28s 1½d to 28s 3d, July at 28s 7½d to 28s 9d, September at 29s 1½d to 29s 3d.

Closing quotations:—	Sellers.	Buyers.
March	27/7½	27/4½
May	28/3	28/1½
July	28/10½	28/7½
September	29/4½	29/1½

Brazil receipts 42,000 bags, against 36,000 and 30,000 the two previous years, and Exchange ½ lower at 11½.

Hamburg unchanged. Havre ¼ up on the day. New York opens unchanged to 5 lower.

Imports, Deliveries and Stock of Coffee in London are as follows:—

Auctions this week have passed off as under:—

EAST INDIA.—Of 912 bags offered 300 bags sold—Coorg, low

middling greyish 47s, common bold 53s 6d to 55s, peaberry 50s 6d to 56s. Naidoobatum, low middling greyish 47s 6d to 52s.

MOCHA.—38 bal-s bought in.

JAMAICA.—Of 63 barrels 5 bags offered a small part sold—good ordinary palish 36s, middling greyish 51s.

NEW HEBRIDES.—97 bags partly sold at 35s for smalls and 58s for peaberry.

COSTA RICA.—Of 675 bags new crop catalogue 500 bags sold—smalls 38s to 48s 6d, low middling to middling 49s 6d to 59s, good middling blue 62s, bold 65s to 78s 6d, fine blue bold 84s, peaberry 57s to 68s.

GUATEMALA.—Of 324 bags offered 200 bags sold—smalls 38s 6d, low middling 48s 6d, bold 56s, peaberry 55s.

VERA PAZ.—13 bags sold—common bold 45s

SALVADOR.—228 bags new crop partly sold—low middling to middling 47s 6d to 53s.

COLOMBIAN.—289 bags sold, sea-damaged, smalls 33s 6d, medium 45s, bold 53s 6d, peaberry 46s; country-damaged:—smalls 31s to 35s, fine ordinary to low middling 41s 6d to 46s 6d, bold 47s 6d to 54s 6d, peaberry 41s to 46s

NICARAGUA.—81 bags country-damaged partly sold, peaberry at 34s.

MEXICAN.—209 bags withdrawn.

BRAZIL.—Of 1,560 bags washed Duymont Santos 800 bags sold, smalls 31s to 33s 6d, medium 33s to 35s, bold 37s to 51s 6d, peaberry 33s to 49s. 1,004 bags unwashed quay terms, 650 bags sold, medium to bold bright greenish 32s 6d to 39s 6d, peaberry 31s to 37s. 250 bags Santos were bought in

Receipts in Rio and Santos.

Rio Exchange 11½d, previous day 11½d.

HAVRE, December 18.—Good average Santos December opened quiet at 33½f. and closed quiet at 33½f., March opened at 33½f. and closed at 33½f., May opened at 34½f. and closed at 34½f., July opened at 34½f. and closed at 34½f., September opened at 35½f. and closed at 35½f.

HAMBURG, December 18.—Good average Santos December opened quiet at 27½pf. and closed quiet at 27½pf., March opened at 28pf. and closed at 28pf., May opened at 28½pf. and closed at 28½pf., July opened at 28½pf., and closed at 28½pf., September opened at 29½pf. and closed at 29½pf.

NEW YORK, December 18.—Closing prices of No. 7 Rio were as follow:—

	Dec.	Jan.	Feb.	Mar.	April.
Dec. 17	4.50	4.50	4.60	4.75	4.85
Dec. 18	4.50	4.55	4.65	4.80	4.90

TEA.

INDIAN.—Auctions were larger, viz., 33,400 packages, compared with 23,300 in the week before, while for the corresponding period of last year they totalled 42,500.

There was a good demand, and prices generally favoured sellers, especially for useful common and fine descriptions. Only a few lines of the more undesirable leaf grades are now to be had under 5½d per lb.

Notwithstanding the rise below, buyers are operating freely at an advance, in the better qualities of Assam and Dooars growth, no doubt influenced by the knowledge that by far the greater proportion of the shortage is in those districts. Autumn kinds are likely to meet with a good reception; that class was practically non-existent last year, and the quantity thus will be lessened by the large purchases, which we understand are being made in Calcutta for shipment to Russia.

Until the higher range of values has become more thoroughly established throughout the country than has yet been possible, owing to the somewhat sudden and smart advance from the former unduly low level, it is of high importance that sellers should feed the market judiciously, especially during January, when, as usual, the quantity available will be comparatively large.

For 27,800 packages on estate account 7 $\frac{3}{4}$ d was realised, against 7 $\frac{1}{2}$ d for 36,000 and 6 $\frac{1}{2}$ d for 38,800 in the two foregoing seasons.

CEYLON.—Public sales embraced 18,500 packages, whereas on the 9th instant they reached 16,500 packages. Twelve months since 19,800 were submitted.

Bidding was brisk, especially for common to medium sorts, both leafy and broken, which were taken up freely, if anything in favour of sellers. Fine and finest sold without much change, though the inquiry for them was not so strong as for the lower grades.

The average is 7 $\frac{3}{4}$ d per lb. On the 11th instant it was a little over 7 $\frac{1}{4}$ d, and 7 $\frac{1}{2}$ d in 1901.

Offered in December, 1902, 52,000 packages (average 7 $\frac{3}{4}$ d per lb.); 1901, 69,600 packages (average 7 $\frac{1}{2}$ d per lb.); 1900, 73,500 packages (average 7 $\frac{3}{4}$ d per lb.).

From January 1 to 31st instant the result for 1,144,900 packages is 6 $\frac{1}{2}$ d per lb. opposed to 7d per lb. for 1,188,500 packages and 7 $\frac{1}{4}$ d per lb. for 1,263,200 packages in the two former years.

JAVA.—About 760 packages passed the hammer at fully previous rates.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From December 1 to 16, 1902	...	11,906,596 lbs.
Do. do. 1901	...	11,729,794 "

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	25,199	8,165	33,364
Ceylon	15,763	2,710	18,473
Java	763	...	763

Total	41,725	10,875	52,600
-------	--------	--------	--------

Also 1,621 packages from second hands.

#### COCOA.

The easy tone in prices continues, and at the auctions on Tuesday, when 3,773 bags were catalogued and about 1,100 bags sold, buyers again had the advantage to the extent of 6d to 1s per cwt. Trinidad was very quiet, and only 300 bags sold out of the 1,266 bags brought forward, at 61s to 62s for good quality—a decline of quite 1s. Of 65 bags Grenada only a lot or two sold at 56s to 57s. 160 bags Dominica rather more than half sold at easier prices—54s to 57s per cwt. Of 45 bags Costa Rica one lot realised 55s, the remainder being bought in. 68 bags Jamaica and 178 bags Jeremie were withdrawn. Of 748 bags Guayaquil 100 bags were placed at 63s to 63s 6d for greyish Caraquez, being about steady. 50 bags good bright Costa Rica realised 58s to 58s 6d. Of 1,193 bags Ceylon offered 520 bags found buyers at 76s 6d for fine bold and medium red, 56s 6d for ordinary to fair ditto, 47s 6d to 56s for fair to good small, and 52s to 54s per cwt. for collected, being about 1s down.

Privately sales include 600 bags Trinidad at 67s for fine, and 58s to 64s for middling to good; 100 bags Grenada at 57s to 60s

for fair to good; 40 bags African at 60s; 50 bags Jeremie at 50s; 100 bags Puerto Cabello at 72s 6d up to 110s; a little fine Caraquez Guayaquil at 70s, and some medium estate Ceylon at 56s up to 66s per cwt.

#### PEPPER.

BLACK—is dearer in all positions. On the spot fair Singapore has been sold at 6d, with further buyers at this but no sellers, and to arrive 75 tons have changed hands for arrival January-March (s.) at 6 $\frac{1}{4}$ d, but closing sellers at this.

At auction on Wednesday 100 bags Aleppy retired at 6d per lb., with 5 $\frac{1}{2}$ d refused.

The shipments of Black Pepper for the first half of December compare as follows:—

	1902.	1901.
U. K.—Singapore	nil } nil	nil } nil
" Penang	nil	nil
Continent	200	90
U. S.	120	130
Total tons	320	220

WHITE—Penang at auction was cheaper, but subsequently firmed up, and Singapore shows no change from last week; the former description sold privately at 9 $\frac{3}{4}$ d for fair, and Singapore at 9 $\frac{1}{4}$ d. For arrival prices are rather higher—Singapore near at hand 9 $\frac{1}{2}$ d, January-March (s.) at 9 $\frac{3}{4}$ d, and Penang January-March (s.) at 9 $\frac{1}{4}$ d per lb.; 50 tons done.

At public sale on the 17th instant 205 bags Singapore passed the hammer unsold at 10d to 10 $\frac{1}{2}$ d. 62 bags Penang realised 9 $\frac{1}{2}$ d for fully fair limed, and 8 $\frac{7}{8}$ d for a single lot of brown; of 13 bags Ceylon 4 bags sold—shirvelled 6d, shrivelled siftings 3d, good heavy brown and white 5 $\frac{7}{8}$ d per lb.

The shipments of White Pepper for the first half of December compare as follows:—

	1902.	1901.
U. K.—Singapore	60 } 100	80 } 110
" Penang	40	30
Continent	30	30
U. S.	nil	30
Total tons	130	170

#### GINGER.

COCHIN.—A further decline in the value of rough has to be recorded, but at the drop there is more inclination to buy. 32 cases medium and small limed cut offered at auction were bought in at 65s, but 361 bags sold at 38s 6d to 39s for good small to bold bright brown washed Calicut, 32s for lean and wormy medium and small hard rough washed, and 31s to 31s 6d per cwt. for small lean and shrivelled dull rough (good D's).

JAMAICA.—75 barrels sold "without reserve" at about valuations—low middling to middling washed 37s 6d to 41s 6d, good common 37s per cwt.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JANUARY 17, 1903.

[No. 3.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 23rd instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Nilgiris.

KOTAGIRI, 14th January.—*Weather*—Very unsettled. Rain on 5th, 70 cents; and on 4th, 40 cents. Every day very cloudy and misty, though no rain has fallen during past week. Occasionally very cold at night. *Crops*—Rather below estimate on most places. From  $\frac{2}{3}$  to  $\frac{3}{4}$  of crops have been picked, and picking has been light of late. Trees are disappointing in appearance, the excessive rain having done a lot of damage. *Labour*—Sufficient. *General health*—As bad as the weather! *Interesting item*—The total rainfall for the year ending 13th December, 1902, was 103 inches, the average being 65 only!

#### Munzerabad.

January 14th.—*Weather*—Everything to be desired, fine days and cold nights. *Crop*—Still gathering, many places are stripping. Estimates about correct. *Plant diseases*—A little leaf disease, a few trees dried after their heavy crop. *Health*—Good. *Labour*—Abundant. *Interesting item*—The Kabuli traders are half at Kodlipett and half at Hassan, the theft case against them was dismissed, but the charge of assault on the local functionaries remains.

### THE MADRAS PLANTERS' LABOUR BILL.

WE propose to review at length the draft Labour Bill submitted for the consideration of a Select Committee of the Legislative Council of Fort St. George. This task entails a certain amount of introductory remark. To planters who have followed the course of the discussion on the subject, the official and non-official discussion that has resulted in the evolution of the draft Bill referred to, much of what we propose to write will read like an oft-told tale; but our present

remarks are not intended for planters alone. We shall base them, primarily, on the Report of the South of India Planters' Enquiry Committee, issued in 1896; and then on certain objections to the present Bill that have been raised by representative planters and in the Press. The appointment of the above Committee originated in an address presented to H. E. the VICEROY by the U. P. A. S. I. in 1895, but that address was the result of a prolonged consideration of the disabilities under which planters in Southern India laboured because of the insufficiency or inefficiency of the law to protect them in their contracts for the employment of labour on their Estates. What they chiefly asked for in their address to the VICEROY was increased protection against "loss from wilful breach of contract and dishonesty with regard to advances made to coolies and maistries." It was admitted that the particular remedy they proposed was opposed to the whole spirit of modern legislation. The VICEROY retorted that the origin of most of the difficulties of the memorialists lay in a system of advances, as to the necessity for and desirability of which they themselves were by no means agreed. To prevent any possibility of misapprehension on this point we may state that the Committee subsequently appointed found that "the system of advances is at once the backbone of the planting industry and the cause of the principal difficulties attending it." They found that "the chronic impecuniosity of the cooly is a matter directly connected with the system of advances." After a most careful investigation they wrote:—"The necessity of advances for imported labour is practically affirmed by the whole mass of official and non-official evidence, *which treats of the subject apart from the planting industry.*" (The italics are ours.) The Committee found that "however much planters would be benefited by the abolition of the advance system, its abolition is impossible under existing circumstances." And, in direct contradiction of the viceregal utterance referred to above, the Committee said:—"we find that there is a practical consensus of opinion among the planters themselves and that their opinion is corroborated by the testimony of other employers of labour. . . . We find that they" (planters) "are now practically agreed as to its necessity" (the necessity of the system of advances) . . . . "We are unable, therefore, to ascertain that any planter has put forward, in any official or public document, the opinion that advances can be entirely dispensed with; and there is nothing on record before us to

controvert the evidence which has now been accumulated, that advances are absolutely necessary for imported labour." A brief summary of the above may be given in these words:

Advances on the part of the planter are a necessity where imported labour is concerned.

This means a finding absolutely in favour of planters' contentions as to the second of the issues (as regards the system of advances to garden coolies and "maistries" submitted to the Committee of Enquiry by the Government of India. These issues were as follows:—

- (a) the nature of the system as at present worked;
- (b) the necessity for its continuance;
- (c) the difficulties experienced in its operation; and
- (d) the best methods of removing them.

In regard to the second issue, at least, conditions have not changed since 1895-96. Advances are as necessary now as they were then in regard to the engagement of imported labour in the planting districts.

The Committee decided that "the demand for labour is in excess of the supply and that the disproportion is likely to grow greater, not to diminish. They considered "from every point of view" that "maistries are indispensable" and that the employment of the maistry "is also necessary in the interests of the cooly." Having stated these important conclusions, we turn to the Committee's remarks on

#### THE LAW IN 1896

relating to the migration of labour and the enforcement of Labour Contracts in Southern India. The summary runs thus:—

The examination we have now made of the law provided for the enforcement of labour contracts in the several planting districts included in the scope of our enquiry shows—

(1) that if Madras Act V of 1866 had ever been enforced, planters in Coorg and in Mysore, Travancore and Cochin could have proceeded in certain Courts of the Madras Presidency against labourers belonging to the Madras Presidency, although planters in the Madras Presidency could not have availed themselves of this remedy;

(2) that planters in the Madras Presidency and Coorg can prosecute defaulting labourers in British Courts under section 492, Indian Penal Code, that they have hitherto been at liberty to institute similar prosecutions under the same section in Mysore Courts, that they can enforce the provisions of Act XIII of 1859 in British Courts, and that they are able to demand the extradition from Mysore of persons accused under this Act, although they do not possess this privilege with regard to Travancore and Cochin;

(3) that Travancore planters and Cochin planters can prosecute defaulting labourers in the Travancore and Cochin Courts, respectively, under the provision of law corresponding in each State to section 492, Indian Penal Code, and under the enactment in each State corresponding to Act XIII of 1859;

(4) that Mysore planters have until now been unable to resort to section 492, Indian Penal Code, inasmuch as it is applicable only to contracts to work at places within British India and that, therefore, although an amendment of section 492, Indian Penal Code, in Mysore is now contemplated, the only law giving them a remedy against breaches of contract is Act XIII of 1859; and

(5) that processes issued by the Courts in Mysore, Travancore and Cochin under Act XIII of 1859 have no force in British Territory, the consequences being that except as provided in Madras Act V of 1866, which has never been put into force with regard to plantations in Southern India, planters in the Native States have no remedy against defaulting labourers who refuse to leave, or escape into, British Territory.

It is of some importance to note that as long ago as 1877 Mr. LOGAN, Collector of Malabar, and various planters advocated the enlargement and amendment of Act XIII of 1859 "to meet the official requirements of the planting districts of Southern India." The Committee of Enquiry proposed a different course. They did not approve of a legislative limi-

tation of advances, but advocated "such measures as will prevent labourers from committing fraudulent or wilful breaches of contract with comparative impunity." They agreed with the arguments of planters as to that most important matter "specific performance of contracts" even after a defaulter has been punished. Perhaps the finding that comes next in importance was that relating to the need of provision against the seduction of labour. Act XIII of 1859 did not adequately meet the planters' case. Act V of 1866 was a dead letter, and could not be utilised in regard to the labour employed on plantations within the Madras Presidency. The Committee recommended:—

(1) That Madras Act V of 1866 should be amended so as to provide a suitable labour law for all planting districts in Southern India.

(2) That the question of declaring Act XIII of 1859 to be inapplicable to contracts for labour governed by the amended Act should be reserved for consideration.

(3) That the Native States of Mysore, Travancore and Cochin should be invited to adopt the amended law.

(4) That the execution of the amended law should be made reciprocal between the Madras Presidency and Coorg on the one hand, and the Native States of Mysore, Travancore and Cochin on the other, by a convention or mutual agreement.

(5) In default of a convention—

(a) that British Magistrates should be empowered to give effect to orders of certain Magistrates in Native States in respect of fraudulent breaches of contract under the amended law, or if there is no amendment under Act XIII of 1859, or preferably.

(b) that Magistrates in British India and in the Native States of Mysore, Travancore and Cochin should be empowered by their respective Governments to deal with persons found within their jurisdiction who commit fraudulent breach of contract (as above explained) across the border.

(6) That in the event of either of the above suggestions 4 or 5 (b) being accepted, the Mysore State should no longer be exceptionally treated in respect of British processes in breach of contract cases.

It may be well to state for the information of our readers that Act XIII of 1859 was reprinted as an appendix to the U. P. A. S. I., Book of Proceedings, 1894; there also appeared therein a draft Bill prepared by Mr. GEO. ROMILLY, which indicates very clearly what planters wanted. In the 1897 book (which is, unfortunately, out of print) Act XIII of 1859 and Act V of 1866 were given. In the 1901 book there is the Draft Planters' Labour Bill from which the Bill now under consideration has been evolved. We propose now to touch briefly upon important points in the earlier draft as revised by the Government of India and by the U. P. A. S. I. and as finally modified in the present Bill. Upon our planting readers we would especially impress the fact that the framing of the present Bill has been greatly influenced by objections or representations of the Government of India, and that the Madras Government have not been left free to legislate according to their own convictions.

#### THE PROPOSED LAW.

It has been wisely decided that the Act shall only be extended to a particular area by special notification. Hence, planters who regard it as likely to prove inimical to their interests may concentrate their efforts on an attempt to induce Government *not* to extend it to their district.

Every alteration made in the definitions is an improvement. On one point we may comment: it is evident that the Act is not intended to apply to *all* labour contracts, for the term "Labour contract" has been so modified as to mean "a contract entered into in accordance with the provisions of this Act," etc.

The first serious alteration in the Act is found in

Section 3. From and after the date upon which this Act comes into force in any local area the provisions of the Workmen's Breach of Contract Act, 1859, shall cease to apply to any contract for work to be done within such local area between a planter and a maistry, or a planter and a labourer or a maistry and a labourer, whether such contract has been entered into before or after the date upon which this Act comes into force.

The Committee of Enquiry left over for consideration the point touched upon here, but the wording of their conclusion on the matter (No. 2 *supra*) conveys a totally different idea from this section No. 3. In fact, the extra breadth given to the planter by the modified definition of "labour contract"—a modification that has obviously been made with intent—is largely withdrawn by this section. Planters have never asked that Act XIII of 1859 should be taken away from them. Their original request for a revision of the law was based on the assertion that the Act was vague, loosely worded, and not sufficiently comprehensive. It was the Planters' Enquiry Committee, not the planters, who suggested that Act XIII should be set aside, and a new law passed on the foundation of Act V of 1866. From what we have said above, and still more from a close study of the Committee's report it will be seen that the Committee specially dealt with *imported labour*. The new section (3) would cut the ground from under the planters' feet with reference to local (not imported) labour, in regard to which he has hitherto enjoyed at least the partial protection afforded him by Act XIII of 1859. We have reason to believe that the Madras Government have strongly urged the retention of Act XIII of 1859: but it might be well if the Special Committee would inquire whether, in representations on this point, the Government of India have had clearly indicated to them the difference between *imported* and *local* labour. From the attitude taken up by that Government we are led to think that they do not understand the conditions of labour in the Southern district. It should be observed also that in a note on clause 3 the Madras Government state:

The object of this clause is to prevent the concurrent application of the Workman's Breach of Contract Act, 1859, and the proposed labour law to contracts for work of any kind between employers and labourers as defined in the Bill. It is, however, intended that the power which planters have of resorting to the provisions of the Act of 1859 in their dealings with persons, artisans or others, who fall entirely outside the scope of the proposed law, should be preserved.

Unless the clause itself is made clearer this note will do little more than place before the judicial authorities a new conundrum: "When is a labourer not a labourer, but an artisan?" We would point out also that if the Bill is passed without modification, the effect will be to deprive all planters in districts to which it is made applicable of the protection of Act XIII of 1859 in respect to all contracts outstanding when the new Act comes into force. This, we venture to say, would involve glaring injustice.

Sections 20 and 21 have given rise to an idea that while, with certain restrictions, specific performance of contracts can be enforced against the labourer (*v. sec. 32*) it is not so with respect to the maistry. Section 29, however, appears to make the requisite provision as regards maistries' contracts.

What is most needed is a revision of the draft Bill with a view to providing for cases of short contracts for the performance of specific work (such as weeding, pruning, etc.), and for agreements with Local (as distinguished from Imported) Labour. The necessary additions made to meet these cases, we cannot but think that the Bill would supply practically all

that planters have been asking for. It has been asserted that conditions of labour have changed since the Enquiry Committee investigated the question. In some districts no doubt they have, but not in all. Are planters prepared to say that they have changed so much that a fresh investigation is necessary? If not, they should press only for such modifications in the present Bill as are essential for their protection: lest, by asking for too much, they should entirely lose the sympathy of the Government and either get no special protection at all or get protection hampered with far more stringent regulations regarding inspection and those are included in the Bill under reference. It is believed that Act XIII of 1859 will not under any circumstances be allowed to apply in districts to which the proposed Act is eventually applied. In reality, planters do not require that Act, though they certainly do need protective clauses in the present Bill to meet certain cases that, as we have pointed out, are not met by it in its present form, and that ought to be met, whether by the new Act or by some other means.

#### COFFEE NOTES.

A project is being ventilated in the columns of *O Estado* of S. Paulo to reduce the supply of coffee by differential taxation by grades, and practical prohibition of exportation of coffees from No. 7 downwards, inclusive.

It is proposed to allow a bounty on all coffees shipped abroad superior to No. 7 New York type, payable part in money at the rate of 10% of the *pauta* or official valuation, and part in State 6 per cent. bonds until the price reaches 600 reis per kilo. when the payment in bonds would cease.

There are besides a number of other stipulations of a subsidiary character of no great importance.

The plan, no doubt, is ingenious and might be accepted, says the *Brazilian Review*, but for the little drawback that the sinews of war must be supplied by the planters themselves.

So long as there is some third party to be bled, no doubt bounties are very interesting but when they come out of our own pockets and planters are taxed to pay bounties to themselves they don't seem quite so enticing. In S. Paulo, outside of the revenue derived from coffee there is practically nothing at all, and even there planters are not quite so unsophisticated as to tax themselves just to allow government to teach them how to carry on their own business.

If, in spite of low prices, planters continue to send low grade coffees to market it is to be presumed that it pays them to do it.

It is believed that in the manner proposed, supplies would in S. Paulo be reduced 15 to 20 %; but unless other producing districts also co-operated, the rise of prices that would inevitably follow would stimulate production and export to a degree that would in the long run counterbalance any temporary advantage.

The coffee industry, like every other, if left to itself will settle the conditions of production without any necessity of outside interference. Even at present prices profits are made on well managed estates.

\* \* \*

In the district of Ribeirão Preto, Sao Paulo, the Melgueira plantation valued at 180:000\$ has been sold at auction for 20:000\$000.

\* \* \*

Heavy rains are reported to have damaged the crops in the western part of the Sao Paulo State.

\* \* \*

A letter from Jahú to *O Estado* describes the prospects for the future crop in Sao Paulo as anything but lively. The berries are said to be nearly all falling off in consequence of injury done by the frost. One-third of the yield is believed to be lost.

\* \* \*

The *Bulletin de Correspondance* of Havre, states that "private telegrams from New York agree in attributing the improvement in prices to the proposed heavy taxation of new coffee trees at S. Paulo. Opinions as to the effects of the measure differ, some thinking that it will cause a rise in prices whilst others argue that there can be no immediate results, as new planting could only affect the volume of production several years hence. The measure, it is added will increase the value of existing plantations and prevent many from being abandoned."

\* \* \*

**Coffee Pests in Queensland.**—Professor Tryon, Entomologist to the Government of Queensland, reports that in 1902 he investigated the following, among many other, points of economic entomology, vegetable pathology, and field work:—

*Coffee.*—Millipede (Jam-Haplosomide) erroneously regarded as injurious, Daintree River, Scale insect (*Diaspis biclavus* Const.) Cairns.

*Coffee.*—Bark-canker, a constitutional disease, Daintree River. Professor Tryon refers to an inspection of coffee plantations in the Daintree River district, jointly with Mr. H. O. Newport,

the Instructor in Coffee Cultivation; and to the commencement of a preliminary inquiry into matters pertaining to the coffee plants, that had been the occasion of complaints on the part of the growers.

\* \* \*

**The Frost in Brazil.**—Messrs. Henry Nordlinger & Co., in a circular letter, call attention to the damage to the Brazil crop by frost as not likely to show itself until after the berries have set. They say: "The mild coffee crops, especially Central America's, are reported to be smaller than last year, particularly those of Guatemala and Mexico. These coffees—that is, about two-thirds of their respective crops—reach consuming markets, as a rule, during the months of January to June; and, if we add thereto the average December receipts, we may look for about 2,660,000 bags of coffee, exclusive of Rio and Santos, between now and the end of the crop year, or a total of 4,000,000 bags for the fiscal year. We certainly have exceptionally low prices now, and, while the distant future depends on the extent of the future production, the immediate future is more or less guided by the actual stocks in sight and the requirements of the trade; and, since these stocks will have to be cut into from now on, we adhere to our belief that a more healthy tone will prevail during the coming months."

\* \* \*

**The U. S. Coffee Market.**—*Tea, Coffee and Sugar* of 17th ultimo reports: The market in coffee is very quiet and to many dealers has never seemed so dull heretofore. But the dullness is excusably the usual holiday apathy and as people have not stopped drinking coffee, buying must some day be resumed to refill empty coffee bins. When the grocer has disposed of his holiday staples he will bethink himself again of his coffee.

But the statistical position of coffee remains oppressively heavy, and there is no relief in sight, despite the cheering reports that coffee cherries are dropping from the trees as a result of weakness fostered by the recent frosts. So then the frosts' damages should amount to ravages, but it all remains to be seen. The 1902-3 crop promises to be fully a 12,000,000 bag affair and the 1903-4 one much larger.

In speculative circles there has been more active selling against purchases in Brazil, 35,000 Santos and Rio. Lewisohns have bought Decembers and Januaries and were supplied by W. H. Crossman & Bro.

\* \* \*

Total stock in United States December 1, 2,622,849 bags against 1,833,652 bags December 1, 1901. Brazil stock in the United States December 13, in store and afloat, 2,605,403 bags against 2,424,009 bags at the same time last year. Other than Brazilian, 222,654 bags, against 275,440 bags last year.

Brazil coffee in New York December 13, 2,129,203. Stock in New York in other coffees December 8, 202,083, in San Francisco, 17,403 bags, and in New Orleans, 3,168 bags.

\* \* \*

Probably the reason for the failure of so many of the coffee trees at Thandaung and other parts of the Karen Hill was, says the *Rangoon Gazette*, the want of shade. Cultivators there seem to have cleared the whole sides of hills, and where there is no shade coffee will not flourish. That it grows successfully even on the plains has been proved over and over again to Burma. In Moulmein, in Chinese Gardens it is to be found generally protected by plantain trees, and a gentleman in Rangoon informs us he gathered last week over a viss

of berries from the Liberian coffee trees he had in his garden which were watered last hot weather for a couple of months and were shaded by plantain trees.

\* \* \*

Curious some one hasn't thought of getting all the Brazilian coffee-planters into a trust, in order to solve the coffee problem. Here's a task worthy of a Morgan.

\* \* \*

Coffee is divided into two general classes—"Rank" (which takes in Santos, Rio, Bahia, Victoria, and African), and "Mild." Don't confuse the words "Rank" and "Mild" with body and strength, for the mild coffee has much more of both; that is, a pound of mild coffee will make many more cups of good coffee than can be obtained from a pound of the Brazil kinds.—*Merchant Journal*, Topeka.

\* \* \*

Cable advices from Brazil to the U. S. last month stated that the buds were falling off the coffee trees. The following sentiment, written on a cable blank, was circulated on the New York Coffee Exchange as expressing the opinion of certain members on the reports emanating from Brazil from time to time on happenings to the coffee crop there:

"The coffee districts of São Paulo are infested with monkeys—they shake the trees so violently that the buds fall off."

\* \* \*

**Low Record for Coffee.**—The price for green Brazilian coffee on November 13 touched the lowest point ever quoted in the New York market. The price named by brokers on the street was  $5\frac{1}{16}$  for invoice lines. The lowest previous price was  $5\frac{1}{4}$ c. Arbuckle Bros. and the American Coffee Company have reduced the price for their package coffee one-half cent a pound to meet a like reduction recently in prices for green coffee. Arbuckle Bros. are now quoting a net price of  $8\frac{1}{2}$ c. for their Ariosa brand, and the American Coffee Company is quoting 8 cents for their Lion brand of coffee. A good demand is reported for these leading brands of package coffee.

\* \* \*

**Coffee Extract v. Coffee.**—Of samples of extracts condensed from three different blends of Coffee, *Tea*, *Coffee* and *Sugar* writes:—

It is our judgment, as well as that of those who assisted at the test, that the extract is the best ever shown in New York, but far from being a satisfactory substitute for coffee liquor brewed from the bean direct. We are speaking from the point of view of lovers of really good coffee and hence it does not follow that the extract Mr. Palmer has invented may not be acceptable to such as are indifferent to their coffee, and with whom price and celerity in the making of the drink are factors of importance. It seemed to us that while the extract produced a cup of coffee that would be described as coffee, it just fell short of disclosing those qualities that make coffee a delicious beverage to drink. To be more to the point, we were impressed that the liquor was a good coffee spoiled in the making—as if its fine qualities had been steamed away by over-boiling and leaving much caffeine. Some other things surprised us too. Two phials were marked "Mild" and bore the dates October 19 and 21. The extract produced a liquor black in colour, thick in density to syrupy, rather lacking in fine coffee aroma, and if chicory was not used in the preparation, that it was a constituent. But the strength of the article was amazing, and we wonder what a "strong" phial of similar dates would have been. Plenty of water was used, too—a large cup. Last was tried the phial marked October 1 and "strong." Unexpected results followed. Rather than a strong concoction, one was produced about half the strength of the aforesaid "milds" and much lighter in colour, proving itself in that respect nearer to ordinary coffee, but apart from these differences there was no change in the taste. It would appear that . . . coffee extract loses strength by ageing.

**Coffee its own Competitor.**—An American contemporary has something to say about over-production:—

Coffee is going through much the same experience that cane sugar has gone through, but the competition which has affected cane sugar is that of beet sugar, while coffee is its own competitor; the production has been enormously increased. It has outrun consumption, and it is not easy to see what the Pan-American Coffee Congress can do about it unless it can reduce production. \* \* \* The great expansion of production in Brazil has occurred since 1895. It was about that time that Consul-General Chittenden made a detailed report on the profits of coffee culture in Mexico, in the course of which he quoted Mr. Joseph Walsh of Philadelphia, a coffee grower, as saying that Mexican coffee cost to raise 7 cents, and was then worth 20 to 22 cents in the American market; the profits were anywhere from 100 to 300 per cent. Prof. Moses of California gave the cost at 8 to 10 cents, Mexican, and the selling price at 25 to 32 cents. J. P. Taylor of the City of Mexico, described as an expert on coffee, said that a low estimates showed a profit of 100 per cent. to the planter. It was about the same time that one of the largest, and one of the most profitable, coffee plantations in Brazil was sold to an English company which in two or three years was involved in heavy losses. At the third annual meeting of the Dumont Coffee Company in 1899 it was stated that for several years prior to 1896 the price of coffee had been more than double the cost of production, and the Dumont Coffee only fetched 62s a hundredweight, while Santos Coffee usually brought something like 78s. But in 1898-9 the Brazilian production was twice as great as it was in 1893-4.

Profits of 100 or 300 per cent. are abnormal. They appear to have lasted for some years in favored coffee regions, but they could not last always. The rate of profit was noised abroad and new men went into the business. The already existing plantations were extended. The production was pushed upward till Brazilian exports are now very much more than three times what they were in 1893-4, and not much less than three times what they were in 1895-6.

Until coffee is produced at a considerable loss the temptation is to extend the area as fast as the price goes down in an effort to make up for the low price by the quantity. Even a small loss has no influence in curtailing the production; the planter is in the business, and the more he has to sell the more money he hopes to get; it is of no use for him to reduce the area unless all do it. The presumption is that the production of coffee will increase till the price will do very little more than cover the cost of production, leaving a moderate profit on the investment, the value of the plantations being reduced to correspond with the diminished profits.

\* \* \*

**Philadelphia said to be Nervous.**—The coffee trade of Philadelphia is said to be considerably exercised over a movement of Boston and New York capitalists who are soon to erect a big plant at Pittsburg to roast and prepare the Nicaragua product. The establishment when completed will represent a value of \$2,000,000, and the concern has been incorporated under the laws of Maine. It will consolidate four big manufacturing companies having headquarters in Richmond, Ind. While Pittsburg will be the main roasting centre for the present, it is stated that a larger plant will be located in this city later on. The parties in control have 3,000 acres of coffee land, with plantations in Nicaragua and Matagalpa, with 420,000 mature coffee trees.

\* \* \*

The depression in coffee prices causes some of the speculators to resort to all sorts of arguments to show that coffee ought really to be a profitable article to buy at present prices. A member of the trade writes from New Orleans to the *Journal of Commerce* (New York) to point out the absurdity of supposing that the much greater quantity of coffee held to-day could be worth less in the aggregate than the supply of a year ago. Of course, multiplied by the lower price the difference is in favour of the smaller stock of a year ago, that stock being about \$9,400,000 more costly than the present one. The correspondent says: "While the present large supply of coffee might warrant lower prices per pound than last year, does it seem reasonable that the aggregate value of 13,200,000 bags should be less than that of 10,500,000 bags?"

## TEA NOTES.

**Tea Packets for Australia.**—A Kurunegala correspondent writes to the *Ceylon Observer*:—"A leading merchant of Wellington, N.Z., who has great experience, makes the following suggestion which I have much pleasure in communicating to you: 'This brings me to say that there is a grand opening in Australia for Ceylon tea packed in  $\frac{1}{2}$ -lb. and 1-lb. packets, 5 and 10-lb. boxes, with original packages coming direct from Ceylon, instead of being repacked from bulk tea, as it is now done in Australia and New Zealand. There should be a large increasing business to be done.'—"But we are aware that there is a packet-business done from Colombo already with Australasia, and our correspondent should tell his New Zealand friend what a merchant says on the above:—"There is a fair lot of packet teas going from here to Australasia, but not so much as formerly, wholesale dealers in Australia preferring to make up their own blends there."

## Ceylon Green Tea in 1901-02:—

	1902. lbs.	1901. lbs.

August	267,635	177,079
September	370,785	112,244
October	407,151	205,137
November	393,290	117,275
December	649,548	136,411
Total	3,914,062	1,589,990
	Increase	2,324,072

**Tea in the U. S.**—In the tea market business proceeded in the even tenor of its way until about the middle of the week, says the *Merchants' Review* of 12th ultimo, when word came from Washington to the effect that all teas in warehouses, some 70,000,000 lbs., would have to pay duty next January. The effect was like the fall of a thunderbolt, and there was a good deal of telegraphing and telephoning going on, until finally Congressman Payne said that he had introduced a Bill in Congress to relieve tea in bond from payment of the duty. It is expected to become a law within a few days. Since the Washington news arrived, the business in tea has been light. Market is firm.

The *American Grocer* gives the following details:—On Monday the Treasury Department notified Collectors of Customs, and all persons who have made inquiry on the subject, that, in accordance with the decision rendered recently in the Circuit Court for the Southern District of New York, in the case of Mosle and others *versus* Bidwell, tea withdrawn from bond after January 1, 1903, must pay duty at the rate of 10c. per pound. The Court held that warehoused goods on withdrawal for consumption are dutiable at the rate in force when the goods were warehoused. The Department's practice under the Customs Act has been to collect duty at the rate imposed by law when the goods are withdrawn. Congress has provided for the free admission of tea after December 31 next, and in the various warehouses of the country there is a very large amount of tea imported under

the impression that it could be warehoused and withdrawn free after December 31.

Secretary Shaw has written a letter to Chairman Payne, of the House Committee on Ways and Means, recommending a modification of the existing law, so as to allow the free withdrawal of tea from bonded warehouses for the purpose of consumption. The Secretary urges that this action be accomplished either by amendment of Section 20 of the Customs Administrative Act, or by a special Act allowing the free withdrawal of tea now in warehouse, as this is necessary to avoid great hardship to tea merchants.

The Department, Secretary Shaw says, must collect duty according to existing statute. He concludes: "Unless the law is modified, the tea probably will be exported, and much delay and litigation will ensue, for much of the tea has been sold to be delivered January 1, 1903, at a price ruinous to wholesale merchants if compelled to pay 10c. a pound duty."

The amount of tea in bonded warehouse on October 31, 1902, was 64,126,785 pounds.

*P.S.*—A Bill was introduced in the House of Representatives, on Tuesday, designed to overcome the difficulty.

**Ceylon Tea Distribution in 1901-2.**—The distribution table which we published for the mail on Wednesday showed that Russia has been our most encouraging tea customer (outside the United Kingdom) last year, taking 1,990,219 lbs. more than in the previous year. Australasia, on the other hand, took 1,919,414 lbs. less; but the increase of 3,031,296 lbs. in 1901 over 1900 was too much to continue and Australasia is still by far our best customer outside the United Kingdom. America shows an increase of 1,343,802 lbs. But it is a question how much of the 4,663,008 lbs. shipped to "China" should be credited to America; and how much ("dust" to make brick tea) to "Russia." The Continent of Europe—apart from Russia—took 1,206,140 lbs. in 1902 or 94,134 lbs. more than in 1901. Belgium and Sweden increased their demands most; France took less and Germany shows about 80,000 lbs., of an increase. Of other places "Africa" gives an increase of 258,548 lbs; Singapore of 70,603 lbs. while Malta and Mauritius have also been better customers. To make the matter clear, we put the comparison in tabular form:—

	1902.	1901.		lbs.
Russia	11,599,953 <sup>2</sup>	9,609,734	Inc.	1,990,219
Rest of Europe	1,206,140	1,112,006	Inc.	94,134
Australia	18,718,794	20,638,208	Dec.	1,919,414

—*Ceylon Observer.*

The *Times of Ceylon* understands that Mr. Kelway Bamber, who is arriving on the 18th instant, is bringing out with him the machinery necessary for the business of the Soluble Tea Company.

Following are statistics of tea importations at Chicago:—Imported during November, 1902, 2,143,899 lbs.; exported, 12,402 lbs.; withdrawn from warehouse for consumption, including

exports during November, 1902, 588,171 lbs.; remaining in warehouse November 30, 1902, 12,048,449, lbs.; remaining in warehouse October 31, 1902, 10,492,721 lbs.

\* \* \*

We call the notice of all planters to the following letter which has been circulated by the Committee of the Calcutta Tea Traders' Association:—

"Our attention has been drawn to the necessity for teas intended for the Canadian and American markets, being packed in strong chests in order to stand, without breakage, the handling to which they are subjected during transshipment."

"The interests of the Indian Tea Industry undoubtedly demand that every care should be taken to ensure that teas for above named markets should arrive in good order, and the Committee trust that all concerned will, as far as lies in their power, assist towards that end by paying special attention to the selection and packing of the chests."

\* \* \*

**The Tea Situation in the U. S.**—There is a pretty general feeling, says the *Merchants' Review* of 12th ultimo, that prices of tea must come down next month, although some members of the trade look for an advance after the duty has disappeared, basing their opinion on the generally firm attitude of producers. However, the statistical outlook is probably more favourable than it is to the interests of Eastern exporters to report, and it will probably be found that no difficulty will be experienced in obtaining sufficient supplies at reasonable prices for the remainder of the season after the warehouse stocks have been used up. But the latter are good for six months' consumption at least and perhaps seven or eight months' requirements. If there is any shortage it will be in green teas, which are in small supply here and in London.

The Ceylon planters are making a determined attempt to win a larger share of American trade by putting up a green variety specially made for this market.

A comparison of present prices with those of a year ago show that teas in this market are, with the exception of Congous, materially higher in value to-day. Japans duty paid sold a year ago at 24@37c. per lb., as compared with quotations of 18@30c. in bond to-day; Foochoos, fair to good, are about three cents higher; and Formosas, fair to good, are six cents higher. Congous are one cent cheaper for the lower grades.

It will thus be seen that there ought to be room for a strengthening movement in Congou teas, judging from the advance in other grades, but unless the comparative cheapness of Congous causes them to assume an especially attractive appearance in speculators' eyes after the turn of the year, they are not likely, from present appearances, to benefit much from the scarcity of other teas. They can be bought freely at former prices.

This week the members of the tea trade were thrown into a panic by news from Washington that warehoused tea would be taxed under the old law.

The Treasury Department had sent telegrams to the Collectors of Customs at all ports and to all persons who have made inquiry on the subject stating that in accordance with the decision rendered recently in the Circuit Court for the Southern District of New York, in the case of Mosle and others *versus* Bidwell, tea withdrawn from bond after January 1, 1903, must pay duty at the rate of 10 cents per pound. The amount of tea in bonded warehouse on October 31, 1902, was 64,126,785 pounds. Other importations since that date, it is estimated, have increased that amount to approximately 70,000,000, the tax on which, if collected, would be \$7,000,000.

Secretary Shaw then wrote a letter to Chairman Payne of the House Committee on Ways and Means, recommending a modification of the existing law so as to allow the free withdrawal of tea from bonded warehouses for the purpose of consumption. The Secretary urged that this action, to be accomplished either by amendment of Section 20 of the Customs Administrative Act, or by a special Act allowing the free withdrawal of tea now in warehouse, was necessary to avoid great hardship to tea merchants. The letter called attention to a recent decision of the United States District Court for the Southern District of New York, which

held that warehoused goods on withdrawal for consumption are dutiable at the rate in force when the goods were warehoused. Congress has provided for the free admission of tea after December 31 next, and in the various warehouses of the country there is a very large amount of tea imported under the impression that it could be warehoused and withdrawn free after December 31. The department, Secretary Shaw said, must collect duty according to existing statute. Chairman Payne has accordingly introduced a Bill to allow free withdrawal of the teas.

*Later.*—The House has passed the Bill for the relief of the tea importers.

## NOTES.

### Java Cinchona.

The exports from Java for the first half of December were 780,000 Amsterdam lbs., against 500,000 last year, and 470,000 in 1900.

### Singapore Pepper.

It is reported that the Singapore pepper crop will be late, and that supplies which usually begin to come to market in January will be delayed a month to six weeks.

### A Diary and Blotter.

We have to thank Messrs. Davidson & Co. for a very handsome and useful Diary and Blotter, which contains a good deal of information of interest to planters, particularly in regard to the best manner of ordering spare or renewal parts for machines purchased from the Company.

### Dooars Tea.

A writer in the *Statesman* remarks:—The Dooars marks are beginning to show up very red and a slight falling away in flavour is noticeable in some of the invoices. On the other hand, a certain number of invoices clearly indicate earlier manufacture by the better flavour and style offered.

### Currency in India and China.

Sir Edward Sassoon predicts that unless China is assisted to place her chaotic monetary régime on a gold basis an inquiry into the currency of India will force itself, and that before long, and let us hope, before it is too late, on the attention of the Indian Government.

### Tea Output in Ceylon.

Over 650,000 lbs. green tea, which is a record monthly quantity for Ceylon, was made in December; the total for 1902, excluding a small amount which has not paid any bonus yet, was 3,914,062 lbs.; an increase on 1901 of 2,324,072 lbs. Some details are given in our Tea Notes.

### Rubber in Venezuela.

The Venezuelan treasury department has fixed an export duty upon second grade rubber—called there *cernambi*, and in the Amazon regions *sernamby*—at 15 centimos per kilogram. Valuing the *bolivar*, the monetary unit of the country, at 1 franc, the tax is equivalent to \$2.89½, gold, per 100 kilograms [220½ pounds]. This is in addition to state or local taxes.

### Tea for the Navy in Australia.

Tenders will be received by Mr. William Hogarth, Victualing Store Officer, Sydney, up to noon on the 3rd March, for the supply of such quantities of Indian or Ceylon Tea as may be required for the use of H. M. Naval service on the Australian Station, during the twelve months, commencing from 1st April, 1903.

**Calcutta Tea Sales.**

At the tea auction on the 9th instant 22,000 packages were offered and nearly all sold. The quality generally was good and there was brisk bidding for all grades. The prices were firm at previous rates. A large quantity was bought for outside markets, Russian and Australian buyers being the chief operators.

**Rubber's Heavy Burden.**

The *Centro Commercial* of Rio lately received the following telegram from the *Associação* of Manaus :—" 40,000 kilos. of Rubber have arrived from Bolivia *en route* for Pará, on which the following duties have been already paid : to Bolivia 12 % and the State of Matto Grosso 23 % : the Government of Amazonas exacts 23 % more, making the total up to 58 %, an incredible extortion that humiliates this country in the regard of civilized nations. In the name of Justice we beg for your intercession with the Federal Government."

**Sale of a Tea Estate.**

A writer in *Capital* remarks :—I observe that the Samanbagh Tea Garden was sold the other day for Rs.5,000, subject to the mortgages upon it and bought by the agents, Messrs. Shaw, Wallace & Co. The shareholders lose the whole of their capital, Rs.2,50,000. The Company has never paid a dividend, the area under tea was about 935 acres. At the last balance-sheet there was due to creditors Rs.3,32,000, which the sale of the liquid assets would probably reduce to Rs.2,85,000, and of this Rs.1,30,000 was secured by a mortgage on the tea gardens which stood at Rs.5,11,313 in the books.

**London Tea Market.**

The weekly special telegram from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for medium-liquoring pekoes and broken pekoes as well as for common pekoes and broken pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6¼d (the same as last report) and the average 7¾d (also the same as last report.) The average for the same period last year was 7½d. *Reuter* reports that common qualities of Ceylon tea command full rates. Fair Pekoes Souchongs are quoted at 5¾d (½d up) but the average for the week is 7¾d (same as last report). 26,000 packages of Ceylon tea were offered for sale and 24,000 disposed of ; while of the 35,000 packages of Indian tea offered, 30,000 were sold at an average of 7¾d. (½d up.)

**Living on Air.**

If the statements about the dietetic value of various articles of food, now in common use, are sustained, then mankind will be forced to live on air, or find some other way of maintaining life. Good wheat bread is declared indigestible; meats are abominable, and only a vegetarian diet permissible; common salt is a poison, and should never be used; the eating of pork is declared worthy the "censure of all Christendom," and so on through the list of eatables there is scarcely an article of food the use of which is not condemned by somebody, and often by such as profess to be teachers. One set declares that "drinking at meals is exceedingly detrimental to good digestion, and promotes manifold evils;" others advise a free use of liquids. Tea and coffee are by some pronounced injurious; milk is a fateful food, being a great carrier of disease germs.

**Britain and Brazil.**

The *Brazilian Review* writes :— Out of a total of 195 different articles exported by this country Great Britain imports 103. With the exception of coffee, of which Great Britain takes only 1 per cent.. Great Britain continues to receive the lion's share of our produce. The proportion of the value of exports of two staples that corresponds to Great Britain is as follows :—

Coffee	...	...	...	1.2 %
Pará Rubber	...	...	...	40.0 "

Including Coffee the Exports of merchandise to Great Britain represent only 12.8 %. Exclusive of Coffee Great Britain takes 30 % of all other merchandise exported to foreign countries. In regard to Coffee, of course, Great Britain is literally nowhere, coming only eighth or ninth in the list of consumers. In Rubber the chief competitor is the United States with 15,427 tons as against 11,610 for Great Britain, Germany only receiving 167 and France 1,925 tons directly in 1901.

**Rubber.**

The first notable attempt in the new world to cultivate any species of *Hevea* ("Pará" rubber) is being made in Ecuador by citizens of Minnesota, one of the most northern of the United States. Now that the feasibility of rubber culture has become impressed upon the minds of Americans, there seems to be no limit to their enterprise in this new field. Another venture mentioned in our pages this month is that of a New Englander introducing the native rubber of Ceará (Southern Brazil) into Nicaragua. These foreign locations, by the way, will not appear nearly so "far from home" as they might to the people of some other countries, for the reason that the average citizen of the United States becomes accustomed to long distances in getting established in business in his own country. If once a promise of profit in rubber appears, no mere consideration of distances will prevent the most from being made of it. Hence the people of the United States may yet be found first in the matter of systematizing the exploitation of South American rubber, both in conserving natural supplies and by increasing those supplies through planting.

**Coffee Seed.**

A correspondent writes us :— "In *Planting Opinion* for 3rd January 'Nursery' writes of Coffee Seed not being garbled, and the cut and malformed beans accounting a good deal for unhealthy seedlings. I must take exception to this, as the seed I supply is thoroughly garbled, every cut and bad bean being removed, having only the best flat and pea berries. If 'Nursery' and those who hitherto have been buying ungarbled Seed Coffee will apply to me for their seed, they will find that the seed supplied is good and free from the cut and malformed beans, and being from perfectly ripe coffee off of thoroughly healthy trees, they will find the plants very good. Last year I supplied a gentleman in Assam with a bushel of seed, and in asking him if he wished any more this year, he replied :—"The seed I got was only for experimental purposes, and it germinated so well, that I don't know what to do with all the plants, in fact, I think, every seed must have germinated." I shall be happy to supply any one with really good seed at Rs 25 per bushel on Estate or rails." We do not give the writer's name, but shall be happy to publish any advertisement that he may send in.

## LETTERS TO THE EDITOR.

## THE PLANTERS' LABOUR BILL.

At first sight it would seem to be nothing less than extraordinary that, after years of agitation on the part of the Planters of Southern India for legislation to deal with their Labour, and after the researches of the Planters' Enquiry Commission, which was supposed to have unearthed all the difficulties of the question, such a storm of protests should have been raised against the new Bill from the Wynaad, Nilgiri, and Mysore Associations at the eleventh hour. The chief reason of this outburst has been caused by the change in clause 3, from what appeared in the draft of the Bill as was printed at the end of the U. P. A. S. I. proceedings for 1901, to the new clause as it now stands. This clause is the one relating the suspension of Act XIII of 1859 in such areas where the new Act comes into force.

The new Bill, as far as imported Labour is concerned, is in almost all respects an admirable one, and leaves little or nothing further to be desired. It protects the cooly from ill-treatment, insures his being well-housed and fairly treated in every way, and it protects the employer from fraudulent maistries and coolies, and from having his coolies "crimped" by others employers.

But in contracts for specified works, or with Local coolies, it is not only useless but absolutely harmful. As long as the Planter remained under the impression that Act XIII would still remain in force for such contracts, he was content to leave the new Bill to come on in due course and has been waiting patiently, trusting to get what he wanted in the long run. But now that he is threatened with a state that will be far worse than the first, it is by no means extraordinary that he has risen from his apathy at last.

At first sight the note on clause 3 at the end of the Bill would seem to solve the difficulty, but in so doing directly contradicts the definitions in the Bill itself. The note referred to states, "It is however intended that the power which planters have of resorting to the provisions of the Act XIII of 1859 in their dealings with persons, artizans or others, who fall entirely outside the scope of the proposed law, should be preserved." But according to clause 2 (c) every person who works for hire on an estate except a domestic servant is a labourer, and thus is subject to the new Act. Hence, when an artizan comes to work on an estate he ceases to be an artizan and becomes a Labourer, and therefore cannot be dealt with under the Act of 1859, and therefore the note on clause 3 is a delusion.

The new Bill throughout only deals with Labourers as contracting to work on an estate for daily hire, but does not allow for any contracts for definite works, such as are frequently made on the majority of estates in the Shevaroy, Wynaad, Nilgiri and Mysore Districts. In these contracts the labourer receives so much money according to the amount of the specified work he has completed, entirely irrespective of the number of days he has been working.

There is not a single clause in the new Bill which is applicable to such contracts, and apparently the Act of 1859 is to be closed against these too, so there will only be the Civil Court to fall back upon, and those who have tried it know only too well what a hopeless proceeding that is.

It is to be hoped that some substantial amendments will be added to the Bill before it is passed, for there is no doubt that if it is passed as it now stands the majority of planters will find themselves out of the frying-pan into the fire.

A PLANTER.

## GENERAL ARTICLES.

## THE INTERNATIONAL COFFEE CONGRESS.

## THE RESULTS.

The *Madras Mail* extracts the following from the Bulletin of the International Bureau of the American Republics, Washington:—The Coffee Congress, to which reference has been already made, closed its sessions in New York on the 31st October, by unanimously requesting the Government of Brazil to convene, as soon as possible, a second Congress of the same kind, to be attended, as delegates of the different Governments, by intelligent persons experienced in the coffee industry, in order that they might formulate and conclude the conventions or treaties referred to in the recommendations made by the commission, or those that may be subsequently suggested which shall be conducive to the best and most effective protection of this industry, it being understood that these delegates shall be authorised to sign said agreements. In the session of the 27th October, which was the 10th sitting, the Report of the Commission on distribution, which reads as follows, was submitted:—

"The Committee on distribution has studied attentively the reports made by the different delegations, but has not found in them, nor has there been furnished it in any other manner, any concrete proposition upon which it could base an opinion. Consequently it has proceeded to collect the general opinions upon this subject which have been presented in said reports, as well as those which have occurred to its members and those which it has obtained from other sources, and has the honour of submitting to the Conference the results of its investigations."

The subject of the distribution of coffee is so intimately connected with a number of the points already studied by some of the other Commissions that have rendered full reports thereon that this Commission believe it will only be necessary to consider some of the branches which the subject embraces, and with this object in view have devoted their attention to the following points:—

## SOURCE.

The advantages of every business that requires the highest ingenuity to effect its transactions counsel the greatest clearness and security possible respecting the source of origin of articles of commerce, and in such a manner as to eliminate the suspicion of deceit, which is always dangerous to the good repute of products of the best class.

## CLASSIFICATION.

In addition to the advisability of marking the origin of the coffee clearly on the sacks or packages, there follows the necessity of marking thereon, in an equally clear manner, the different grades shipped from the same place for the purpose of distinguishing the product in the markets of the world under its own name and by its different grades.

## SALES.

Among the suggestions prepared by a Commission at San José and submitted to the Conference by the delegation of Costa Rica is the following:—Private sales in the United States have great disadvantages which it will not be difficult to prove. Without any great mental effort one may arrive at the more important conclusions that make clear the value of the system of sales at public auction.

The views of the Commission not being unanimous upon this point, the Commission confined themselves to a submission of the question to the Conference.

## REPEAL OF THE ALCABALAS OR LOCAL TAXES.

A different question of reform is that relating to the system of *alcabalas* now in force in some of the countries, and the existence of which does not depend upon the growers, exporters, or dealers in coffee. The Commission are of the opinion that the abolition of the duties known as *alcabalas* or taxes on goods in transit between

different places in the same country or nation, such as are collected by the various States or by the different jurisdictions in the same State or Province, should be recommended.

#### PROPAGANDA.

A very important, if not an essential, requisite to the increase in the consumption of coffee, and therefore closely allied to its distribution, is that which relates to the propaganda, and with this understanding of the subject the Commission recommends that every step in the sense of increasing the number of consumers by the most appropriate means for that purpose in the countries where coffee is already known be made use of, and that new markets be opened where none now exist.

#### TRANSPORTATION.

Necessarily the question of the means of transportation is of the greatest importance. It goes without saying that this is an inherent principle in the possession of any product, since the acquisition of gold itself would profit one little if that rich metal had to remain confined in the place of its production.

#### PACKING OR SACKING.

An important requisite in this respect is the quality of the packing or sacking, since the shipments must be made by land and water and the covering or packing is to preserve the coffee from dampness and other atmospheric conditions that might injure it.

#### RECOMMENDATIONS.

With the foregoing as a basis, the Commission have the honour to submit to the Conference the following recommendations:—

The International American Coffee Commission recommend that the Governments of coffee-producing countries take the necessary steps, in conjunction with the other recommendations proposed to them by the Conference, for the accomplishment of the following ends:—

1. To secure severe punishment for the abuse of changing the sacks or the marks indicating the origin of the coffee imported into the consuming countries, or for the employment, in any other manner, of deceit for the purpose of unjustly raising the price of coffee of inferior grades to the prejudice of coffee of higher grades.

2. To secure also the assistance necessary for an effective propaganda in the sense of extending the use of coffee and of opening new markets for it.

3. To secure the abolition of the *alcabala* or any other local taxes that tend to prevent or delay the free movement of coffee.

4. To secure, by the means indicated, or by any other means that may be deemed proper or adequate, the sale of coffee, when it is so desired, at auction in those markets where this practice obtains.

For the home Governments the Commission propose the following:—

The International American Coffee Commission recommend to the Governments represented therein—

1. That they encourage and develop every possible means of transportation in their respective countries, and in the means of communication with other States, in order that they may promote the growth of International commerce as a means of increasing the consumption of coffee.

2. That they adopt regulations looking to the employment of better sacks or packing for the purpose of securing the conservation of the coffee without alteration.

3. That by means of these regulations the manner of classifying and marking each sack of coffee under the name of the country from which it comes be determined.

### PRODUCE AND PLANTING.

In his address last month at the opening of the Legislative Council, the Governor of Ceylon referred to the new products to which the enterprise of Ceylon planters had of late been directed. The desire to avoid having all the eggs in one basket has led to the cultivation of products other than the staple, tea, and it is evident from the Governor's speech that the outlook is very hopeful. Para rubber has now taken its place as a recognised cultivation in Ceylon, with every prospect of becoming a large and profitable industry. The market price during the past year has been good. The trees introduced into Ceylon in 1876 by the Department of Agriculture are most vigorous, and have this year again produced a large crop of seed, some 250,000 of which have been distributed through the island for planting. New areas of tobacco have been planted both in the Northern Province and in the Dumbara Valley.

In the latter district a promising industry, conducted by Tamils, is growing up, and a distinct improvement in the quality of the cured leaf is to be recorded. Improved methods of cultivation and curing have been experimented on by private enterprise in the Northern Province, and the results of these experiments will be of use when the market value of the cured leaf is known. Camphor has been planted out in various upcountry estates, and in suitable climates will prove a useful additional cultivation to tea. Cacao has been producing very good crops, and where the rules for the extermination of canker, as published by the Department of Agriculture, have been carried out, the freedom from this dangerous fungus is most encouraging. The amount of crop harvested for the half-year is larger than any previous cacao crop.

The Cape Colony imported tea during 1901 to the value of £138,092, while the value of the tea imported into Natal was £37,401.

In a review of the cocoa trade the *Grocer* says: "This article is of yearly increasing importance, and each branch of the trade is continually making fresh strides towards a higher point of advancement than it had ever reached before. Apart from mere assertions, statistics prove that the quantities received and delivered in the United Kingdom are far ahead of those in previous years, and, confining the figures as taken from the official accounts to this year and last, it will be seen that the total importations of raw cocoa during the past eleven months have amounted to 53,009,256 lbs., against 49,406,166 lbs. in the same period of 1901. A corresponding improvement was observable in the duty-paid entries for home use, which were 42,619,394 lbs., in comparison with 39,833,326 lbs. last a year; and the quantity taken for exportation was also much heavier than in the first eleven months of 1901, being 12,253,700 lbs., instead of 10,710,189 lbs. As a result of these extra outgoings, the bonded stock in the U. K., as officially stated, was by the 30th ultimo reduced to 10,030,000 lbs., against 15,097,000 lbs. in the preceding year. As a defect which mars the completeness of the Board of Trade Returns it may be noticed here, in passing, that the compilers do not distinguish one description of cocoa from another, and keep colonial separate from foreign sorts. The latter mode, it is but fair to say, is that regularly adopted by the authorities at the Port of London, where the landings and clearances of the leading kinds of cocoa are kept totally distinct from each other. They are on that account doubly interesting to the importer, dealer, and exporter, who carefully note every new movement that shows itself in this article of commerce and manufacture. To follow out this plan we therefore give particulars of both colonial and foreign cocoa as they enter and leave London, from which it will be observed that of the two main growths the former forms the chief portion of what is landed and delivered from time to time as the season progresses. Thus, in the first fifty weeks of the present year, in comparison with those in 1901, the receipts and clearances of cocoa, as returned at this port, have been as annexed:—

	Landings.		Home Deliveries.		Exports.		Stocks, December 13.	
	1902.	1901.	1902.	1901.	1902.	1901.	1902.	1901.
Colonial pkgs.	102,450	87,850	72,700	72,550	30,600	20,500	22,700	24,900
Ceylon ...	35,350	32,750	25,850	12,200	17,600	10,400	6,600	14,400
Foreign ...	80,850	89,500	62,500	58,700	24,900	30,600	33,700	41,400
Totals...	218,650	210,100	161,050	143,450	73,100	61,500	63,000	80,700

"These totals confirm in a remarkable manner the general outlines of the Board of Trade Returns above alluded to where in most cases the amounts entered during 1902 exhibited appreciable increases over those in 1901. It is, consequently, no wonder that with an aggregate supply more than sufficient to satisfy all requirements (though leaving stocks materially lighter than in last December) prices of cocoa almost throughout the year have been materially below those in 1901. For instance, under the influence of a large crop of Trinidad cocoa now beginning to arrive, fine quality has latterly been sold at 65s. per cwt., whereas last year it was fetching over 70s. The same may be said of the Grenada description

which offers at 59s. to 62s., instead of at 63s. to 64s. in 1901, or 8s. per cwt. cheaper than the article was in 1900. African cocoa has, however, been little affected by the depression existing for colonial sorts, as its principal market is in Liverpool, where between 4,000 and 5,000 bags come in every week from St. Thomé, *via* Lisbon, and about 15,000 bags have already been sold, *sub rosa*, for arrival next February on terms equivalent to those for 'spot' parcels in London. Guayaquil, on the contrary, is an exception to the prevailing depreciation in values, and is actually shillings dearer than it was a year ago. Beyond this there are faint signs of improvement or better prices in the cocoa market, owing to the fact that supplies nearly everywhere are most abundant, and more than equal to the demands from consumers."

Messrs. C. J. Leech & Co., in their weekly report on the coffee market, state that the speculative markets were easy in tone during the greater part of the week, Santos receipts having actually increased sensibly, refuting Messrs. Zerrenner, Bulow & Co.'s cable of last week stating that "Santos receipts are small and likely to continue so." As a matter of fact, last week's figures are larger than those of last year, but many think that this may be the final flicker before the actual falling off so long predicted. The size of the present Brazil crop is still a matter of doubt; certainly it is much smaller than its predecessor, the total receipts to date being 2,391,000 bags less than last year, but 1,040,000 bags more than in season 1900-1901, which eventually totalled 10,900,000 bags. The comparison with season 1899-1900 is not a fair one at present, because in that year there was a landslide on the Santos railroad involving a cessation of receipts for two days. But, despite this, the receipts to date are only 1,321,000 bags larger than in that season, which finally gave 8,971,000 bags. Messrs I. A. Rucker and Bencraft, in their circular, say that "at the moment of writing, December is worth 26s. 6d.; say 1s. 6d. above the lowest price ever known for good average Santos. Thus drought, frost, and an American syndicate combined, have just succeeded in keeping us above the lowest record. The year has been a bad one, all coffees having depreciated in value, mild coffees are heavily lower, and good average Santos is about 28 percent. lower, as compared with the quotation on January 1, 1902. As regards the future, the general view is pessimistic. This time last year, after a great boom, everybody was optimistic, and everybody was wrong. Now, after a heavy fall, everybody is the reverse, and everybody may easily be wrong again. Values are very low; drought and frost have so far done little for us in values; but they were facts, and may yet assert themselves. Receipts may run much smaller, and traders are poorly supplied. It would not take much to turn the current, and caution on the 'bear' side is only common-sense."

As is well known, the various South American States play a very important part in the production of produce of all kinds. Venezuela's chief industry is coffee planting, and its greatest exports are, in the order of importance named:—coffee, cocoa, hides and skins, timber, coprah and cotton. Bolivia is a wonderfully productive country, and it is difficult to imagine a tree, grain, fruit, or vegetable that could not be successfully grown. Bolivia grows barley, oats, wheat, beans, potatoes, maize, and all kinds of vegetables and fruits upon the uplands; and oranges, pine-apples, bananas, coffee, rice, cocoa, chocolate, vanilla, sugar-cane, manioc, and rubber in the forest-covered regions. There are others; as the quinoa, a grain indigenous to the mountain regions; the oca, a kind of potato; the cherimoya, or custard-apple; the tembe, a fruit of a species of palm; the guayava; the granadilla; the fruit of the passion-flower, and many more. Thus great areas of the country may be designated huge gardens, and there are millions of acres of the finest timber, watered by navigable rivers. British Honduras has not merely its mahogany and logwood to depend upon, but vanilla, cacao, rubber, sapodilla, and other valuable products, as well as useful woods of many sorts, are indigenous and abundant, and the soil in many large areas is peculiarly fertile and suitable for the growth of sugar-cane. Bananas, oranges, rice, and maize are only a few of the products which grow luxuriantly, but scarcely anything is done with them, and the bounteousness of nature has made existence so easy that the inhabitants have lived almost solely by cutting their mahogany. Even the natural forest produce remains ungathered. The vanilla grows so abundantly that the traveller when riding through the forest roads has often to clear away the vine of this valuable orchid with his machete

before he can pass. The cochune nut, which yields the finest table oil, grows in immense quantities, and is also entirely wasted.

Brick tea we know, but fruit packed in brick form is a novelty. In California they propose to pack fruit done up in oiled tissue paper, and of about the consistency of the confection known as "Turkish Delight." The fruit bricks are made by boiling down fruit pulp to the required consistency, and then pouring it into pans and allowing it to dry slowly for ten hours, after which it is cut into rectangular or disc-shaped bricks, and wrapped in oiled paper. The plan, it is added, is being adopted in California with satisfactory results. It is said that these fruit bricks will keep for years, although it is not clear how this can be known, seeing that the process is described as a new one. Probably gelatine is used to solidify the pulp, although no disclosure is made to this effect.

The *North China Daily News* recently published an article on the "Resurrection of China Tea," in which the writer referred to the blossom and decay of the China tea trade, and exhorted those interested to make some effort to save the industry from extinction by advertising. A letter is quoted from Mr. E. J. Moss, of Foochow, who also endeavours to awaken interest in the question of a revival of the tea trade of China by means of push and enterprise. Mr. Moss calls attention to some paragraphs which appeared in the *Home and Colonial Mail*, of July and August, in which it was mentioned that the China tea trade had already a good advertising medium in the form of the reports of the various Consuls at the treaty ports. This is so, and if Indian and Ceylon tea received such free advertisement, and its excellence were the theme of praise in various official documents, we do not doubt that such valuable testimonials would be turned to good account. Mr. Moss has, we believe, endeavoured to induce the Chambers of Commerce in each tea port of China to agree to a plan whereby a sub-Committee of members interested in the tea trade shall be elected with the view of collecting from the exporters, with the aid of the Commissioner of Customs, an advertisement fund. No doubt Mr. Moss thinks that if China tea is to compete with India and Ceylon, the former must take a hint from the methods of the latter.

## TEA TRADE CHANGES.

### THE MODERN BLENDER.

(From the *Daily Telegraph*.)

The recent regrettable failure of an old and honourable City firm of tea merchants, who attributed their losses chiefly to the changing conditions of their business, has directed attention to the almost complete revolution that has taken place in the tea trade of late years. So far as the retail buyers are concerned, it has come about so silently and gently that they have fallen in with it, quite unconscious that any transformations were proceeding. They are vaguely aware that China tea has to all intents and purposes passed out of their grocer's shop, and they are learning that tea should be drunk when freshly made. Price remains their chief standard of comparison, and the average householder feels she has acted rightly when she orders a quantity at 2s. a pound for general use, and a smaller amount at 2s. 6d. for her weekly "At Home" day. But how it has come about that month after month she can rely upon having the same quality of tea, and the same "robust" or "soft" flavour, to cite the terms of the dealer's price list, she knows not, nor has she any idea of the skill and science which have ousted the rough and ready methods of by-gone days. The old-fashioned tea-caddy, with its divisions for black and green tea, which were mixed at the discretion of the lady of the house, seems as far from the elaborate machinery of scientific blending of to-day as the tallow candle from the electric light.

To understand the present conditions of a trade of such vast proportions and Imperial moment, it is necessary to go back to the early sixties, when the experiment of tea-growing was first made in India. China was then supplying the world, or, rather, such portions of it as consumed tea, and gentlemen of long experience in the trade can tell one that about 1868 the general quality of this tea was at its best, though 1879 saw the "record" of bulk ever furnished by the Celestial Empire. Meantime, it was steadily

deteriorating, however, and India was becoming a more and more formidable rival. Ceylon came into the lists, too, and by 1886 was sending in 6,000,000 lbs., and every year has made enormous strides. It is interesting to note, therefore, the relative proportions of the tea now drunk in this country by the figures of last year. Roundly, India furnished us with 148,000,000 lbs., Ceylon with 91,000,000 lbs., and China with 10,000,000 lbs. According to the latest available statistics, India has nearly 525,000 acres now under tea cultivation, and Ceylon 387,000 acres. Tea is a growth that is most easily affected by soil, height, the wetness or dryness of a season, and a score of other influences, and the products of certain estates are known to be superior to those of others. With the varying conditions of such a wide area, and tea, good, bad, and indifferent available, how is it that it reaches the consumer so unvarying in the standard of quality and flavour?

It is due entirely to the expert ability of the blender, and when new methods were introduced about 1888, the transforming change began. Previous to that the grocer, judging approximately the amount he would require, ordered a few chests of China and Assam tea of varying degrees of pungency or mildness, and according to his own judgment mixed any two or three of them, and gave them labels and designations as he thought most likely to commend them. He did not possess the super-cultivated palate essential to a tea-taster; his ideas of combinations were essentially primitive and restricted, and he quite failed to take into account that, say, the Orange Pekoe from Darjeeling, which had been so good a feature of "our strongly recommended" last year, might this season be a totally different tea on account of an abnormal season. Of course, his mixtures sometimes proved unsuccessful, but there was always uncertainty, and the fastidious people who were wont to say, "they could not drink grocer's tea" were in the habit of sending to one or other of the old-fashioned London houses, which made a speciality of high-priced and choice teas.

The pioneers of the change conceived the bold idea of supplying the grocers with ready blended tea, and bold and enterprising firms pushed forward the scheme with rapid success. They secured the assistance of tasters able to detect the subtlest gradations of flavour, and able to judge to a nicety the exact degree to which a full, rough Assam with its large percentage of theine should be tempered with the softer growth of Ceylon's uplands, and the fragrant dash of some scented variety. By means of constant experiment they mastered the great secret, which is to produce a "negative" blend. In a popular tea at the present time there may be anything from twelve to twenty different kinds of the leaf, each representing some different qualification of strength, delicacy, flavour, or aroma. The importance of the water used is now recognised as it never was of yore, and different blends are prepared for districts where this can be broadly classed as hard or soft. In the mixtures prepared for Scotland and Ireland, for instance, the combinations are quite distinct. But between these clearly defined divergences are endless lesser ones, and it is found on experience that a blend embodying numerous constituents is more likely to prove universally suitable and palatable than one into which fewer varieties enter. Moreover, in the event of a failure in any of the crops represented, it is easier to replace a small proportion of the whole, and to maintain the level standard that the public now demands in what may be termed the "branded" teas of favourite firms.

It is pleasant to be able to state, on the highest authority of the wholesale houses, that never has better value been offered to the retail buyer than at the present time. The prices both of Indian and Ceylon teas have been steadily declining during the past twenty years, and adulteration has thus been stamped out. So much genuine, even if not high class, tea is now available that there has ceased to be the incentive there once was to mix other items with it, so that though the flavour of the cheaper descriptions sold may not always appeal to a critical and fastidious taste in tea, there is no occasion to fear it may contain foreign substances. The average housekeeper, too, has learnt to make tea upon much better principles, and instead of extracting every grain of tannin it contains by long infusion, she uses more of the leaf and pours it out after two or three minutes' "drawing," to the advantage of the nerves and digestion of the consumer. This point is illustrated, to some extent, by the steady growth of the tea drunk per head of the population, which from the 4.91 lbs. of 1895 had attained last year to 6.17 lbs., and is beginning to approach Australia—the greatest tea-drinking country of the world in ratio to its population—with its 7.80 lbs.

## TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, December 11, 1902.

The local tea market is firm in tone and buying has been brisk during the week in Indian and Ceylon greens and blacks. There has been a larger percentage of the greens sold this year than usual, probably owing to the scarcity of the China and Japan article. Nothing is available on the spot in Indian Pekoe Souchongs at  $6\frac{1}{4}$  to  $6\frac{1}{2}$ d., and foreign advices state that  $7\frac{1}{2}$ d. is the price asked for merchantable stuff, and that the buying would be lively if 7 or  $7\frac{1}{4}$ d. would be taken for Indian Pekoes or Pekoe Souchongs. Good Ceylon Pekoes were not available at  $8\frac{1}{2}$ d., but first-class goods might have been obtained at 9d. Orange Pekoes from 1 to 1s. 3d. were wanted and obtainable only in a few cases. The prices were altogether in buyers' favour. Green Indians and Ceylons were saleable at  $7\frac{1}{4}$  to  $9\frac{1}{2}$ d., and few goods were offering. Fancy green Indians were worth 1s. 3d., and a few were offering. Later despatches say that the Japan and Indian markets are closed and no Ceylons nor Indians, no matter how poor, were lower than 7 to  $7\frac{1}{2}$ d.

MONTREAL, December 11, 1902.

There has not been much change in the tea market. The position of almost all teas is still strong. Ceylon low grades have continued to advance and are now about  $1\frac{1}{2}$ c. higher than last week. The higher grades, however, have not changed in price, but are still firm. Green teas are also very firm. Japans are still high and very firm. Some arrivals are reported on this market during the week, and one large house announces that it will have sufficient to supply all demands from retailers.

## CEYLON TEA IN AMERICA.

"T. Gossupp," of New York, writes to the *Times of Ceylon*:—

Following my remarks of a week or two back, I may repeat that it is of importance here—where the grocers in the United States are used to Japan teas and receive green teas either uncoloured or coloured, pan-fired or basket-fired, in Japan or China packages that are faced (that is covered) with Japan or coloured papers on the outside of the packages (as well as being matted)—that in order to introduce our teas, we should adopt some method by which the teas will be received in exactly the same way as Japan and China teas are. These teas are sold to the wholesale grocer (that is to the large merchants) as nothing else but Ceylon greens, but they maintain that the ignorance of the retail grocer prevents them from pushing the teas, on account of the difference in the appearance of the packages.

The ignorance of the retail grocer is deplorable where teas are concerned, and to illustrate by an example how great this is:—I went into a shop a day or two ago and asked what teas they had in stock. The store-keeper told me they had "English Breakfast" (which is a China Congou), "Black and Green" (which is a mixture of China Congou, Gunpowder, and Young Hyson), which he called a black tea. As any tea man will know, a Young Hyson is a green tea, but as this particular grocer had no other bin to put his tea in he put a Formosa Oolong (which is a black, leafy tea) into the Young Hyson bin, and was selling this tea to the public as "Young Hyson" and the tea-drinking public were none the wiser.

We have, therefore, still a great deal of education to do before we can get the United States public to appreciate our teas, but the future is the brightest possible, for no nation in the world is so willing to take a good thing if you will only prove to them that it is as good as what they have been used to, at a lower cost to them. It is remarkable, but very apparent, that the American people (and when I refer to the American people, I mean the U. S. people) are most generous and open-minded, and when you have once got their confidence, they are conservative enough to stick to the tea that suits them well and that they can obtain at a lower figure than the tea that they have been used to.

Now, if you will bear these points in mind, you will find that they will be of advantage to Ceylon teas in the future; that we are making steady headway is without doubt, and I consider the cess is of material advantage and encourages many advertisers to include the "Ceylon" teas in their advertisements, when they might other-

wise leave them out. Therefore they bring to the public notice the teas they have been using, but have been loth to boom.

You must fully understand that the retail grocer is not the pioneer. The "missionary" work must be done by the importers here who employ salesmen and travellers to canvass the country and introduce Ceylon teas. The wholesale grocer invariably runs a package tea business of his own, and if he can get a longer profit from selling Ceylon green tea instead of Japan, you may be perfectly certain he does it, for everyone here is "out for the dollar." Another thing that must not be overlooked is that a number of the large wholesale houses finance the small retail grocer, and can, therefore, dictate to them the class of tea they have to sell. . . . I may mention that in many cases Indian greens at the same prices have shown better value than Ceylons, but I have demonstrated on several occasions during my brief visits through the States here, that, whereas a fine flavoury Japan tea tastes (without milk) very delicate and full of flavour, if milk is put into the cup, the flavour is lost, whereas, in the Ceylon and Indian greens, the flavour is not only retained, but there is a pungency and quality of cup that is looked for by the United States consumer.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Extremes during the week ending November 21st were  $11\frac{1}{2}$ d—12d for 90 d/s Bank paper and  $12\frac{1}{16}$ d. for private. The average Bank 90 d/s counter drawing rate for the week comes out at  $11\frac{6}{16}$ d., the corresponding sight rate being  $11\frac{5}{16}$ d. against  $11\frac{5}{16}$ d. the average sight rate of the *Camara Syndical*.

Ninety days' Bank rate on London opened on Monday 17th at  $11\frac{3}{16}$ d. and closed this evening at the same rate.

The change of President has come and gone with no sign of the promised revolution even in the Rua da Alfandega.

When one of the Banks wants money it has to put the rate up to 12d. to get it, and as soon as it is satisfied it relapses again to  $11\frac{3}{16}$ d. which has become stereotyped. Business, the little there is of it, is now done at a margin so narrow as to leave little or no profit to the Banks, whilst collections have fallen off to almost *nil*. One of the Banks in which collections previously averaged £5,000, *per diem*, has lately come down to £1,000, and even £300. Clearly without speculation in Exchange or movement in other Banking business there is not enough for five foreign banks in addition to the Banco da Republica to do, and some of them will sooner or later withdraw.

The change is really remarkable and worth a little attention. Why collections should fall off in this manner when imports have been so decidedly on the increase since the beginning of the year is somewhat of a mystery. Unless, indeed, it can be regarded as an indication that the market's indebtedness abroad has been reduced to that for current purchases merely and that the great burden of back debt has been practically wiped out.

For the month of September the value of imports was £2,000,000 as against only £1,500,000 last year, whilst Export values were £3,163,000 as against £3,680,000 last year. Imports of specie in September were only £51,000 and seem to be falling off persistently. All of which are factors that seem to indicate the operation of a gradual change in the relations of Supply and Demand for bills, that should be carefully weighed.

The remarkable falling off in coffee entries during the week whether symptomatic or spasmodic remains to be seen, but, unless it be accompanied by a rise in prices abroad sufficient to make up for the shrinkage of volume, must be regarded as a "bear" factor rather than otherwise.

During the week ended November 21st the value of shipments, (*embarques*) was only £393,000 as against £378,000 for the previous week and £660,000 for the corresponding week last year, whilst declared sales fell again to 171,000 compared with 201,000 last year.

Joint entries at Rio and Santos during the week ended November 21st, show a remarkable falling off, being 81,875 bags less than the previous week's and 149,759 less than for the corresponding week last year of which they represent 62.9 %.

Allowing for the holiday on the 15th the average daily entries at Santos for the week ended November 21st fell from 38,808 for the previous week ended Friday 14th to 33,747 as against the daily average of 45,378 for the corresponding week last year.

There can be no question whatever as to the reality of the shrinkage and, as there seems to be no particular reason to account for it, it is quite possible that it may continue and the current crop not prove so large after all. At 62.9 % of last year's future entries, would give a total of barely 11,000,000 bags. There are, however, persons who seem very well informed who assert that 75 % of the crop is already marketed and that it will not exceed 10,000,000 bags at most.

Of course, money is really very light this year, lighter, indeed, than it has ever been, and this may have obliged many of the smaller and more necessitous class of planters to send their wares to market earlier than usual. But, as a rule, the indomitable optimism of the average planter in this country may be relied on to keep back a good deal of coffee under any circumstances.

It is too early yet to draw conclusions, but the sudden drop of entries from an average of 341,387 per week since the first week in October to only 254,387, over 25%, is remarkable, to say the least of it. In New York it is already regarded as symptomatic and has determined a slight but welcome advance in prices.

The same correspondent who foretold the shrinkage of entries, to which we alluded last week, maintains in the most positive manner that next year's crop at S. Paulo will not be bigger than this, and will not exceed 7 or  $7\frac{1}{2}$  million bags at most. As to this we ourselves venture on no opinion.

We believe that the frost has really done a good deal of damage but to what extent the growing crop will be injured by it, or how far new coffee may compensate for it we have not sufficient data to go upon. We, however, know that different parties all well informed, scrupulous and trustworthy, profess diametrically opposite opinions on the subject and defend them with the greatest warmth. All we can do, therefore, is from time to time to put the facts before our readers and comment on them to the best of our ability and then leave them to form what judgment they can; regretting that the proposals we last year made to the Coffee Trade for the organisation of an information bureau was not realized.

Until some such organisation is undertaken crop news must continue to be uncertain and contradictory, because there is no independent authority who makes it their business to find out the real facts over the whole area.

No doubt there are many who possess excellent opportunities of forming opinions as to certain determined circumscribed districts, but there is no one whose information embraces anything but a relatively small section of the vast area now covered by plantations, and it is to the partial nature of the information available that we attribute the tremendous difference of opinions on the subject.

We have just completed the organisation of the Commercial Statistics of the Union, and have at our disposal elements for the organisation of a Coffee Service Bureau on an excellent footing, that we would once more urge on merchants abroad to utilize. Compared to the task just completed it would be a simple matter, though doubtless to make it reliable would require a good deal of money.

Shipments (*embarques*) at the two ports were about the same as the previous week's, but 104,656 bags less than for the corresponding week last year.

Declared sales fell off from 190,000 for the previous week to 171,000, as against 201,000 for the corresponding week last year.

Stocks at the two ports increased slightly, on the 22nd November, being 6,862 bags more than on the previous Friday.

The total value of the coffee sailed from Rio and Santos since 1st July is £9,334,119 as against £12,235,648 on the corresponding date last year, a shrinkage of nearly three million sterling.

In consequence of the shrinkage of entries there was a small but general revival of prices, the week's average for "good average" having risen from 4\$066 for the previous week to 4\$120 per 10 kilos., and for N. York spot from \$5.12 to \$5.20 per lb. as compared with \$6.74 the average last year.

**Planting Conditions in October.**—The *Boletim da Agricultura* for October publishes the following reports of the inspectors:

*1st district* (Taubaté).—After a few days rain and a threat of frost, continuous dry weather has again set in causing serious damage to new plantations. Probabilities of a fair medium crop are, however, maintained.

*2nd district* (Campinas).—The weather this season, especially during the past few months, has been very unsettled—alternate

rain and frosty. October was a dry month throughout the district and very cold in some zones, frost falling in the municipality of Limeira on the 3rd.

Flowering has been retarded and in some districts, where it had already commenced was damaged by drought, cold and strong winds.

**3rd district (Ribeirão Preto).—**The situation here may be resumed in a few words: The current crop is practically over and a violent hailstorm, which traversed this district caused serious damage, especially in Batataes and Mococa estimated at 40 % in the latter.

**4th district (S. Carlos do Pinhal).—**The coffee trees, nearly bare of foliage, even in the newest zones, wear a sad appearance, though, tried as they have been by rough weather, it is a marvel they have survived and proves their extraordinary vitality.

The poor condition of the trees dates from the frost and was not improved by the strong southerly winds that subsequently raged here.

For the reasons mentioned a large part of the September flowering remained unproductive and that of October, which opened about the 9th or 10th, suffering besides by wind and rain combined has likewise given poor results.

Stable Spring weather was looked forward to for October but the first few days of the month were dry and windy, always considered injurious at this time.

A slight frost in the low lands, fortunately causing no harm, fell on the morning of the 3rd, then wind and hail in Babylonia and S. Carlos on the 7th and on the 25th in Santa Eudoxia. On the same day a hurricane caused serious damage to trees and buildings in Ararahy.

Showers fell on the 11th, 12th, 15th, and 16th, and drizzle with excessive heat was the characteristic of the weather to the end of the month.

**5th district (Botucatu).—**The months of September and October were too dry to be good for plantations, but the occasional heavy showers were very beneficial to coffee. The trees, now the crop is over, are regaining vigor and look very well.

The first flowering suffered from frost and cold in August, but the second was uninjured. Trees tired through over-production and others that did not receive proper attention show a poor flowering, but those recently come into bearing are in splendid condition.

#### LATER NEWS.

**Exchange.**—Extremes during the week ending November 28th were  $11\frac{1}{8}$ d.— $11\frac{3}{4}$ d. for 90 d/s Bank paper and 12d.— $12\frac{1}{4}$ d. for private.

The average Bank 90 d/s counter drawing rate for the week comes out at  $11\frac{1}{8}$ d, the corresponding sight rate being  $11\frac{1}{2}$ d. against  $11\frac{3}{4}$ d the average sight rate of the *Camara Syndical*.

**November 29th, 1902.**—Ninety days Bank rate on London for the past week opened and closed at  $11\frac{1}{8}$ d. The market continues on the even tenour of its way unchanged and impartable with  $11\frac{3}{4}$ d. apparently a fixture. There is nothing to say about it. Bank counters are empty of customers and the little doing is done direct between shippers and importers. A 32nd is now a thing to be run after, and at one of the banks the difference between drawing and taking rates has been cut down to  $\frac{1}{4}$ th. Clearly at such rates no one can make much, and it must be hard work for the banks and brokers to make ends meet. What is poison to one man may however be meat to his neighbour. Whatever may be the case with mere dealers in exchange, the market and country gain by stability, and business is gradually, if slowly, improving.

That imports are increasing very considerably there can be no question, especially dry-goods, as custom house receipts for the past month were 40 % over those of 1901. It is true that last year imports were lower than they ever were previously and that the present spurt may therefore cease as soon as stocks are replenished. Otherwise, taken with the shrinkage of Exports and possibility of a deficit in the budget, the situation is not altogether re-assuring. On the other hand if coffee entries are smaller, there is still an enormous stock to draw on left over from last season, whilst the balance sheets of the Banks show that they are considerably over-remitted and may have to draw at any moment. It is possible too, that coffee prices may rise abroad. At present the demand and supply of bills seem to be balanced, and until some considerable factor intervene to destroy the equilibrium one way

or the other there seems to be no reason to expect much alteration. During the week ended November 28th, the value of *Embarques* here and at Santos was £397,000, almost identical with the previous week's but £287,000 less than for the corresponding week last year.

Declared sales were 11,000 larger than the previous week's and 5,000 over those of the corresponding week last year.

**Coffee.**—Joint entries at Rio and Santos during the week ended November 28th were 3,226 bags less than the previous week's and 93,144 less than for the corresponding week last year, of which they represent 73.4 %.

For the crop, entries on the 28th November were 2,281,371 bags under last year's, of which they represented 76.1 %

In spite of the heavy rains that have been general all over the interior since the 19th or 20th of November, entries were maintained last week, and compared with last year's show a decided revival.

If, however, it is a fact that as is pretended, the sudden falling off last week is not to be attributed solely to the weather it would seem to show that little or no stocks exist at the stations and that the coffee has really been forwarded with unprecedented despatch.

The weather has been bad for the roads but splendid for the trees, which are said to be now in perfect condition.

Shipments or *embraques* during the week ended November 28th were 2,868 less than those of the preceding week, and 105,310 bags less than for the corresponding week last year.

Joint stocks at Rio and Santos on the 28th November showed a slight reduction of 45,414 bags compared with the previous Friday's and are about the same as on the same date last year.

Declared sales at Rio and Santos were 11,000 over the previous week's and 5,000 more than for the corresponding week last year.

Prices improved a little from the average of 4\$120 for Good Average for the previous week to 4\$16 per 10 kilos. as against 5\$450 last year. New York spot quotations also averaged 5.20c. against 5.17c. for the previous week and 6.83c. last year.

The value of coffee sailed from July 1st amounted on 28th November to £9,717,444 or £2,915,023 less than for the same period last year.

#### COFFEE IN LONDON.

The terminal market has exhibited further weakness says the *Produce Markets' Review* of December 20, 1902, owing to a most unexpected increase in the receipts at Santos, and quotations have given way about 6d, reaching a level of only 1s 6d above the previous lowest record. As that price was brought about by an abnormally low exchange, the rate then being less than half what it is now, the present quotation is proportionately lower to the planter, and there is again a talk of production being checked by its unprofitable return. It will require more than talk to convince dealers of this, for at present there is no sign of checking the output, and even a sensational cablegram regarding the next crop has had no effect upon quotations. There is no change to report in mild Coffee; trade has been quiet, and the auctions have been poorly supplied, though valuations have been maintained. A rather better shipment of new Costa Rica obtained higher prices, though still decidedly under those of last year.

#### TEA IN LONDON.

**INDIAN TEA.**—The market is strong with a further upward movement in values, says the *Produce Markets' Review* of 20th December and a large business has been done both at public sale and by private contract. For the lower descriptions business has been active at an advance of  $\frac{1}{4}$ d. per lb., and as there will be no more public auctions until the 31st instant, the market closes very firm with an upward tendency. There is no doubt that the stocks of this class of Tea held by the trade are comparatively small, and, although a large quantity may be brought forward after Christmas, it will probably not be out of proportion to the requirements, even at present prices. The medium qualities are fairly plentiful but include a smaller proportion of the more useful Assams which have been well competed for at higher values, while the other growths show no change of importance. The fine and finest grades are gradually getting into a smaller compass, and, in consequence of the well-sustained demand, prices have again gone in favour of sellers. The latest advices from Calcutta give the estimated total exports for the season to the

United Kingdom as 148,000,000 lbs., or about 5,000,000 lbs. smaller than last season, while the home consumption for the eleven months of this year is larger by about 13,000,000 lbs. At the public sales 33,400 packages were offered and nearly the whole sold at firm to advanced rates, while a very limited proportion fetched under 5½d.

**CEYLON TEAS.**—The last sales of the year were held on Tuesday, when a rather larger, though still moderate, quantity was brought forward, and the bidding was good throughout. Common Leaf Tea remained firm, very little being available under 5½d. while the medium grades were steady at last week's prices. In Broken Pekoes, the medium sorts continued in request, and recent rates were well maintained. Only a small quantity, mostly Colombo-bought Teas, sold under 7½d. but the finer kinds over 9d. per lb. were slower of sale, and showed some irregularity. The supply of dusts and fannings has been very limited, and the finer descriptions realised high prices, while there is nothing to be bought in the former under 5d. per lb. At the public sales 19,900 packages were brought forward, of which about 2,500 were withdrawn. According to present advices no further auctions of Ceylon Tea will be held until the 6th January.

**CONGOU TEA.**—The market has been somewhat quiet, but a fair business has been done, chiefly in the lower kinds of Monings, at steady rates. The quantity of fine Tea now available is small, and consequently prices are firm, although no transactions of any importance are reported.

**OTHER CHINA TEAS.**—The market remains firm for Gunpowders with no quotable alteration, and at Thursday's sale all grades were well taken at late rates. In consequence of the high prices now ruling in the Green market, Indian Young Hysons are well worth attention, and though rather pale in cup, the liquors are of a every pungent character, and should command a ready sale. The Caper market remains steady, and a fair business has been transacted privately. Formosa, Oolong and scented Orange Pekoes are unchanged, and the demand has been limited.

## QUININE AND CINCHONA IN 1902.

The *Chemist and Druggist* says speculation in quinine has again been on a smaller scale this year, the shellac-market having overshadowed it to a great extent, and the latter has proved a more remunerative article. There has been practically no inducement to speculate for a rise in quinine, as the bark-shipments from Java up to November have again been extraordinarily heavy, even out distancing the figures for 1901. So far the total shipments from January to November have been:—

1900 .. ..	9,680,000	Amsterdam lbs.
1901 .. ..	11,499,000	"
1902 .. ..	12,028,000	"

These figures have completely non-plussed the "outside" market, and various theories have been propounded to account for them. Rumours of a combination among the Java planters have been hinted, and that the output was to be restricted, but as each successive month saw heavy shipments such rumours were naturally discredited. Taking the average unit paid for bark at Amsterdam, we find it is the lowest for the past three years. In January it opened at 7'45c., advancing at three consecutive auctions to 8'65c. in May (the highest point), when makers quoted 1s. 3d. From this period there was a gradual decline to 4'90c. in August, when makers reduced quinine to 10½d. In August the unit rose to 6'80c., and subsequently declined to 6'25c. this month. There have been fewer fluctuations in makers' quotations, and they close 1d. per oz. lower than in January. The top price was 1s. 3d. (from April to June), but at the end of the latter month a reduction of 2d. was made, and by September it was down to 10½d. It was barely a fortnight at this figure, for before the end of the month it stood at 1s. 1d., and another ½d. added in October brought it up to 1s. 1½d.—to-day's price. In the "outside" market spot values close about 2½d. lower than at the commencement of the year. The highest price paid was 1s. 2d. in March, and the lowest 9½d. in September, when the makers quoted 10½d. This low figure was merely temporarily, however, and with everybody wanting to buy there was a gradual advance to 1s. 0½d. by the end of the month. From that point it went down to 10½d. in November, and although the market subsequently advanced to 11½d., the position has an element of weakness in it.

## The British and Colonial Druggist remarks:—

Lastly we come to *quinine*, which for B and S and for Brunswick spot stood at about 1s. 1½d. per ounce at the beginning of this year, but changing now and then but little until the latter part of June, when, in consequence of the unsatisfactory result of the Dutch bark auctions on the 19th of that month, the market became depressed, coming down all round. The price on the spot was then 11½d., and declining further on account of heavy bark shipments from Java to 10½d. by the beginning of August, it collapsed a short while after, altogether from the same cause, touching, on Monday, the 18th, for an hour or so, 9d., but soon recovering to some extent, a fair amount of business was transacted, commencing at 9½d. and closing a few days after at 10d. This was, however, of short duration, as after the Dutch bark auctions of the 23rd the market came down again, the official price being reduced the day after to 10½d., remaining at that until September 16th when the convention of manufacturers raised their official price to 1s. chiefly to check a large American demand. This imparted an increased firmness to the market and spot rose to 11d., and subsequently to 1s. 0½d., and this after 1d. and then later on another ½d. had been added to the official price, and the English manufacturers had also proportionately increased their quotations. About a fortnight later, however, the spot price was down again at 11d., in consequence of renewed heavy bark shipments from Java and a large quantity to be offered at the Amsterdam sales of November 6th, remaining at that, a few slight changes excepted, until towards the end of last month, when it recovered to 11½d., raising since with an improved demand from 11½d. to 1s., and declining again to 11½d., which is the price at the close.

## NOVEMBER COFFEE MOVEMENT IN THE U. S.

During November, says the *American Grocer*, the deliveries here and in Europe fell far below the same month last year. The combined movement reached 1,240,213 bags, against 1,535,740 bags in 1901—a decrease of 295,527 bags. The visible supply, December 1, was only 15,383 bags deficient from that on November 1, being that much lighter. It is now more than three times greater than the lowest quantity reported during the past five years. The low point was reached in February, 1897, when the visible supply was 3,882,234 bags, against 13,217,901 bags December 1.

The following statement shows the November movement in detail:

Stocks, November 1, 1902—	Bags.	Bags.
United States ...	2,594,941	
Europe ...	6,319,343—	8,914,284
Receipts during November—		
United States ...	528,240	
Europe ...	1,165,590—	1,693,830
Total supply, December 1, 1902 ...		10,608,114
Less stocks, December 1, 1902—		
United States ...	2,622,849	
Europe ...	6,745,052—	9,367,901
Deliveries, November, 1902—		
United States ...	500,332	
Europe ...	739,881—	1,240,213
Deliveries, November, 1901 ...		1,535,740
Decrease as compared with November, 1901 ...		295,527
Deliveries, July, 1902 ...		1,211,088
Deliveries, August, 1902 ...		1,302,949
Deliveries, September, 1902 ...		1,396,975
Deliveries, October, 1902 ...		1,545,611
Deliveries, November, 1902 ...		1,240,213
Total deliveries, year ending June 30, 1902 ...		15,516,663
Total deliveries, year ending June 30, 1901 ...		14,329,925
Average deliveries monthly year, 1901-02 ...		1,293,055

The average monthly deliveries in the United States for the past five months were 559,262 bags, against 555,297 bags as the monthly average for the last trade year ending June 30, 1902.

The total visible supply of the world, December 1, 1902, was 13,217,901 bags, against 10,735,719 bags, November 1, 1901—a gain of 2,482,182 bags.

The total receipts at Rio and Santos for the first five months of the crop year 1902-03 were 7,320,000 bags, against 9,510,000 bags same period 1901-02.

The October sales of options were 1,348,260 bags. The lowest price for No. 7 Rio was 4.35 cents for December; the highest, 5.80 cents for September.

Of the total deliveries in the United States, 438,190 bags were Brazil and 62,142 bags of all other sorts. About 87.6 per cent. of the total deliveries were of Brazil sorts and only 12.4 per cent. of all other kinds.

Coffee at 4.50 cents for No. 7 is certainly at a price to warrant carrying ample stocks. Crop prospects are for crops in 1902-03 in excess of the world's requirements, and another big yield in 1903-04. There are now no signs of any reduction in consumption through the use of nostrums as substitutes.

## DISTRICT ASSOCIATIONS.

### NELLIAMPATHY.

Proceedings of a Meeting held at Nelliampathy Meeting Room, January 7, 1903. **PRESENT:**—Messrs. H. M. Hall, W. R. McKenzie, G. H. Welchman, W. L. Ranking, and J. C. Abbott, *Honorary Secretary*. Mr. W. R. McKenzie *in the Chair*.

**New Member.**—Mr. G. L. Duncan was elected a member of the Association.

**Palghat-Wallenghy Road.**—Read correspondence with Head Assistant Collector. As nothing appears to have been done, the Honorary Secretary was requested to write to the Chairman of the District Board and call his attention to the disgraceful condition of the British portion of this road, and to point out that the culvert between the 3rd and 4th mile, which fell down about two years ago, had not yet been repaired.

**Hospital.**—Read letter from the Apothecary with reference to the dilapidated and dangerous condition of his house, which had been put up more than four years ago, out of old material, at a cost of Rs.138 and was intended to be used for only six months whilst suitable quarters were being erected, but which was still in use.

The Honorary Secretary was requested to forward a copy of the Apothecary's letter to the Dewan, and the following Resolution was passed:

"That this Association records with regret that notwithstanding repeated representations nothing whatever has been done towards providing suitable quarters for the Apothecary."

**Wallenghy Bungalow.**—Read letter from the Chief Engineer, Cochin State, asking that certain articles of furniture should be provided by the Association.

The Honorary Secretary stated that this had been done.

**French Tariff.**—Read correspondence.

**Planters' Labour Act.**—After some discussion, the Honorary Secretary was instructed to write to the Planting Member of Council with regard to certain points.

A vote of thanks to the Chair terminated the proceedings.

(Signed) W. R. M. MCKENZIE,

*Chairman.*

( , ) J. C. ABBOTT,

*Honorary Secretary.*

### WYNAAD.

Proceedings of Annual and General Meeting held at Meppadi Club, January 7th, 1902.

#### ANNUAL MEETING.

**PRESENT:**—Messrs. Abbott, Atzenwiler, Day, Mackinlay, Romilly, Taylor, Waddington, West, and B. Malcolm, *Honorary Secretary*. Mr. G. Romilly *in the Chair*.

1. The Honorary Secretary read the Annual Report for 1902.

#### Annual Report, 1902.

**GENTLEMEN,**—The year under reference has been made auspicious by the event of the Coronation of Their Majesties our King and Queen; and we may well take this opportunity of expressing our earnest hope that they may long be spared to reign over us.

As usual in the Annual Report I will refer to local matters first.

**Roads.**—The district has been unfortunate in having been made the subject of an experiment, our Collector having decided to improve the methods of road repair by replacing the "A system" with what we are told, and sincerely trust, will prove a better one. He has assured us that by doing as little work as possible this season, he will be in a position to spend a proper proportion of money at the right time on metal collecting, *i.e.* between December 1902 and April 1903; and that this metal will be laid next monsoon. This arrangement once started will presumably continue without any further hitch, and we must hope it will be successful.

2. It is unfortunate that, where the Gudalur Cholahé road is so splendidly maintained on the one side, and the Calicut-Chundale road is under the P. W. D. on the other, the intermediate and comparatively small section of some 18 miles of this main highway cannot be handed over to the P. W. D. as well. Were this done it would be a distinct benefit to the district, and a relief to the District and Local Fund Boards, which would then be in a position to afford more liberal aid to other roads in the district that urgently need it.

**Money Orders, Postal, etc.**—In August last I was instructed to draw the Collector's attention to the deficiency of two-anna bits supplied with cash received in payment of M. Os.; and in November we recorded his reply pointing out that the matter would be attended to "with satisfaction." We have been informed that in October and November two-anna bits to the value of Rs.700 were issued to the Vayitri sub-Postmaster. While deploring the continued general deficiency of this small coin which causes great inconvenience in paying coolies, we have a further grievance against the postal authorities in the district for the unequal distribution of the two-anna bits at their command, several planters not having received any of this small coin for the past three or four months.

The attention of the Postmaster-General was drawn to the irregularity of delivery of letters at the Meppadi and Vayitri Post Offices; and his action in the matter has evidently had the desired effect as there have been no further complaints.

**Pepper Disease.**—After two years of almost incessant agitation we have received the good news that the Government of Madras has sanctioned Mr. Barber visiting the district, and arrangements for his tour have just been concluded. Though much valuable time has been lost, and the disease has made rapid strides, we must hope Mr. Barber will succeed in suggesting a cure. No small share of our thanks are due to His Excellency the Governor for this aid, and we also owe our thanks to Mr. Windle, of the Nilgiris, for representing the matter to His Excellency in person.

**Court of Wards Bill.**—A petition was got up in Madras opposing the introduction of this Bill, and it was at first decided by this Association to support it. On the assurance of our Planting Member, the Hon'ble Mr. Acworth, however, to the effect that the Bill was not intended to apply to planters, it was decided not to sign the petition.

**Medical.**—Early in the year we approached the Collector with the request that a Government hospital be erected at Meppadi, our reasons being that the district was not in a position to maintain a properly qualified European doctor with a sufficient number of Apothecaries; and that the population of Meppadi was now sufficiently large to require special medical aid.

Our request has resulted in the establishment of a Dispensary at Meppadi with a Hospital Assistant and Compounder in charge, and the appointment of an Apothecary at Vayitri in place of a Hospital Assistant. All the extra charges incurred by the District and Local Fund Boards in this connection are to be borne by the Association. We owe a cordial vote of thanks to Dr. Hackett Wilkins for the interest and trouble he took in drawing up the scheme which has resulted in this arrangement.

**Coffee and Pepper Robberies.**—No particular cases of theft have been brought to the notice of the Association; but judging from the re-establishment of the old receivers' houses it may be presumed that one or other of these products is being stolen to some extent.

**U. P. A. S. I. matters.**—As your delegate to the Bangalore Meeting, I reported on all subjects of interest up to that time; but several important matters have reached a climax since. Among these is—

**The Madras Planters' Labour Act.**—The extraordinarily short time allowed between the publication of the Bill and its introduction

into Council did not leave us any time to think over the recently amended clauses; but it appeared to those of us who were able to meet at such short notice as I was only able to give you, that the matter in the Bill that would be most harmful to our interests is concentrated in that very objectionable clause III.

We put in an immediate and urgent protest *re* this clause directly to Government; our Planting Member is fully informed as to our position; and we must hope that Government will allow Act XIII to run concurrently with the new Act, or if not, permit of such amendments being included in the new Act as will place us in a fair position with our labour.

It is unfortunate that some of the native members of Council do not understand the position between employers and labourers in planting districts better. We cannot too strongly condemn the hysterical tone, and absolute want of truth, in some of their statements.

**Duties.**—*British Import Duty on Tea.*—The Resolution passed at the last U. P. A. S. I. Meeting has so far resulted in the matter having been referred by the Indian Tea Association to its London Committee. That hesitating body is considering the best means of approaching the Chancellor of the Exchequer. It is to be hoped that it will be able to solve the problem in time to approach him before the new Budget is framed. Seeing the promise made to the Ceylon Association some two years ago it is difficult to understand the diffidence with which this matter is being taken up.

*French Import Tariff.*—It was decided at Bangalore "that as the matter was receiving the attention of Government we confidently left it in its hands."

In the meantime the Ceylon Government has arranged matters for the Island, and the Chairman of the U. P. A. is taking action in referring the matter again to the Government of India.

*Coffee Cess.*—A fair number of members in this district have agreed to support this Cess on the condition that the scheme, when published, meets with their approval.

*Tea Cess.*—The Cess we agitated for is being allowed by the Government of India, and it is intended that it should come into force on April 1st. Our effort to obtain a larger share of representation

for S. India has not been successful; and it now remains with us to decide whether in our opinion both the representatives allotted us should be planters, or one of them a member of the Madras Chamber of Commerce, which body has consented to appoint one of its number if required.

*Sale of Tea in S. India.*—In this connection I may say that we hoped last year that the Ceylon import duty might be abolished. The representation to the Government of India to act in the matter has not been successful however. It becomes all the more necessary, therefore, that we should strain every nerve to capture our share of the Indian market. The demand for dust tea that exists is, at present, largely supplied by rubbish from Ceylon. We have the opportunity offered by Messrs Parry & Co., of Madras, who, with the Agencies they have in almost every town of any importance in S. India, afford a ready-made Distributing Agency which should enable the S. Indian planter to control the S. Indian tea trade.

It is a matter for comment that one of the largest blenders in England, Messrs. Brooke Bond & Co., are advertising the sale of their blends in Madras.

*Coffee Crop* prospects are fairly good in the district; but prices unfortunately do not promise to improve. We must hope that the Leeming System, which has proved so successful on the Shevaroyis, and which there is every reason to think will answer here, will prove our salvation.

*Tea* has, on the whole, had a good flushing season, and prices are improving.

*Pepper Crops* are decidedly good and prices maintain a good level.

Our numbers have fallen off considerably during the past year—six members having left, one new member joined.

In conclusion, I lay the accounts on the table for your inspection, and my resignation in your hands.

2. Proposed by Mr. Romilly and seconded by Mr. Waddington. That the report be adopted and accounts passed, and a vote of thanks be given to the Honorary Secretary for his work during the year.—*Carried unanimously.*

3. Mr. B. Malcolm was re-elected Honorary Secretary.

# "All Sorts and Conditions of Men"

USE

## ST. JACOBS OIL

FOR RHEUMATISM, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Stiffness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains,

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price 1/1½ & 2/6.

## CONQUERS PAIN

## GENERAL MEETING.

The gentlemen mentioned above were present with the addition of—

Messrs. Armstrong, Behr, and D. Mackenzie. *Visitor*: Mr. P. Guard. Mr. W. Mackinlay *in the Chair*.

1. Proceedings of last Meeting taken as read.
2. Read letter from Mr. S. H. Powell, senior, resigning the Association.

*Resolved*, that this Association reads Mr. Powell's letter with regret and unanimously elects him an Honorary member.

3. **New Member.**—Mr. H. Armstrong was unanimously elected a member of the Association.

4. **Medical.**—Read letter of December 7, 1902, to President, District Board, and Board's proceedings of 18th.—*Recorded*.

5. **Pepper Vine disease.**—Read letter of December 7, 1902, to Board of Revenue, and G. O. No 1121, of December 15, 1902, informing the Association that Mr. Barber's services would be available early in January. Also read correspondence with Mr. Barber.—*Recorded* and Mr. Barber's tour was arranged for.

6. **Money Orders.**—Read letter, received through the Collector of Malabar, from the Treasury Officer, Calicut, dated December 13, 1902, stating that the Sub-Treasury Officer, Vayitri, reported that two-anna bits to the value of Rs.772-8-0 were issued to the sub-Postmaster, Vayitri, during the months of October, November, 1902.

Read letter to Vayitri sub-Postmaster asking what proportion of the above value of two-anna bits had been sent to the Meppadi and Sultan's Battery Offices. Read his reply stating no account is kept by the Vayitri Office of the receipt and distribution of small coins in their respective offices, but that small change of all kinds to the value of 10 per cent. was issued.

*Resolved*, that a letter be addressed to the Superintendent of Post Offices, Calicut Circle, quoting the Vayitri sub-Postmaster's letter and asking that orders be passed to the effect that a proper proportion of each kind of small coin be distributed in future.

Attention was drawn by Mr. Abbott to the late arrival of mails at Vayitri; and by Mr. Day to their late delivery by the Meppadi peon.—*Resolved*, that the Postmaster-General be addressed on the matter.

7. **Roads.**—Read Mr. Winterbotham's letter and Honorary Secretary's reply which was confirmed. Read letter of December 7, 1902, to President, District Board, and his reply of December 23, 1902, stating that no change has been made in the allotments of any of the roads in the Wynaad for next year and that funds are available to meet any expenditure already sanctioned.—*Recorded*.

8. **U. P. A. S. I.**—(a) *Labour Bill*—Read circulars 87, 88, 89, 92, 93, 95, 96, and 97 of 1902.

Read telegram and letter to Government of Madras, of December 11, 1902, and Chief Secretary's reply of 22nd.

Read letter to Hon'ble Mr. Acworth.

- (a) *Resolved*, that the Government of Madras be addressed through the Planting Member strongly protesting against the Bill being hurried through; and requesting that at least another month allowed for its consideration.

- (b) *Resolved*, that Messrs Romilly, D. Mackenzie, Waddington, Day, and B. Malcolm form a Committee to frame amendments to the objectionable clauses of the Bill, and that a Meeting of the Committee be held on Friday, 9th instant:—

- (b) *Sale of Tea in S. India.*—Read letter from the Secretary, U. P. A. S. I., of December 11, 1902.

*Resolved* (with one exception pending reference), that Mr. Knight's scheme be supported.

- (c) *Tea Cess*—After considerable discussion it was resolved, by seven votes to five, that in the opinion of this Association a planter should be nominated as the representative of Madras interests, on the Tea Cess Committee.

- (d) Also read circulars 91/02 on French Import Tariff, and 90/02 on Coffee in Brazil.

*Papers on Table*—

"Planting Opinion," "Indian Gardening and Planting," I. T. A. Circulars, Proceedings, Coorg Planters' Association, of November 1, 1902, Proceedings, Shevaroy Planters' Association, November 10, 1902.

A vote of thanks to the Chair terminated the proceedings.

(Signed) W. MACKINLAY,

*Chairman.*

( " ) BERNARD MALCOLM,

*Honorary Secretary.*

## MARKET REPORT.

[Per Mail advices of December 26th, 1902.]

## COFFEE.

The London Commercial Record says:—No auctions have been held this week, and privately sales have been much restricted. Brazil "futures" have ruled easy and values at the close are fully 3d per cwt. lower than when we last wrote, after having been at one time 6d to 7½d down; yesterday Santos for March delivery sold at 27s 3d, May at 27s 10½d to 28s, and September at 28s 10½d to 29s per cwt. We quote:—

London	...	Santos	...	March delivery	...	27s 3d.
New York	...	No. 7 Rio	...	"	...	4.70 cents.
Hamburg	...	Santos	...	"	...	27¾ pf.
Havre	...	Santos	...	"	...	33½ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1902.	1901.	1902.	1901.
Tons	24,642	12,202	44,060	45,644
	HOME CONSUMPTION.		EXPORT.	
	1902.	1901.	1902.	1901.
Tons	16,362	19,671	14,608	28,400

The preceding figures exhibit—

In the Imports a decrease this year of	...	1,584
Home Consumption a decrease of	...	3,309
Export a decrease of	...	13,792
Stock an increase of	...	12,440

## Receipts in Rio and Santos.

	1902-3.	1901-2.	1900-01.	1899-00.
Since July 1—	Bags.	Bags.	Bags.	Bags.
Rio	2,472,000	3,487,000	1,616,000	2,071,000
Santos	5,482,000	6,866,000	5,301,000	4,534,000
Total	7,954,000	10,353,000	6,917,000	6,605,000
Crop	...	15,496,000	10,900,000	8,971,000

Rio Exchange 11½d, previous day 11½d.

HAVRE, December 23.—Good average Santos December opened steady at 33f. and closed quiet at 33½f., March opened at 33½f. and closed at 33½f., May opened at 34½f. and closed at 34f., July opened at 34½f. and closed at 34½f., September opened at 35f. and closed at 35f.

HAMBURG, December 23.—Good average Santos December opened steady at 27pf. and closed quiet at 27pf., March opened at 27½pf. and closed at 27½pf., May opened at 28½pf. and closed at 28½pf., July opened at 28½pf., and closed at 28½pf., September opened at 29½pf. and closed at 29½pf.

NEW YORK, December 23.—Closing prices of No. 7 Rio were as follow:—

	Dec.	Jan.	Feb.	Mar.	April.
Dec. 23	4.45	4.45	4.60	4.70	4.80
Dec. 22	4.45	4.50	4.60	4.70	4.80

## COCOA.

In the absence of public sales little of moment is passing.

## PEPPER.

BLACK—Singapore is firm but quiet; on the spot there are buyers at 6d, and January-March shipment is quoted at 6½d; business has been done in March-May at 6½d per lb.

WHITE is likewise firm, but sales are very small. The spot quotation for Singapore is 9½d and Penang 9d, while for arrival January-March shipment the former is 9½d and the latter 9d per lb.

## QUININE.

Sulphate of Quinine is firm, but, as with most other articles, little business has been done. On the spot there are buyers of best German makes at 11½d and May delivery has sold at 1s per oz.

### THE AMERICAN TEA DUTY.

AMONG the "Tea Notes" in our last issue were some relating to an important question in regard to the American Tea Duty. Dealers in that country had until recently understood that it was the intention of Congress to provide that all teas remaining in bond should be free of duty on the first day of 1903. Under date April 18th the Department at Washington issued a decision to the effect that "tea which shall have been in warehouse not more than three years on January 1, 1903, may be withdrawn, free of duty, for consumption." Naturally, the trade based their operations upon this assurance; and we can well imagine the consternation produced when the Secretary of the Treasury telegraphed the Collector of Customs:—"by a decision of the United States Circuit Court, southern district of New York, tea now in bonded warehouse will be subject to duty, though withdrawn after January 1." The law-makers and the law-interpreters do not appear to have been in agreement; and the result was temporary paralysis of the tea trade. This produced one excellent result, however. It brought men together and bound them together, as a common danger often does; and the tea men of New York entered a very prompt protest, and a request for immediate action on the part of Congress to set things right, and tea men throughout the States backed them up without loss of time. As practical

Americans the tea men gave a very plain hint that there was a way of circumventing the present law if it were not amended. As the Chairman of the Tea Duty Repeal Association put the point in a telegram to Senator PAYNE:—"Contracts have been made by whole country to deliver tea, free of duty, after January 1. If amendment to law should not be made all teas will have to be exported and re-imported at great expense without benefit to Government and with great hardship to entire trade."

What Congress was to be asked to do was, to pass immediately a Bill providing that the repeal of the tea duty shall apply to stocks remaining in bond January 1, and to enact a Bill providing that section 33 of the Dingley Tariff shall apply to tea on January 1, 1903. In Washington Senator PAYNE introduced in the House a Bill for the amendment of section 20 of the Dingley Act. It is as follows: "Provided, that the same rate of duty shall be collected thereon as may be imposed by law upon like articles of merchandise imported at the time of the withdrawal, and provided, further, that nothing herein contained shall affect or impair existing provisions of law in regard to the disposition of perishable or explosive articles." The Bill provides that importations of tea in bonded warehouse throughout the country at the end of 1902 may be withdrawn, free, after January 1, 1903; when the Bill abolishing the duty on tea became operative. The Bill was passed after favourable report by the Ways and Means Committee, and the Senate passed it without debate. It was later signed by President ROOSEVELT.

The repeal of the Tea Duty in the United States is of some importance to tea-planters in India. It is not because of this, however, that we have given in this and former issues such full particulars of what has recently occurred in American. Our main desire is to emphasise the manner in which American tea men rallied and combined and protested and carried the day, all with decision and with a promptitude that commands admiration. Face to face with a situation that meant a loss estimated at \$1,500,000, a loss that would fall on wholesale grocers and retailers, because of the competition of duty-free tea to be admitted from the beginning of this year, the tea men realised that union was a necessity, they united and they won. There is a lesson here for the planter in India. It is, we are glad to think, a lesson that

the South Indian planter has learnt and has applied, but we need scarcely cite instances to prove that the London branch of the Indian Tea Association, which represents the joint interests of Indian tea-planters in the metropolis of the English markets has on several occasions failed to take action as spirited and vigorous as that recently taken in the United States. We need not attempt to show that the tea industry in this country has suffered in consequence. This is a well-known fact. Need we urge the desirability of taking steps to impress upon all planters and all Associations that represent their interests the excellence of the example set by America and the expediency of making such arrangements as will enable the tea-planting community in this country to show, on occasion, the same determination and unity of purpose as has been lately exhibited by American tea men?

### IMPORT DUTY ON SEEDS.

The Government of India have declined to fall in with the suggestion made by the U. P. A. S. I. that seeds imported for agricultural or experimental purposes should be exempt from duty. The reasons given are that there are administrative objections to the differential treatment of an article for tariff purposes according to the object for which it is intended to be used, and that the aggregate value of the seeds imported is insignificant. As to the first point, we may remark that a differential system is already in vogue with reference to some articles for *industrial* purposes, such as machinery, for instance; so that "administrative objections" to this sort of thing are evidently not insuperable. As for the second point, Government assert that the relief that would be afforded by exempting seeds from duty would be too small to justify a departure from what is considered to be a sound customs principle. That is all very well as matters now stand, but the fact is that the importation of seeds is stunted because of the import duty. The point is that, as a general rule, a considerable proportion of imported seed does not germinate, unless too soon (on the voyage!) Thus a 5% duty on one lot imported may easily come to mean 50% or more on the seed that actually proves useful to the agriculturist in this country. This point the Government of India have chosen to ignore.

### THE MADRAS PLANTERS' LABOUR BILL.

We had not intended to revert to this subject, but our attention has been drawn to an article in the *Hindu*, which contains some remarkable statements that ought not to be allowed to pass uncontradicted. The *Hindu* mendaciously refers to the Bill as "designed in the interests of European employers of labour as against the poor and helpless Indian coolies." The truth is that the Bill provides protection for the labourer such as he has never yet had. The *Hindu* goes on to say of the Bill:—"Its main object and purpose is to enable the planters to secure labour at cheap cost. The planter is unwilling to pay the coolie according to the law of supply and demand. If work has to be done in uncongenial soil, in malarial localities far away from the plains, it follows that much higher wages should be paid in order to attract free labourers. But the planter wants to gain profit at the sacrifice of the Indian coolie. His margin of profit will be less if he pays the coolie a scale of wage which will be a

sufficient compensation for his leaving his home and the plains. . . . The Hon'ble Mr. Stokes spoke of the necessity of making advances to coolies; but if attractive wages are given, there will be much less necessity for advances, and the loss of employment with good wages will itself be regarded by the coolies as a misfortune to be avoided by all means." These ridiculous assertions do not, it will be observed, go the length of saying that higher wages would make advances totally unnecessary. They are, however, written in entire ignorance of the labour problem as it affects India, and are diametrically opposed to the facts stated in the report of the Planters' Enquiry Committee and to the terms of the Bill itself. We would ask the *Hindu* to study that report, and to peruse the Bill once more—if it can, with an unprejudiced mind.

### COFFEE NOTES.

**Coffee in Cuba.**—There has been considerable talk about Cuba becoming a coffee exporting country. The daily Press every now and then airs the views of some promoter with an axe to grind, who talks in glowing language of the immense possibilities offering in Cuba for coffee plantation investments. We have been at some pains and expense, says the *Spice Mill*, to secure from correspondents in Cuba accurate, first-hand information on the subject. We learn—as we had expected—that it is only a certain section of Cuba that will grow coffee and that it is hardly likely that the production of the article will ever be sufficient to supply the home demand. The amount produced there to-day supplies only about 10 per cent. of the total quantity consumed on the island.

\* \* \*

The man who believes that New York ought to get its coffee at 7 to 10c. a pound, would perhaps be surprised to hear, says the *Merchants' Review*, that the poorer consumers sometimes pay high prices for this staple without a quiver. The writer drinks coffee at home that costs 33c., a next-door neighbour pays 25c. a pound for coffee, and another one pays 30c., but a woman who makes a scant living in the neighbourhood by keeping a boarding-house pays 40c. and never makes a "holler." She is satisfied; the other people mentioned are presumably satisfied, and that would hardly be the case had they all been compelled to use cheap grades at 12c. or 15c. But this fact would, of course, make no difference to those daily newspapers which are constantly insinuating that grocers overcharge the public. It would not be easy to overcharge, even if the grocers wanted to do so, for there are too many of them, and the department stores, specialists, and delicatessens are too many also.

\* \* \*

**The Decline of Coffee Prices.**—A surprising assignment in the coffee and sugar trade of New York was that on Saturday, the 20th ultimo, of Gustave A. Jahn & Co., 98, Wall Street. Regarding the assignment Mr. Jahn gave out a statement, in the course of which he said:—"The making of this assignment is one of the saddest acts of my life. I began my business career as an office boy nearly forty-three years ago and have been in business for myself for over thirty-seven years, all in the city of New York. During this time my commercial credit has stood high and it has only been during the past year that there has been any question in regard to my ability to pay all my debts on demand and have

a comfortable surplus in addition. The losses of the firm were mainly the result of our having made contracts for large importations of foreign granulated sugar during 1901, coupled with a continuous decline in the coffee market in 1901, which resulted in making heavy losses."

\* \* \*

**The U. S. Coffee Market.**—The coffee market is very uneventful. Matters are flat, with the slightest changes in values so far as Brazil grades are concerned. In Milds a firm market obtains, made firmer by the Venezuelan troubles. On the whole the tendency is to lower prices. In Brazil the receipts are still heavy, especially at Santos, where they come in at the rate of 30,000 bags some days. Prices in Brazil are tending to rule on parity with those at New York and if this continues transactions may be stimulated. The speculative market continues quiet and in the main unchanged in New York but is rather irregular abroad.—*Tea, Coffee and Sugar*, Dec. 24.

\* \* \*

**Brazil Crops estimated.**—*Views of a Planter as printed in a Letter in Sao Paulo Paper.* The following letter from a planter named Ramos connected with the Schmidt fazendas was published in the *Estado de S. Paulo* under date of October 28 :

"Wishing to form an idea as approximate as possible as to the effects of the frost on the cultivation of coffee, and its effect on the future crop, I called on a great number of planters and on the largest Commissarios of Santos, and from the information received I arrived at the following conclusions, counting the State as a whole—

"1. The losses caused by the frost on the trees in S. Paulo represent a diminution of from 0 to 35 per cent. on the future crop in relation to what it would have been had there been no frost.

"2. The trees that suffered most were the young ones and it can be considered that the greater part destroyed were those under two years.

"3. August flowering was considerably damaged by the frost.

"4. If this flowering had taken well the S. Paulo crop for 1903-04 would have been at least twelve millions.

"5. October flowering was normal (fairly good) and up to present looks as if nearly all took well, principally in Ribeirao Preto and the surrounding district.

"6. It is quite impossible at present to make a reasonable estimate of the future crop, because during the coming six or eight months climatic changes might upset the most reasonable expectation. All that can be done is to form an approximate idea of the volume on the hypothesis that the weather will keep favourable from November to May, on the basis of the basis of the quantity of fruit that escaped the frost, and at present sticks to the trees.

\* \* \*

Messrs. Duuring & Zoon state in their report dated Amsterdam, December 30, 1902:—The immense over-production of coffee ordinarily appeals as sufficient explanation for the existing cheapness of coffee, but in Europe, it seems, says *Tea, Coffee and Sugar*, they see deeper and hence know differently and explain the lowering prices to the machinations of the Coffee Trust, which, fearing a violent tea fever in the United States, arrest it by making coffee so cheap that of course nobody could afford or want to drink tea, and least Lipton's tea. Perhaps the wish is father to the news heard in Mincing Lane and reported by the *Home and Colonial Mail*. In detail it is that the manipulations of the Coffee Trust have been brought into play to check, if possible, the growing taste for tea of the American consumer. "This," continues the news article, "is attributed to the machinations of the Coffee Trust to keep Lipton's tea out of the market." What ho! Where is this octopus? Nobody has seen him here, not even in Lilliputian size. Truly the times are fit for a Don Quixote and he may issue (the coffee one) from out London.

Business has been extremely slow during the month under review. During the first part, importers met the market freely, but values were not notably lower, part however remained unsold and bidding was slack. Sales were suspended during the last fortnight.

Second hand dealings, chiefly Santos coffee, were quite insignificant, the trade being unwilling to enter into any new engagements, whilst viewing the actual figures of supply; the speculative market continued in a lethargic state.

Arrivals during the month amounted to 81,600 bags Java and 120,100 bags Santos. Deliveries were on a moderate scale 72,300 bags Santos, leaving our stock at 901,100 bags, against 853,300 bags last month.

Afloat from Santos to Rotterdam:

46,000 bags per ss. <i>Baha</i> ...	... sailed December 4th
26,000 " " " <i>Norderney</i> ...	... " " 17th

72,000 bags,

against 172,000 " in 1901.

" 127,500 " " 1900.

" 54,000 " " 1899.

In the terme market, values slowly gave way, in all about 1ct., quotations now being: 16 $\frac{3}{4}$ cts. per March, 16 $\frac{5}{8}$ cts. per May, 17cts. per September, and 17 $\frac{3}{4}$ cts. per December. Dealings only amounted to 77,000 bags for the month. December contracts 358,500 bags of which 77,000 bags were tendered. Contracts this year amounted to 1,517,500 bags, tenders to 378,000 bags, being 25 per cent. against 14 $\frac{1}{2}$  per cent. in 1901, 18 $\frac{1}{2}$  per cent. in 1900, 23 per cent. in 1899, and 29 per cent. in 1898.

## TEA NOTES.

**Tea in Persia.**—The following note of prices ruling in Meshed in November, 1902, has been prepared by Mr. T. J. Greensill, Government canvasser for trade in Khorassa. and Sistan:—

*Tea.*—There are several kinds of both black and green sold here, but the most in demand are the following:—

*Black Tea.*—Fine Pekoe leaf—wiry and even with few tips—known here as "Kalami," present rate 20 krans (kran equals 4d. to 5d.) per Meshed "mán" (the Meshed tea "mán" is 7 lbs.), with a credit of fifteen months, equivalent to 17 krans cash. Leafy kinds are not much in demand, but some would sell at 20 krans, carrying twenty to twenty-five months' credit, equivalent to 15 to 16 krans cash.

*Green Tea.*—Gunpowder—bold, even leaf, coloured greenish—known here as "Sabz," present rate 21 krans per Meshed "mán" (7 lbs.), with four months' credit, equivalent to about 20 krans cash. For natural unfaced or faced there is no demand, but coloured after the China style, in India known as Bombay tea, would find ready sale if not too expensive. Heavy soapstoned greens are rejected at once.

*White or Silver-tipped Tea*, known here as "Lamsa," is really a mixed tea, consisting of about 15 per cent. silver tips and about 85 per cent. uneven Orange Pekoe and Pekoe leaf, and comes chiefly from Java, usually packed in 5-lb. lead-lined wooden boxes, and sells here at 40 krans per "mán" (7 lbs.), with twelve months' credit, which is equivalent to about 35 krans cash. Those with more white tips fetch slightly better rates, but the demand is very limited.

\* \* \*

We have not yet reached the point in the tea trade that the British have, says the *Merchants' Review* (New York). There everybody in the retail business is liable to sell packet teas, even the stationers and news agents, and people who become reduced in circumstances, as clergymen, widows with a fair list of acquaintances, and bankrupt merchants,

are pretty sure to turn their thoughts to the sale of tea as a means of living even if they do not take it up as a business.

\* \* \*

At the request of the "Thirty Committee," the Secretary has sent to the Colombo papers extract of letter from a New York correspondent of Mr. Wm. Mackenzie's.

In a letter from Mr. Mackenzie, dated London, 29th December, 1902, he wrote as follows:—"I have just had in a letter from a New York friend—a Tea man who handles of lot of our Greens." "I saw a statement that 38 packages a Ceylon Greens had been rejected, and went down to the Appraiser's Stores and found out about it. All I can say is, it deserved rejection, as some colouring trick had been tried on it, resulting in a thick muddy liquor with a curious twang."

\* \* \*

At the Meeting of the Shareholders of the Tea Corporation, Ltd., on 15th instant, the scheme of reconstruction brought forward by the Board of Directors was rejected. The Committee of Investigation also had an alternative scheme; but it was not brought forward, for want, it is believed, of sufficient financial support. Matters are now at a dead-lock.

\* \* \*

**The Ceylon Tea Crop: Estimate for 1903.**—Messrs. Forbes & Walker, of Colombo, estimate the Ceylon Tea Crop at 150 million lbs. distributed as follows:—

	Million lbs.
United Kingdom	94
Russia	15
Rest of Europe	1½
America	14
Africa and Mauritius	1½
Australia	18
India	1
China and Singapore	5
Total	150

The above includes Green Tea, which Messrs. Forbes & Walker estimate at 11 million lbs. All their figures are based on the supposition that the present careful system of plucking is followed out during the year.

\* \* \*

**Tea Exports.**—The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association:—Quantity of tea entered for export to United Kingdom for the first half of January, 1903: Calcutta, 4,039,097 lbs., Chittagong, nil. Quantity entered during the corresponding period last year: Calcutta, 5,482,778 lbs.; Chittagong, nil. Total from 1st April, 1902, to 15th January, 1903: Calcutta, 115,668,165 lbs.; Chittagong, 18,050,600 lbs. Total 135,718,765 lbs. Total from 1st April, 1901, to 15th January, 1902, 14,060,208 lbs.

\* \* \*

From a report on St. Joseph (Missouri) as a distributing centre for imported goods, written by the British Vice-Consul at Chicago, we learn:—

CEYLON TEA—One very widely-advertised tea is in demand, but wholesale dealers seem to think that there is an opening for Ceylon tea, put up in tins and sold to them at a price leaving a little more profit than they are able to make out of the brand they at present deal in, and that it would—with some judicious advertising—find a market, but the outlook for these teas is not bright.

**Total Export of Tea from all China.**—(Siemssen & Co.'s Market Report: Hongkong, January 2.)

	1902-1903 lb	1901-1902 lb
To England	15,113,663	17,345,606
„ The Continent	6,802,877	6,584,664
„ Russia	25,634,985	30,052,347
„ America	54,871,456	33,126,706
„ Australia	1,138,697	2,036,969
„ South Africa	1,016,423	1,707,242

Total lb. ... 104,578,101      90,853,534

\* \* \*

**Green Tea in America.**—A Fort merchant supplies the *Times of Ceylon* with some extracts from business letters, to show what objections are raised in the United States. There is still, as our informant says, a very considerable difference between Japan and Ceylon green teas; and we are asked whether some machine cannot be invented which would make Ceylon green tea approach that of Japan in appearance. An Indian expert, by the way, points out the necessity of imitating one or the other, and not of producing something which approximates to neither Chinese nor Japan tea—that is, like one in leaf and like something else in cup. This is the old trouble, and prevented our supporting the green tea movement in its unenlightened, unfinished days. Fortunately, Mr. Larkin and Canada came to the rescue, and took the unpolished greens; but the United States continued to reject them—speaking generally.

\* \* \*

**Green Tea and Patents.**—Writing to a Colombo paper under date, 7th January, Mr. Drummond Deane mentions:—"My Ceylon patent for the Deane-Judge Strainer hangs fire owing to the usual red-tape, though it has been granted long ago for India. I am of opinion that the 'Thirty Committee' bonus on green teas should be on a sliding scale; otherwise, as black teas rise in value, greens will fall back. I suggest as worthy of consideration that with black tea average 8d. or over, the green tea bonus should be not less than 8 cents which, with such an average, the black tea producers can well afford and that for every farthing fall (or fraction of a farthing) there should be ½ a cent reduction down to 6d. average, where it should remain at 4 cents. Something on these lines is wanted if you don't want to nip the green tea industry in the bud. We shall shortly have a Deane-Judge Finishing and Pan-firing Machine for the Ceylon public."

\* \* \*

**Tea in New York—50,000,000 Pounds.**—The transactions of tea for November at the port of New York were as follows:

	Pounds.
Imports	12,417,463
Withdrawals for consumption	1,560,810
Withdrawals for transportation to other domestic ports	894,160
Withdrawals for export	27,166
Remaining in Warehouse at close of month	49,951,168

\* \* \*

**The U. S. Tea Market.**—Tea has been steady but very firm and at some selling still for January delivery. Not a few who have held off buying in expectation of a reaction at this time from prevailing high prices have rushed in to buy. They are not always successful in effecting purchases, for despite the large stock of teas in the country (85,000,000 lbs., it is estimated) sellers look for higher values and hence are indifferent receivers of bids. They have some good logic to support them, but it is based on premises which time alone will prove. It is the impression that the country has been well cleaned out of teas and so grocers' stocks are very low, and to

resume normal conditions each one in the land will buy at least one chest of tea more than heretofore. There are 200,000 grocers in the United States, and their extra demand, hence, means 200,000 packages, which at 50 pounds per package is 10,000,000 pounds of tea.

Something good in this may happen to Congous, which continue flat, and there is many a shake of the head when the recent purchase of the syndicate is recalled. The large stock should quickly disappear, in blending at least. There is some talk now of an export demand for England in view of the advance there in Indias and Ceylons. Exports of greens are still reported and so this tea is especially strong, and the same may be said for Japans and Formosas.—*Tea, Coffee and Sugar*, Dec. 24.

\* \* \*

**Tea in Philadelphia.**—There were 238,257 pounds of tea remaining in warehouse at Philadelphia, December 1, according to the report of the collector of the port. During the month 97,949 pounds were imported.

\* \* \*

“Rubbishy teas in the harbour might have combined with it the question of sand in tea dust offered in Colombo, especially in view of the importance into which the trade in dust has developed owing to the demand for it to give tone to China brick tea. If the bricks were to be used for building, sand to mix with cement, might have its market value; but the proportion in which it figures in some of the samples that go round the Fort—it can only be discovered by blowing—is both astonishing and scandalous.”—*Times of Ceylon*.

\* \* \*

**America Ought to Grow Her Own Tea.**—Reviewing the matter seriously, it may be said that, while it is probably possible to cultivate tea over at least one-third of the area of the United States, it is hardly practicable to hope to bring within the space of a generation an American tea to the point where it will be liked by tea-drinking people, though ultimately this country ought to be independent of China, Japan, Ceylon or India in producing the material for “the cup that cheers, but does not inebriate.”—*McKeesport Herald*.

## NOTES.

### Cinchona “Pays.”

The Cinchona Cultivation Company (“Tjitiis-Pasirangka”) held their Annual Meeting at Batavia on October 31, when a dividend of 19 per cent. was declared. Mr. L. L. A. Maurenbrecher was re-elected Managing Director, and Mr. J. A. Veenstra was elected to the directorate.

### Java Cinchona Bark.

The shipments from Java during December were 1,300,000 Amsterdam lbs., against 1,273,000 Amsterdam lbs. last year, and 1,091,000 Amsterdam lbs. in 1900. The total for the 12 months is 13,143,000 Amsterdam lbs., against 12,606,000 Amsterdam lbs. last year, and 10,741,000 Amsterdam lbs. in 1900.

### London Tea Sales.

At the sales on the 17th instant 36,972 packages were offered. There was less eager inquiry; and prices were a little uncertain. Up to 6½d., the late rates were not always obtainable; but really desirable invoices received attention. A good deal of poor and unattractive tea was included, for which there is not always a market.

### Cheap Quinine in Italy.

On several occasions we have referred to the practice of the Italian Government in their campaign against malaria of providing

quinine at low prices for the peasants. The *Daily Mail* has now discovered the beneficent intentions of the Government, and adds that in order to meet the demand for the 1903 malarial campaign (from May to November) “11 tons of bisulphate of quinine are now being prepared.”

### Coarse Plucking of Tea.

A special cablegram, dated 12th instant, to the *Times of Ceylon*, states:—“The Tea and Produce Committee has passed a strong Resolution pointing out that buyers maintain that they can keep down prices, Ceylon being sure to pluck coarse; and urging planters to abstain from so doing.” It is quite evident from this that the Committee is by no means satisfied that all Ceylon planters have come to understand the dangers of coarse plucking.

### The British Tea Duty.

As a Colombo paper remarks, “The Joint India and Ceylon Memorial—which it is intended to place before the Chancellor of the Exchequer praying for a reduction of the tea duty by two-pence, is a step in the direction of placing the long depressed tea industry in its wonted place of prosperity.” It does not go far enough, however, unless the memorial has stated quite plainly that what is *eventually* wanted is a complete abolition of the duty.

### A Grant-in-Aid for Green Tea.

A Ceylon planter has gravely suggested that as the manufacture of Green Tea is a new industry a grant-in-aid from Government should be asked for! He questions if payment of a bonus out of the Tea Cess fund is legal. We sincerely trust that planters in India will *not* follow Ceylon’s example if this sort of thing goes on. Never yet was community treated with greater liberality than the Ceylon planters have been by the Local Government, and though the Government has certainly had its reward there is no good reason why its kindness should be imposed upon at every opportunity.

### Calcutta Tea Sales.

At the tea sales, 16th instant, 18,000 packages sold. The offering was not very attractive, and there was a large quantity of red, stalky kinds, last season’s invoices being composed of odds and ends. Except Assams the market was weaker generally and was a farthing lower, except for good tea and pretty leaf kinds which were firmer. Darjeelings were difficult of sale. Buyers had to accept lower rates. There was not so much bought for outside markets as usual Greens (hyson) realised 8 annas; (50 cents) ditto 6 annas 8 pies (41½ cents) young hyson, No. 1, 7 annas 6 pies (47 cents).

### Proposed Cardamom Cess in Ceylon.

The appointment by the P. A. of Ceylon of a Committee to inquire into the question of a cardamom cess, to be raised on the acreage (not on the total exported) of cardamoms has been followed up by investigation on the part of members of the said Committee. The money raised would, we understand, be expended on the Continent and in America by means of the same methods as are in vogue for pushing tea. It seems very doubtful if this expenditure would serve any useful purpose. The demand for cardamoms is limited, and it is questionable if any amount of advertising would cause an important expansion.

**Java Quinine.**

The exports from Java during October amounted to 242 cases, 100 cases of which were shipped to the U.-K., 133 to New York, 7 to Japan, and 2 cases to Singapore. From January 1 to October 31 the exports have been:—

	1902.	1901.	1900.	1899.	1898.
Cases	1,363	1,692	1,701	1,467	957

A case usually contains 400 oz.

The result of the quinine tender held at Batavia on Wednesday, December 31, was as follows:—Of 2,150 kilos. Ed. II. offered, 1,900 kilos. were sold at an average of 16½f. per kilo. (about equal to a unit of 6 $\frac{1}{16}$ c. Amsterdam), against 16½f. per kilo. at the previous tender.

**Tea in France and Switzerland.**

Mr. H. Valentine Webster, Chairman of "Tea Planters, Limited," Bâle, states:—"in France and Switzerland

alone during the past twelve months I have sold through the Tea Planters, Ltd., of Bâle, 225,000 Quaker one-ounce decorated tins filled with pure Ceylon tea, beside which considerable numbers of Koh-i-noor, Ugalla, Bee and Maravilla one-ounce tins are distributed every week. . . . Further my distribution of teas in one-ounce tins, is not confined to France and Switzerland but is extended to all parts of the globe." No doubt this is good advertising, and we must hope that in time, pounds will be asked for where now ounces are taken.

**Tea Ring Broken.**

A London daily remarks:—"The tea Clearing House has at last, after long continued pressure from tea producers, importers, dealers, and brokers, expunged from its books the following rule, which has long been considered detrimental to the wholesale tea trade of Great Britain:—

"No subscriber shall be entitled to warehouse or deposit tea with, or employ in connection with tea, any dock company or tea warehouse keeper who is not a member of the Clearing House, or to purchase or sample any tea from the warehouse of any non-member."

This is looked upon as a defeat of the warehouse ring, which has boycotted brokers for selling teas warehoused outside their circle.

**Pará Rubber at 1,600 feet.**

Mr. Francis J. Holloway writes from Matale to the *Ceylon Observer*:—"I am now tapping some trees, at about 1,600 feet, on a hillside, and am very pleased with the excellent results obtained. Trees at this elevation, although a good deal smaller than the ones of the same age, at a lower elevation, are now being proved to yield *better* than those lower down. They only require one incision in the morning, and the cups are emptied at 11 A.M. and replaced under the same cut immediately, and are again emptied at 3 P.M., thus giving the same yield from one cut, as would be obtained from two cuts on trees at the lower elevation. I have never been able to do this at the low elevation, as the latex does not flow at 10 A.M. This is proof positive that Pará rubber yields better at 1,600 feet, than at 600 feet.

**The Pepper-Vine Disease.**

After many weary months, the Government of Madras have accepted the proposal of the Board of Revenue, Madras, that Mr. Barber should investigate the disease said to be affecting the pepper-vine in Wynaad. If he can do so "without prejudice to other work on hand," Mr. Barber is to

visit Wynaad this month. Government explain that these instructions would have been issued earlier, but that a reply was awaited from the Government of India to a reference regarding the recent tour of Mr. E. F. Stebbing, the Forest Entomologist, in the Nilgiri and Malabar districts, and the nature of the investigations made by him. This reply is not yet forthcoming, though the Madras Government regard it as "possible that Mr. Stebbing investigated the pepper-vine disease, and that his report, if available, may afford information on the subject."

**The Indian Tea Association.**

There are several points of exceptional interest in the report we give elsewhere of proceedings of the Indian Tea Association (Calcutta). Commenting on the suggested employment of a portion of the coming Tea Cess for scientific purposes, the *Ceylon Observer* remarks:—"We are immensely surprised at the Indian official proposal to use the proceeds of the tea cess there for its Scientific Department. Here in Ceylon such an institution is supported in the interest of planters out of the General Revenue and we can well imagine the outcry that would arise if cess funds were to be taken for such a purpose. Paternal interest in tea-planters seems less apparent in Calcutta and Simla than in Ceylon." We need scarcely say that we view the suggestion with disfavour. It is, however, evident that the Indian Tea Association has not taken kindly to it, so no more need be said.

**London Tea Sales.**

Weekly special telegram dated 15th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that there is a dull tone generally among buyers and that the market for medium-liquoring Pekoes and Broken Pekoes as well as for common Pekoes and Broken Pekoes is weak. The price of fair liquoring Ceylon Pekoe Souchong is 6d. ( $\frac{1}{4}$ d. down) and the average 7½d. (also  $\frac{1}{4}$ d. down). The average for the same period last year was 7¾d. Reuter reports that common qualities of Ceylon tea are rather easier. Fair Pekoe Souchongs are quoted at 5½d. ( $\frac{1}{4}$ d. down) and the average for the week is 7½d. (also  $\frac{1}{4}$ d. down). 67,000 [? 27,000] packages of Ceylon tea were offered for sale and 24,000 disposed of; while of the 45,000 packages of Indian tea offered, 33,000 were sold at an average of 7¾d. ( $\frac{1}{8}$ d. down). At the tea auctions on the 19th instant, 30,899 packages were catalogued. There was only a moderate competition, and a good deal of tea had again to be taken out chiefly between 5¾d. and 7d. a pound. Really attractive invoices did fairly well, and Broken Pekoes generally are in more enquiry.

**GENERAL ARTICLES.****COFFEE AND CHICORY MIXTURES.**

At the Meeting of Bermondsey Borough Council on Tuesday, the 16th ultimo, the Public Health Committee reported having had under consideration a letter from the Metropolitan Grocers', Provision Dealers', and Oilmen's Association with reference to the action taken by Battersea Borough Council in respect to mixtures of coffee and chicory. On October 7 last the Committee reported to the Council a letter from the Battersea Council, in which that body expressed the opinion that the sale as "coffee and chicory" of articles containing large proportions of chicory (*i.e.*, 70 per cent.) could not be regarded as legitimate, and that some definite limit

should be fixed, or the vendor should be compelled to declare the constituent parts of the article. The Battersea Council had addressed a letter to the Local Government Board pointing out that as there is nothing in the Acts regulating the proportion of the constituents of articles sold as mixtures, it was a matter of urgent necessity that steps should be taken to enforce by legal enactment the recognition of such limits as the Board might see fit to determine. Bermondsey Borough Council, upon the recommendation of the Public Health Committee decided to support the views of Battersea. Since then a communication from the Association had come to hand. The text of this letter was published in the *Grocer* of November 15 (p. 1218). It stated that it was not practicable to fix a standard of the proportion of coffee and chicory in mixtures of these two articles for the following reasons:—"Firstly, that the proportions of coffee and chicory depend in part upon the price paid by the consumer for the article, whilst they also depend upon the relative value of the coffee and chicory employed. The public would be able to purchase a cheap article at 1s. per lb. containing cheap coffee and cheap chicory, in which the proportions might be larger of coffee than of chicory; the mixture, however, would be a common one. On the other hand, the public could purchase a mixture of coffee and chicory in which the coffee was of superior quality, and therefore the chicory would be in larger proportion, but the resultant mixture would be of much finer quality. Secondly,

#### THE ANALYTICAL RESULTS OF COFFEE MIXTURES

often exhibit startling variations, especially where the mixtures are sold in tins that are kept in stock for some time. The chicory being the heavier article in such mixtures naturally falls to the bottom, with the result that when the tins are opened, unless the mixture is thoroughly re-compounded the probabilities are that the portions of the sample purchased for analysis would show very varying results." The Committee went on to report as follows:—"As regards the first of the foregoing points, it seems, from inquiries, that coffee, according to its quality, will blend with a certain proportion of chicory. It is the custom of wholesale coffee merchants to blend the different qualities of coffee before roasting, and it is thus possible for them from year to year to produce a blend of constant quality that will always be able to stand the same proportion of chicory. Thus, if a grocer were required to make a declaration on the cover of the percentages of coffee and chicory in a mixture sold as such, it would be quite easy for him to get a mixture always having the same quality and proportions according to the price paid for the articles. As regards the second reason, there may be some truth in it, as the tins in which the mixture is packed are in some cases filled tight, and in some loose, according to the weight of the coffee. This difficulty is, however, probably exaggerated, since if the chicory is a little heavier, it would require not only to be kept a good while in stock, but to be more or less regularly shaken up before the chicory would fall to the bottom. Chicory appears to be a comparatively harmless ingredient. On further consideration of this question, we have come to the conclusion that our first opinion was wrong (as far as coffee and chicory mixtures are concerned), owing to our not being in full possession of both sides of the question in order to judge the merits, and we recommend (a) That the Association be informed that this Council is of opinion that it would be preferable for vendors to sell mixtures of coffee and chicory in wrappers stating the proportions of each, rather than that the Government should fix a standard; (b) that a copy of this report be sent to the Local Government Board, and to the Battersea Borough Council."—These recommendations were adopted.

#### IMPORTANCE OF BEEKEEPING.

It is estimated that Europe produces about \$18,000,000 worth of wax and honey, and that a similar sum results from the benefits conferred by the fertilizing habits of the bees. So highly is this industry esteemed abroad that Germany has 1,900,000; Spain, 1,690,000; Austria, 1,550,000; France, 950,000; Holland, 240,000; Russia, 110,000; Denmark, 99,000; Belgium, 200,000; Greece, 30,000. These countries practically consume their own honey crop. There is no reason why our consumption should not be proportionately great. The chief obstacle is the general ignorance of the value of honey as food, and the use of it only as an occasional treat, instead of an article of daily food.

#### THE TEA TRADE: THE COMPLAINT AND A REMEDY.

Mr. Herbert S. Parker writes to the *Home and Colonial Mail*:—

The absence of response to the proposals lately made to you for helping producers by adoption of schemes elaborate in detail and difficult to carry out should not deter others who may have simpler plans to suggest. I would like, therefore, if you can spare the space, to show a way out of some of our difficulties, which I believe will be effectual, which is practicable, and will not involve either the cost or the hazard of the plans to which I refer.

I ask your help with the more confidence because you helped me twelve years ago by printing some letters signed "Negotiator" to bring about a change in the way of selling tea. It was a small matter, merely the omitting from catalogues sundry details, of which the publication was prejudicial to re-sale, but because it was an innovation, so much persuasive reasoning was required to make it acceptable that I fear this correspondence will make a large demand upon your columns.

For I am going to indict the *system* and the *method* by which tea is sold in London, to charge it with being responsible for the recent undue depression of prices, and with being answerable for the unreasonable *extent* of the decline in the value of tea during recent years.

Please to underline "system," "method," and "extent," because I am going to speak with emphasis, and mean to make it quite clear that the subject under discussion is an impersonal entity, and that I do not want to overstate my case.

The system that I condemn, believing that it is doing us a serious injury, is the almost exclusive reliance upon the auction room for the disposal of tea.

It is of little use to say that a method is bad unless you can show how to improve it, so I pass on to suggest a remedy. It is, that steps be taken forthwith to create a market, alternative to the Public Sale Room, in which sellers can deal with buyers by direct negotiation with each other through the medium of their brokers.

If this be begun at once and developed by degrees, dealings on a large scale will in time be possible; the market that once extended intermediate between the consignee and the counter will be re-created; operators who cannot now turn their talent or their money to account in the tea trade will be attracted to it; the need for trying to regulate sales will disappear, and little more will be heard of alleged combinations in the room to keep down prices.

What is the origin of public auctions? They were essential when Indian, and afterwards Ceylon, teas were new to the market and in need of advertisement. They were useful for years after when teas were of high and doubtful value, and buyers as well as sellers needed the guidance of bids made under the hammer. They are useful still at certain times of the year, and for certain sorts of tea—possibly for a large portion of the crops—but as the sole channel of business they have failed, and have become a menace to the stability of the London market.

How and why has this happened?

1. Because the perpetual and exclusive auction has destroyed the intermediate market there once was, in which tea could be "turned over," and has thereby spoilt the business of the dealers who used to be mainstays of the trade, driving some of them out of it, lessening the buying-power of them all. And this has spoilt the business of the buying brokers whom the dealers supported—a valuable element in the market—of whom some have been driven into exile, some are heart-broken, and some have retired in disgust to find more congenial occupation.

One among the latter, as straight a dealing and able a man as one could wish to meet in negotiation, who at one time had the finest business in London, a man invaluable in such a market as I foresee, has told me that he would not resume attendance in the auction room for ten thousand pounds a year! That is the sort of man to be attracted to the market, together with the strong, shrewd independent men still left among the dealers.

2. It has come about through the uprising of the blender and of those great trading companies which swallow grocers by the hundred. Their success has greatly reduced the number of independent buyers able to compete and hold stocks, and has placed

a power in the hands of a few, which if used in effective combination might seriously injure the interests of producers.

"Combination" is not my word. I prefer to speak of these great powers "acting in concert"; it is more diplomatic; moreover, less is known about their combinations by men who have spent their lives in the trade than seems to be known by some who have never set foot in the "Lane." But supposing they were to combine to buy cheaply, which is said to be their business, either by exclusive dealing, or by abstaining from bidding, having previously well supplied themselves from the Calcutta and Colombo sales, how could they be met? Importers have met a recent emergency (which was the outcome of the dispute with the Clearing House) by adopting a course which has been to some extent successful, and may continue to be so for a time, if they do not part with the teas that are going to improve in value and keep back those that are not. But success has been due to the fact that the basis of price was unreasonably low and the position unusually strong. Under other conditions such a course would be hazardous, not to say impracticable, for we all know the difficulty of selling tea withdrawn from sale—it is damned by the fatal record of the price bid in the auction room, and trying to get  $\frac{1}{2}$ d. or 1d. more is like trying to drag a bull up a chimney, unless such an advance take place as sellers have lately had to help them.

The plan which I suggest seems the only one that can be followed continuously from the beginning to the end of the year and from one year to another. It has the promise of keeping the market *permanently* in a healthier condition, and it leaves each importer free to sell his produce at his own time in his own way without binding himself to the uniformity of action which is so difficult and inconvenient to maintain.

I know the objections that can be raised to selling tea except at or after public auction, and with your permission I will discuss them in another letter. Some will say it is impossible to sell any considerable quantity in any other way. Have they ever tried to do so? There was a time when the auction room was the *last resort* of those who had unsaleable tea or were unskilful in negotiation; then, the *raison d'être* of a broker was to find out who wanted to buy, bring him in touch with the client who wished to sell, and to go on bargaining until they came to terms. To do it well was the aim of his life. Thirty years ago I was continuously instrumental in large transactions by private negotiation, and have been so to a lesser extent at intervals ever since, and my experience is that there is no difficulty whatever that cannot be got over if both seller and buyer mean business.

Importers will hesitate, and as sound men of business will be right to look at my proposal from every point of view. But let it not be dismissed as a dream, for nothing less than the future of the London market and the welfare of producers may be at stake. I repeat that this thing can only be done by degrees—here a little, there a little; and a suitable time must be chosen. That time is now, whilst the position is so good that sellers can treat with buyers on strong ground. They will find the very men who are supposed to be deriving the most benefit from the chaotic condition of the trade the most ready to deal in the way I suggest, and help make the new and healthier markets. This sounds like a paradox. It is a paradox, but it is true, for none are more dissatisfied with the present state of affairs than some of the thoughtful men who buy for and direct the principal firms in the trade.

### TEA IN AUSTRALIA.

SYDNEY, December 16.—This market is slow in responding to the feverish conditions almost daily reported by cable as prevailing both at Calcutta and Colombo. At to-day's sales, however, a better feeling prevailed, although prices obtained fell far short of covering rates. Stocks have been considerably worked down, so that there is every prospect of buyers very shortly having to draw up-high-priced shipments to meet their current requirements. The trade confidently expect that the new year will herald distinctly better conditions as far as tea is concerned.

MELBOURNE, December 19.—The December month is a quiet one as a rule in this department, and this month has proved no exception. Stocks have been worked down considerably, but even now it is almost impossible to get covering rates. Shipments for the next

few weeks will be comparatively small. The Australian market apparently responds very slowly to the animation at producing centres, and it thus remains an extraordinary feature of trade that importers still find it unprofitable to unload stocks. There are, practically speaking, no really choice teas on the market, but, apart from this, all excepting commons that have been offered have firmed to the extent of about  $\frac{1}{2}$ d. on the month.

ADELAIDE, December 17.—Merchants report an active demand for all likely kinds, and large orders are due to arrive from India and Ceylon by the next Eastern steamer, *Fortunatus*.

BRISBANE, December 16.—Values have improved at least 1d. per lb., and higher prices are looked for owing to the advanced cost at producing centres. Good Indians are required, but medium Ceylons have been selling very freely owing to improved demand from the country districts.—*Australasian Grocer*.

### CASTILLOA AND COFFEE.

Mr. J. Hill, a coffee-planter at Santa Anna, Salvador, is making the experiment of planting *Castilloa elastica* amongst the coffee trees on his plantation. Two years ago he planted six thousand castilloa trees, which have already reached a height of from one to two-and-half yards. There are between thirty thousand and forty thousand castilloa trees one year old, and in this year he hopes to bring the total number of trees to sixty thousand. It seems as if at the comparatively high altitude at which the coffee plantation is situated, the castilloa trees grow somewhat slowly, and only future experience can show whether the yield of rubber is not affected thereby. Mr. Hill appears to feel a little apprehensive regarding the effect of these trees upon his coffee. He writes according to the *Tropenpflanzer* 1902, p. 542: "Many condemn the mode of planting as likely to be prejudicial to the coffee when the rubber covers it, but I am going to try anyhow, and I will let you know later on how the thing works, so that others may profit by the experiment."

How the rubber trees will thrive in that locality I have no data to express an opinion upon, but I think I may reassure him on the question of influence of the castilloa trees upon his coffee. *Castilloa elastica* does not develop a dense crown, and could, therefore, hardly be considered a shade tree. Moreover, there is a considerable plot planted in exactly the same manner on the plantation at Las Cascadas, and while the rubber trees are doing extremely well, there is not the least evidence that they interfere with the bearing of the coffee trees. At the time of my visit to that plantation the coffee trees amongst the rubber trees were in full, rich bearing.—*India Rubber Journal*, Dec. 8.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, December 18, 1902.

Buying in all grades of Ceylon and Indian blacks has been fairly active on the local market this week, and the holders, on the strength of firm advices from the primary markets, are strong in their views, and values have been fully maintained. The heavy sale of Indian and Ceylon greens continues, and the Chinese article is scarce, the cheaper grades of young hysons being now unobtainable at first hands. There is an active demand for Ceylon and Indian greens at from 14 to 19c. Indian greens of attractive style are in good demand, but there is no stock of those at 14c. Indian Pekoes and Orange Pekoes at about 16c. would sell readily, but the stock is almost exhausted and good drawing teas are hard to procure. Those grades of Kangra teas, at from 18 to 20c., are scarce, and 22 to 36c. descriptions are luxuries, as they are in few hands. Some lots of ordinary Darjeelings, at from 18 to 20c. are offering, but goods of this class, at from 30 to 40c., are sparsely offered, there being none here and hardly any on the London market.

MONTREAL, December 18, 1902.

A very good demand is reported on the local market for dusts, siftings and fannings; these are somewhat scarce at present and the prices are firm. The Indian market is now closed and prices are in consequence a little higher. The Ceylon market has followed this advance. There is a good demand for Ceylons. Although

There were 4,500,000 lbs. more exported from Ceylon this year than last, yet the consumption, from one cause or another, has also increased, and to such an extent that there has not been left the same quantity as last year in holders' hands. Japan low-grades are in fair demand, but there is not a great deal on the market; in fact, it is reported that two or three houses have sold all their stocks. Gunpowder teas, in some cheap grades, have arrived in small quantities on this market, and are offered at 15c. per lb.

### SIAM GROWN TEA.

"Tea in Xien Mai (Chiengmai, Siamese Laos), regarded as a European enterprise," is the summary of information derived from the Report of the Vice-Consul of France at Nan. Tea-trees grow spontaneously and on large areas in most of the higher valleys of the chain that divides the waters of the Méping and the Mé-Lao and Woung, as well as between these rivers and the Mê-Ing and the Mêkong. These forests of tea-trees, known as "Va-Mieng" are cropped principally between the Mê-Ing and the Mé-Lao. But everywhere the natives, generally Khamoos from the left bank of the river, crop only a small quantity, for which they pay a slight due, by no means legal, to the village chiefs, or even to the first occupant who discovered this forest. The croppers content themselves with taking off the leaf stalks without any cultivation or attempt at multiplication. Four times a year they harvest the leaves, the first being the best; the green leaves piled up in small packets and first of all boiled with steam, are left aside during two months and, after this maceration, sold under the name of "Mieng" for chewing, at about Rs.12 the 60 kilos. (135 lbs.). The natives do not know that this same "Mieng," sold at this low price, is nothing else than tea. Even were they told this, they would not know how to prepare it. But it is certain the rational cultivation of these large groups of trees by an experienced colonist and with the help of head coolies imported from China or Ceylon, would give excellent results in a region so highly favoured by nature. This should be quite as remunerative as the cultivation of teak forests now so largely carried on there with European capital. It would have the advantage of requiring smaller capital and of being carried on for long periods, whereas the reserves of teak are being exhausted. Nothing would prevent a forester from carrying on the two cultivations. Besides, the working with teak presents this peculiarity that although a large staff of workmen must be hired by the year, yet they are often inactive, while waiting for a temporary rise that shall enable them to float some logs in the small streams, and there may be a further idle time while waiting for the next storm. Such enforced leisure might be well utilised. — *Straits Times*, January 5th.

### MESSRS. GOW, WILSON & STANTON'S INDIAN, CEYLON, AND JAVA TEA REPORT FOR 1902.

Messrs. Gow, Wilson & Stanton, in their report, say:—

The Tea industry has been passing through a series of years showing unsatisfactory results to producers, and 1902 proved perhaps worse than any of its predecessors. The year opened with the most gloomy forebodings, the market being overweighted through surplus production, while it was generally anticipated that the output in 1902 would be even larger, and that prices in consequence would show a further fall. This cloud hanging over the market not only prevented a rise in prices throughout almost the whole year, but resulted in the lowest average ever recorded, that for Indian tea being for many months about a penny below the excessively poor rates in 1901;—perhaps lower than would have been warranted even had the anticipated increase in production taken place. But during the later months of the year it became evident that crops would not be as large as was originally expected. Even this created no impression upon the market until too late to materially affect the average price. Although the last few weeks showed a considerable advance, so much of the crop had already been sold that the benefit to producers will probably be counterbalanced by the expected shortage in supply. Nevertheless, the outlook is at length decidedly more cheerful than for many years past; the certainty of moderate supplies gives time to work off the world's accumulated stock caused by recent over-production, while the fact that very little tea

has been planted in either India or Ceylon for some few years back obviates the probability of largely increased crops for some time to come, the planting of former years being mostly in bearing. It is now an ascertained fact that consumption at home has been but very little interfered with by the late increase in the duty, and that the normal rate of progress has been about maintained, while the lower prices of recent years have considerably increased the use of British-grown tea in foreign and colonial markets. Consequently, with a crop almost stationary and every probability of a continued increase in consumption, the conditions so long prevailing in the trade are likely to be entirely reversed. The natural result of over-production has been a continued fall in price, and conversely the outstripping of production by expanding consumption should be accompanied by a corresponding rise in value. Hence the industry looks now in a more healthy condition, and there is every reason to believe that for five or six years to come, i.e., until any new lands which may be brought into cultivation commence to yield heavily, prices will be on a scale more remunerative to producers, while should there be a decrease in the rate of duty the industry would, to some extent, be relieved of a very pressing burden, with the probable result of a further improvement in price.

#### GREEN TEA.

The quantity of green tea made in Ceylon has been gradually increasing and is finding favour in North America; India has this year also made some green tea which is being well taken, and there is every probability that both countries will next year manufacture increased quantities, by which means the black tea market should be still further relieved.

#### INDIAN TEA CESS.

The Viceroy has decided to legislate for the purpose of raising a tax of one-fourth of a pie per lb. on the exports of Indian tea, for raising money to exploit new markets. Planters should therefore soon have larger funds at their command for promoting the use of Indian tea, both in India itself and in other markets.

Foreign markets continue to expand satisfactorily, about 105 million pounds being taken, against 95 millions last year.

#### PRODUCTION.

It is expected that the total crops of India and Ceylon will be about the same as last season.

#### INDIAN TEA.

The quality of the crop, as a whole, was hardly equal to that of last season, although Darjeeling showed a considerable improvement. The average price of tea sold on garden account was 7'35d, against 7'50d in 1901, and from June 1 to end of December 7'24d, against 8'04d for the same period last season.

#### CEYLON TEA.

There is not much change to notice in the quality, which, on the whole, was very fair and about up to the average. The average of tea sold on garden account was 6'81d, against 6'86d in 1901, and from June 1 to end of December 6'66d, against 7'05d for the same period last season.

#### JAVA TEA.

Production in Java has lately increased, and imports were in consequence somewhat heavier, previous quality being maintained.

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Extremes during the week ending December 5th, were 11½d.—11¾d. for 90 d/s Bank paper and 11½d.—12d. for private. The average Bank 90 d/s counter drawing rate for the week comes out at 11¾d., the corresponding sight rate being 11¾d. against 11¾d. the average sight rate of the *Camara Syndical*.

*Saturday, December 6th, 1902.*

Ninety days' Bank drawing rate on London opened on Monday, 1st instant, at 11¾d. and closed this evening steady at 11¾d.

The rate during the early part of the week showed decided symptoms of weakness, which encouraged the bears to attack. Bills were kept back in the usual manner, and an artificial scarcity created, which later on will have to be sold again if they have not been so already.

That there was no real falling off of the current supply of bills is shown by the figures in our Coffee market report, as declared sales

were larger even than last year, and *embarques*, though less than last year's, were 38,042 bags over the previous week's and considerably over the average for some time, yielding in sterling £455,000 as against £397,000 the previous week and £691,000 last year.

Of course, the great difference between the value of exports this year and last, amounts for coffee alone to over £3,000,000 since June, which, must tell on the supply of bills in the long run and possibly create a disequilibrium with demand. But just at present with the rubber and cotton exports beginning to get active in the North, the danger does not seem very acute, though no doubt it requires to be carefully watched, as the slightest sign of weakness will certainly be taken advantage of to bear the rate. Fortunately the stringency of money is a serious impediment to any regular bear onslaught. As the table published in another column shows, none of the foreign banks seem, at present, to be in a position to lock up much money in bills, the aggregate account of cash in the different branches being only 87.7 % of their slight deposits.

For very many and powerful reasons it seems advisable to maintain the rate even at some slight sacrifice. In the first place a fall of exchange would bring no advantage to coffee planters, as currency coffee prices would, in view of the over-supply, certainly fall here because gold prices would fall on the other side in sympathy with exchange and thus provoke a counter fall of exchange again, and so on indefinitely until the minimum at which shipments of coffee would cease were reached. It is this effect and counter effect of a simultaneous fall of coffee prices and exchange, in a market where coffee is over-supplied and bills in danger of being under-supplied, that is extremely dangerous and should be avoided at all risks. If, therefore, the Bank of the Republic is, as appears, utilizing its great deposits to secure bills whenever rates go to 12d and lets them go when it falls decidedly below and thus keeps the market steady, it is acting unquestionably in the general interest and fulfilling its true function as a regulator of exchange in the market.

**Coffee.**—Entries at Rio and Santos during the week ended December 5th were 40,163 bags less than for the previous week and 79,359 less than the corresponding week's last year, of which they represented 73.2 %.

The rains continued more or less throughout the week and though bad weather may have interfered with entries, to some degree, it is clear that it is not exclusively to that cause that the shrinkage of the last three weeks must be attributed as the percentage to last year's entries is still remarkably heavy. Entries during the first 24 weeks (up to December 6th) of each crop year, in million bags, were as follows:—

	Entries.	Crop.	Percentages entries to crop on Dec. 6.
1897-98 ... ..	6.6	10.4	63.4
1898-99 ... ..	5.0	8.8	56.8
1899-1900 ... ..	6.2	9.0	68.8
1900-1901 ... ..	6.5	10.9	60.4
1901-1902 .. ...	9.8	15.5	63.2
	34.1	54.6	62.6

It will be observed that the percentage falls off and rises again regularly on alternate years, as the crop is earlier or later. This year the crop is later than last and the entries in December should represent a smaller average. On the other hand, the Sorocabana railway is working more regularly and a sudden spurt of entries towards the close of the crop as was witnessed last year is not therefore likely to occur. Taking the general average 62.6 % as the basis of calculation with entries of 7,489,000 bags up to December 6th, entries at Rio and Santos during the current season should reach 11,900,000 bags as against 11,600,000, our estimate on similar statistical lines on the 14th October last.

Shipments (*embarques*) during the week ended December 5th were much larger being 48,052 bags more than the previous weeks and only 60,738 bags less than the corresponding week last year.

Declared sales were also very active promising good *embarques* this week, being 16,000 over the previous week and 39,000 more

than the corresponding week last year. Stocks, in consequence, fell off a bit and on the 5th instant were 76,867 less than on the previous Friday but 214,644 more than last year on the same date.

Prices gave way a little all round, the average of both currency prices here and gold prices at New York being lower than the previous week. Up to 5th December the F. O. B. value of coffee sailed from this port and Santos was £3,162,833 less than last year.

Mr. Kilburn<sup>™</sup> Scott, M.E., well known in connection with the manganese mining in this country, has been commissioned by the Ironmasters Society of Great Britain to report on the manganese deposits of south Russia. The outcome of this commission is important as it can scarcely fail to affect manganese interests in this country one way or another.

Telegrams to *O Estado* state that the roads in many districts are intransitable in consequence of the heavy rains.

From S. Paulo reports are general as to the injury inflicted by the late heavy rains on the growing crop which seem to have stripped the trees, weakened in many districts by frost and drought, of a great deal of their fruit.

It is stated that, in consequence of the judicial liquidation of the Banco Uniao de S. Carlos, a number of plantations mortgaged to that bank will have to be sold.

## PRODUCE AND PLANTING.

In an article in *Chambers' Journal*, entitled "The Table and the Empire," the writer refers to the important part played in history by tea. The American declined to pay the price of "duty" and independence for "the cups that cheer but not inebriate," and a revolution was the result. But tea has played a happier part. "It has been the means of rescuing parts of India from a state of nature that was neither attractive nor profitable; it has saved Ceylon, one of the most interesting and valuable of British possessions, from a worse fate than that which foreign bounties have inflicted on the West Indies; it has provided the Imperial Exchequer with enough funds, if need be, to pay for the construction yearly of three or four ironclads; it has contributed materially to our manufacturing industry, thus bringing wages and profit to the pocket of the Briton at home; above all, it has afforded the Briton who turns his attention and capital to the outlying portions of the Empire an excellent opportunity of showing the grit that is in him." The story of the rise and progress of the tea industry in Ceylon supplies, in the writer's opinion, one of the best instances on record of British refusal to be beaten. When coffee, the chief article of Cingalese produce, was attacked by a virulent disease, and when the blight was followed by a decline in the public taste for coffee, the plucky planter raised new capital, tried tea, and won in the very teeth of disaster—an Imperial triumph which "will not be disputed by anyone who understands the importance of Ceylon to the British Empire." The writer shows how the spice trade, after passing from the Venetians to the Spanish and Portuguese, and from the Spanish peninsula to the Dutch, was lost by the latter as a consequence of their overbearing attempt to extort an excessive price for the products of which they held a practical monopoly. An attempt to raise the price of pepper in London from 3s. to 8s. per lb. met with prompt resistance. "The Lord Mayor of London instantly called a Meeting of merchants to discuss the exactions of the Hollanders. On September 21, 1599, Sir Stephen Soames, the Lord Mayor, sundry aldermen, and others of less dignity—such as grocers, drapers, vintners, leather sellers, skinnners, and haberdashers—met together at Founders' Hall, Lothbury, and there agreed with their 'owne handes' to embark on a 'voyage to the East Indies, the which it may please the Lord to prosper.' Rather more than a year later the charter of the first East India Company was signed by Queen Elizabeth, and in three months more the Company's first fleet of four vessels set out on the voyage which was to pave the way to Empire."

Tea-drinkers frequently express sympathy for the unfortunate people who lived before the days of tea-drinking. There may have been compensation, but we doubt it. A writer in the *Globe*, under the heading "Some Queer Teas," recently called attention to the great variety of beverages and decoctions made from herbs and plants quite unknown in China or India, called

"teas," in imitation of the genuine article and drunk from various motives. He says: "In early tea-drinking days, when fragrant Bohea was sold for from twelve to twenty shillings and more a lb., poor folk, who could not afford such a luxury, endeavoured to content themselves with decoctions from less expensive leaves. A great favourite of old was sage-tea, which was regarded not only as a pleasant but a particularly wholesome drink. John Wesley, who was a determined opponent of the Chinese leaf, strongly recommended sage as well as mint and pennyroyal, as an excellent substitute; while another enemy of the cup that cheers ventured to prophesy about the middle of the eighteenth century that the pernicious foreign leaves would quickly become cheaper, wherein he was right, and that tea would then go out of fashion and be replaced by sage, wherein he was hopelessly wrong. At the time when this wise person wrote, an ordinary breakfast among the poorer folk was bread and butter with sage-tea; but the cheapening of the real tea simply drove such substitutes as sage out of use. In revolutionary days in America various herbal substitutes for tea were used from patriotic motives. After the Boston mob had thrown the cargoes of the three East India tea-ships into the harbour, and the colonists had taken a vow to buy no tea which had to pay the obnoxious duty, their wives and daughters—'daughters of liberty' they called themselves—devoted their ingenuity to devising fragrant beverages to take the place of the boycotted leaf from the Far East; and some strange decoctions were made and perhaps enjoyed. The stalwart New Englanders drank 'tea' made from the leaves of rib-wort, strawberry plants, and currant bushes, sage, thoroughwort, and other herbs. So-called 'Liberty Tea' was made from the four-leaved loosestrife, while 'Hyperion Tea,' says Mrs. Earle—an invaluable chronicler of Colonial life and habits—was from 'raspberry leaves,' and was said by good patriots to be 'very delicate and most excellent.' The beverage may have been so when tasted by patriotic palates, but we can feel pretty certain that many a colonial dame must have thought with longing of the cups of fragrant Hyson which she had been accustomed to enjoy before the embargo was laid on the imported leaf. One at least of the substitutes named above, thoroughwort, is still used in rural New England for medicinal purposes, if Miss Wilkins' stories may be accepted as authorities. No reader of those delightful sketches will forget how often thoroughwort tea, as a remedy, especially for an ailing or more often supposedly ailing child, is suggested and made by village wisdom. Rural medicine of the same kind is, of course, common enough also on this side the Atlantic. Herbal remedies might not be used quite so much, perhaps, now adays as in times gone by, but 'teas' from herbs of various kinds are still brewed and firmly believed in by many country folks. Valerian, for instance, which is commonly known by the significant popular name of 'all-heal,' is one of these herbs, for the 'tea' made from its root is believed to be of efficacy in cases of consumption. An infusion of milk-wort—the plant whose pretty flowers, varying in colour from pink to a deep blue or purple, are so abundant on dry, upland pastures—is good for a cough. In Sussex villages 'gazel-tea' is a favourite prescription for a cold. Berries of any kind are called 'gazels,' but those usually employed for medicinal purposes are black currants. But much stranger things than black currants have been similarly used. For example, when Queen Anne was known to be suffering from gout, a certain Martin Bowes wrote to the Prime Minister, the Earl of Oxford, suggesting as an easy cure a 'decoction, or tea, made of nettle-seed.' Not a few of the herbal teas which were drunk as beverages were, like the New England thoroughwort, also considered to have no small medicinal value."

The excessive production of coffee in Brazil is the cause of many economic troubles. Last season the crop exported exceeded 16,000,000 sacks, equal to about 970,000 tons. This season the total is estimated at 13,000,000 sacks, or nearly 800,000 tons. This latter amount is equivalent, approximately, to the world's consumption. As there are other important sources of supply in addition to Brazil, it is obvious that the surplus stocks of coffee in 1902 and 1903 must be exceptionally heavy. This accounts for the unusually low prices now ruling, New York only paying a little above 5c. per lb. for the quality known as Rio No. 7. But even at these low prices a profit is left to the Brazilian grower, and, as a consequence, the inclination is rather to increase than to restrict the area under cultivation. It is said that frosts in the neighbourhood of Sao Paulo damaged the plantations, to some extent, during September

last; but this injury was exaggerated, in some cases purposely so, in the hope of causing a rise in values abroad. With production continued on the present scale it is reasonable, says the *Times* correspondent at Rio Janeiro, to anticipate a further drop in the price of coffee; indeed, a steady decline until the price is such as to leave no profit to the producer. When that stage is reached a large number of estates will be abandoned—a development to be looked for at the end of another two years. But even the abandonment of plantations does not mean the complete cessation of a supply of coffee from the localities no longer cultivated. The trees will continue to produce a certain quantity of berries when uncared for; these will be gathered by the country people living in the vicinity and sent forward for sale. In the circumstances it is difficult to see how the Brazilian crop is to be reduced sufficiently for several years to come. Until it is restricted to some 10,000,000 sacks, or consumption augments in a manner hitherto unprecedented, no substantial advance in prices can be expected. Naturally the commercial situation is affected directly by the crisis in the coffee trade. The more wealthy classes have less money to spend, and the wage-earning portion of the community, composed largely of Portuguese and Italians, save all they can and remit the amount to Europe. Hence, in spite of the immense crop of coffee, less money is in circulation than formerly, and merchants in all branches of commerce complain of hard times in business. The fact that there is no immediate prospect of this stagnation disappearing exercises a disheartening influence over all commercial enterprise. The export of rubber continues to be large, and this year will be worth from £8,000,000 to £9,000,000; but this money is confined to the districts of the Amazon and its tributaries, and affords no relief to the more thickly populated central states. —*H. & C. Mail.*

### A GOVERNMENT REPORT ON RUBBER.

Since the United States department of agriculture has been understood for some time past to be devoting special attention to the subject of rubber culture, on account of the possibility of developing this interest in our new tropical possessions, the space devoted to this subject in its latest annual publication\* and the treatment accorded to it are likely to prove disappointing to those who may look to this volume for information. In a report on "Agriculture in the Tropical Islands of United States," by Mr. O. F. Cook, botanist-in-charge of investigations in tropical agriculture, less than two pages, under the heading "Rubber and Guttapercha," form the single reference to the matter under discussion. The spirit in which Mr. Cook writes is decidedly unfavourable to the formation of rubber plantations. He says, for example: "Notwithstanding widespread interest and the investment of millions of dollars, it cannot be said that rubber culture has passed the experimental stage, if indeed that period has been fairly reached." But there is no reference to any experiment made in any country, or to the results, in such detail as will enable the reader to look into the subject further with a view to satisfying himself as to the present status of rubber cultivation, or to investigate the reasons for "the investment of millions of dollars" which is still going on.

Mr. Cook says again: "Moreover, it is known that many rubber plantations established with the most lively expectations have been abandoned because the anticipation of a profitable yield of rubber from cultivated trees proved to be fallacious." This report would have been more complete and more convincing had it been followed by a list of such plantations and of their locations. As a matter of fact, there has not been time, since the systematic planting of rubber on a commercial scale began actively, for very many of the plantations to become productive, and, so far as we can learn, the results attained have been such as to encourage very many others to engage in this branch of planting. There is reason to believe that more rubber trees have been planted in Ceylon, the Malay peninsula, Burma, Mexico, Central America, and the West Indies during the last twelve months than in any previous year, and in the list of plantations on record in the *India Rubber World* office—which includes all that we have been able to gain any

\* Year Book of the United States Department of Agriculture, 1901. Washington: Government Printing Office, 1902. [8vo, pp. 846 + xc plates.]

knowledge of during the past ten years—there has been no case of abandonment of trees once planted. Mr. Cook admits, however, that “similar disappointments, misapprehensions, and misrepresentations”—referring to the prospectuses of certain companies formed to plant rubber in Mexico and Central America—“have, of course, marked the early history of many finally successful and important industries.”

The author of this report seems to think that a particularly weak point in the projected rubber-planting enterprises is a lack of definite botanical knowledge as regards species yielding rubber, and he notes that “the traditional rubber tree of Pará has recently been described as a new species and found to be quite different from the *Hevea Brasiliensis*, with which it has so long been confused.” We don’t believe that any botanist to-day is prepared to designate without “confusion” the several species which actually yield the rubber product of the Amazon valley. But, none the less, the trees found there yield the same quality of rubber, whether termed *Hevea Brasiliensis*, *Siphonia Kunthiana*, or *Jatropha elastica*—all of which designations have been applied by botanists of standing to a single species, to say nothing of designations by writers of less reputation. Of course, it will be wise for any intending planter of rubber to first be assured that the species which he is planting is one which actually produces rubber. But it is hardly fair for Mr. Cook to quote as a discouraging fact a recommendation by some unnamed person that *Eucommia ulmoides*—a plant found in China—be cultivated for the sake of Guttapercha, when, as he states, “Guttapercha would need to be worth \$50 a pound before the culture of *Eucommia* would become profitable.” The fact that this plant contains a small quantity of Guttapercha has been printed rather widely within two years past, but a careful reading of all the journals devoted to tropical planting fails to show in any case a recommendation that the species referred to be planted as a source of Guttapercha.

We regard it as the province of a government bureau charged with the advancement of planting interests to guard the readers of its publications against wrong courses, no less than to point out new channels for profitable industry. But the greatest agricultural department in the world, and one whose statements are received with respect in every country, should not, in a comprehensive review of cultural progress for the year, touch upon the subject of rubber cultivation in such a way as to leave the impression that no practical results have been attained, that the “experimental stage” has not even been “fairly reached,” and that many rubber plantations established have been abandoned. A not unreasonable inference from this report would be that there is no practical rubber-planting in existence. However, Mr. Cook has since visited some rubber plantations in Mexico, and the results of his observations may appear in later reports of a different character.—*India Rubber World*.

### COFFEE IN 1902, AND PROSPECTS.

Messrs. G. Duuring & Zoon’s Monthly Market-Report, dated December 30, 1902, says:—

Arrivals in Holland have been more than in any previous year, altogether 1,940,000 bags. The Trading Company imported 21,900 bags more. Private imports from Java and Padang were 153,700 bags more, but from Celebs 11,100 bags less. Foreign descriptions 7,900 bags less from Africa, but 85,900 bags more from Santos and 3,300 bags more from Central America. The latter descriptions seem to lose ground on account of the preference given to Santos Coffee, being so much cheaper. Production of Liberian Coffee is on the increase in Java. The quantity offered for sale this year amounts to 114,300 bags, against 108,000 bags in 1901, 110,700 bags in 1900, 96,300 bags in 1899, and 37,300 bags in 1898. The quality, as a rule, is improving.

Total arrivals in Holland for private account amounted to:  
1,814,300 bags in 1902

against 1,593,700 bags in 1901.	against 1,240,000 bags in 1898.
“ 1,431,800 “ “ 1900.	“ 1,184,000 “ “ 1897.
“ 1,466,000 “ “ 1899.	“ 978,000 “ “ 1896.

Values have been drooping nearly uninterruptedly, with a temporal recovery in September on the report of frost damage in Sao Paulo, closing at the lowest. Santos Coffee was particularly

affected by its abundance. Java Coffee has been fluctuating entirely on its own merits, Plantation experiencing the heaviest fall.

Values fluctuated as follows:

		1 Jan.	May.	June.	Sept.	30 Dec.
Java good ordinary	... cts.	38	34	32	37½	33
“ pale	... “	40	38	37	38	36½
“ Plantation colory...	“	39½	32	32	34	30
“ Liberian	... “	26½	22½	21	22	21
Santos	... “	23	17½	19	20	17½
African	... “	20	16½	15½	17½	15½

Arrivals and deliveries.—Arrivals in Europe have again been beating the record in consequence of the unprecedented crop in Brazil, whilst deliveries have not been more than last year.

Arrivals and deliveries in Europe amounted to:

	*1902.	1901.	1900.	1899.	1898.	1897.	1896.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Arrivals	597,690	626,710	516,870	539,160	554,520	540,110	433,780
Deliveries	496,090	557,260	524,570	521,640	500,170	468,710	435,630
Excess in arrivals	101,600	69,450	...	17,520	54,350	71,400	...
Excess in deliveries	...	...	7,700	...	...	...	1,850

Consumption in the United States during eleven months has been:

1902.	1901.	1900.	1899.	1898.	1897.	1896.
350,938	365,760	289,760	344,231	309,171	286,408	243,529 Tons.

Prospects are not bright, more or less dependent on stocks falling or increasing, consequently on receipts. The experience of both last years has given evidence how unreliable Brazil crop estimates are. Consumption is increasing but very slowly and by no means proportionate to Brazilian production. Arrivals during the first semester of 1903 are bound to be considerably inferior to this year’s, probably on a par with 1900 and 1901, say about 60,000 tons or one million bags less. This deficiency is likely to be felt sooner or later, the trade, as a rule, being but poorly supplied. The pressure of oversupply will probably relax during the first part of the year, at least until next crop is coming in, which will be late on account of the damage done by frost to the first flowering, but no higher range of values can reasonably be expected as long as Brazilian production is giving a surplus. Frost and other reports concerning next crop are still too vague and indefinite to produce any effect. The trade is looking to facts and no longer to sensational reports. It is of the greatest importance that a check may be put to production in Brazil without delay, in order to avoid a crisis in that country and ruin to Coffee estates. Present stocks are much too heavy to be borne by the trade and the surplus is carried by outside speculation; this carrying power however is not unlimited either. Production in countries other than Brazil is not increasing generally, but still the outlook for next year is for a better yield than this one.

Crops and crop prospects up to date:

	Estimate. 1903-1904.	Estimate. 1902-1903.	1901-1902.	1900-1901.
	Bags.	Bags.	Bags.	Bags.
Rio	4,500,000	3,750,000	4,976,000	2,971,000
Santos	7,500,000	7,750,000	9,732,000	7,820,000
Victoria	325,000	250,000	436,000	200,000
Bahia	200,000	150,000	214,000	192,000
Java	700,000	727,000	414,000	452,000
Padang	50,000	55,000	59,000	40,000
	Estimate. 1903.	Estimate. 1902.	1901.	1900.
	Bags.	Bags.	Bags.	Bags.
Ceylon & British East-India	200,000	130,000	330,000	250,000
Venezuela	600,000	545,000	735,000	800,000
Costarica	325,000	250,000	300,000	270,000
Mexico	500,000	400,000	350,000	420,000
Guatemala	350,000	450,000	575,000	500,000
San Salvador	300,000	250,000	300,000	370,000
Nicaragua	150,000	150,000	140,000	150,000
Haïti	370,000	400,000	375,000	460,000
Portorico	80 Kgr.	120,000	80,000	120,000

Of the present Rio crop 2,353,300 bags have already been shipped leaving 1,396,700 bags (82,158 tons) for shipment up to 30th June, against 95,820 tons in 1902, 80,389 tons in 1901, 75,640 tons in 1900, and 83,562 tons in 1899.

\* In eleven months.

The *Santos* crop is estimated at  $7\frac{3}{4}$  million bags (455,882 tons) leaving to be shipped 2,737,000 bags (160,995 tons) against 208,276 tons in 1902, 201,648 tons in 1901, 85,787 tons in 1900, and 123,806 tons in 1899. The present crop is not as small as has been anticipated also on account of about  $1\frac{1}{2}$  million bags old crop having been included in this season's shipments.

Next *Java* crop does not promise quite as well as some time ago, low grown has suffered from drought and will probably yield less, whilst high grown estates will produce more than last year. Private production as now looked at, is likely to give 50,000 piculs less, but Government rather more than this year.

Prospects of the *Venezuela* crop are not bad, but shipments will be greatly interfered with by revolution and war. Nearly three years' revolution in *Columbia* have caused so many crops to be held back in the interior, perhaps about 400,000 bags, part of which may be forwarded to shipping ports, as soon as circumstances will permit. Altogether crop estimates in Central American and South American republics are mere guess work, for want of reliable figures.

### TEA IN LONDON.

INDIAN TEA.—A fair amount of business has been transacted by private contract, more particularly in the lower qualities, at late public sale rates, says the *Produce Markets' Review* of 27th ultimo. At the resumption of the auctions next Wednesday, the quantities to be offered bid fair to be of a moderate character, and former prices are likely to be well maintained. Later Calcutta advices confirm the report of the early closing of the season, and in most districts the out-turn is below the earlier estimates, so that reduced shipments to this market compared with the previous season are anticipated.

CEYLON TEAS.—In the absence of public sales no alteration in values has taken place, and the market remains quiet. There has, however, been some enquiry privately, and a fair business has been transacted, higher prices being generally anticipated in the new year.

CHINA TEA.—There have been no public sales this week, and, consequently, no business of any importance has been reported. Prices remain unaltered for all descriptions. There is no quotable change in Scented or Green Teas.

### COFFEE IN LONDON.

With a continuance of heavy receipts, says the *Produce Markets' Review* of 27th ultimo, the terminal market has remained weak and quotations have further given way, but only to the extent of about  $4\frac{1}{2}$ d. per cwt. At this season of the year there is not much chance of new contracts being entered into, and the general position is such that unless some news comes to hand the actual business transacted is likely to be small. Prices are too low to tempt operators to open a "bear" account, yet the weight of stocks and the uncertainty of the actual turn-out of the present crop, to say nothing of the prospects of the coming one, check buyers from increasing their holdings. As no sales have been held, and will not be until the 6th proximo, there is no alteration to note in values of actual spot parcels.

### THE AMERICAN COFFEE WAR COST \$50,000,000.

Robert J. Trimble, of New York, has filed an amended Bill in the Court of Chancery of New Jersey asking that the American Sugar Refining Company be restrained from dealing in coffee and from selling sugar at less than cost price, and that the Directors be compelled to distribute among the stockholders as dividends a portion of the Company's undivided profits which, it is alleged, amount to more than \$50,000,000.

A similar action was begun by Mr. Trimble in May, 1900, but was dismissed by Vice-Chancellor Pitney, who sustained a demurrer filed by the Company holding that the Bill failed to set forth a sufficient equity on the part of the complainant to justify the proceedings, but with leave to file an amended Bill setting forth sufficient grounds to warrant interference by the Court. In the original Bill, the Vice-Chancellor held that legal conclusions were substituted for statements of facts.

To substantiate the claim that the fight against Arbuckle Bros. in the coffee trade is not within the powers conferred to the American Sugar Refining Company by its Charter the Bill quotes from that Charter the objects of the Company. It is charged that in violation of the powers conferred by its Charter the Directors of the Sugar Company, upon the refusal of the Arbuckles to enter a combination to control the sugar output, determined thereafter not to distribute a reasonable proportion of the undivided profits among the stockholders, but to use these profits to engage in the business of buying, roasting, and selling coffee in competition with the Arbuckles. As part of this plan, it is charged the Directors have since been selling sugar below cost, to lower the price of that article and cause the Arbuckles such losses as would force them to enter into the proposed combination.

It is estimated in the Bill that the fight against the Arbuckles has entailed upon the Sugar Refining Company a loss of \$50,000,000, and it is charged that if the Company is allowed to continue in the coffee business and to sell sugar below cost the entire balance of the undivided profits, including such an amount as should be reserved for a working capital, will be dissipated.

The Bill asserts that the existence of a large amount of undivided profits has been persistently and fraudulently concealed by the Directors of the Company ever since it exceeded \$10,000,000 and that the Directors have never made any statement of the financial condition of the Company to any of the stockholders.—*Tea, Coffee and Sugar.*

### SEYCHELLES VANILLA.

The Administrator of the Seychelles, in the course of his annual report on the Trade for 1901, states that the falling off in the value of exports of cocoanuts, coconut oil, and soap is attributable to neglect of existing plantations in favour of the cultivation of vanilla. Admirably suited as are the climate and soil of Mahé, Praslin, La Digue, Silhouette, and many other islands for the cultivation of this valuable orchid, the abandonment, or even partial neglect, of coconut-plantations is much to be deplored. In view of the many uses to which cocoanuts can be put, the danger of over-production is slight; but in the case of vanilla, the danger of over-production is considerable. There is a capriciousness about its price, which renders it desirable that planters should have some other products of economic value to rely on when the yield is small or its selling-price unremunerative. This conclusion seems to be justified by the following statement, showing the quantity of vanilla exported from Seychelles and its declared value at the Customs, from 1891 to 1901:—

Year.	Quantity in Kilos.	Declared Value. Rs.
1891	40,929	373,190
1892	28,177	394,478
1893	28,869	346,428
1894	34,444	293,328
1895	4,553	60,344
1896	31,227	936,000
1897	30,691	920,730
1898	25,177	748,810
1899	41,835	1,338,720
1900	17,569	580,877
1901	71,899	1,108,792

Nearly the same amount of vanilla was exported in 1891 as in 1899, and yet the declared value of the vanilla of 1899 exceeded the declared value of the vanilla of 1891 by almost 1,000,000r. In 1901 the quantity of vanilla exported exceeded four times the quantity exported in 1900, and, had prices been maintained, the declared value of the vanilla exported should have been over 2,000,000r., or four times what it was in 1900; but it will be seen that it was not quite twice as much, and, as has been pointed out before, the declared value probably exceeded the actual value.

The first year for which there is any record of vanilla being exported from Seychelles is 1877, and in this year the quantity was 60 kilos., valued at 1,195r. The next year the quantity exported rose to 147 kilos., valued at 2,950r., but fell in 1879 to 8 kilos., valued at 160r. In 1880 the export of vanilla amounted to 1,713 kilos., valued at 22,877r., and from that year Seychelles has never looked back as a vanilla-producing country.

### THREE GENERATIONS IN THE TEA TRADE.

Joseph Tetley & Co., of London, England, Colombo, Montreal, Winnipeg, New York, Boston, and Chicago, are one of the largest firms of wholesale tea merchants in the world. Their firm is one of three generations' standing, and is admitted to be one of the most reliable and enterprising in the wholesale tea trade. They are specialists in tea, and believe most strongly in Ceylon and Indian teas, dealing heavily in which has placed them at the head of the list in Great Britain.

Joseph Tetley & Co. in 1889 first introduced these teas to the Dominion of Canada and the United States of America, but found that the battle which they had fought and won triumphantly in Great Britain had to be fought even more stubbornly in these great countries. Ceylon and Indian teas were then practically unknown here. They therefore decided to introduce them in the packet form, and were the first firm in London, England, to which Her Britannic Majesty's Customs granted the privilege of having their own bonded warehouse for this purpose. They, by this means, introduced the consumers of Canada and the United States of America to taste Ceylon and Indian teas, and now have the gratification of knowing that their own verdict on these sterling teas have been endorsed and confirmed here.

It is strange, however, that looking at the consumption of tea the world over, it is in Canada and the United States alone that the tea trade remains stationary. While in the last three years Ceylon and Indian teas have doubled their output in Canada and the United States, they have trebled their output even in the Empire of China, have increased it fourfold on the continent of Europe, and have swept all before them in Australia and Great Britain.

#### THE WORLD'S CONSUMPTION OF CEYLON AND INDIAN TEAS.

	1901.
	Lb.
Great Britain ... ..	236,000,000
Australia ... ..	30,000,000
Russia, etc. ... ..	27,000,000
Canada and United States ... ..	18,000,000

From these interesting and important figures it will be seen at a glance that in Canada and the United States alone has the tea consumption actually declined in weight, though we think it safe to assume not in the volume of liquid tea drunk. One pound of Ceylon and Indian tea makes as much of liquid tea, of equal strength and infinitely superior flavour, as two pounds, at least, of any other tea; therefore, Joseph Tetley & Co. are not surprised to see that the additional one million pounds of Ceylon and Indian teas now consumed in Canada and the United States have displaced 20 million pounds of tea from other countries, of a weaker growth—so, that, instead of taking 109 million pounds from other countries and 8 million pounds from Ceylon and India, as in 1895, Canada and the United States find it necessary to take only 90 million pounds from other countries, as they are now taking 18 million pounds annually of the stronger teas of Ceylon and India. We must, however, accept the fact of the tea consumption in these countries being stationary, if it is not declining. Is it because too many tea dealers in these countries are pushing low-priced common teas, with far too much regard for leaf value and far too little regard for cup value, which is resulting in a stationary tea trade and an increasing trade in coffee, cocoa, chocolate, etc.?

Be this as it may, Joseph Tetley & Co. annually buy and sell more Ceylon and Indian tea than is consumed in the Dominion of Canada and the United States put together. They have always put quality first. Their watch-words are Quality and Uniformity, and as tea is to be drunk, not looked at, their packet teas and their

loose blends are standards of cup-value the world over. This is why they sell annually nearly 20 million pounds of high-grade Ceylon and Indian teas. Their standard teas win them staunch and lasting friends, because in trading they build on a solid foundation. They do not take large profits, nor do they give lots of credit, but they buy for cash in the largest tea markets in the world, and sell close and on short terms, they make few bad debts, and so they give fighting value and their enormous turnover is always increasing. They enjoy the highest reputation to which a firm can attain in the tea trade. They put their name upon their packets and they put their shipping mark

upon their standard blends of loose bulk teas as a guarantee of good faith, and as their business has been built upon quality, their goods stamp any store in which they are as one which sells high-grade articles.

Joseph Tetley & Company, buying for cash only, are always welcomed in the three great markets for Ceylon and Indian teas, and get whatever pull is going; but it is in London, where 250 million pounds of these teas annually pass the hammer, that their great strength is felt. At 5 and 7, Fenchurch, London, they have one of the finest tea sale rooms in the world, in which they transact their immense home business. Here the work is so organized and systematized that they employ expert buyers for each of the following departments: Ceylon leaf teas for home consumption; Ceylon broken teas; Ceylon teas for export; Indian leaf teas; Indian broken teas; Travancore teas; Java teas; China blacks; China greens; China Oolongs; China scented.

They have three expert tasters, who do nothing but select from their purchases the most suitable teas for exporting to Canada, the United States, and the continents of Europe and Africa. They have two experts who devote themselves to blending and packaging their highest grade teas.

Joseph Tetley & Company's buying experts are admitted to be at the head of their profession. Through these skilled men they get the best and most suitable teas for their customers at the lowest possible prices. They have at No. 54, Commercial Road, London, large duty-paid and bonded warehouses, fitted with the latest electrical machinery for blending, weighing and packaging their teas. Here there is all that experience and expert knowledge can suggest to obtain the quality, uniformity, and economy.

Joseph Tetley & Company's turnover is such that their packets and standard blends are always in the fighting front. Turnover means freshness. There is no necessity for their customers to stock heavy at one time, as they are quite satisfied to have their customers draw from their stocks as much or as little at a time as suits their own convenience.—*Canadian Grocer*.

### DISTRICT ASSOCIATIONS.

#### INDIAN TEA ASSOCIATION (CALCUTTA).

A Meeting of the General Committee of the Indian Tea Association was held on the 6th instant, at which there were present: Mr. Lockhart Smith (*Chairman*), Messrs. W. Warrington (*Vice-Chairman*), G. Kingsley, A. C. Lawrie, T. McMorran, G. Pickford, R. R. Toynbee, and T. Traill.

#### BRITISH IMPORT DUTY.

In the letter, dated 19th December, it was stated that a joint Memorial to the Chancellor of the Exchequer upon this question was being prepared by the Indian and Ceylon Associations in London. The Memorial asked for the removal of the twopence per pound which was added to the duty on account of the South African War.

The Committee noted this information with much satisfaction; and considered what action they could take in the way of supporting the Memorial. They came to the conclusion that it would be best to adhere to the decision at which they had arrived at their Meeting on the 16th December, that is, to defer approaching the Government of India until the time for the presentation of the

Budget to Parliament was somewhat nearer. In the meantime enquiries were to be made of the Ceylon Planters' Association as to whether the Ceylon Government had been invited to move in the matter.

#### INDIAN LABOURERS IN NATAL.

In the letter, dated 19th December, the London Committee enquired as to the extent to which Indian labourers emigrate to Natal. They had been informed that recently five hundred labourers had been sent from Calcutta to Natal for work on the tea estates in that Colony.

From information before the Committee it appeared that the number of emigrants from India to Natal during recent years was:—1900-01, 6,312; 1899-1900, 1,590; 1898-99, 4,958; 1897-98, 6,036.

The Committee had not, however, been able to obtain any particulars as to what proportion of these labourers had been engaged for the tea gardens in Natal. They accordingly decided to ask the Government Emigration Agent for that Colony if he could furnish information on this head; and also if he could give the total number of emigrants from India to Natal in the year 1901-02.

#### INLAND FREIGHT ON TEA.

Considered a letter, dated 11th December, from Messrs, Gow, Wilson & Stanton, making enquiries as to the quantity of tea sent by rail from Calcutta to Bombay. Messrs. Gow, Wilson & Stanton had been informed that since the 1st January, 1902, the Railway Companies had reduced the freight on tea from Calcutta to Bombay to approximately the same as the rate by sea. Consequently a considerable part of the supply for the Bombay market had since been sent by rail; and not being required to pass through the Custom House, had escaped notice in the official returns. To the end of July 3,273 packages or about 327,300 lbs. had been thus sent. Nearly the whole of this quantity had been bought at the Calcutta auctions, and would, in former years, have been sent by sea, and have been included in the official returns.

The Committee decided to make enquires from the East Indian and Bengal-Nagpur Railways; and to include the figures in future issues of the monthly export circular. Messrs. Gow, Wilson & Stanton were to be informed that this action was to be taken; and the result of the enquiries was also to be communicated to them.

#### EXPORT STATISTICS OF TEA.

On the 21st November the Committee had addressed the Calcutta Collector of Customs with reference to the statistics of exports of Indian tea from Calcutta and Chittagong on through bills of lading. They pointed out that shipments were sometimes made under a London bill of lading with option of transshipment for America or the Continent. Similarly, shipments were made under American or Continental bills of lading with option of landing in London. The point upon which information was desired was, as to whether, in the Custom House statistics, these shipments were treated as sailings for America, or as sailings for the United Kingdom.

The Committee now had before them a letter, dated 19th December, from the Collector of Customs, with reference to the question. In this letter the Collector stated that the Custom House did not scrutinise bills of lading—whether through or only to port of transshipment—as regards exports of tea or other cargo. The export statistics were entirely controlled by the ports shown in the application submitted for outward entry by the agents of the steamers concerned. But even then it was not necessary for the exporter to disclose his port of ultimate destination. In the case, for example, of a vessel entering outwards to London and taking cargo for New York, if the exporter declared London to be the port of destination, the Custom House would have no option but to accept that declaration. At the Chittagong Custom House a similar procedure was followed.

The question had been raised originally by the London Committee to whom the information furnished by the Collector was to be forwarded.

**THE  
STOMACH  
MAKES THE MAN.**

A competent stomach means vigour, vitality, health, for by digestion alone can food be transformed into blood, brain, muscle, wasted tissues repaired, decay arrested and life sustained. Imperfect digestion (indigestion) upsets the whole economy of life. It makes good food poison, breeds dolts, laggards, hobbling rheumatics, nerve racking pains. Seigel's Syrup ensures digestion, dispels disease, produces health. Backed by 34 years' unbroken success in 16 countries.

# SEIGEL'S

## SYRUP

"Two years ago I contracted indigestion and had it pretty badly," says Mr. Geo. Matthews, 93, Bourke St., Sydney, N.S.W. "I suffered from severe pains in the stomach, sleeplessness and vomiting. I lost flesh and strength rapidly and could not work nearly so well as previously. My wife induced me to try Mother Seigel's Curative Syrup. The first bottle relieved me wonderfully and before the second was emptied I was quite cured and as 'right as rain.' July 1st, 1902.

**TONES THE  
STOMACH.**

## THE SCIENTIFIC DEPARTMENT.

In the proceedings of the Meeting held on 9th September it was stated that the Government of Bengal and the Assam Administration were to be addressed with reference to their grants towards the expenses of the Scientific Department of the Association. It will be remembered that early in 1900 the Lieutenant-Governor of Bengal sanctioned a grant of Rs.5,000 annually for three years to the Fund, and the Hon'ble the Chief Commissioner of Assam, a grant of Rs.2,500 annually for three years. As the Committee were most anxious that Mr. Mann's services should be retained, and that the work of the Scientific Department should be extended, they had asked—in the letters referred to—that these grants should now be renewed and, if possible, enhanced.

The Hon'ble the Chief Commissioner of Assam had expressed his agreement with the view that investigation should be on a larger and completer scale, if practical results were to be hoped for. He had further given it as his opinion that the cost of the researches might be appropriately charged to the proceeds of the Tea Cess.

The Committee now had before them a letter, dated 23rd December, from the Secretary to the Government of Bengal, in the Revenue Department, on the subject. In this letter it was stated that the Acting Lieutenant-Governor concurred with the Hon'ble the Chief Commissioner in thinking that the cost of the Scientific Department might be charged against the Tea Cess. And if the levy of the Cess were legalised in terms which would permit of the appropriation of a portion of the proceeds for this purpose, the grant of a special Government subsidy would, His Honor thought, be unnecessary. At the same time His Honor was pleased to accord provisional sanction to a grant of Rs.7,000 a year, for a period of three years from the date of the expiry of the present grant. This decision was, however, to be subject to reconsideration, if it should be determined to provide for the Scientific Department from the Cess funds.

The decision to increase the grant was noted by the Committee with much satisfaction, and an expression of their cordial thanks was to be conveyed to His Honor. But it was to be pointed out that the work of exploiting foreign markets would make such demands upon the Cess funds, as to preclude the possibility of the Scientific Department being maintained from that source. The Committee were not disposed to favour the idea that the Cess should be legalised in terms which would permit of a portion of the funds being devoted to this purpose. And even if it were so legalised, it by no means followed that the grant of a special Government subsidy was unnecessary. The Cess funds were provided not by Government but by the industry; and the fact of their existence did not, in the opinion of the Committee, relieve the Government of their obligation to assist the development, upon scientific principles, of the cultivation and manufacture of tea.

A letter in terms similar to the foregoing was also to be addressed to the Hon'ble the Chief Commissioner of Assam.

Papers relating to the establishment of a proposed Experimental Farm in Assam were discussed by the Committee in connection with the question of the Scientific Department. It was, however, decided to postpone consideration of the proposal, pending the completion of the negotiations for the renewal of Mr. Mann's agreement.

## SHEVAROYS.

Proceedings of the monthly Committee Meeting of the Shevaroy Planters' Association, held in the Victoria Rooms at Yercaud, on the 12th January, 1903, at 1 P.M. PRESENT:—Messrs. C. G. Lechler, J. C. Large, C. Dickens, W. I. Lechler, W. Rahm. Mr. R. Gompertz, *Honorary Secretary*.

1. Read notice calling Meeting.  
2. Mr. Travers Drapes not being present, his case could not be proceeded with.

3. Read letter from Mr. Large pointing out that the Ghaut Road would be almost useless without feeder Roads for which it was very desirable that the savings on the original project should be expended.

Honorary Secretary read letters that he had written on this subject to the Collector, and through him to the Chief Secretary of Government, so long ago as the 15th August last, to which he had received no answers.

*Resolved*, that he should be requested to send a reminder at once asking for an early reply.

4. Read Secretary's Circulars Nos. 93/02, 96/02 and 97/02 regarding the proposed new Labour Bill.

*Resolved*, that the Honorary Secretary be requested to address the Planting Member, pointing out that Government originally proposed to frame a new Act, applicable to certain Districts only, which imported their labour from a distance; and that Act XIII should run concurrently with the new Act. Also that it should in any case continue to be applicable to those Districts which did not desire fresh legislation or to which Government refused to extend it. It was always—until quite lately—understood that the application of the new Act to any District would depend on the wishes of the planters. The new Act is totally inapplicable to local labour and the Planting Member's proposed amendment to Section 7 would entirely fail to meet the difficulty, since weeding contracts, etc., are usually made for a year and the coolies, though coming from villages within the District, do generally prefer to reside on the Estate. If Act XIII of 1859 cannot be allowed to run concurrently with the new Act, this Association would much prefer the former; as Act XIII, though bad, was infinitely better suited to Local labour than the proposed new Bill.

The following letters have been recorded:—

1. Chalan from Treasury Officer, dated 16th December, acknowledging receipt of Rs.75 for twelve Bamboo pass books.

2. Secretary's Circular No. 94/02, dated 19th December, 1902, stating that Planting Member fears it will be impossible to retain Act XIII of 1859.

3. Replies to Mr. Nicholson's proposal *re* payment of maistries  
(1) of those who do agree.  
(2) of those who do not agree.

4. Letter from District Forest Officer, who declines to forward correspondence *re* Bamboo Passes to Board of Revenue.

5. Letter of 27th December from Mr. E. G. Windle wanting more information about proposed system of paying maistries.

6. Letter from the Madras Railway Company, No. T. 30, dated 27th December, 1902, wanting a list of Plantations and their distances from the Railway.

A number of books and papers received during the month were laid on the table.

ROBT. GOMPERTZ,  
*Honorary Secretary, S. P. A.*

## MARKET REPORT.

[Per Mail advices of January 2nd, 1903.]

## COFFEE.

*The London Commercial Record* says:—The public sale market is still closed; auctions will be resumed on the 6th instant. Business in "futures" has been quiet and variations in price slight; on Wednesday Santos for January delivery sold at 26s 3d, March at 27s 3d, May at 28s, September at 28s 10½d to 29s, and December at 29s 7½d per cwt.; yesterday was a blank day. We quote:—

London ...	Santos ...	March delivery ...	27s 3d.
New York ...	No. 7 Rio...	" ...	4'60 cents.
Hamburg...	Santos ...	" ...	27½ pf.
Havre ...	Santos ...	" ...	33¼ francs.

No sales of importance have taken place privately to-day and auctions will not be resumed until next Friday.

Brazil "futures" open steadily and remained unchanged during the day. Transactions are only small, the market still being in a holiday mood. March done at 29s 3d, May at 28s, September at 29s, and December at 29s 7½d.

Closing quotations:—

	Sellers.	Buyers.
March ...	27/3	27/
May ...	28/	27/9
July ...	28/6	28/3
September	29/	28/9
December	29/9	29/6

Hamburg unchanged. Havre closed until Monday. New York opens unchanged to 5 lower.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1902. Tons.	1901. Tons.	1902. Tons.	1901. Tons.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated January 2nd, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903 ...	891,592	666,634	43,000
1901-1902 ...	893,398	672,851	39,248

7,852 pkgs. INDIAN } Total 8,971 packages were offered in public auction  
 1,119 " CEYLON } this week.  
 1,119 " JAVA }

The small shipments from India are at length beginning to tell upon arrivals in England, those for December being about four million pounds below the corresponding period of 1901, while the stock of Indian tea is now about five millions less.

INDIAN.—The market opened on the 31st ultimo with a small sale of 7,852 packages; little change was shown from rates current before Christmas, and as merchants were inclined to be very firm, several parcels were withdrawn for higher limits.

Week's av. of New Season's tea sold on Garden Account 1903, 6,312 pkgs., av. 7'39d.—1902, 22,333 pkgs., av. 7'28d.

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

New Season's tea sold on Garden Account 1st June to date 1902-3, 656,301 pkgs., av. 7.24d. 1901-2, 674,789 pkgs., av. 8.02d.

CEYLON.—The market still remains closed, the first sale of the year not taking place till the 6th instant.

JAVA.—1,119 packages were brought forward and sold with good competition fully up to recent prices, while occasionally an advance of  $\frac{1}{4}$ d per lb. was noticeable.

Bank Rate 4 per cent. Exchange on London three months' sight :—  
Calcutta  $1\frac{1}{4}\frac{3}{4}$ . Colombo  $1\frac{1}{4}\frac{5}{8}$ .

WHITE—is also firm, but no sales are reported. On the spot the quotation for fair Singapore is  $9\frac{1}{16}$ d, and for Penang  $9\frac{3}{16}$ d; to arrive the respective values are unchanged at  $9\frac{3}{4}$ d and  $9\frac{1}{2}$ d per lb. for January-March (s.).

The shipments of White Pepper for the month of December compare as follows:—

	1ST-HALF.		2ND-HALF.

#### QUININE.

Quinine has been very quiet, but firm, the year closing with a small business in the usual brands of German sulphate at  $11\frac{1}{2}$ d to  $11\frac{3}{4}$ d per oz., spot, and 1s 0 $\frac{1}{2}$ d for May delivery. To-day there are sellers at  $11\frac{1}{2}$ d, spot, and buyers at  $11\frac{3}{4}$ d to  $11\frac{1}{2}$ d. If the bark shipments from Java had been moderate, as was expected, there would probably have been a better tone.

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JANUARY 31, 1903.

[No. 5.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 6th proximo. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Kotagiri.

*22nd January.—Weather—*Much brighter, but still a bit cloudy, though no rain. *Crops—*Still picking lightly; stripping has begun on one or two of the lower elevation Estates. Plenty still to come on higher ones. *Labour—*Sufficient. *Health—*Improving, though there is a certain amount of what appears to be influenza. *Spike* is a great deal too forward to be pleasant, and general appearance of trees is poor.

#### Kotagiri.

*28th January.—Weather—*Continues fine, though there are still clouds hovering round. *Crop—*Picking steadily though slowly. A large amount of Dry Cherry being gleaned. Weeding is being taken in hand now that fewer coolies are needed for picking. *Labour—*Sufficient. *Health—*Fair. *Interesting items—*(i) The Volunteer Prize Meeting on the 3rd, 4th and 5th February; (ii) one tiger has accounted for 12 head of cattle and ponies in two months. He has been wounded slightly, but is still at large; (iii) a Dance at the Club to-night, a "farewell" to Mr. & Mrs. F. T. F. Wilson.

### SCIENTIFIC AID FOR PLANTERS.

FROM various parts of India comes information that clearly points to an insufficiency of scientific aid for the agriculturist (including the European planter) in this country. In India there is supposed to be one Entomologist; in the Madras Presidency there is one Botanist; in the comparatively small Province of Mysore there is an Agricultural Chemist. So far as the planter in South India is concerned, this completes the list, save that he may at times obtain a little useful assistance from the authorities of the Indian and Madras museums.

Is it enough? We have heard complaints from planters in Mysore that they have not derived the benefit from the Agricultural Chemist that they looked forward to when they advocated the engagement of this official. We hold no brief for Dr. LEHMANN; he is quite capable of defending himself, if attacked. But we say that even in the territory that he has had to deal with, he has found his hands more than full. Until recently he has been handicapped by the want of a laboratory, and he has made no secret of the fact that he does not regard himself as quite "complete" when he has no laboratory at hand. Coffee cultivation in Mysore is in such parlous condition that an investigation of it that had any pretensions to thoroughness would occupy the full time of any scientist. We want the whole matter looked into, from the preparation of the soil and the selection of seed to the curing and packing of beans. There have been fresh complaints lately about deterioration of quality. If a competent scientist could devote his time to a thorough investigation, we should, in time, know one of two things: either that there is deterioration that cannot be prevented, or that there are means of preventing it. We take the deterioration for granted. There are exceptions to the general rule; but we take it as established that the average quality of Indian coffee beans offered for sale in the London market is not as high as it was, say, ten or twenty years ago. Curers say their machinery and methods are the best available; if so, the fault lies with soil conditions or methods of cultivation or atmospheric conditions. The first two can be improved perhaps, and some changes might even be introduced to counteract unfavourable atmospheric conditions.

If for Mysore one scientist is insufficient, how about the Madras Presidency with its one Botanist, India with its "regulation allowance" of one Entomologist? It seems to us that both Tea and Coffee demand the attention of scientists. Pepper has claimed that attention for months past, and never was there a clearer indication of the undermanning of the scientific side of agriculture in Madras than was afforded by the delay that occurred before the Government Botanist was deputed to look into the diseases of the pepper-vine. Mr. BARBER is not to blame. He has had, among other matters, to investigate diseases of the sugar-cane, a much wider, and a more important subject. We assert that one man is not enough for the investigation of diseases in planting products alone; and it stands to reason that no one man can

deal thoroughly with the many and varied agricultural products of the Madras Presidency. Planters have expressed ere this a desire for the appointment of a special scientist; in Mysore their representations have been partially successful. In Madras they stand to all intents and purposes much where they did a decade and more ago. It is on this ground, and because of the knowledge that planters have suffered greatly for want of scientific advice and assistance, that we urge that this matter be pressed on the Government again—and, if necessary, again and yet again until victory is achieved. Some few men may be satisfied with things as they are, but it needs no more than the prevalence of pest, or blight, or disease to dissipate their contentment. Only a few years ago coffee was practically exterminated on the Pulneys at a time when it might perhaps have been saved if immediate scientific aid had been forthcoming when first the inrush of the enemy was observed.

The Government may be said to owe the planter assistance such as we urge him to claim. Apart from considerations of the general duty of the State towards every important agricultural industry, there is in India a special reason why Government should help the agriculturist. We do not say the planter alone, though we advocate the employment of a special scientist, or more than one, to help him. Whatever influence the present Currency Policy of the Government may have had in checking over-production of Tea, it has had no such effect in regard to Coffee. Even with Tea also it has tended to withdraw from the planter a large share of his revenue; in return for this he, along with every agriculturist in India, has a right to claim at least that Government should provide all necessary scientific aid, to protect him from the effects of plant pests and diseases and to help him to perfect methods of cultivation and preparation. We do not invite any discussion on the Currency question. Let us take that question as settled. Still, the fact remains that the artificial raising of the rupee has been a serious handicap to the planter, to the coffee-planter in particular, for he has been met by the competition of other countries not equally handicapped, and has never incurred any risk of over-production. Whether planters make use of the argument with which this Currency Policy furnishes them or leave it alone, they have a strong case to put forward, and we urge that it ought to be put forward again and again until it is taken into proper consideration. Every year of late the need of scientific aid has been felt in increasing force; and there is no good reason why the Government of India and the Government of Madras should not be urged to give at least as much support to planters in this respect as the Government of Ceylon does.

#### COFFEE NOTES.

**Retail Coffee Prices in the U. S.**—The *Merchants' Guide*, of Philadelphia, says: "Importers and wholesale dealers in coffee are excited because the Treasury Department says in its report that they are receiving extortionate prices from the consumers, besides selling inferior grades for the Mocha and Java growths. Many of the importers were in possession yesterday of the reports, which also contain the statement that, while the standard grades of coffee are the lowest ever quoted, they have not brought about any appreciable reduction in price to consumers.

"Many of the importers declared yesterday that the reports did them an injustice, especially in the matter of price, for

in no sense was extortion practiced upon retail dealers or consumers."

The *Merchants' Review* comments thus:—"The Philadelphia coffee handlers probably had not seen the article in the *Merchants' Review* exposing the absurdities of the Treasury statement, otherwise they would have understood that there was no ground for undue excitement. The Government officials are not supposed to know much about coffee or any other product, and, as a matter of fact, they do not know much. The Treasury outpourings on the subject of coffee are about as valuable, and no more, than the tommyrot of the Department of Agriculture on the subject of home-grown tea.

"For some reason the Treasury Department and the Agricultural Department seem bent upon making things as unpleasant as possible for the importing element in trade, although without the import trade the country would not have much use for either department, for imports mean exports, and the Treasury Department would amount to very little without the one while the Department of Agriculture would cut an absurd figure without the other. Yet it seems that neither department can be satisfied unless hatching some scheme to make life unpleasant for the importers.

"Real harm, however, does not often result from attempts like that to which we referred editorially a week ago, and when the importers and wholesalers have cooled down they will recognize the uselessness of anger or any feeling of annoyance over the excursions of Government officials into realms that are strange to their feet.

"We do not think the Washingtonian officials who had a hand in sending out the statement alluded to by the *Review* last week, will care to subject themselves to a second dose of the reproof conveyed in our criticisms, and the question of the proper margin of profit in the coffee trade will probably be left, as before, to the grocers for settlement with the help of the irresistible force of competition.

"It should be a sufficient answer to all attacks such as we are considering, that the consumption of coffee has doubled within a little more than a decade. The *per capita* consumption of coffee is much larger here than in any other important nation, and this could not be were there any truth in the charges lately given currency in the Press."

\* \* \*

Coffee is certainly much more freely drunk than formerly, says the *Merchants' Review* of New York. This could hardly be unless the price had been greatly reduced to the consumer. Where the price has not been materially reduced it will be found, generally speaking, that the quality has been improved. This raising of the quality when the market price has fallen is a rather common practice with grocers. Thus butter, tea and cheese, as well as coffee, do not vary much in price in some grocery stores, the ups and downs of the market being represented by an up-and-down movement of the quality. Newspaper charges, which ignore the influence of the competitive principle, may mislead some people, but those who have studied such matters are well aware that the public is always the gainer by marked reductions of price, whenever the low level is retained for a considerable time. Sharp, sudden fluctuations of course cannot be expected to affect the retail selling prices to the same extent.

\* \* \*

Demand has been slow, and prices for spot easier for high-grade Brazil, says the *American Grocer* of December 24, 1902. It is the same old story of excessive supply and indifferent

demand, subject to speculative manipulation on the Exchange, where quotations have dropped to 4.40c. bid for December and January. Mild coffee firm for fancy marks and all desirable roasting grades. Stocks are moderate.

\* \* \*

The same old canard! The *Merchants' Review* writes:—The quality of Indian coffee is good—so good that it is appreciated by the Arabs and Turks. It is not easy to determine how much of the 250,000 pounds of Indian coffee shipped to Arabia finds its way to Europe and America as the finest "Mocha."

\* \* \*

The packers of cereal coffees, with their free use of printing-ink, seem to be troubling the souls of some of the friends of coffee in India; yet while the "Postum" people have been hammering the Arabian berry it has doubled its consumption in the United States.

\* \* \*

**Bickford's Coffee Circular.**—Advices from numerous sources in Guatemala as to the actual or even approximate damage sustained by the recent volcanic eruptions there are conflicting an authoritative estimate is impossible. Some place it at 400,000 quintals lost to this crop, while others go variously to the opposite extreme. Important estates near the volcano are known to be permanently ruined. Others, more distant, will occupy a season or seasons in recuperating. As the distance increases the damage lessens and many who felt themselves ruined at first will now partly or largely save their crops. Still others will lose, not as the direct result of the eruption, but by neglect occasioned through the fleeing of their native labourers and the delay and difficulty in securing their gradual return. The area involved has been pretty well defined and there is no doubt that the aggregate loss will prove severe, but the planters seem unable to more than approximate their figures. As a rough hazard we would put the shortage of this crop at 250,000 quintals, say 185,000 bags.

New crop coffees have begun to arrive in small quantities, but no business has transpired in these and none in old crop worth mentioning. The market has been very dull the past month and is likely to continue dormant until the turn of the year. Prices in New York for spot Brazil coffees are about the same as on November 7th. but futures are one-half cent lower, with general conditions very dull there.

First hand stocks December 13th consists of 58 bags Costa Rica, 1,113 Nicaragua, 982 Salvador, 12,344 Guatemala, 398 Mexican, and 7,050 various; in all 21,945 bags.—*Weekly Commercial Review*.

\* \* \*

Statistical positions at the moment count for little; it is sentiment that is required, and there is a total absence of that just now. It may be a consolation, though a poor one, that other trades are no better off, on the contrary some fare even worse. Look at fine coloury East Indian coffee. The first arrivals of the new crop have met with a very poor demand, and were sold at ruinously low prices. Two well known and liked Coorg crops realized an average of 50s., landed, and this figure was only reached after a great deal of trouble and work on the part of the selling brokers, for not more than 45s. was bid in sale for the parcels. This, we feel sure, will be a great shock, not only to the owners of the estates in question, but to the entire Coffee community in India—Planters, Dealers, and Shippers. For a long while they could not be brought to realize that the prices which they demanded were far above the parity of other coffees, and also that old stocks were still lying in London, which were depressing the market. We have cautioned our readers several times, but were only called pessimists in return. This week's sales, although we cannot regard them as a criterion, for the quality of the coffee did not come up to their usual standard, will serve as an indication what the feeling of the London Coffee trade is like. Brazils are pouring in upon us, and under their weight prices slowly but surely must decline. We have almost reached the lowest point of last year, but with this difference, that we are facing about double the quantity of visible supplies. The market is full of weak and tired bulls, who are only too anxious to clear out, and they avail themselves of any improvement to reduce their holdings. We are afraid the outlook is not very promising at the movement.—*London Commercial Record*, Jan. 9.

From a prominent Anglo-Brazilian firm Messrs. Willett & Gray have received the following about the crop prospects: "The course of events and what we can learn from the best sources of information available, have confirmed our opinion, as expressed in our circular of September 1, that the damage by frost in the State of Sao Paulo was greatly exaggerated, and that the prospects of the growing Rio and Santos crops continue very favourable. The heavy flowering seems to have set well, and now any but local damage is improbable. We prefer not to name figures, purporting to be more or less exact, because there is no exact data on which to base such figures. In former years we could usually estimate the crop with some exactitude, but the extension of area under cultivation has made crop estimation largely a matter of guess-work. Should above forecast be realized, it appears to us that the supply of coffee in excess of demand is assured for some time to come, and that the position of the article is in consequence inherently a weak one. Apart from possible unforeseen causes, or any extraordinary damage, we do not see reason to expect any great falling off in the production of Brazil, even if prices go much lower, as the bulk of the crop will be picked, even if the smaller and poorer planters have to neglect theirs, while new planting has continued of late years, and still goes on, though of course on a small scale compared with some years back." This has been confirmed by cable of late, and the information being spread of fruit falling off and other damage does not seem to be entitled to any consideration.

### TEA NOTES.

Tea, like coffee, is cheap, but, unlike coffee, tea does not increase in consumption, says the *Merchants' Review*, of New York. We do not look for any material gain in the popularity of the article until Ceylon and India teas, or blends of these teas with Chinas and Japans, have been thoroughly introduced.

\* \* \*

The effects of green tea upon the nervous system of the consumer have frequently been made use of in fiction, and it is well known that green tea is much more trying to the nerves than other sorts. The consumers in the United States prefer green tea to black tea as a rule.

\* \* \*

**The "Thirty Committee" and Green Tea.**—The "Thirty Committee" have decided that the information placed at their disposal goes to show a probable export during 1903, of twelve million lbs. of green tea. At the same time they can only see their way to paying a bonus of 4 cents per lb. on seven million lbs. and unless the Cess rate is temporarily increased, all beyond this quantity must go without the bonus. The vote for Mr. Renton must go on till the end of 1903, Rs.7,500 has been expended on Mr. Foley's scheme for Afghanistan; but Rs.5,000 of this is expected back from Mr. Foley.

\* \* \*

All teas placed in warehouses are, says the *American Grocer*, when withdrawn, subject to duty in force at the time they were warehoused. Unless this ruling is changed by act of Congress, there is trouble ahead for the tea trade.

\* \* \*

The United States and Canada imported 17,710,873 pounds of Indian and Ceylon tea during the first nine months of 1902, against 12,382,755 pounds for the same time in 1901.

\* \* \*

**Selling Tea and Coffee.**—It is astonishing, says the *Journal of Commerce*, Kansas City, what poor tea is sold at the average grocery for 75c. per pound. It is simply because most retailers are not good judges of the article. No man is capable of buying tea on its merits who is not a lover of the beverage, and that remark applies

to coffee as well. There is no legitimate excuse for not selling tea and coffee of fine flavour and good body at popular prices, yet thousands of grocers fail to make these articles large profit-payers simply because they are not good judges of quality. Such retailers should rely on the judgment of an honest expert; one who will take a lively interest in aiding to establish a growing trade. These should study flavours, and learn to test and select fine tea and choicy coffee. There is not only a big profit in the articles, but a means of enhancing the popularity of the store.

**Car Loads of Tea for Milwaukee.**—One dealer notified the collector that he has four car loads of tea destined for Milwaukee, while nearly every wholesale merchant has car load lots on the way. All of them have plenty of room in their warehouses. The removal of the tax on tea will reduce the receipts of the Milwaukee office by \$10,000, that being the amount of the annual tax paid here by tea merchants.—*Milwaukee Sentinel*.

### NOTES.

#### Ceylon Cinchona.

been :—

The exports from Ceylon from January 1 to December 15 have

	1902.	1901.	1900.	1899.
Lbs. ...	397,931	571,357	499,039	592,492

#### Para Rubber in the Kelani Valley.

A Syndicate of leading planters in the Kelani Valley have, according to the *Ceylon Standard*, concluded negotiations for the purchase of 600 acres of land for the cultivation of Para Rubber. The land is situated at Bulatkohupitiya in the Three Korales.

#### Java Cinchona.

Exports for 1902 are given at 13,143,000 Amsterdam lbs. of bark as against 12,606,000 for 1901. In English lbs. the comparison runs :—

1902 ...	29,440,320
1901 ...	28,237,440

The Amsterdam *pond* is equal to 2.24 English pounds—the French kilogramme being 2.20.

#### Cacao.

The Ligu cacao (*Theobroma bicolor*) is now fruiting at the Botanic Station, Dominica. Several plants of the Alligator cacao (*Theobroma pentagona*) has also flowered. Both of these species were obtained from Nicaragua by Mr. J. H. Hart, Superintendent of the the Botanic Gardens, Trinidad. On one estate in Grenada where very particular attention is given to cultivation and manuring the efforts of the proprietor have been rewarded by a yield of 130 bags (of 182 lbs. each) of cacao from about 16 acres. This is at the rate of 8 bags per acre.—*Agricultural News*, Dec. 20.

#### Java Cinchona.

The N. V. Nederlandsche Veem at Amsterdam reports the shipments from Java to Europe during December, 1902, as under:—

Year.	Amst. lbs.	Year.	Amst. lbs.
1902 ...	1,318,000	1897 ...	731,000
1901 ...	1,300,000	1896 ...	890,000
1900 ...	1,100,000	1895 ...	634,000
1899 ...	626,000	1894 ...	531,000
1898 ...	1,018,000	1893 ...	391,000

Total Shipments June-December.

Year.	Amst. lbs.	Year.	Amst. lbs.
1902 ...	13,346,000	1897 ...	8,437,000
1901 ...	12,799,000	1896 ...	10,079,000
1900 ...	10,780,000	1895 ...	8,827,700
1899 ...	11,409,800	1894 ...	8,917,700
1898 ...	11,150,000	1893 ...	7,342,000

#### Dumont Coffee Company.

A circular has been issued stating that the coffee crop for the current year, owing to the trees having borne a very heavy crop last year, which was followed by a severe drought, has fallen considerably below the Manager's estimate of 60,000 cwt., the yield only amounting to 42,650 cwt., against 143,395 cwt. in 1901. The market price of ordinary Santos coffee has averaged 28s. 9d. per hundredweight since the selling season began, but the average price realised to date on 15,702 cwt. sold on the Company's account is 40s. 3d. per hundredweight. Owing to the unsatisfactory harvest and the low price of coffee, the Directors regret no further distribution can be made at present on account of arrears of preference dividends.

#### London Tea Sales.

Weekly special telegram dated 22nd instant from Messrs Gow, Wilson & Stanton to Colombo reports that the market generally is weak and that the market for medium-liquoring Pekoes and Broken Pekoes is steady, while the market for teas for price is easier. The price of fair liquoring Ceylon Pekoe Souchong is 6d. (the same as last week) and the average 7½d. (also the same as last week). The average for the same period last year was also 7½d. Ruter reports that common to medium qualities of Ceylon tea are rather easier. Fair Pekoe Souchongs are quoted at 5½d. (same as last week) and the average for the week is 7½d. (also same as last week). 22,000 packages of Ceylon tea were offered for sale and 18,000 disposed of; while of the 33,000 packages of Indian tea offered, 26,000 were sold at an average of 7¾d. (same as last week).

#### Java Government Cinchona-plantations.

A sum of 289,000fl. has been allotted to the Java Government cinchona-plantations, in connection with the estimates for 1903. This sum is an increase of 189,000fl. on the estimates for 1902. It is intended for the purchase of quinine, gathering, manufacturing, transport, and sale of cinchona, etc. In 1902 the production of Government bark was estimated at 1,000,000 Amsterdam lbs., but this year they hope to increase the output by 50 per cent.—i.e., 1,500,000 Amsterdam lbs. In view of this, and also because more money is required for laying out new nurseries, upkeep of nurseries, etc., expenses of the Government plantations are estimated at 5,000l. There is also an increase of 3,250l. in the estimates for the purpose of meeting the extra cost of manufacturing the quinine produced by the Bandong Quinine Works. The revenue for 1903 is expected to realise 399,000fl., chiefly derived from the sale of Java quinine.

#### American Journalism.

*Apropos* of the recent article in the *Boston Herald* "booming" Pinehurst Tea, Mr. P. C. Larkin writes to the *Ceylon Observer*:—If you think the *Boston Herald* would allow any institution or person to boom itself at the expense of the proprietors of the *Herald*, then you are mistaken. Every line of the article you allude to was paid for, and paid roundly for, and, in fact, it is articles like this that bring around the donations from the Government of \$10,000 to \$20,000 to help on the "experiments" of the "Pinehurst Plantation." Therefore when you reflect on your Commissioner for not getting similar articles inserted free, you are doing him an injustice. I will venture to say that Ceylon tea has had more free reading articles in the Press of the United States twenty

times over than the "Pinehurst Plantation," but this has been done not only by making the articles interesting, but also by buying much space in their advertising columns.

**Cinchona.** Statement of the movements of "Peruvian" Bark in the United Kingdom, according to the Board of Trade Returns for the twelve months of last and two previous years :—

GENERAL ARTICLES.

HOW TREES DRINK.

Irrigation on the capillary attraction principle is now being investigated by the State Board of Horticulture, and the Government Experiment Station at Fort Collins, with a view to recommending it for adoption in this State. Fruit-growers who have experimented with the scheme declare it to be entirely feasible and much more effective than the old way of feeding moisture to trees by way of the roots.

Mr. Flage Carter, of Park County, the first person to try the plan in this State, wrote to Governor Orman some time ago explaining the method of irrigating a tree by capillary attraction. He takes a vessel, a pan or a bucket, or anything that can be tied to a tree limb, and will hold water. He fills it with water and then bends a twig about the circumference of an ordinary lead pencil into the water. The liquid will be rapidly absorbed by the twig, and in turn the water will enter the limb and soon permeate every part of the tree. The problem of keeping the vessels supplied with water is not difficult, for the reason that a half-gallon of water will do as much irrigating as many cubic inches under the present plan the adherents of the scheme claim.

"Capillary attraction is the future of orchard irrigation," says the originator of the proposition. "I took up the matter two years ago, but did not put it to a final test until this Spring. Then I had two trees that needed attention badly, and I experimented with each. One young tree had been rubbed thoroughly by a horse, and was wilted badly. I applied my method of watering it, and within one week it completely revived. I next treated a sick apple tree, and now it is all right, thanks to the capillary attraction principle."—*The Denver "Post."*

TOBACCO CULTURE.

In the *B. C. African Times* a correspondent gives the following hints as to growing Tobacco in those parts :—

Tobacco beds require to be made up very carefully and the soil made into as fine a tilth as possible. It is sometimes advantageous to mix well-rotted manure with the soil and the beds should be burned over. That is, a layer of grass and brushwood and small sticks should be placed on top of the bed and set fire to. This burning is for the purpose of destroying grass seeds which come up with the tobacco and give much trouble unless they are eradicated in this way as the young tobacco seedlings, being

so small and delicate, do not stand much weeding. After burning, the charred remains and unburnt portions of the wood should be removed and the surface made fine for sowing the seed.

As regards quantity a tablespoonful of tobacco seed is sufficient for a bed 50 feet long by four feet broad if the seed is good. It should be sown evenly and to effect this the tablespoonful of seed should be mixed with fine sifted ashes and sown broadcast on a still evening, as the least wind carries the light seed away. The hand should be held close to the ground when sowing. One of the best ways is to sow half of the mixture up and down the bed as evenly as possible, the other half being sown over the first but crosswise. The bed should then be covered with chopped straw (without any grass seeds,) and watered gently, preferably with a fine rose or, if that is not at hand, by using a brush of small leaves to scatter the water on the top of the straw. The bed should be kept moist and for this purpose should be watered morning and evening. The seed should appear in about a fortnight according to weather conditions and freshness of seed.

Plants are ready for planting out when the leaves are about three to four inches long.

MORE ABOUT COFFEES.

The more some people talk about coffee the more they reveal their ignorance. This opinion has been elicited from us by the remarks on a recent Treasury statement which have appeared in the shape of an interview in several contemporaries. In this interview the nonsensical talk of the Treasury expert relative to 25-cent coffee being extortionately high, in the face of low-grade Rio selling at 5½c., is deservedly criticised, but the usual cloven hoof appears in the shape of a hit at the importers who are charged with selling bogus Java and Mocha grades in place of the genuine.

Surely it is hypocrisy for any Jobber of teas and coffees to attempt to point the finger of scorn at another Jobber because the latter sells Java and Mocha as he finds them in the market. Surely it would be hypocrisy on the part of the grocer, knowing nothing of Java and Mocha save as trade names, to attack another dealer or even an importer for handling trade Javas and Mochas instead of the real thing.

It has been told so often that Java and Mocha coffee is usually Brazil coffee of a superior grade that is sometimes worth more than the East Indian coffees, and the trade has for so long a time accepted the designation of "Java" or "Mocha" less as a geographical term than as a trade grade meaning something like "prime" or "superior," that one would have thought that no experienced dealer would have lent his name to an attack on the good faith and trade honour of the members of the coffee trade. But, of course, when one has certain goods to sell it may help them to move out freely if one can impeach the trade morals of rival dealers.

A Philadelphia paper has set the pace for this kind of thing, having assailed the mass of Philadelphia importers and handlers of the coffee bean in such a manner that a remonstrance was made, but it was ignorance rather than malice in its case, an excuse which should hardly hold when an experienced dealer begins to talk about his fellow-jobbers in the following terms:

"The better class of grocers in the United States do sell real Java and real Mocha coffee, but it is unfortunately true that a certain proportion of the trade sells coffee for Java and Mocha which never saw the island of the first name nor the part of Arabia from which Mocha is supplied. But this is not altogether the fault of the grocers.

"During the past year some of the most glaring deceptions in this respect have been discovered by experts, who have had samples from the trade all over the country, which, upon being tested, showed, without exception, that the retail grocer had not been getting what he asked for and paid for—Java and Mocha."

Now this dealer who is speaking knows perfectly well that the calling of these so-called Mochas and Javas something else would not make them sell any lower in price. And whatever name should be chosen for them, he knows that they would be sold by the retailer as Java and Mocha, and would be hailed as Java and Mocha by the consumer. The retailer could not help himself in most cases, because the public insists upon having Java and Mocha, and there is not enough Java and Mocha by a great deal to accommodate their demand.—*Merchants' Review.*

## IS COFFEE ROASTING AN ART?

E. F. Navlet, a Practical Coffee Roaster of Twenty-six Years' Experience, writes in the *Spice Mill*:—

Coffee roasting is an art from the very fact that it requires a long experience in the handling and roasting of the different kinds of coffee grown in the different parts of the world.

For instance: we have the high mountain and low-land coffees. In colour they run from a dark olive to a pale golden, and bleached. It is necessary that the operator be familiar with the different kinds of coffee. He should study their nature thoroughly and treat them accordingly.

I have known many coffee roasters to turn out a roast where the outside would be well done and the centre of the berry under done. The reason for this is that they rushed their coffee too much. They should give it the proper time to roast. A roast should not be hurried or left over the fire too long. That is the reason why, I say, you should treat coffees according to their nature in order to develop their full aroma. It is easier to roast coffee under-done than to roast it to the finishing point.

Some coffees require much heat, while others must be roasted over a slow fire. You must bear in mind that if you want to become an expert coffee roaster, you must study it thoroughly or else you are not a fit candidate for the roasting room. Some of the best coffee roasters in San Francisco, California, served their apprenticeship under me. I served my apprenticeship under the following expert coffee roasters: Mr. Leon Rebour, of Paris, France; Mr. Gibson, of London, England; and Mr. Gates, a pioneer of San Francisco, California.

I dare say that after serving under the French, English, and American coffee roasters, I have gained points that very few possess. You hear people say, "Why most any old lady can roast coffee." Yes, that might have been so in the days of our grandmothers but the new woman of our day does not bother her head about coffee roasting. She prefers to buy her food ready cooked and "predigested."

With the latest improved coffee roasters, operated by skilled hands, I do not see any reason why a perfect roast can not be had. My first coffee roasting was done with a man killer. From that I have been roasting with different makes, but of all, I prefer the Burns. I speak from my own practical knowledge of twenty-six years' experience.

## THE FARM ORCHARD.

### WHAT OUGHT TO BE DONE.

The "Agricultural Annual and Mark Lane Express Almanac" for 1903 contains a variety of articles specially written by experts, together with several new attractive features.

Dealing with the subject of fruit orchards, a writer says they are established institutions in connection with the majority of farms, be the latter situated in strictly fruit-growing districts or not. The common way with the tenant farmer is to accept the orchard as a kind of legacy from his predecessor, and after getting his bit out of it during his term of tenancy, he passes it on to his successor in much the same condition as he received it, with the additional deterioration brought about by the hand of time. We can do more than our grandfathers did, and reap the benefit in our own day, as well as leave legacies behind us, because we have the advantages of cheap trees, high-class varieties, and the spread of knowledge. There is no general need to sweep away existing institutions and make a fresh start, for there are hundreds of established orchards that only need renovating. They may contain old worn-out trees that have had their day. Let them be rooted out, and submit others that are still vigorous and healthy to a judicious thinning of the branches. If these are strong specimens that bear useless and unprofitable apples, cut their heads off and re-graft them with such a variety as Bramley's seedling, than which there is none better for grafting on to old stocks. In a few years the tree will be furnished with a new head that will be a source of profit for many years to come.

In the interests of both this and succeeding generations it is necessary that the work of establishing orchards on farms where they do not exist go on, and the man who plants an orchard, be he

landlord or tenant, should remember that he is doing something for posterity, therefore he should be careful in his selection of varieties and his method of establishing the trees. Doubtless the best site for forming an orchard is on arable land, as trees establish themselves quicker on ground that is under cultivation for a few years and is then laid down to grass. But where trees are planted in pasture the turf should be pared off and the grass not allowed to grow round the stems for a few years. In the case of a young orchard it is a mistake to be too anxious about fruit. In the first place get a good specimen, by judicious shortening of the young shoots in the early stages of the tree's existence, and when once the foundation is laid, fruit will be sure to follow. Above all things plant good varieties, whether the fruit grown be apples, pears, plums, or what not. In the selection be guided by the varieties that do well in the district, then go to a respectable nurseryman and secure good specimens. If they cost a little more they will be cheaper than poor trees, which are dear at any price. Though the foreigner may send his wares into our central markets and compete there with the wholesale fruit-growers at home, there are people enough in the provinces to buy what the ordinary farmer has to dispose of at prices that will pay, provided that he supplies them with a good article.

## COFFEE IN 1902.

A review of the Coffee trade for the year 1902 naturally divides itself into two parts, viz., that of the market for "Futures," and that for landed parcels alone. We will take the first-named before the other, because it has of late years overshadowed the article on the spot, which does not occupy anything like the same pre-eminent position that it did in the last century. It was well known that the Brazil Coffee crops, on which hinges the whole scheme of speculation as reflected in the "terminal" market, were for the year 1901-02 the largest ever recorded, the receipts from the interior aggregating 15,522,000 bags (Rio and Santos together), as contrasted with nearly 11,000,000 bags in 1900-01 and barely 9,000,000 bags in the season 1899-1900. For want of a better reason, it was urged by some authorities that a rate of production on the formidable scale above indicated was hardly to be expected in the ensuing year, and they began to indulge in prognostications of failing supplies and advancing prices for coffee in the year 1902-03. But at the outset it was a matter of immediate importance that the huge old crop of the former year should be dealt with ere any new movement should be started having for its object the setting up of a higher level of prices. In this respect the sanguine anticipations of holders fell far short of the actual mark, and good average Santos at the start in January last was deliverable between that month and the following December as low as 31s. 3d. to 33s., which showed a total depreciation of quite 10s. per cwt. from the previous highest point in September, 1901. From February, 1902, until July there was an almost continuous decline in quotations, when the same description of Coffee was forced off at 27s. to 27s. 6d. for that month's and September delivery, at 28s. to 28s. 3d. for this December, and at 29s. to 29s. 6d. for contracts in March to May next. Up to this period (July last) the "bears" evidently had things all their own way, but later on the "bulls" had the satisfaction of seeing circumstances work round rather strongly in their favour instead, and reports of frosts inflicting damage on the growing crops being subsequently circulated, quotations for forward deliveries gradually rose to 31s. 6d. to 34s. per cwt. for September to July coffee (1902-03). The action of speculators now rested upon the nature of advices from the Brazils as to the probable size of the coming crop, and its increasing deficiency as compared with the "monster" one in 1901-02 was already regarded as a foregone conclusion. As the year wore on the question that most puzzled the wits of operators was the erratic movements of the article in connection with the daily receipts of Rio and Santos coffee at the shipping ports, which varied to such a nicety in swelling and shrinking that for weeks and months together it was almost impossible to gauge what would be the full extent of their final outcome, and it was not known beyond a doubt that the decrease was really heavy until November, when the receipts at the ports of shipment turned out to be about 2,000,000 bags less than those in 1901-02—say (from July 1 to November 12) 6,643,000 bags, against 8,637,000 bags. All this time neither buyers nor sellers felt quite

sure of their ground, and after numerous fluctuations backwards and forwards, prices for good Santos near the close of the year, to be delivered between the present time and September, 1903, were seldom much above 26s. 6d. to 30s., or but little, if at all, higher than they were about the middle of 1902. Turning to coffee "on the spot," it cannot be said that a very glowing account can be given for the simple reason that there has not been the requisite assortment of qualities exactly suitable for either the home or export trades. Although the aggregate importations into the United Kingdom have nearly equalled the enlarged total in 1901, it was because they were composed of a much heavier proportion of Brazil kinds than before, and these being not the useful sorts sought after by either the dealers or exporters, a gap was left in the general supply which was not easy to fill up from other sources. Desirable or plantation coffees, such as arrive from the East or West Indies, Central America, or other foreign countries, have been relatively scarce throughout the year, as is proved by the scantier imports that have come in from each quarter, and as similar demands have had to be satisfied as hitherto, business in many respects has been greatly cramped for want of the necessary selection of wholesome coloury qualities. Of the rival branches of trade, the shippers or the home dealers, the former appear to have suffered the most from deficient and unsuitable supplies, if the quantity exported from the United Kingdom can be taken as a criterion of their loss, as for the first eleven months of the year only 335,300 cwts. were shipped from hence, in contrast with 653,000 cwts. in the same period of 1901. Purchasers for home use have also been losers and put to a deal of inconvenience through the dearth of fancy or coloury growths, many of which have been secured by exporters at every opportunity, and where the superior and attractive grades have been competed for with more than usual spirit, stiff prices, and closely on a par with those of the previous year, have been the rule rather than the exception. Stocks of coffee in Europe are very excessive, computed at 130,000 tons more than those in 1901, but they do not consist of the right sort, and until the whole bent of the world's supply is reversed by some preponderance of the preferable qualities over those that are admittedly inferior, the anomaly of extremely low prices at one end of the list and very high rates at the other will continue to exist in the opening year.—*Grocer*.

## TEA IN 1902.

### CHINA TEA.

Owing to the unfortunate rise in the price of common Tea about the middle of October, 1901, the smaller anticipated crop of 1901-02 was increased by some 3 million pounds; and the total landings for the season were 2 million pounds more than the previous season. One at last knows that common grades are only wanted by the home trade as "make-weight," in case Indian and Ceylon grades rise to such a price that China has to be used for the low-priced canister. Luckily for the blender, this extra quantity was not wanted, and the bulk of it has been hanging over the market and depressing values all the year. Each forced sale lowered the price without sending it into consumption, and even the Continent refused to take it. The lowest point was touched about September, when really good sweet Monings were to be bought at 3d. to 3½d., and clean sweet Panyongs and Kaisows at 2½d. to 3d., while common leaf could be had at even a lower price. Large lines of low-priced Foochow Teas were at last absorbed by the Continent at the lowest rates ruling, and in November "blenders" began to take Monings in quantity, and prices rapidly recovered ½d. to 1d. per lb. from the lowest point touched, but still ½d. under rates ruling the beginning of the year. Foochow Teas, however, participated only slightly in the improvement in values. On the other hand, good Monings were scarce from 6d. up, and fancy prices were paid in retail quantities up to the end of June. These remarks, however, do not apply to Foochow Teas, which are scarcely used by the trade, while exporters did not want them. Supply of Foochow Tea, luckily, was small and losses were not heavy. The first new season's Monings (1902-03) arrived per *Himalaya* on July 1, with further supplies on the 14th, including new season Foochow Teas. The bulk of the first crop was now in, and the trade and export settled down and selected the best for their immediate wants. The Kintucks were not liked—quality was light and indifferent, with no "stand-out" Teas, and everyone bought very carefully and

under "protest." The Ningchows and Oonfaas, however, were particularly good, but realised very reasonable prices, as they are not so much used by the home trade, and exporters gave little support. Common grades have been in very small supply this season, and even the few were not wanted. Trade and the Continent bought from hand to mouth up to the end of the year, while America took several thousand half-chests of Ningchows and Kintucks between 6d. and 1s. in October-November. Prices kept very steady, importers being willing to wait until they were asked for. Anything standing out in Kintucks and worth over 1s. in the importers' hands got so scarce that dealers were able to realise good profits on the market for what they had bought earlier in the season, while forced sales of fair grade Monings between 4½d. and 5d. in August and September were turned over at ¾d. a lb. profit towards the end of the year, as there was nothing left in first hands. As regards Foochow Teas, the crop was decidedly better than last season's, more particularly for Panyong kinds, but there has been no market for them since the season began, and prices have ruled low. The Soo Moos were good and very useful, but with no style or make in the leaf. Importers dropped the price of the crack chops about 1d. per lb. on the opening rates ruling for the last few years, and the Continent took them readily. Panyongs, however, have been most difficult of sale, and exporters have helped themselves at the lowest prices we have almost ever seen for good medium grades—between 5d. and 8d. The best Ching Wos, on the other hand, and of which we only get a few hundred half-chests, realised full rates from 10d. to 1s. 2d. There have been no common grades from Foochow, and none are wanted, but a few fair grade Panyongs sold down to 4½d. to 4¾d. per lb. Souchongs were good, and have sold quietly at steady values. Foochow Pekoes were very well scented, and prices very moderate, but with a limited market. The Canton Scented Caper trade is a dying one, and they are only used by one or two big houses in any quantity, so that they control the market more or less. The quality has been good, and the early arrivals were splendidly scented, and prices opened very moderate, so that rates have kept fairly steady, and supplies look as if they will not be equal to the demand, as stocks are already getting small. Formosa Oolongs have been a light and rather poor crop with no choice teas. America has been lately taking all the surplus stock of old crop, and also new season's up to 11d., so that the small supply now on the market consists of Teas between 1s. and 1s. 6d. per lb. Green Teas have again been the startling feature of the year. Prices ruled very high until the new crop arrived in August, and then there was a sharp drop. A very large crop had been made in China, and we expected to be flooded. America, however, could not be satisfied, and only has let us have a million more to date than last season. The demand here, too, has been steady and strong, and prices have been going up and up until they have now reached a giddy height; as an instance, Gunpowders at 9d. in September are now worth 1s. 3d., etc., and other classes have moved up from 2d. to 4d. per lb. within two months.

Figures for the year are very good. The landing of the new crop is over 3 million lbs. less already, and the deficiency is likely to be 6 or 7 million lbs., as there is virtually nothing more to arrive, whereas last year they sent us 3 or 4 million lbs. of low-priced Teas at the end of the season. Home consumption has increased over 2 million lbs., and export nearly 2 millions, and if deliveries continue at the same rate for the rest of the season the stock of Congou ought to be reduced to about 4 million lbs. by the end of June. The surplus of common Tea has been quietly absorbed during the last few months, and if the blenders are forced to fall back upon China Tea for their cheap blends, the price is bound to rise. As the year closes values are still low, with sweet Monings at 4d. to 4½d. and Kaisows and Panyongs at 3½d. to 4½d. per lb.

### INDIAN TEA.

Although the year 1902 has not been so eventful as the previous one, yet it has been disappointing for the trade generally, and some heavy losses were sustained by the dealers the first half of the year. The crop of 1901-02 exported from Calcutta to London was about 153 million lbs., against the bumper crop of 162 millions the previous season, yet the landings in London amounted to 155½ lbs. The extra few millions seem to have been attracted here from other ports, and were not included in the Calcutta figures. The present season 1902-03 has been variously estimated at 150 to 153 million lbs., but latest wires from reliable sources say it will not be more than 148 million lbs. However, the sharp rise of 1d. per lb.

in common grades in November may divert some of the shipments that would otherwise have gone to America and the Continent, so that one might reckon on receiving 150 million lbs., while the total delivery for the year will be 160 million lbs. We began the year 1902 with a stock of 73 million lbs., or an increase of 3 million lbs. over 1901, notwithstanding the splendid deliveries of 1901, which showed an increase of 13 million pounds. Imports and deliveries both fell off considerably the first half of this year, and when the new season's arrived we had increased our stock to  $5\frac{1}{4}$  millions more than in June, 1901. Science then, however, deliveries have gone up by leaps and bounds, and as we now write, we have actually reduced the stock to about 7 million pounds less than last year's, while the total deliveries for the year will be nearly 3 million pounds more than in 1901—truly wonderful. Re-exports only show  $\frac{3}{4}$  million pounds increase on the year, so that home consumption has increased 2 million pounds. The year opened strong with a quotation of 6d. per lb. for Pekoe Souchongs; prices, however, soon gave way and dropped to 5d. to  $5\frac{1}{2}$ d. for the remainder of the season. The stock on hand consisted principally of good tippy Pekoes and Broken Pekoes, and as they had to be forced off, prices dropped 2d. to 3d. per lb., and the bottom was not reached until well into the new season's. Losses to dealers have been considerable, as they were tempted into buying far more than their requirements. No one could be found to relieve them of their burden, until at last they had to take  $4\frac{1}{2}$ d. to  $5\frac{1}{2}$ d. for good tippy Pekoes that had cost them  $1\frac{1}{2}$ d. to 2d. per lb. more. Common grades, however, were in smaller compass, and price only dropped 1d. to  $1\frac{1}{2}$ d. per lb., with a quotation of 4d. to  $4\frac{1}{4}$ d. about the middle of July both for new and old, or, say, 2d. per lb. under the rates ruling the beginning of the year, and there was a quotation of  $3\frac{1}{2}$ d. to  $3\frac{3}{4}$ d. for whole leaf. This was the lowest point of the market, but common and undesirable new season's showed no improvement until the end of September. The new season's were generally very light, poor, and dry, and compared badly with last year's crop. A few very choice Assams and Darjeelings came to hand in August to October, and these brought exorbitant prices. Darjeelings, however, have been very poor and pointless, and have ruled very low all through. Fine and finest have not brought so high an average as last year. There has been a generally steady to improving market for all really good liquoring Teas, both old and new, over  $7\frac{1}{2}$ d. per lb. since June, but the ordinary new season's Teas were kept down by the weight of old season's that were hanging over the market. There was a distinct improvement in prices and trade towards the end of September, which continued for a month. Several of the big buyers then combined to get prices down, and a drop ensued, much to the surprise of holders, and the recent rise in common tea was lost. The combination only lasted two or three sales, and there was a scramble to get in the middle of November, which resulted in a sharp rise to  $5\frac{1}{2}$ d. per lb. for common Pekoe Souchong leaf. Dealers all turned over their stocks at a profit on the market, but the better grades were only slightly affected. As we close the year, the sound position of the market is recognised, and there is every probability of rising prices in the new year. We are still under the rates ruling for common teas a year ago, and most of the big importers and agents controlling large gardens or supplies have recently agreed not to sell any tea privately, and to regulate the supplies at auction for the next two months. Importers certainly hold the key to a very strong position, and may be able to twist the lion's tail to a lively tune if supplies only turn out as anticipated.

#### CEYLON TEA.

This class of Tea has a market value of its own, more or less, although the lower grades are affected by the rates ruling for Indian growths of the same grade. Losses, however, are not sustained by the trade in the same degree as Indian Teas, for the simple reason that supplies come in month by month throughout the year with great regularity. As Ceylon Tea does not keep fresh, the trade only buy for immediate wants, and consumption rises or falls with supply. The imports for the year have been about 2 million pounds less than in 1901, but the deliveries have fallen off some 6 million pounds, and almost entirely on account of home consumption, the re-exports being  $\frac{1}{2}$  million less than in 1901. Supplies for the first five months of the year fell off 5 million pounds, but arrivals from July to October were much heavier, *viz.*, 5 million pounds, while from October to end of this year they have fallen off 2 million pounds, and deliveries since June have been identical with 1901, the great falling-off being in the first half of the year, and so synchronising with the shorter imports. This year's crop has been

uniformly good, but with no particularly choice teas. The spring of the year was noticeable for the wonderful value offering in fair to medium Broken Pekoes. Another feature is that Russia does not now pay the fancy prices for those fine pure Pekoes and Orange Pekoes she used to do, and which were often 2d. to 3d. per lb. over what the home trade would take them at. Even Russia is now losing its refined palate since she gave up using so much China Tea, and is getting used to the stronger flavours. 1902 has not been marked with the violent fluctuations of 1901. The year began with a stock of  $19\frac{3}{4}$  million lbs., against  $24\frac{1}{2}$  million lbs. in 1901, and a quotation of 6d. for Pekoe Souchongs and  $6\frac{1}{2}$ d. for Pekoes. The market was very strong for price Teas up to  $7\frac{1}{2}$ d., and also for fine grades, but owing to heavy supplies and indifferent quality there was a drop of  $\frac{1}{4}$ d. to  $\frac{1}{2}$ d. per lb. by the end of the month. Demand, however, was good in February, March, and part of April—quality good; and value in Pekoes and Broken Pekoes was exceptional between  $6\frac{1}{2}$ d. and  $7\frac{1}{2}$ d. per lb. After the Budget was over trade was very bad, and prices had a sharp drop for all but fine stand-out Teas; the latter continued a strong market all through the season whenever anything thick or fine was offered, as the bulk of the supplies arriving were too thin for the trade, but in May and June there was a recovery in all but the common grades. From July until the end of the year trade and demand have been fairly good, with flat weeks now and again. For instance, we notice that in mid-August the quotation for leaf had risen to  $4\frac{1}{2}$ d. from  $3\frac{3}{4}$ d., lowest point. Prices held good for a few weeks, when there was another drop on the lower grades and a bad market all through September, while in October prices rose sharply on all good and fine liquoring Teas, and well known garden marks were 1d. to 3d. per lb. up as the quality improved. Common grades also firmed up, but the great rise came suddenly mid-November; but a week or two before the big blenders combined to get prices down, to the astonishment of brokers and importers, who knew the position to be strong and warranting a rise rather than a fall. However, they had their way for a time, and let the dealers and ordinary trade get some cheap stock. For reasons best known to themselves they suddenly rushed in to secure what they could. Common to fair grades at auction rose  $\frac{1}{2}$ d. in a day, and before the week was out all dealers' stocks were bought up at good profits by the same big blenders who had combined to lower rates. Quotations for leaf rose to 5d. to  $5\frac{1}{4}$ d. at once, and, although they again tried to get prices down, rates gradually rose to  $5\frac{1}{2}$ d., but even at that the quotation is still  $\frac{1}{2}$ d. per lb. under the closing prices of last year, with a stronger statistical position. We have landed 2 million pounds less on the year, and the stock on December 31 will be nearly 1 million pounds less. The argument, of course, is that Ceylon is an "unknown quantity," and, given favourable conditions, an extra 10 millions is easily turned out. On the other hand, we are told by well-informed and thoughtful men that excessive supplies to London are most improbable in the future. Russia, the Continent, and other countries are taking more and more each year direct, while about 10 million pounds of Green Tea will be made next year (which would otherwise be Black), against about 3 million pounds made this year. Considering the short supplies from India and China, we have the strongest belief in an active market and rising values for Ceylon Tea at the beginning of the new year.—*Grocer.*

#### "OOLONGS."

At the Annual General Meeting of the Dimbula Planters' Association on the 19th instant, Mr. T. Fairhurst delivered the following address on Oolongs:—

When I met Mr. Welldon in the train the other day, he asked me if I would lay before you what little knowledge I possess concerning China Oolongs. I have pleasure in doing so, but regret that my knowledge refers more to the tea as ready for shipment than to its actual manufacture. In China, European merchants are confined to the Treaty Ports—travel in the interior of the country being discouraged by the Chinese and only entered upon with what amounts to a "safe-conduct" in the form of a letter from some high official to all Government officers in the interior. The purchase of land by Europeans, outside of the Treaty Ports is forbidden by Chinese Law, and so it happens that we who live at the threshold of the tea districts, know so little of the methods of manufacture. Even were the necessary

permission to visit those districts obtained, the very rough nature of the country, necessitating travelling in comfortless boats up rivers encumbered by rapids, making progress very slow, together with contact with the frequently unfriendly dwellers by the river, would deter most men. We, therefore, only come into contact with the tea after it is manufactured and packed, as is the case in Colombo. The nearest tea district to Foochow lies about 20 miles distant, and the leaf is frequently brought into that town in a half-finished state. Thus we see a little of the later processes, such as firing or drying and sorting. Some years ago it was possible to see the final stages of green tea manufacture, but at Foochow only a low grade of green tea was made, very highly coloured, and when the United States legislated against the excess of colouring matter, the manufacture in Foochow ceased. All other teas than those of the near district which I have mentioned, are manipulated and packed on or near to the spot where they are grown. Touching Oolongs in particular, Foochow and Amoy in China, and Tamsui in the Island of Formosa are the ports of shipment. As regards Formosa Oolongs, these, as their name indicates, are grown in the Island of Formosa—the principal market is at an inland town distant about 15 or 20 miles from the port of Tamsui. The leaf in a partially prepared state is purchased by Europeans or their Agents and brought down to Tamsui for final manufacture. This is done not only by Europeans but by Chinese and the teas thus prepared are sent by steamer to Amoy on the China Coast, for final shipment to the different markets in the United States and England. The teas so shipped from Tamsui by Europeans are mostly already ordered by their constituents, whilst those shipped by the Chinese are intended for sale on the Amoy market to the European buyers.

The teas grown in the island of Formosa, are all of one variety ranging from common to extra choicest. The best "chops" are frequently scented with a flower belonging to the Jasmin tribe. The soil of the island of Formosa is volcanic and very rich, and it is to this that the teas grown there owe their special and peculiar flavours. This is proved by the fact that the tea trees in Formosa are grown from seed imported from Amoy—the produce of the parent trees on the China side possessing nothing of the peculiar Formosa quality and like all Chinese teas deteriorating so much, that the produce of the Amoy gardens has practically ceased to be cultivated.

I myself some years ago, to my after regret,

IMPORTED INTO CEYLON SOME SEED FROM THE FORMOSA TREES, and the resulting plants reverted to the worst China type. I am of opinion that this type of Oolong, known as "Formosa Oolong," can never be produced in Ceylon to possess the true characteristics of the type. But it is different with the Oolongs made and grown at Foochow. Of these there are *three* varieties, and I see no reason why their manufacture should not be successfully attempted in Ceylon. These varieties differ materially in make and flavour. The best are usually brought to market in what are called "String-chops," that is they consist of "lots" varying from 500 to 3,000 half-chests, which must be bought *altogether*. There are usually 5 grades in each "string," "common" to "choice," and they are sold at an average price for the "lot," which the European buyer calculates by working out each grade at his idea of its value. The lower grades are large in leaf approximating to the leaf of an up-country Pekoe Souchong of long leaf. The size of the leaf decreases as the quality improves, until the best would resemble in size, a boldish Pekoe. The infused leaves show a greenish colour, very even in the finer ones, but becoming mixed with darker leaves in the lower grades. The liquor is soft and fine in the better teas, becoming coarse in the commoner ones. Black leaves in Oolongs are highly detrimental, and cause danger of rejection by the United States Tea appraisers. No tea intended for the United States market should contain more than 10 per cent. of dust. The price paid for these in China is based on, say b.c.i.f. New York up to about 1/3. The only other kind which requires special notice is a variety made more after the style of Congou or Black Teas as regards the size of dry leaf, but of course showing the same light-coloured infused leaf and liquor as the variety previously spoken of. The flavour however differs greatly, for whilst, with all their softness, the first kind mentioned as "Stringchops" possess a good deal of pungency—the last named variety—known as "Suey Kut" Oolongs, taste more like the Black Teas from the Suey Kut district, and have little distinctive Oolong character. The leaf, especially of the finer sorts, resembles closely the teas which were being made

in Ceylon 3 years ago, as Ceylon Green Teas. Their value ranges from about 10 cents, say 5d. to 1s. 2d.

The remaining kinds of Oolong grown in Foochow are mostly of large leaf, and varying quality, many being below the standard insisted on by the United States.

The average crop of the Formosa Oolongs amounts to about 15 to 17 million pounds, and of the Foochow Oolongs to about 5 millions. But both crops are liable to sudden increase according to demand, and this has been exemplified during the season of 1902 by an increase in the Foochow production of 50,000 half-chests equal to 2½ million pounds, owing to the speculative demand from America contingent on the abolition of the Tea Duty there.

I think that the class of Oolong known in Foochow, as

"SUEY KUTS" COULD EASILY BE IMITATED IN CEYLON, but whilst "Suey Kuts" were on their first introduction into America, much liked and eagerly bought, there is not now the same demand for them. As regards that, I would suggest enquiries being made from some of the leading New York brokers, whilst as to the processes of manufacture—of both Foochow and Formosa Oolongs—the best way would be to ask the information from the British Consuls at Foochow and Tamsui. And the information would be more readily obtained if the request for it is forwarded through the Government of Ceylon, English Consuls abroad not being very well disposed to incur trouble over trade matters, which are regarded as somewhat outside their province. I would also recommend that a similar application should be made through the German Consul in Colombo to the German Consuls at the ports named. All Green Teas and Oolongs should be packed in half-chests containing 54 to 60 pounds Tea net. My own connection with China has practically ceased, but I could give the names of one or two firms in Colombo who could, I think, procure large samples of Oolongs, and possibly assist in obtaining particulars of their manufacture. I will now reply categorically to the

QUESTIONS WHICH YOUR CHAIRMAN HAS ADDRESSED TO ME.

"How many kinds of Oolongs are sold in America?"—The reply is, three from Foochow and one from Formosa shipped at Amoy.

"Where are they manufactured and what is the range of prices?"—In Foochow and Tamsui the range of prices paid being from 5d. to 1s. 3d. or 1s. 4d. for Foochow, and from 6d. to 3s. for Formosa. Many of the finest of the Formosas are sent to the London market.

"Could we in Ceylon, manufacture Oolongs that would give an average of, say, 1s. per lb?"—To this I should answer decidedly, No!—since the average of the "Suey Kut" Oolongs, which would be more easily made, runs only about 9d. per lb. if so much.

"Are 15 to 18 millions of Oolongs sold in America?"—A circular of the Foochow Chamber of Commerce, dated 19th December last, gives the export of Oolongs to America from Foochow as 6½ millions, and the annual export of Formosa Oolongs would be about 12 to 14 millions.

"Could Ceylon hope to displace, say, 5 or 6 millions of these Teas?"—I think that Ceylon could certainly hope to place that quantity, provided the quality was right, and the average I have named—say 8d. to 9d., a paying one.

"Are Oolongs artificially scented and is the process of scenting them difficult?"—So far as I know only the finer or finest kinds are scented. The process is not difficult or very expensive, provided the scenting flower is at hand.

"Can you tell us how it is done?"—The scenting flower is added in certain percentages to the tea before final firing. After the tea and flower have been left together for half or one day, they are fired or dried together and afterwards the flower is sifted out before the tea is packed.

"Is Formosa a country to which we should be likely to obtain admission in case of wanting to study the manufacture of Oolongs?"—Anyone can enter Formosa and visit the tea centres. A person so doing could doubtless pick up the process by watching, but as there are no inns or hotels in those parts, he would perforce be the guest of one of the European firms engaged in the trade, and if they knew his purpose, they might do their best to thwart it, besides which, the guests attempting it would be placed in a very uncomfortable position.

"Is the crop of Green Teas going from Japan this year, due to labour difficulties or is it climatic?" I am unable to say, but should think it was mostly climatic.—"Are we likely to see a great fall in the price of Green Teas in America, supposing 15 to 17 millions were shipped this year from Ceylon and India?" I should say most certainly such an export would cause a reduction of

possibly 3 to 5 gold cents per lb. ( $1\frac{1}{2}$ d. to  $2\frac{1}{2}$ d.) unless the quality so pleased as to throw the greater fall on to the teas from Japan and China. "How do Ceylon greens compare with Japan and Indian greens? If the comparison is unfavourable to Ceylon, will not our teas suffer severely in the event of a large Japan crop?" I have not seen enough Ceylon greens to form an opinion. Those I have seen compare favourably with Japans and Chinas in leaf, but are, in my opinion, too thin in liquor. If the American verdict was the same and the importations from Japan and China large, there would undoubtedly be danger of a severe fall in Ceylons—which could only be tided over by a liberal cess allowance, until the industry had it upon the desired quality and colour. For information regarding the method of manufacturing Green Teas, I would recommend application being made to the English and German Consuls at Ningpo, in which district all Green Teas are grown and made. "In Western America beyond St. Louis, is there not still a large continent where Black Teas are consumed and where Ceylons are unknown?" Undoubtedly there are many large cities, such as San Francisco and others within a radius of 1,000 miles (Chicago included) where Black Teas are largely used and where the "Thirty Committee" Commissioner has done little or nothing, (excepting at Chicago), but those markets have been and are being exploited by firms in Colombo having Agents there. More might be done by the means at the disposal of the "Thirty Committee" in the country indicated. There is one danger ahead which I would notice. Should the Export to London fall off and become lower than the requirements of that market, an opening would be given to China to send larger supplies of common Black Tea. China can increase or decrease that supply at will, witness the large increase during 1902, in the Export of Oolongs, which excess will have been made from the "Suey Kut" Congou leaf by which the supply of Black Teas has been curtailed to the extent of  $2\frac{1}{2}$  millions of pounds. The fact also that the larger crop of Oolongs has been made out of the leaf usually converted into common Black Tea shows that the manufacture of Oolongs in Ceylon as well as Greens can be as well carried out on low-country estates as on those of high elevation.

FINAL.—In conclusion, I would merely add that I have always been of opinion that the money expended by the "Thirty Committee" in the Eastern states in pushing Black Tea has been simply and absolutely wasted, and would have been of far greater use had it been applied to exploitation of the same tea in Russia.

The Eastern States are the ones which use Oolongs and Green Teas, and funds may, I think, still be employed in pushing them there advantageously. A great effort should be made at the St. Louis Exposition to bring Ceylon Greens and Oolongs into notice, whilst at the same time it can do no harm to show also Ceylon Black Teas.

It would be a great pity, I think, to discontinue the campaign in the Eastern States on behalf of Green Teas and Oolongs, as those are the kinds used by  $\frac{3}{4}$ ths of the population of those States, and to cease the effort now would be to destroy what good has already been done.

I do not think that China will be able to compete with Ceylon as regards Black Teas so long as Europeans are prevented from holding land in the interior, and even should that privilege be eventually granted, it is a question how far the China leaf will lend itself to machinery.

The result of an experiment made at Foochow, where a small factory with Jackson's machinery was erected, was a decided improvement in the appearance of the dry leaf, and a thicker liquor in the cup, but the flavour was destroyed, the taste being mawkish and dull, and the peculiar flavour, which the leaf tried, should have developed was entirely absent.

The CHAIRMAN invited members to put questions to Mr. Fairhurst. Mr. CHARLES RYAN.—I should like to know in this connection from Mr. Bosanquet, what the "Thirty Committee" has done in regard to Oolongs?

Mr. BOSANQUET.—From what I gathered at the last Committee Meeting, I understand it is intended to offer a prize of Rs.500 for the first good sample of Oolongs, but we did not consider that we were quite ripe for making the offer yet.

The CHAIRMAN.—I think, gentlemen, we are all very much indebted to Mr. Fairhurst for so kindly having come here to-day and also for so fully answering Mr. Bosanquet's questions. (Applause.)

Mr. FAIRHURST.—Thanks very much, Mr. Chairman and gentlemen.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Extremes during the week ending December 12th, were  $11\frac{2}{3}$ d.— $11\frac{1}{8}$ d. for 90 d/s Bank paper and  $11\frac{1}{8}$ d.— $11\frac{2}{3}$ d. for private.

The average Bank 90 d/s counter drawing rate for the week comes out at  $11\frac{5}{8}$ d., the corresponding sight rate being  $11\frac{5}{8}$ d. against  $11\frac{5}{8}$ d. the average sight rate of the *Camara Syndical*.

Saturday, December 13th, 1902.

Ninety days' bank rate on London opened on Tuesday 9th instant, Monday being a holiday, at  $11\frac{2}{3}$ d. and  $11\frac{1}{8}$ d. and closed this evening at the same rates.

The market is dull and nothing happens to give it animation.

**Coffee.**—During the week ended Friday, December 12, aggregate entries at Rio and Santos show a decided shrinkage being 52,655 bags smaller than those of the preceding week, and represented only 67.9 % of those during the corresponding week last year.

Joint entries for the crop on 12th instant were 2,438,585 bags less than on 13th December, 1901.

**Embarques** (shipments) for the week were 67,214 bags smaller than the previous week's and 80,614 bags less than during the same week last year. The corresponding decrease in sterling values was £103,000 and £241,000 respectively.

Sales seem to continue on the same scale as the week before being only 3,000 bags smaller, but were 38,000 bags less than during the same week last year.

Rio currency prices were slightly firmer than the previous week's, whereas Santos prices were weaker. New York No. 7 spot quotations remained unaltered. The f.o.b. sterling value of coffee sailed during this crop-year up to date shows a decrease of £3,400,311.

## THE TEA TRADE: THE COMPLAINT AND A REMEDY.

Mr. Herbert S. Parker writes to the *Home and Colonial Mail* :—

The objections which can be raised to the plan outlined last week for dealing in tea, otherwise than at public sale, are of two kinds — theoretical and practical.

It will be well to consider first the objections, which are theoretical, because if the scheme can be shown to be sound in principle and likely to conduce to the general welfare of the trade, the difficulty of carrying it into practice can be overcome.

At the outset it will be said: "You propose to strengthen the middlemen, who have been deemed interlopers, to be set aside if possible, in order that produce may come into closer contact with consumers." This is so, and it is mainly by making them stronger

that I expect the end in view will be attained. It cannot be proved that their gradual decadence is the principal of several causes contributing to our declining prosperity, but it has certainly been coincident with it, and those who hold that prosperous, numerous, and strong middlemen are a necessity to us have good reasons. Tea is perishable. It is sent here to be turned into cash, not to be locked up in a warehouse, at the cost and risk of the grower. Some one is needed to hold stocks ranging from 50 lbs. to 100,000,000 lbs. For this much capital is required. Capital does not remain in a trade unless it find profitable employment.

It has been said that the interests of dealer and importer are identical. That will not do. It has been more often assumed they are antagonistic. That will not do either. Their interests are separate, but not necessarily antagonistic; the one is supplemental to the other. When the dealers and blenders and distributors are recognised not as dangerous opponents to be kept at arm's length, but as our useful allies in the difficult task of passing 300,000,000 lbs. a year from the tea plantation to the teapot, then the position will begin to mend.

A criticism not quite so easy to meet is this: "Your plan will only help the grower if it raise the average value; you also contemplate more profit accruing to the middleman. From whose pocket will all this come?" A higher average price would not be the only benefit. Steadier markets, with larger facilities for selling, buying, and re-selling are in themselves great advantages. But I reply without hesitation that the difference will in the end come from consumers. There has been clear proof since 1900 that retail quotations can be raised somewhat without checking consumption, or consumers feeling it at all. But it may not be necessary to raise prices. Sooner or later the duty will be reduced, and just as the average retail price has not risen the full 2d. of the extra duty, so, too, it will not fall the full 2d. or 4d. of the reduction when it comes. Something will remain to the middleman, and something will come back to the grower. I am able to say there is at least a hope of the great distributing firms, in whose hands the matter rests, agreeing to abstain from the ruinous policy of perpetually lowering retail prices, one against the other, when the duty is reduced. This is a kind of "combination" that all will welcome, for it will strengthen the trade at home and benefit the industry abroad.

Again, it will be said: "Have you not always maintained that prices must fall if supply is larger than requirements? How can this be averted by a new or different system of sale?" Prices must fall to the end of time when there is too much tea, and will rise when there is too little, controlled by a law which declines to be suspended. But how much they will fall, or how much they may rise is the point. If from 8d. to 7d., why not to 6d. or 5d.; if from 8d. to 9d., why not to 10d. or 1s.? This is not determined (until long after) by any known law, but by other influences of which good or bad management, a sound or unsound system of business, may be the post potent. We have not only to see how to make the best of a good position, but also how to mitigate a disaster in a bad one. Has any one considered what would have happened since October, but for the mercy of Providence and the forethought of planters in sending us short crops?

And some will say: "If you let a buyer procure by private purchase what he wants, he will not bid in the sale room, which will lessen competition, and reduce the price." Let us follow this to its logical conclusion. "If you sell all buyers all they require privately, there will be no bids at all in the sale room." Possibly, but then there will not be any tea to put in sale, unless the speaker foresees perennial over-supply, which I do not.

In practice, selling by private contract to thriving, up-to-date men, who will be the first to buy, has quite a different effect. They either re-sell the more quickly because the tea was bought privately, and are ready for more, or they bid for similar tea in the auction room in order to protect their own stocks. Every thousand chests sold beforehand, and thus taken off the weight of tea in catalogue, helps the sale of those that go to the hammer. If one-third of the tea destined for sale next month could be disposed of without being put in a catalogue, and the auctions could be reduced by that third, the improvement in the tone of the market would convince those who are sceptical.

Another question that may be asked is this: "What reason is there for thinking that buyers will support a plan which promises to make the market first steadier, then stronger, and finally a little higher?"

It is a pertinent question, but is based upon a misconception. A weak and declining market, subject to sharp fluctuations, may suit a few buyers prone to speculate, but it does not suit the great majority of them, who want a steady, even a strong, market that is not liable suddenly to give way, and for this reason: Principals seldom take upon themselves to buy the tea; it is entrusted to their subordinates, who have to incur grave responsibility and run grave risks if they are caught with much stock in a declining market, and are, therefore, obliged to protect themselves, often against their own judgment, by buying as little as possible at the first sign of weakness. It is directly to their interest to support a plan that will make the market steadier, make tea easier to re-sell here and in the country, and save their stocks from depreciation.

I must ask you to allow me to postpone until next week examination of the practical difficulties that have to be overcome.

## COFFEE IN LONDON.

The terminal market has been affected by the holidays to even a greater extent than that for actual coffee, says the *Produce Markets' Review* of 3rd instant, and very few transactions are reported while prices have hardly fluctuated. The year, however, opens, in some respects, with a much better prospect, than 1902 did, for the fall in "average Santos," which has been very nearly 30 per cent., has brought the quotation to 26s. 3d. for the current month, and even the most pessimistic "bear" would hardly look for another such fall during the coming year. With regard to coffees other than Brazil, prices are also considerably lower than a year ago, and there is a much brighter prospect to look forward to. The past year, while being one of enormous Brazil crops, has been disappointing both as to values and quantity, as will be seen by the following table, which gives the amount offered in public sales compared with the previous year:—

	CEYLON.	EAST INDIA.	MOCHA.	JAMAICA.	AFRICAN.
	Packages.	Bags.	Bags.	Packages.	Bags.
1902	.. 831	.. 67,904	.. 4,435	.. 13,976	.. 6,850
1901	.. 1,009	.. 150,455	.. 3,093	.. 5,515	.. 8,016
	COSTA RICA.	GUATEMALA.	COLUMBIAN.	Other Foreign.	
	Bags.	Bags.	Bags.	Bags.	
1902	.. 132,952	.. 117,707	.. 23,689	.. 59,117	
1901	.. 190,505	.. 166,281	.. 48,334	.. 48,326	

Though perhaps not quite equalling the figures of 1901, both East India and Costa Rica should show a much larger quantity, and with the Columbian revolution closed, it is impossible to estimate the quantity that may be looked for from that country.

## TEA IN LONDON.

INDIAN TEA.—The public auctions were resumed on Wednesday, when 7,900 packages were offered, and competition was fairly active at prices fully equal to those prevailing before Christmas. The bidding for the lower grades was well sustained, says the *Produce Markets' Review* of January 3rd, but owing to the firmness of importers a considerable proportion was withdrawn, and only a limited quantity was obtainable under 5½d. Prices for the lower qualities are now only about on a par with those at the same period last year, although there has been a rise of a 1d. from the lowest point. For the medium teas the market has shown strength, and improved rates in many cases have been established. The Assam growths still attract the most attention, but some of the Dooars and Sylhet teas are in more favour, owing to a marked improvement in quality. Fine teas met with a good inquiry, and were readily disposed of at decidedly stronger prices. The quantity of the season's crop available for the United Kingdom is estimated at from 5,000,000 lbs. to 7,000,000 lbs. below that of last season. This reduction is reported to be attributable in a great measure to direct shipments to other markets, especially to Russia and the United States, the former having taken a much larger quantity than formerly, and there is every probability that the demand will increase. The comparative returns for December and in the same month in 1901 are as follows: Imports 21,989,000 lbs. against 25,819,000 lbs.; deliveries 12,394,000 lbs. and 13,731,000 lbs., while the stock is smaller by 4,812,000 lbs.

**CEYLON TEA.**—This market has not yet opened, no public sales of Ceylons having been held since the holidays, and transactions privately has been very limited. The next auctions are advertised for Tuesday, 6th instant, when about 26,000 packages will be brought forward, a very small quantity after so long an interval, and it is expected that strong prices will result. The following are the figures for the past month compared with December, 1901:—The imports were 7,070,000 lbs. against 6,545,000 lbs., the deliveries being 6,968,000 lbs. and 7,173,000 lbs. respectively, while the stock stands at 19,881,000 lbs. as compared with 19,710,000 lbs.

**CONGOU TEA.**—There have been no public sales this week, and consequently business has been quiet. No transactions of any importance have been reported, although prices for all descriptions remain firm.

**OTHER CHINA TEAS.**—A slightly easier tendency was noticeable for all descriptions at the sale of Green Tea held on Thursday, and a better business has been transacted, prices being more reasonable than had been the case for some time before the Christmas interval. A good business is reported in low price Oolongs, and there is a fair enquiry for the finer sorts. Capers are unchanged. The following are the public sale figures for the week:—2,083 packages of Green Tea were offered, of which only 430 failed to find buyers, and on Wednesday about 990 packages of fancy tea were brought forward for auction.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, December 24, 1902.

Buying in teas on the local market is slow this week, but the prices are maintained at the previous advances. As the tea markets in India are closed, advices as to the outside markets now come entirely from London. Indian teas in transit are now of good quality in all grades. The best property is Pekoes and Orange Pekoes at  $7\frac{1}{2}$  to  $8\frac{1}{2}$ d. Good Pekoe Souchongs are worth  $6\frac{1}{4}$  to  $6\frac{1}{2}$ d. Darjeelings are scarce and low grades are quoted at  $7\frac{1}{2}$ d. The finest goods of this description used on this market are now worth 1s.  $1\frac{1}{2}$ d. to 1s. 6d. The last sales made locally were at  $7\frac{1}{4}$ d. to  $9\frac{1}{2}$ d. for good imitations of Japan and China teas. . . . A private letter, bearing date of November 26 from Hiogo, Japan, states that the season there had closed and that while shipments from there to Canada had been smaller than last season, the total export of Japan teas was slightly in excess of last year. The stocks there were entirely used up. Last mail advices report that China greens at the close of the market jumped from 7 to 12 taels per picul, owing to the great scarcity and buying orders without limits.

MONTREAL, December 24, 1902.

Sales of Japan teas are not large, but considering the very high prices the demand for them is comparatively good and is evidence that no other teas can quite take the place of Japans with a certain class of trade. Quite a number of small lots have been selling during the past week or two, the price ranging between  $17\frac{1}{2}$  to  $18\frac{1}{2}$ c, and in the finer grades, 23 to 24c. There has been no quotable changes in Ceylon teas, which are in fair demand.

### THE CHINA TEA TRADE.

[From the *Journal of the Society of Arts*.]

The change which has come over the Tea trade, not of Foochow alone, but at other producing centres in China, and which is ruining what was once a flourishing industry, seems, according to H. M. Consul at Foochow, ascribable to several causes, not all within the power of the sufferers to remedy. Firstly, there is the indisputable fact that the use of due care in the manipulation of the leaf when growing, when being picked, and when being prepared for its transit over the sea, is not exercised by the native grower. The means of ensuring all this has been repeatedly indicated to him, and put within his reach, with no result, owing either to apathy, ignorance, or dogged conservatism. He has been in turns implored, scolded, and lectured, but all to no purpose. Some years ago a circular was issued by the Inspector-General of the Customs, warning Tea-growers that owing to the superior methods prevailing in India, the trade was slipping out of China's hands—hands that used to supply the world. It was recognised by Europeans

interested in the industry, that the lead taken by India and Ceylon has been secured by the substitution of machinery for hand-labour. Machinery was accordingly imported. In some places, more even than this was done in the effort to infuse new life into a moribund industry. While Formosa was still Chinese the Governor imported into the north of the island not only the machinery considered desirable, but even an expert from Assam. But neither in Formosa nor in Foochow have these devices proved of any avail. To the intelligent native they possibly appealed, but not to the fountain head—the grower and picker, whose methods continued to be unscientific and primitive. His livelihood was obviously slipping from him, but the prospect of even that catastrophe has had no power to startle him from his invincible optimism. Secondly, there is the change which has come over the public taste in Europe. When China held the monopoly of Tea production, China Tea was necessarily bought. But when Assam and Ceylon entered into the competition, it was very soon apparent that the liking for their products was increasing rapidly, and China Tea was in no long time hopelessly distanced. It is likely that as regards delicacy of flavour and aroma, the Teas of China are still assured the suffrages of the cultivated few. Teas from the nearer East are, says Consul Playfair, admittedly coarser of taste, and contain a larger proportion of tannin, on which account they are condemned by medical men as prejudicial to digestion. But they make an attractive dark brew, and are economical in that a little of them goes a long way. Thirdly, the trade in Indian and Ceylon Teas has been fostered by judicious advertising, to which the Foochow merchants have not resorted. Fourthly, the trade is crushed by an excessive export duty. When the duty on tea was first made specific, it no doubt represented fairly enough the 6 per cent. *ad valorem* sanctioned by treaty. The diminishing value of teas, has, however, resulted in the export duty representing 40 instead of 5 per cent. The first, second, and fourth causes seem beyond the control of the merchants, but the remedy for the third should be within his reach. Advertisement is the life blood of commerce at the present day, and is freely resorted to in all departments whenever there is an element of competition. Consul Playfair says that a dozen virtues might be predicated about teas without overstepping the bounds of truth. If the teas of India or Ceylon had occupied exactly the space once filled by the teas of China the case would be more desperate. But it is not so. If China teas disappear the breakfast tables of the world will be the poorer.

### PRODUCE AND PLANTING.

According to the figures issued by the Indian Tea Association (London), the quantity of tea exported from Ceylon for the twelve months ending December 31, 1902, was  $104\frac{1}{2}$  million lbs., as against  $107\frac{1}{2}$  million lbs. in 1901. From the figures given elsewhere it will be seen that the Indian exports for the period, April 1 to December 31, were  $130\frac{1}{2}$  million lbs., compared with  $135\frac{1}{2}$  million lbs. for the same period in 1901. There was therefore a total shortage of 8 million lbs. in 1902 compared with the previous year.

Messrs. McMeekin & Co. estimate the consumption in the United Kingdom of tea to have been 6.01 lbs. per head last year, comparing with 6.17 lbs. in 1901, and with 6.10 lbs. in 1900. The decline last year is doubtless to be attributed to trade movements, and not to be taken as representing a decline in actual consumption. Some statistics are added to show the proportions of the different kinds of tea drunk in this country. Indian tea leads the way with 58 per cent., Ceylon is next with  $33\frac{3}{4}$  per cent., "China, etc.", has the tiny proportion of  $4\frac{3}{4}$  per cent., and Japan and Java together supply the remaining  $3\frac{1}{2}$  per cent.

It was to be expected that there would be talk in the United States of the necessity for increasing the area of tea cultivation, so that ultimately the whole tea supply should be grown within the boundary of the States. The day is far distant, but some of the newspapers live in hope. One journal says: "Reviewing the matter seriously, it may be said that, while it is probably possible to cultivate tea over at least one-third of the area of the United States, it is hardly practicable to hope to bring within the space of a generation an American tea to the point where it will be liked by tea-drinking people, though ultimately this country ought to be in-

dependent of China, Japan, Ceylon, or India in producing the material for 'the cup that cheers but does not inebriate.'"

Discussing the Indian tea cess the *Financial Times* says:—"Curiosity is naturally excited as to how much money the cess will put at the disposal of the Committee, which, subject to the approval of the Government, will have the control of the fund. On the assumption that one-fourth of a pie will be levied—the maximum amount asked for—a 96-lb. box of tea will pay 2d., and according to an authority in the tea trade the total yield of the tax will amount to about £20,000. This is considerably below the rate in Ceylon, the tea-planters in which island have spent in advertising in America no less than £100,000. The general opinion in Indian tea circles is that the imposition of a cess for the purposes mentioned is a step in the right direction. One Indian tea-planter whom our representative met in the course of his inquiries was entirely of this view, which he said was generally held by his confrères in India. A tea expert in discussing the position said: 'It is not surprising that those interested in Indian tea should be anxious to follow the lead of Ceylon. It is not so very long ago that Ceylon tea was almost unknown, yet thanks to the enterprise of the planters it has gained a position in foreign markets, especially America, which is justly envied by the Indian producers. Even in this country Ceylon is popular, and only last week it sold for 1d. more per lb. than Indian. The cess is almost a necessity for the Indian industry if it is to hold its own.' 'But will this not mean keener competition between India and Ceylon?' inquired our representative. 'It will certainly place competition between the two countries on more even grounds.' Another gentleman pointed out that the effect of the cess will be to provide more money for pushing Indian tea and also to distribute the burden more equitably over the industry. Up to the present subscriptions for advancing the interests of Indian tea have been voluntarily made by certain of the tea-growers. The total amount collected has been considerably less than half that realised under the Ceylon tax, but it has been subscribed by not more than about 75 per cent. of the growers, while the remaining 25 per cent. have more or less benefited at the expense of the others. It is somewhat premature to forecast the policy of the Committee and the application of the fund, in view of the fact that the Bill has not yet become law, but we understand that it is altogether probable that the course adopted by Ceylon will be largely followed. Opening up new markets will be one feature, and it is more than likely that bonuses will be given for the encouragement of the production of green teas."

The *Westminster Gazette* calls attention to the efforts of India and Ceylon to capture the trade of the world. It says:—"India and Ceylon, having secured the control of the world's trade in black teas, are now making a serious attempt to capture the green tea trade also. A cablegram received by the London Committee of the Indian Tea Association this week states that legislation for the purpose of levying an export duty on black tea and applying the proceeds as a bonus on green tea is now practically assured. This tax was proposed by the Indian Tea Association in consequence of the great success of a similar cess and bonus in Ceylon. What this effort may mean to India and Ceylon can only be justly estimated by a look at the recent history of the tea trade. By producing a tea suited to the English palate the Indian and Ceylon planters have in thirty years practically driven China and Japan teas out of the English market. In the United Kingdom alone we drank 250 million pounds of tea in 1900, 90 per cent. of which came from India and Ceylon, and only 10 per cent. from other countries, and almost every pound of the 90 per cent. was 'black.' Ceylon began seriously to consider the necessity of encouraging the making of green tea in 1901, when a bonus of 16-25d. was paid on 863,000 lbs. During ten months of 1902 the bonus was paid on nearly 3,000,000 lbs. India, on the other hand, only paid on 250,000 lbs. in 1902, the bonus of nearly ½d. per pound being provided by voluntary subscription, but in 1903, when the planters will be under the necessity of making a regular contribution, the production is expected to reach 3,000,000 lbs. The samples of Indian green tea sent last season to American ports have been well reported upon, and the Ceylon green tea has met with a ready sale in Canada. So far these new green teas have not made their appearance in English retail shops, though 137 packages from Cachar were sold in Mincing Lane a few weeks ago."—*H. & C. Mail*.

## EAST INDIA AND CEYLON TEA COMPANY (LIMITED).

An Extraordinary General Meeting was held on January 5, at the Cannon Street Hotel, Mr. G. A. Talbot presiding, to consider a Resolution for removing Mr. C. T. Richardson from the Board of Directors. The Chairman stated that there were matters of vital importance to the Company with regard to which Mr. Richardson's views were in conflict with those of the other Directors. He regretted that it was necessary to submit such a proposal to the shareholders, but no other course was open to him and his colleagues. He concluded by moving the Resolution. Mr. A. C. Cronin (a Director), in seconding the Resolution, dealt with the questions at issue between Mr. Richardson and the other Directors, and referred in particular to the endeavours which the Board were making to get rid of the difficulties caused by the formation of the Hopewell Tea Company, in which this Company are interested. The Hopewell Company, he stated, could no longer affect their financial position to any great extent, as their business was not only thoroughly sound, but was steadily improving. Headed that he had recently increased his holding of shares. Mr. Richardson replied to the points in dispute between himself and his co-Directors. He remarked that he was one of the largest shareholders, and stated emphatically that he had no interest, direct or indirect, in any firm connected with the management of this or the Hopewell Company. There was not the least foundation for the suggestion that he had attempted to sacrifice the interests of this Company to the Hopewell Company. He urged that the proper course to adopt, in order to get relief from the consequences of the agreement with the Hopewell Company, was to open negotiations for arriving at a friendly settlement. With regard to his action as a Director, he claimed that he had been the means of cutting down the local expenditure on the Indian estates by over 6,000% per annum, and that his practical experience had enabled him to recommend other economies. A discussion followed, and eventually, on a show of hands, the Resolution was defeated by a single vote. A poll was thereupon demanded, with the result that the Resolution in favour of removing Mr. Richardson from the Board was carried by considerably more than the requisite three-fourths majority.

## TEA IN AUSTRALIA IN 1902.

The year 1902 has been unsatisfactory for traders in this article. The removal of the duty by the Federal Government found dealers with more or less heavy duty-paid stocks, on which a loss of 3d. per lb. had to be faced. In addition, there was an impression amongst the trade that financial necessities would induce the Government to try and reverse the decision of Parliament, and in anticipation thereof large sales were effected at high prices. Tea, however, remains free of duty, and it has taken many months to get rid of these surplus stocks on a market which has been continuously adverse to all holders.

A further adverse element was the unexpected action of the Federal Government in condemning on a purely chemical analysis (which was part of the Customs Act) certain teas imported from India and Ceylon, because they contained a limited portion of ash in excess of the academical standard laid down by the Act, although the tea extract they contained was largely in excess of the standard, and by the analysis they are admittedly "fit for human consumption." The contention of the trade is that reasonable notice should have been given to importers, *viz.*, time to advise their agents in the Far East, and that it is impossible to know whether teas comply with the Act until their arrival in the States and analysis here. On these grounds permission has been requested to re-ship the teas in question.

It is now hoped that the Government will amend the clause relating to tea in the Customs Act—on the lines of the American Customs Act—which thoroughly protects the public without harshness to the trade. Over-importation during the past two years, due to tariff speculations, also contributed to depress the market, so that during the greater part of the year complaints were heard amongst all sections of the trade. For the past few months, however, imports have been restricted, and stocks are now getting into a more healthy position.

Colombo continues to be the main source of supply. Imports, however, will be fully 10 per cent. less than last year. Prices in

Colombo have risen considerably, owing to the London market recognising the strong statistical position of tea generally, and this market will, doubtless, follow suit. With very moderate stocks held in the States, the new year should see a larger business passing on sounder lines, the present position being certainly in favour of stock holders.

Indian teas have been disappointing in quality. The earlier shipments were distinctly good, but with heavier arrivals the teas seemed lacking in point and distinctive quality, and they have certainly lost ground with the blenders as compared with Ceylon. The trade, however, are quick to notice all teas with point, as they form a valuable element in all blends owing to their superior keeping quality, as compared with Ceylon.

The Calcutta market has risen considerably in the last three months, especially in common teas. The crop is expected to be less than was estimated, and an early closing of the season is looked for. Colonial imports will be 25 per cent. below last year.

China teas are getting into smaller and smaller compass. The year's imports will only be about 1,000,000, lbs; the only demand has been for a little fine tea, fine buds, fine Panyongs and scented teas, which are in short supply. Kooloos are not so much used, and their sale has been slow and unprofitable. Stocks are now very much reduced, but the outlook for next year is very poor. —Age, Jan. 2.

## A LITTLE ABOUT TEA AND COFFEE.

### ITS GROWTH AND CURING.

A Tea Expert (eight years in Ceylon) writes in the *American Grocer* :—

At this time of the year, people are generally looking for something interesting to read, and in doing so, if a little knowledge can be gained, so much the better. It will perhaps not be out of place to tell your readers something about the growing and curing of tea and coffee on some of Sir Thomas Lipton's magnificent estates. Covering some thousands of acres of some of the finest tea-growing land in the world, the estates are situated at an elevation of over 5,000 feet above sea-level, where only the finest quality of teas can be grown. The scenery from these gardens (as can be easily imagined) is panoramic. For forty miles can be seen mountains and undulating land, extending on one side to the sea and on the other are acres of tea land. The mountain scenery is most picturesque, and just above us can be seen thick jungle in which big game abound in large quantities. On these tea gardens are many thousands of coolies (that is, natives) employed to pluck the fine leaves which make the delicious teas that are so liked by those who drink any of Lipton's well-known blends. The coolies employed are generally natives or Tamils, from Southern India—small men and women, very black, and when standing in the field (watching, perhaps, a white man passing), look very like bronze statues, so wonderfully shiny is their skin from the natural blackness, and the oil which they rub on their bodies. Men, women, and children, all do their share of work on the gardens, either plucking leaves, weeding or carrying tea. With a basket on their backs (in which to put the leaves that they are plucking) they bring it, full to the brim, to the factory door, where it is weighed, and they are credited with so many cents, according to the weight brought in. The tea is then put on the floor, all the stalks or damaged leaves being carefully picked out. The good leaves are then sent up to the floor above, where they are put on shelves, made of burlap, stretched on rollers, and the leaf is then allowed to remain until it withers and becomes as pliable as a lady's kid glove. In this condition it is brought down and placed in a large tea roller, where for two or three hours it is turned and rolled till the little cells in the leaf are broken and the leaf is rolled into the shape it is known to us. Even now, however, the leaf is still just as green and very little altered in colour from what it was when growing on the bush. After it has been sufficiently rolled, it is put on fermenting tables, where it matures. This is one of the processes which requires the most constant attention and experience, for if the tea ferments too long, the delicious aroma is lost. Finally being put into what is called a sirocco, or a drying machine, the tea leaves are fired by hot air, and fermentation checked. Then they are sorted into grades and packed into chests or cases for shipment all over the

world. Transportation from the gardens to Colombo (which is the shipping port) is done by bullock-wagons and rail-road, the former quite a picturesque sight. Throughout the entire curing of Lipton's teas, they are untouched by hand, thus insuring absolute cleanliness, purity and hygiene. They are then packed in hermetically-sealed cans, thus ensuring that delicious flavour so well known in all Lipton's brands of tea.

Readers of the above cannot fail to be impressed with the fact of how little these teas come in contact with anything but the most modern methods of making tea.

Before ending my little article, it might be of interest to know a little about coffee, the United States being such an enormous coffee-drinking country.

The growth of the coffee tree is somewhat different to the tea bush, inasmuch as the tea bush when it blossoms does not produce leaves suitable for making tea, whereas the coffee tree has to blossom before the berries appear. It is a very pretty sight to see several thousand acres with small trees, closely planted together, covered with a most beautiful "orange blossom," with a scent very like honeysuckle. At this period of flowering of the trees, the coolies are not allowed to go near them, as, if a blossom is shaken off, the berry may not appear. After a few days, the blossom begins to fall, and in a short time a small green berry appears. This, after growing until it gets nearly the size of a cherry, begins to turn yellow, and the whole of the coffee estate is covered with coffee trees, bearing yellow berries. From a yellow, this berry turns into a red colour, and then looks very like the cherries we know in this country, inasmuch as if you open the cherry you find a stone in it, so if you open the coffee berry you find two little coffee beans in the same place where you would find a stone in an ordinary cherry. These are packed and carried to the factory, where there is a large pulping machine, which takes off the outside husk and leaves the coffee beans, ready to be washed and put in the sun to dry. This is what is called "green coffee," which is roasted and ground before the consumer drinks it, and in doing so, it is always best to have the coffee freshly roasted and freshly ground, as the mere fact of ground coffee remaining for ever so short a time unused, the oil in the coffee changes the flavour and is not so palatable as freshly roasted coffee.

## COFFEE.

When the brown is on the pancake and the coffee's fragrance steals through one's every nook and cranny, from the cranium to the heels, that is the time when the average man can appreciate the good qualities of his family grocer. Whether he does or does not do so depends upon the kind of coffee he is drinking, its aroma and its flavour. The average man does not care a picayune whether the coffee he drinks is called Java or Mocha, whatever some people may say. All he cares is that the coffee shall taste good and smell good. It will drink and smell no better for being called Java and Mocha, and will drink and smell no worse for being called something else.

This matter of the aroma and flavour of the consumer's cup of coffee is of prime importance to the grocer. Upon it rests the whole edifice of his business, nine times in ten, for, let the coffee be good, any small defects in other articles are passed over, whereas if the coffee is poor there is always dissatisfaction. Whoever heard of a grocer making a considerable success unless he sold decent coffee?

Coffee will drive more customers away, if it is bad, and make more new customers, if it is good, than any other article in the stock or than any half-dozen articles combined, barring butter.

Coffee will nourish the human system, fill the heart with goodwill, bring new trade to the grocer, keep down the tide of drunkenness, tighten the bonds of trade and sentiment that bind the great republic and her small sisters to the South and even furnish a substantial basis for the Monroe Doctrine. For consider our position as lovers of the aromatic berry, if any foreign enemy, after acquiring a foothold in Central America, should maliciously or ignorantly shut off our supply of coffee! We could stand a substitution of the mild monarchism of Western Europe for the despotic republicanism of our southern neighbors, but could we stand a deprivation of our favourite beverage?

But to return to the grocer's relationship to the coffee habit. It is clear that choice coffee is a good thing to tie to—a good thing

to advertise and push in every possible way. There is one drawback of coffee, according to the point of view of some of the Association grocers, and that is the manner in which the dealers in especially fine blends are compelled to open branch stores.

Drawn by the fame of the choice goods people come for miles and after a while they tell the dealer that they wish his store was nearer their homes, perhaps adding that there are a large number of people in their neighbourhood who would be glad to patronize him if his store were more conveniently situated. The usual consequence is soon seen in the shape of a new branch store.

Great is coffee and liberal is its profit! Liberal, but not so much in the actual margin as in the contingent advantages that come from the sale of a good blend.—*Merchants' Review*.

## DISTRICT ASSOCIATIONS.

### KANAN DEVAN.

Proceedings of Extraordinary General Meeting, held in the Munaar Reading Room, on Saturday, the 17th January, 1903. PRESENT:—Mr. A. F. Martin (*Chairman*), Messrs. E. E. Williams, C. B. H. Hunt, C. E. Hancock, J. C. Swayne, W. O. Milne, A. Yates, H. L. Pinches, W. D. Martin, R. Quartley, C. Bell, A. B. Redmayne, and E. R. Howlett. Mr. R. W. Cole, *Acting Secretary*.

*Visitors*: Messrs. J. A. Guyne, W. Pottie.

1. Notice convening the Meeting was taken as read.

2. **Labour Law.**—The Chairman roughly explained to the Meeting each section of the New Labour Act now being introduced into the Madras Legislative Council and at the request of the members present, went carefully into such points as the Committee considered affected this Association. After some discussion it was resolved, that the Planting Member of Council should be approached on the following points:—

*Section 2, Clause (G).*—Proposed by the Chair and seconded by Mr. Howlett, that the words "*or the Manager for the time being*" be introduced instead of as the clause now stands.

*Section 3.*—Proposed by the Chair and seconded by Mr. Hunt, that this Association strongly protests against Section 3 and the repeal of Act XIII of 1859 *especially with retrospective effect*.

*Section 7.*—Proposed by the Chair and seconded by Mr. Hancock, that this Association is very much dissatisfied with this section unless numerous special Magistrates are appointed under the Act.

*Section 10.*—Proposed by the Chair and seconded by Mr. W. D. Martin, that this Association objects to this section, because by present wording a Kangany contracting to bring 100 coolies to an Estate, may march them off as soon as the advance is cleared by paying 3 annas a day for three months *for himself alone*.

3. **Election of Chairman.**—Mr. A. F. Martin, the Chairman, tendered his resignation at the Meeting as arranged at the last General Meeting of the Association. He was accorded a hearty vote of thanks, and it was unanimously agreed by the members present, that in view of the fact that the Annual General Meeting for election of office-bearers was approaching, that the Committee be asked to attend to the Chairman's business until that time.

To this the Committee agreed.

4. **Coffee Cess.**—Read and recorded U. P. A. Circular No. 70/02.

5. **Tea Packing Requisites.**—Read and recorded U. P. A. Circular No. 84/02. The Secretary was instructed to write to the Hon'ble Mr. G. L. Acworth to take such steps in the Legislative Council as he may consider desirable, to obtain the same advantages for the India Tea Industry in exemption of Import Duties on Tea Packing Requisites and oil for motive power, as is enjoyed by the Ceylon Industry.

6. **Bodi Mettu Ghaut Road.**—Read and recorded Messrs. Sealy and Bewley's correspondence on this subject. The Secretary was instructed to inform both gentlemen that the Association was not prepared to undertake any responsibility in connection with the work and suggested that as the road mostly affected Surianella Estate that they should arrange the matter between themselves privately.

7. **Mr. Sealy.**—Recorded letter from Mr. Sealy. The Acting Secretary was unanimously instructed to write to Mr. Sealy and express the regret of the Meeting that through an oversight on the part of the Secretary who was absent, that he had not as Honorary Member received an official notice of this Meeting.

The following papers were laid on the table:

1. Parry & Co.'s letter refusing to sell coffee in connection with Tea Exploiting in S. India.
2. Proposal that an agent be sent to investigate coffee cultivation in Brazil.
3. Tea Exploiting in S. India.
4. French Import Tariff.
5. Import Duty on Seeds.
6. Metric System.
7. Cardamom Cultivation.
8. Supply of Tea to Chief Supply and Transport Office.
9. Limitation of Advances.
10. Report of Sub-Committee on Local Labour question.
11. Adulteration of Coffee.

ROBERT W. COLE,  
*Acting Honorary Secretary.*

## MARKET REPORT.

[Per Mail advices of January 9th, 1903.]

### COFFEE.

The London Commercial Record says:—Public sales were resumed on the 6th instant, when supplies to a fair extent were brought forward. The first arrivals of new crop East India, consisting of Coorg, were very unsatisfactory in quality, and the demand was slow and prices disappointing, being about 2s to 3s per cwt. below valuations. Fine Costa Rica sold well, but less desirable qualities were easier. Central American was fairly steady, but country damaged Colombian closed at a decided decline. Santos was 1s per cwt. lower. "Futures" have been irregular, and the closing rates show a reduction for the week; yesterday Santos for March delivery sold at 26s 7½d to 26s 6d, May at 27s 6d to 27s, September at 28s 6d to 28s 1½d, and December at 29s 1½d to 28s 9d per cwt. We quote:—

London ...	Santos ...	March delivery ...	26s 6d.
New York ...	No. 7 Rio...	" ...	4.45 cents.
Hamburg...	Santos ...	" ...	27 pf.
Havre ...	Santos ...	" ...	32½ francs.

Auction supplies to-day consisted of 1,022 bags East India, 31 barrels 44 bags Jamaica, 20 bags Nicaragua, 533 bags Nyassaland, 64 bags Guatemala, 34 bags Salvador, 639 bags Columbian, 19 bags Mexican, 2,661 bags Costa Rica, 235 bags New Grenada, and 44 bags Venezuelan.

Brazil "futures" opened steadily, but gradually firmed up during the day, closing firm at top prices. The offers on c.i.f. terms from Brazil are being freely absorbed by the trade, and bears seem anxious to cover.

Transactions include: March 26s 4½d to 26s 10½d, May 27s 3d to 27s 7½d, September 28s 3d to 28s 7½d.

Closing quotations:—		Sellers.	Buyers.
March ..	...	27/	26/9
May ..	...	27/7½	27/6
July ..	...	28/10½	27/10½
September ..	...	28/9	28/6
December ..	...	29/3	29/1½

Brazil receipts 27,000 bags, against 24,000 and 23,000 the two previous seasons, and exchange 11½.

Hamburg ½ up. Havre ½ up. New York opens 5 higher.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1903.	1902.	1903.	1902.
Tons ...	24,522	12,606	518	729
	HOME CONSUMPTION.		EXPORT.	
	1903.	1902.	1903.	1902.
Tons ...	188	283	217	146

The preceding figures exhibit—

In the Imports a decrease this year of	211
Home Consumption a decrease of	95
Export an increase of	71
Stock an increase of	12,916

The following are the particulars of this week's auctions, viz:—  
EAST INDIA.—546 bags partly sold as follows: Coorg, new crop, smalls 38s, low middling 45s, bold 55s, peaberry 53s, old crop peaberry 53s to 54s.

**MOCHA.**—55 half-bales ordinary short berry sold "without reserve" at 55s.

**NYASSALAND.**—417 bags sold—pickings 29s to 34s 6d, smalls 36s 6d, fine ordinary to low middling 40s to 46s 6d, peaberry 46s 6d.

**COSTA RICA.**—Of 1,547 bags new crop offered, 1,490 bags sold—smalls 42s 6d to 48s 6d, low middling to middling 50s 6d to 59s 6d, good middling blue 60s 6d, fair bold 61s 6d to 64s, good to fine blue bold 66s to 76s 6d, very fine bold 78s to 86s, peaberry 52s 6d to 83s 6d.

**GUATEMALA.**—488 bags mostly sold—new crop smalls 37s, good middling 58s 6d, fine bold 70s, peaberry 60s; old crop, fine ordinary to low middling 42s to 49s, fair bold 57s, peaberry 48s to 53s 6d.

**SALVADOR.**—750 bags offered and 430 bags sold, smalls 39s to 39s 6d, low middling 46s to 46s 6d, peaberry 51s.

**COLOMBIAN.**—860 bags damaged mostly sold—smalls 28s 6d to 30s, ordinary palish 27s to 29s 6d, low middling greenish 42s to 46s 6d, bold 47s 6d to 54s, peaberry 45s to 49s.

**MEXICAN.**—95 bags bought in.

**NICARAGUA.**—125 bags passed the hammer unsold.

**ECUADOR.**—317 bags withdrawn.

**VENEZUELAN.**—51 bags bought in.

**BRAZIL.**—Of 2,025 bags washed Dumont Santos 1,850 bags sold, smalls 29s to 32s 6d, medium 33s to 40s, bold 36s 6d to 51s, peaberry 38s 6d to 51s. Of 201 bags unwashed, quay terms, 50 bags sold, small pale greenish 26s, peaberry 25s.

*Receipts in Rio and Santos.*

	1902-3.	1901-2.	1900-01.	1899-00.

Jan. 7 ...	4.30	4.35	4.45	4.55	4.65

**TEA.**

**INDIAN.**—This week the offerings comprised 36,000 packages compared with 53,000 in the first week last year. With the exception of a few Assam and Dooars invoices of the more recent manufacture, quality has mostly been of a medium character, and included very little really fine. There was a good demand throughout at hardening values, strong thick liquoring Broken Pekoes and Fannings especially marking an advance. Any "stand-out" parcels and autumnal kinds sold very freely at full rates.

**SOUTH INDIA.**—A useful selection was included in the catalogues, many of the teas showing improvement either in point of flavour or colour in the cup; this combined with the better market has resulted in more remunerative returns to growers.

The statistical position continues to develop further strength, and in the face of a shrinking stock and visible supply, perhaps the most striking feature is the moderate basis on which the ordinary consuming qualities can still be purchased.

We would reiterate the importance of guarding against anything like an excessive quantity being brought forward in any one week; following a period of unduly depressed prices, and until a level more in accordance with the improved position has been thoroughly established throughout the whole country, buyers will be chary of going into stock and the market needs to be fed accordingly.

Exports to outside centres continue to be one of the most hopeful indications for the future. Russia, in particular is well fulfilling the promise of being one of our best customers both for

Indian and Ceylon produce, and the displacement of China tea in that country is, we are informed, proceeding apace.

As might be expected clearances for home consumption are smaller than at this period last year. An increase in duty was then looked for as not improbable, while the exact reverse being now the case retailers will more likely be inclined to restrict their customs payments to actual requirements until after the Budget has been brought forward. In consequence of this also the Board of Trade returns for the twelve months of 1902, show a slight decrease from 1901 in the quantity of tea taken out of bond throughout the United Kingdom, though owing to the expansion in our export trade during the year which has just closed the total deliveries are slightly in excess, say, 300 million lbs. compared with 299 $\frac{1}{4}$  million lbs. in 1901.

We understand that the various Trade Associations are taking steps to approach the Chancellor of the Exchequer praying for some reduction in the present heavy duty impost.

For 31,000 packages on estate account 7 $\frac{3}{4}$ d per lb. was obtained against 7 $\frac{3}{4}$ d per lb. for 40,000, and 6 $\frac{1}{2}$ d per lb. for 44,000 in the two foregoing seasons.

Total amount catalogued in December was:

1902.	1901.	1900.
101,000 pkgs.	129,200 pkgs.	142,300 pkgs.
making 769,000 packages of the present crop brought to sale to 31st ultimo, versus 784,000 packages in that period of 1901, and 876,000 packages in 1900, and on the latest revised estimate of the proportion of the crop available for this country, what remains to be disposed of should be appreciably less than for the concluding months last season.		

**CEYLON.**—The market remained practically closed until Tuesday, 6th instant, when 26,000 packages were submitted, opposed to 31,600 for the same interval a year ago, when, however, two sales took place.

There was an active demand for all kinds up to 7d per lb., Pekoe Souchongs and Pekoes mostly selling in favour of importers. Medium leaf grades were taken up on about the same basis as before Christmas. Broken Pekoes with useful cup were wanted, and under 10d per lb. showed little change in value, though above that price buyers were scarcely so eager, partly due to some falling off in quality.

The average remains as on the 18th ultimo, when it was 7 $\frac{3}{4}$ d per lb. and 7 $\frac{1}{2}$ d per lb in 1902.

**JAVA.**—Rather over 2,300 packages passed the hammer, and went off briskly to the advantage of sellers.

Printed in December:—

1902.	1901.	1900.
4,100 pkgs.	4,100 pkgs.	2,800 pkgs.
(Ave. 6 $\frac{1}{2}$ d per lb.)	(Ave. 6 $\frac{3}{4}$ d per lb.)	(Ave. 6 $\frac{1}{2}$ d per lb.)
<i>Deliveries.</i> —Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—		
From January 1 to 6, 1903	...	4,192,559 lbs.
Do. do. 1902	...	5,433,883 "

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India ...	30,421	5,684	36,105
Ceylon ...	22,860	3,253	26,112
Java ...	2,082	242	2,324

Total ... 55,363

Also 145 packages from second hands.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated January 9th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1902-1903 ...	927,741	692,774	45,397
1901-1902 ...	946,477	694,191	40,814
36,149 pkgs. INDIAN	Total 64,686 packages were offered in public auction this week.		
26,140 " CEYLON			
2,397 " JAVA			

There was a great falling off in exports from both India and Ceylon to this country during December, the former showing a decrease of nearly three-and-a-half million pounds and the latter of three millions, making a total shortage for December of nearly

6,500,000 lbs. when compared with the corresponding month last year:—hence there seems absolutely no occasion for producers to bring forward supplies in other than very moderate quantities. The figures quoted at foot show that the stock of all tea in London is eight million lbs. less than it was twelve months ago.

**INDIAN.**—The market was decidedly firm, rates previous to Christmas being easily obtained, while the tendency was towards improved prices with strong general competition more especially noticeable in lower and medium teas.

The official wire gives exports to U. K. for second half of December as 5,740,000 lbs., against 7,840,000 lbs. for same period last year, making the total from 1st April to 31st December 130,660,000 lbs., against 135,481,800 lbs. last season.

Week's av. of New Season's tea sold on Garden Account 1903, 31,251 pkgs., av. 7.76d. 1902, 40,207 pkgs., av. 7.63d.

New Season's tea sold on Garden Account 1st June to date 1902-3, 688,552 pkgs., av. 7.26d. 1901-2, 714,996 pkgs., av. 8.00d.

**CEYLON.**—The first Ceylon sale since Christmas was held this week, when prices ruling before the holidays were well maintained for all grades, rather better rates being occasionally paid for teas up to about 9d per lb.

Private advice from Ceylon gives shipments to U. K. for December as 9,000,000 lbs., against 12,000,000 lbs. last year, making the total from 1st January to end of December 104,500,000 lbs. against 107,000,000 lbs. during 1901.

Average for week 7.75d, against 7.48d in 1902.

Ceylon Tea sold on Garden Account 1st January to date, 1,101,626 pkgs., av. 6.84d. 1901, 28,175 pkgs., av. 7.48d.

**JAVA.**—Offerings were mostly of very fair quality and attracted strong competition—resulting in an occasional improvement of about  $\frac{1}{4}$ d per lb. 108 pkgs. "Goalpara" averaged 11d per lb.

#### COCOA.

The opening auctions of the year, held on Tuesday, presented 11,889 bags for competition. The sales opened with a slow demand, but subsequently buying became more active, and about 6,000 bags

sold at a decline in some cases of 2s to 3s per cwt. Trinidad brought steady prices, 960 bags out of the 1,515 bags catalogued selling at 68s to 68s 6d for very fine red, 61s to 65s for good to fine, and 58s to 60s for ordinary to good. 4,269 bags Grenada offered and 3,250 bags found buyers at about 2s depreciation, viz., 57s to 59s for good to fine, and 54s to 56s 6d for common to fair. Of 1,763 bags Dominica 1,540 bags sold at a decline of 2s to 3s, common to fine being quitted at 52s 6d to 57s 6d. 164 bags common to fine St. Lucia sold at 53s 6d to 56s 6d, showing a similar decline to Dominica. Of 357 bags Jamaica 85 bags sold at 52s to 56s for ordinary to good, which was about 2s below valuations. 82 bags Esmeralda brought 60s to 60s 6d, and 83 bags Carupano 70s. Of 402 bags Guayaquil only 60 bags Caraquez sold at 63s, being steady. Of 2,595 bags Ceylon only 400 bags sold, the demand for this growth being very slow, but prices about unchanged; fine bold and medium red brought 74s 6d to 75s, fair to good 64s to 71s 6d, middling medium and small 60s to 61s, small 40s to 50s per cwt. Bought in growths comprised 2 bags Monserrat, 27 bags Colombian, 83 bags Carupano, 135 bags Bahia, 32 bags Brazil, 49 bags San Domingo, 167 bags Puerto Cabello, 19 bags Java, and 216 bags African. Private sales embrace fine Trinidad at 69s, Carupano at 70s, Puerto Cabello at 115s, Arriba Guayaquil at 74s, Caraquez at 63s to 70s, and Esmeralda at 60s 6d per cwt.

#### PEPPER.

**BLACK.**—The market is dull and business has been of small importance this week. On the spot sales of fair Singapore have been made at  $6\frac{1}{2}$ d, with sellers January-March shipment at  $6\frac{5}{8}$ d, and March-May at  $6\frac{1}{2}$ d.

At public sale on the 7th instant 497 bags Penang were bought in at  $5\frac{1}{2}$ d to 6d, also 291 bags Trang at 7d, and 339 bags Lampong at 6d, with the exception of 27 bags of the latter, which sold "without reserve," all faults, at  $5\frac{1}{4}$ d per lb.

**WHITE.**—is quiet. On the spot sales of fair Singapore at  $9\frac{3}{4}$ d, and fair Penang at  $9\frac{3}{8}$ d. For arrival Singapore January-March shipment is quoted at  $9\frac{3}{4}$ d, and Penang at  $9\frac{1}{2}$ d.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, FEBRUARY 7, 1903.

[No. 6.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 13th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*February 2nd.*—*Weather*—Excellent drying weather for the coffee and healthy for the human subject. *Coffee*—A little leaf disease. *Crop*—Most estates getting towards the end, some have started pruning and weeding. It is to be hoped that for our next crop the blossom showers will hold up for another month. *Health*—Good. *Labour*—Abundant. *Interesting item*—Our local wigs have been distinguishing themselves by issuing the red-tapist of red tape circulars, that all applications for gun licenses must be on Mysore five-rupee stamp paper, or they will be returned—poor things.

#### Coorg.

*POLLI BETTA, 4th February.*—*Weather*—It is fine now and cool at nights. There is little East wind which is good for the coffee. It is a good thing the clouds have passed away. *Crop*—Stripping has been begun. Estimates are being obtained in most cases. Pruning is following on the heels of stripping and a good supply of wood is being left for next season. *Labour*—Ample. *General health*—Fair. *Interesting item*—Chief Commissioner's tour.

### THE MADRAS PLANTERS' LABOUR BILL.

#### SELECT COMMITTEE'S REPORT.

IN OUR issue of the 17th ultimo, we reviewed the draft Madras Planters' Labour Bill in the form in which it was submitted for the consideration of a Select Committee of the Legislative Council of Fort St. George. The report of that Committee has now appeared, and we publish it to-day, together with the draft Bill in its revised form. We are glad to note that amendments have been suggested in regard to every point in the old draft to which we took exception.

These amendments do not go quite as far as we could wish, but they are all leading in the right direction, and the Bill is now decidedly less objectionable than it looked three weeks ago. Clause 3 still stands, by which this application of the new Act to any planting district annuls Act XIII of 1859 in that district; but retrospective effect is not to be given to this. Running contracts made under Act XIII and not wholly carried out when the new Act is applied are to be upheld; and we have information to the effect that the new Act, when passed, will not be applied to any district if planters there express a strong desire that it should not be so applied. This is a great point, but we could wish that it was made clearer in the Bill itself. The Committee have had to reconcile the necessities of planters with the demands of the Government of India, and they have succeeded to such an extent as to warrant our saying that they have done very good work. They have done this work quickly, too; and if at certain points the planter still sees provisions of which he cannot fully approve he will yet realise, we are sure, that the Planting Member has done his utmost on their behalf, and has secured very valuable amendments. He has managed to get a distinction made between *imported* and *local* labour; and while in certain districts this distinction may not quite meet local requirements, there is probably no district in which planters cannot so adapt their arrangements that the new Act will do all that is necessary to safeguard their interests.

The position is practically this: planters, district by district, may go on under the present Labour law or may agree to the application of the law that is about to be passed. This new law will, we think, if passed in its present form, be found generally preferable to the old; but that is a point which the planters in each district can consider for themselves. Once the new Act is accepted, they must abide by it; there can be no reversion to the old. When Native States Administrations introduce similar legislation, as they doubtless will if planters desire them to do so, there will be the same law governing estate labour in Madras, Mysore, Travancore, and Cochin; with the additional advantage that there will be reciprocity in regard to the administration of the law. This last point is too important to be overlooked, and should outweigh some of the minor defects or disadvantages that may be thought to be still present in, or imposed by, the new Act. It is yet, however, too early to write with

certainty of the new Act, because the full Council has not adopted the recommendations of the Select Committee, nor has the sanction of the Government of India been obtained. So far as we can judge there is nothing in these recommendations that undermines the principles of the former Bill, and the Madras Government have been so helpful to planters throughout the negotiations on this subject that we are confident that the Bill will be passed in very much the form in which it now appears. Nevertheless, the last word of criticism or comment can only be uttered when the exact terms of the law enacted are made known. We understand that the Legislative Council will meet again very shortly, and it should not be many weeks before the Bill is passed into law, with the approval of the Government of India.

Only after that time can the law be tested in its actual working. In the meantime we have thought it well, for purposes of ready reference, to publish to-day the report of the Select Committee, the amended draft, and a certain amount of Press comment showing how the Bill has been received in various quarters. Among Anglo-Indian writers it has been, on the whole, well received; and the hostile criticisms of the native Press deal solely with points that have been considered and settled long ago, or with points that are entirely irrelevant. We feel sure that planters generally will endorse our remarks as to the work of the Select Committee, and more particularly of that member who directly represents their interests. In the Hon'ble Mr. ACWORTH they have a Planting Member in whom they have rightly placed confidence; and it is easy to see that he has proved himself a strong, reliable, and tactful representative. We venture to voice the opinions of the community, by saying that he deserves a very hearty vote of thanks; but in doing this we detract nothing from the value of the remark by adding that Mr. ACWORTH'S labours were greatly lessened by the firm and sound foundation laid by his predecessors in the Legislative Council, Mr. GEORGE ROMILLY and Mr. H. P. HODGSON. To all intents and purposes these gentlemen have constituted a very valuable defensive Triple Alliance on behalf of the planting industry of Southern India.

### THE AMERICAN TEA MARKET.

In the closing week of 1902 the New York Tea market was a waiting one; early in the present year there was a decline consequent on tariff changes. Reports dated 7th ultimo point to small sales and the probability of quietness for a fortnight ago. *Tea, Coffee and Sugar* remarks:—"Apart from the withdrawals from the custom house of the free tea, the event of the week has been the shipment from New York of Congous to England. This tea sold for export amounted to at least 5,000 packages and still to arrive. It will be reshipped as soon as it arrives here. It will, in all probability, be followed by other shipments of Congous, for the India and Ceylon continue too high to suit Englishmen, who thus fall back on the English Breakfast Tea. The circumstance, of course, improves the market for Congous here where they have been too plentiful. Other teas remain unchanged in prices." These are statements that seem to call for investigation. There was a rush for tea from the customs on January 2, and it is said that one quarter of the trade catering to consumers have yet to come in and buy of the 85,000,000 pounds in the country. Having held off so long, however, they may decide to wait still longer for the break in prices to occur.

### BOARD OF TRADE RETURNS.

DECEMBER, 1902.

**Cocoa (raw).**—Supplies of this article in the United Kingdom were greatly swollen during December, and, in spite of expanding deliveries, some accumulation of stock took place.

In the twelve months.		1902.	1901.	1900.

## COFFEE NOTES.

Bogota coffee has come more to the front in recent years. It has always had a good reputation. It is grown on the slopes of the Andes, thus reminding one of the famous Blue Mountain coffee of Jamaica, and gives a full, heavy, fragrant infusion which is much relished by good judges of coffee. It is a native of Colombia, which has an area of fully 160,000 square miles that is suitable for coffee culture. This vast area could supply the coffee demands of the United States several times over.

\* \* \*

**The New York Market.**—Advices up to 7th ultimo say, 'dull,' 'dull,' ever 'dull.' "It is hard to get away from the extremely bearish statistical position of coffee. The chances are that the visible supply of the world for January will not have decreased very much short of 5,000 bags, which leaves the total still above 13,000,000 bags. It is now certain that the crop now being marketed will be very little short, if short at all, of 12,000,000 bags and the one growing will be at least as large as the bumper crop marketed last year. So cheap coffee seems to be the rule for some time to come."

\* \* \*

A. Trommel & Co., Santos, cabled to New York as follows on coffee: "Next Santos too early to estimate crop; probably 8,000,000 bags lowest."

\* \* \*

**A Speculation on Speculation in Coffee.**—The New York *Commercial* says:

"The present year has been a disastrous one for those who have tried to hold up the price of coffee. Lewisohn Bros. have been the head of the bull movement and the Lewisohn interests have for their 12 months of speculation in coffee, a showing of a total loss, which, on paper, amounts to about \$5,000,000. Other interests show a loss of about half this amount.

"The firm that has led the market on the other side is W. H. Crossman & Co., and the interests represented by them are very heavy winners. In a general way, however, it has been the whole market against the Lewisohns, and almost all of the other large coffee houses have been on the right side.

"At the beginning of the year it seems that the Lewisohns greatly underestimated the crop. They went into coffee with the idea that the supply would be short, and that

by securing and taking off the market great quantities of coffee they would be able to force prices up. The more coffee they bought, however, the more came to the market.

"After they had secured control of more than 1,500,000 bags, prices went on lower than before, and nothing has been able to stop them.

"It is generally conceded that the campaign of the coffee bears has been managed with rare judgment, and for this management W. H. Crossman & Co. are given most of the credit. This firm has been ready to meet every emergency of the market, and has been able to checkmate every movement intended to send prices up."

\* \* \*

A movement is on foot in the New York Coffee Exchange to alter the rules so that the minimum fluctuation in the market may be reduced from 5-100 of a cent per pound, to 1-100 of a cent. The circulation of a petition favouring the change has called forth much talk. Those who advocate the amendment contend that many operators are kept out of the market who would trade if the difference was reduced. The present difference of 5 points amounts to \$16.25 on a contract of 250 bags, or one lot. If the minimum is reduced to one point, the difference on 250 bags will be only \$3.25.

Some large firms are opposed to the proposition. They argue that the change would bring into the market small operators detrimental to the trade.

Some members believe that if any change is made a reduction from 5 points to 2½ points will be adopted, as a compromise.

\* \* \*

A year ago, says *Tea, Coffee and Sugar*, Rio No. 7 was 7c. and the quotation to-day is 5¼c., while in options the decline has been in that time 345 points, the January option in 1902 being 6.80c. compared with 4.35c. for the same month at the opening of 1903. The world's visible supply has grown to 13,000,000 bags, and what with the crop now being marketed, the great one growing equal, if not indeed in excess of that one which was marketed in 1902 of nearly 20,000,000 all told, even lower prices seem destined. Strange to say the Brazil growers are the only ones that have profited, whereas they should be the losers. No doubt they are happy and pleased to be with them in the same boat as the bears who have made millions at the expense of the unwise bulls and not least pleased are the Yankee people, who, as consumers, get a reasonably cheap coffee and appreciating the privilege have increased their consumption of coffee enormously although not enough to make a decided impression on the stored coffee crop.

\* \* \*

*Tea, Coffee and Sugar* remarks:—The amount of coffee raised in Java for importation to this country has shrunk to such small proportions that not even 1 per cent. of the total imported here is genuine Java. Of the Mocha, there is no doubt that a large quantity comes from Brazil, where the Mocha tree has been transplanted, and the consumer cannot detect the difference in the taste of the Mocha as grown in Arabia and the Mocha as grown in Brazil.

It is certain that not more than 5 per cent. of the coffee sold as Mocha and Java has ever seen Arabia and Java, and if the public desires to be deceived and buys coffee simply by the description of Java and Mocha, paying an exorbitant price for it, the fault lies at its own door.

Representatives of New York city coffee firms are in Mexico for the purpose of buying all the coffee stocks of this country, including this season's crop that is in the hands of the planters. Considerable head way has already been made toward getting control of the Mexican coffee supply by these firms.—*Associated Press Dispatch.*

### TEA NOTES.

**A Week's Review.**—Reductions of tea prices in wholesalers' price lists this week show, says the *Merchants' Review* of New York, how the repeal of the duty has affected prices. The decline ranges from about five to ten cents. This reduction should put a stop to all talk of the foreigners getting the best part of the saving due to the lopping off of the tax.

\* \* \*

The return to free tea is, says *Tea, Coffee and Sugar*, the particular gift of the Federal Government to the people and from every corner of the land the fact is hailed with jubilation and additionally by some others with comment that the tax never should have been imposed; indeed, that the imposition was an "outrage." In Boston there were special editorial felicitations and very properly was recalled the relation of tea to American Independence. It is pleasant to note this sentiment as it may serve against another violent laying on of hands by Congress should occasion arise, unless, indeed, the American tea industry should cry out to be protected. But about this there is much difference of opinion.

Meantime tea is not so cheap as it was before the duty was imposed. Since last Spring there has been on the average an advance of five cents a pound, which advance has been variously accounted for but the most reasonable seems to be that it is due to the demand which was started last Summer when the trade found itself very nearly sold out owing to abstention from purchasing to any large extent during the twelve months previous. The main event in the situation was the restraint the trade exerted against speculation, which has hitherto been a factor in the repeal of tea duties and so disastrously. Conservative influences, well known, deserve much thanks for this salvation of the trade, which, in consequence, welcomed the dawn of the most extraordinary January 1 in the history of the American tea business as certainly full of hope and prosperity, and this, however it may be effected from a possible reaction from the high prices prevailing, can experience no overwhelming adversity unless it comes in a universal way and there are no signs of such a calamity.

\* \* \*

**Plain Words from Ceylon.**—In the course of his remarks at the Annual Meeting of the Dikoya Planters' Association on 26th ultimo, Mr. W. R. Tatham, the Chairman, said:—

#### THE TEA CROP.

As regards the estimate of crop, gentlemen, it is very much the same as last year. Last year it was 13,423,860 lbs., whereas this year it is 13,022,450 lbs. The yield is 455 lbs., as against 465 lbs. last year. I think that, gentlemen, is a very satisfactory yield from the whole district. There is little doubt that we have gone through a very depressing year, and the price of all tea sold in London has gone down to the very lowest it has ever touched, namely, to 6'61 as against 6'68 the year before. This depression, gentlemen, I think, is now lifting. The dark clouds that have overshadowed us for so long are rolling off, and I think there is

every chance of our doing well in the future. Figures speak for themselves. Last year we exported, approximately, 103,000,000 lbs. of tea to the United Kingdom. The year before that I think it was 108,000,000, and I think this year 96,000,000 is estimated. Well, gentlemen, these figures speak for themselves, and there is no doubt that with the last export we ought to hold the buyers in England in the palms of our hands (applause)—if, gentlemen,—I emphasize the word *if*—if we are not so ill-advised as to resort to coarse-plucking again. (Hear, hear.) The big buyers in London have given out that if the growers will continue to resort to coarse-plucking they will be able to keep the price at what it is now. I am perfectly sure if we go on in the future as we do now, and don't send more than they want, we shall have those buyers in the palms of our hands, for they are sure to fall out among themselves when the demand is greater than the supplies.

#### GREEN TEA AND THE BONUS.

There is only one other point I should like to make some remarks upon, and that is the green tea manufacture and bonus. Green tea has taken a very great spurt in the last few months, and has necessitated the provision of some means whereby the bonus on the extra quantity can be paid. I think I should like to tell you the views of the Thirty Committee on this point, as there is a good deal of misapprehension. At the end of the season when we apportioned how the money for 1903 should be spent, the Committee voted a sum of 4 cents on 7,000,000 lbs. of green tea. At that time we thought that 7,000,000 lbs. would probably be the amount made. Later we awoke to the fact, however, that 7,000,000 lbs. was going to be exceeded, and the question then arose, how was money going to be found to pay the bonus on the extra amount? A letter was drafted by the Chairman to London proposing to raise the cess from 30 to 50 cents. This proposal, however, did not meet with the approval of the Home proprietors and an alternative scheme was sent out by Mr. Rutherford. At the Committee Meeting held in Kandy last month the Committee were of opinion that it was not a very business-like proposal and they then proposed that the cess should be raised from 30 to 50 cents for eight months, and that would allow of sufficient funds to meet the bonus on the tea between the 7,000,000 and the 12,000,000, which is the official estimate. The figures in the room showed that the green teas would amount to 12,000,000 lbs. That, gentlemen, is the position of affairs now. I don't say that I am entirely agreed that the cess should be raised, but under the circumstances I see no better scheme than that proposed at the last Meeting in Kandy, namely, to raise the cess for eight months. That being so, I shall give it my heartiest and most cordial support.

#### "A FATAL STEP."

There is no doubt, gentlemen, that the bonus on the 7,000,000 of green tea will run out about July or August, and it would then be a fatal step to stop giving a bonus to green tea manufactures. If we do stop I think it will mean that we shall find a lot of them going back at once, and making black. At the present time undoubtedly the price of green tea is very good, and when the Committee voted four cents for 7,000,000 lbs., of course, they didn't know that the prices would be so good, and I must confess I should like to see the bonus fixed on the sliding scale, that is from two to five cents. However, gentlemen, it was four cents which was voted.

#### VINDICATING THE THIRTY COMMITTEE.

I have heard one or two remarks made as regards the Thirty Committee. In the Maskeliya meeting I noticed some gentleman said that, if there was not sufficient funds, then why not reduce the bonus at once? You may remember that the Committee pledged themselves to pay four cents on 7,000,000 lbs., and on that guarantee forward contracts were made in Colombo, and therefore it is impossible to go back and upset everything, for all the contracts would be upset. Then there is one other remark that I have heard made in one or two quarters which I should like to repudiate, that most of the gentlemen sitting on the Committee have their own axes to grind; that they are mostly interested in green tea; and that is the reason why they want the bonus kept up. That is not a fair remark to make. There is not a bit of truth in it, and it is not fair to make such remarks about a set of gentlemen who devote their time, leave alone the expense, to attending the Thirty Committee.

**Ceylon Green Tea Report.**—Messrs. Walker, Lambe & Co. for the week ending 8th January, 1903 says :—

The public sale offerings amounted to 3,208 packages

1,110 Packages	..	..	..	Moyune
417 "	..	..	..	Teen kai
680 "	..	..	..	Fychow
160 "	..	..	..	Local Packed
508 "	..	..	..	Ping Suey
333 "	..	..	..	Indian

3,208

In addition to this very full supply some few teas were offered privately.

Although there was a little more confidence among buyers the supply was too heavy and prices for most grades again weakened, so much so that some importers would not face the results and about 1,000 packages were withdrawn. It is stated that some of the fine Moyune teas of very recent arrival were sold to show about 1d. loss on the actual net cost. Finest Sow Mees and also 1s. 4d. 1s. 5d. grades again dropped and are now bringing 1s. 4d. to 1s. 9d. for teas worth 1s. 7d. to 2s. 1d. in November. Gunpowders sold at 10d. to 1s. 3d. for firsts and extra grades a further half-penny fall worth 1s. 1d. to 1s. 6d. in November, some very common cup teas with make bringing only 9d. to 10d. Foong Mees over 1s. 4d. were steady—lower grades declined a full 2d.; indifferent cup Young Hyson were also weaker but the good ones sold well.

Ping Sueys met with but little bidding and in sympathy with country teas declined a full half-penny, meeting no buyers in the room.

The tea trade of Boston is a growing one. In 1901, 202,281 packages were imported but in 1902 the quantity was 232,929 packages.

## NOTES.

### Darjeeling Tea and Railway Rates.

The Darjeeling railway has reduced the rates for tea 22½ per cent. without conditions.

### Export Duties in Ecuador.

(10s. 1d.) per quintal.

### The Tea Clearing-House Question.

The special correspondent of the *Indian Daily News*, wiring from London, says :—There is every probability of a reconstitution of the Tea-clearing House on broad lines.

### Oranges in Florida.

By heroic efforts the orange crop of Florida was saved from destruction by frost. Orange growers kept bon fires and sheet-iron stoves burning throughout the cold nights. The bulk of the crop has now been picked, so there will be little loss.

### Science and Agriculture.

At last the Madras Government have made provision for the employment of an Agricultural Chemist, on a salary of Rs.500, rising to Rs.700. The mischief is that he will have to work under a Department where higher officials are eminently unscientific !

### The French Import Tariff.

A Reuter's telegram dated..... instant says :—The French Customs Commission have approved a Bill provisionally granting minimum tariffs on foodstuffs from countries concluding agreements with France before 24th February. An agreement has been already concluded regard-

ing Seychelles. Negotiations concerning India, Ceylon, and Mauritius are approaching conclusion.

### Cinchona at Amsterdam.

The auction to be held at Amsterdam on January 22 will consist of 10,215 bales 775 cases (929,229 kilos.). Java bark, containing 46,503 kilos. sulphate of quinine, are an average for the manufacturers' bark of 5.45 per cent., against 5.74 per cent. for the December auction last, and 5.51 per cent. average of the ten auctions held here in 1902. The shipments from Java up to January 14 amounted to 250,000 Amsterdam lbs. —a decline.

### Colombo Tea Sales.

The *Times of Ceylon*, of 28th ultimo reports :—At the public sale of tea at the Chamber of Commerce room to-day, 13,668 packages = 1,120,917 lbs. were offered, of which 9,264 packages = 764,259 lbs. were sold. A buyer writes to us this afternoon : —“The tea sales went very well this afternoon. London seems to have no effect upon prices here. It is astonishing what a lot of rubbish planters have been trying to send down just now. It is bound sooner or later to knock the bottom out of things.”

### China Teas.

The *Press*, Hong-kong, says :—It seems a thousand pities that China should have given up the valuable tea trade with Great Britain without any genuine effort to keep it. Neither repeated written warnings nor the damnatory evidence of the Customs statistics have availed to induce the Chinese Government to reduce the crushing export duties, which raise the cost of low-grade teas by as much as 40 per cent. Nor have the successive losses of markets served to impress the Chinese producer with the necessity for improving the cultivation and firing of the leaf.

### Science and Tea Growing.

At a recent Meeting of the General Committee of the Indian Tea Association, a discussion took place as to the possibility of putting into operation their scheme of extended investigations. The total annual cost of this scheme was estimated at about Rs.27,000. Of this amount the Government of Bengal, and the Administration of Assam, would provide Rs.10,000; and it was thought that the industry would be able to contribute Rs.7,000. For the provision of the remaining Rs.10,000, it was decided to invite the assistance of the Government of India.

### Cinchona in the East.

Dr. Frederick Rose, His Majesty's Consul at Stuttgart, in his report on the trade of Würtemberg during 1901 and part of 1902 attributes the present state of German industries to over-production, with its concomitant symptoms. Dr. Rose's remarks about cinchona are curious. He says : “The hope is expressed that the new plantations in Ceylon and British India may be increased in size, as prices demanded by the Java planters seem to be regarded as abnormally high.” Evidently, he is not aware that Ceylon and British India send us infinitesimal quantities compared with Java, and that the output from those countries tends to decrease, especially as regards Ceylon, while the Java prices could scarcely be lower than they are.

### The St. Louis Exposition.

The managers of the St. Louis Exposition, 1904, announce that under the classification of “Sugar and Confectionery, Equipment,

Processes, and Products," there will be installed in the Agriculture Palace of the Exposition, displays as follows: Sugar and confectionery, sugar, glucose, chocolate, coffee, tea, substitutes for coffee, aromatic drinks, mate, and chicory. Spices—pepper, cinnamon, allspice, etc. Equipment and methods of preparation: Sugar manufactories and refineries; manufacture of chocolate and confectioneries; decoration and roasting of coffee. There will be no charge for space occupied by exhibits, and a limited amount of power for the operation of mechanical devices to illustrate processes of special interest will be furnished to exhibitors without charge.

#### Cinchona and Quinine.

Messrs. C. F. Boehringer & Söhne have issued an annual statement in regard to cinchona and quinine, from which we extract the following:—*Cinchona-bark*.—The imports into the United Kingdom in 1902 amounted to 4,447,000 lbs., or 318,000 lbs. less than in the year before. Java exports were 13,346,000 Amsterdam lbs., or 447,000 lbs. more than in 1901. The stock of bark in London was 8,080 pkgs. on December 31, 1902, and in Amsterdam 16,952 pkgs. *Quinine*.—The estimated amount of quinine in the bark sold in London last year was 1,400,000 oz., and in Amsterdam 11,304,000 oz. The combined figures are the highest for the past six years, as were also the stocks of quinine in London on December 31, 1902—*viz.*, 3,594,000 oz.

#### London Tea Market.

Weekly special telegram dated 29th January from Messrs. Gow, Wilson & Stanton to Colombo report that the buyers are operating

very cautiously and that the market for medium-liquoring Pekoes and Broken Pekoes is steady, while the market for common and broken Pekoes is weak. The price of fair liquoring Ceylon Pekoe Souchong is 6d. (the same as last week) and the average 7½d. (also the same as last week). The average for the same period last year was 7¼d. Reuter reports that fine qualities of Ceylon tea are good at fully previous rates. Fair Pekoe Souchongs are quoted at 5¾d. (½d. down) and the average for the week is 7½d. (same as the last week). 17,000 packages of Ceylon tea were offered for sale and 15,000 disposed of; while of the 31,000 packages of Indian tea offered, 22,000 were sold at an average of 7¾d. (¼d. down).

#### A Cup of Coffee in Persia.

The expression "to give a cup of coffee" has in Persia a somewhat ominous significance. This is due to the fact that the coffee cup is one recognised medium for conveying poison, says a writer in the *Leisure Hour*. Some years ago the governor of the city which he had styled Aspadana, having long been at daggers drawn with the chief of a powerful mountain tribe, determined in this way to put an end to all trouble. He professed to entertain a great degree of friendship and esteem for the chieftain, and invited him to visit him at his palace. The chief unsuspectingly came, accompanied by his two young sons. For a week they were right royally entertained. But at last one morning, when the chief came into his host's presence, he was coldly received, and an attendant soon stepped forward with a single cup of coffee in his hand, which he offered to the guest. The latter could not fail to understand that he was doomed. Preferring, however, steel to poison, he declined the cup, and was thereupon, at a signal from his host, stabbed to death in his presence. This is but a single instance of the way such matters are managed in Persia.

## THE INDIAN REVIEW.

A HIGH CLASS MONTHLY.

Edited by G. A. NATESAN, B.A.

HAS AN EMINENT LIST OF CONTRIBUTORS.

Annual Subscription including { India ... Rs. 5  
Postage. { Great Britain ... „ 10  
United States 3 dollars.

#### SPECIAL FEATURES.

SHORT Notes on the Topics of the Day. About five original contributions on a variety of subjects including commerce and manufactures. Critical Reviews of the latest Books. Summary of noteworthy articles in leading English, American and Indian periodicals. Departmental Reviews and Notes.—Educational, Literary, Legal, Trade and Industry, Medical, Science and General.

#### Contributions.

Contributions are invited on all subjects of general interest, especially on industrial, economic and commercial topics relating to India. Contributions accepted and published will be duly paid for.

#### To Business Men.

THE INDIAN REVIEW has a *bona fide* circulation of one thousand copies and our list is open to inspection.

#### Rates of Advertisement.

Per page per insertion—India Rs.10 and Foreign £1.  
Proportionate rates for half and quarter pages.

Contract rates on application.

## THE PLANTERS' BILL.

### REPORT OF THE SELECT COMMITTEE.

*Bill introduced into the Council of the Governor of Fort St. George for making Laws and Regulations.*

The following is the report of the Select Committee on the Bill to regulate the conditions of labour in the planting districts of the Madras Presidency, together with the Bill as amended by the Committee.

TO THE HONOURABLE THE COUNCIL OF THE  
GOVERNOR OF FORT ST. GEORGE  
FOR MAKING LAWS AND REGULATIONS.

We, the undersigned, members of the Select Committee to which the Bill to regulate the conditions of labour in the planting districts of the Madras Presidency was referred, have considered the Bill and the papers noted in the margin and have now the honour to submit this our report, with the Bill as amended by us annexed thereto.

2. We have divided the Bill into six chapters and slightly re-arranged the sections following in this respect to a great extent the arrangement in the Assam Labour and Emigration Act, 1901.

Chapters I to X of the report of the South of India Planters' Enquiry Committee (Paper No. 1).

Telegram from the Honorary Secretary, Wynaad Planters' Association, dated 11th December, 1902 (Paper No. 2).

G.O., No. 2, Legislative, dated 19th January, 1903 (Paper No. 3).

3. *Section 1.*—We have not changed the terms of this section but we think it right to put on record our opinion that the Government should always give due notice and await the receipt of and consider local representations before bringing the Act into force in any local area.

4. *Section 2.*—As several estates especially for growth of pepper are small, we consider that twenty should be altered to ten in the definition of estate [clause (b) of sub-section (1)]. That definition has also been amended in order to prevent a person removing his estate from the operation of the Act by ostensibly breaking it up into smaller areas than ten acres.

We have amended the clause—defining “planter” clause (g) of sub-section (1)—so as to make it include every person entrusted, whether temporarily or permanently, with the management or superintendence of an estate.

5. *Section 3.*—We have had much discussion over this section and would have preferred, had it been possible, to provide that this Act should be withdrawn at the option of the Local Government, from any district where its operation was found unsuitable, with the power to revive the operation of Act XIII of 1859. It seems clear that it is impossible in any way to revive the Act of 1859 after the introduction of this Act. We have therefore had to accept the position that this Bill will, when it becomes law and is extended to any district, have the effect of annulling the Act of 1859 for good and all in that district. We have, however, as will be seen below, tried to modify the Act to make its provisions more suitable to meet the wants of those planters who are now in the habit of using the Workman's Breach of Contract Act, 1859. We have provided that contracts already executed under the Workman's Breach of Contract Act, 1859, when this Bill comes into force shall still be enforceable, as in our opinion it will only be fair that such contracts should be carried out.

There is no doubt that the Bill will meet the wants of a great number of planters. The Committee, however, are aware that in certain portions of the country there is a strong feeling that the position under the Bill will be less satisfactory than it is at present. We have endeavoured as far as possible to meet the difficulties put forward without infringing the principles which are at the basis of the Bill.

6. *Section 6.*—We have added a proviso to section 6 from the Assam Labour and Emigration Act, 1901, to prevent women from entering into labour contracts against the will of their husbands or guardians.

7. *Section 7.*—It has been strongly represented to us that in some districts where local and coast labour is much employed on very short contracts the provisions of the section requiring the signature of all contracts in the presence of a magistrate will cause great inconvenience, and make the employment of any large number of such labourers impossible. Such a course would interfere very gravely with the progress of planting industry in these districts and would also probably seriously interfere with the opportunities for wage earning at present enjoyed by labourers living in these parts.

We have added a proviso to section 7 to provide for cases of this kind, understanding that it is never the custom to house in permanent lines on the estates, labourers who enter into such short contracts.

We consider that contracts between a maistry and a planter need not be signed in the presence of a magistrate, as such maistries are intelligent men and may be expected to understand what they are doing. There are a number of such petty contracts for weeding and digging portions of an estate, and it would be very inconvenient for the planter if he had to attend before a magistrate for the signing of each of these contracts and it seems unnecessary that he should be compelled to take this course.

8. *Section 8* (Section 9 of the original Bill).—We have amended this section by the addition of the following words to paragraph 1: “and in case of dispute on his showing to the satisfaction of a magistrate sufficient cause for such determination of the contract.”

We consider that a labour contract ought not to be determined unless a magistrate is satisfied that the planter or labourer has good cause for such determination. The planter by the desertion of a large number of his labourers in the middle of the working season would be caused very serious inconvenience. On the other hand, the planter should not have the power of summarily dismissing his labourers. Both parties should be able to appeal to the magistrate.

We have omitted the last words of the proviso which seem to us to place an unnecessary restriction on the recovery of advances. We think that advances given to the labourers on any account should be repaid before he quits the estate.

We have made corresponding amendments in section 10 of the original Bill (now section 9). We notice that in section 8 of the Bill referred to us no limitation was put on the word “advance.”

*Sections 11 and 13* (Section 13 of the original Bill).—We have broken up section 13 into two sections to make it clearer.

9. *Section 12* (Section 14 of the original Bill).—In this section we have provided for a subsistence allowance as an alternative to food.

10. *Section 26* (Section 25 of the original Bill).—We discussed the terms of section 25 at length, but are unable to suggest any considerable amendment to the section. It is impossible to make imprisonment the only punishment for neglecting to work, as the aim we have had in view is not to punish the labourer but to get him to work. The Hon'ble M.R.Ry. Srinivasa Rao considers that the provision compelling the labourer to pay his employer As. 4 a day should be omitted. We, however, consider that the power of inflicting a fine instead of or in addition to imprisonment should be retained, but we have reduced the period of imprisonment to seven days, which we think will be sufficient for the purpose.

11. *Section 28* (Section 27 of the original Bill).—We have provided that from the fine levied under this section any advance due by a labourer to the employer shall be repaid.

*Section 35* (Section 34 of the original Bill).—We consider that it is advisable in this section to make it distinct that any person who induces a labourer to leave his employer for employment on another estate shall be deemed to come under this section. We understand that this is not at all an uncommon form of annoyance to which planters are subjected and one which in many cases causes them heavy loss. It seems doubtful whether without the explanation we have added, such action would be punishable.

12. *Section 44.*—We have added this new section to empower specially authorized officers to make enquiries under this Act.

13. The other amendments we have made are merely drafting amendments and do not call for any remarks.

14. Our colleague, the Hon'ble the Advocate-General, was unavoidably prevented from attending the meetings of the Committee.

15. We recommend that the Bill be passed as amended by us.

No. 3 OF 1902.

A

## BILL

TO

*Regulate the conditions of labour in the planting districts of the Presidency of Madras.*  
(As amended by the Select Committee.)

## CHAPTER I.

## PRELIMINARY.

WHEREAS it is expedient to regulate the conditions of labour in the planting districts of the Presidency of Madras; It is hereby enacted as follows:—

1. (1) This Act may be called the “Madras Planters’ Labour Act, 1903.”

Short title, extent and commencement.

(2) It extends to such local areas within the Presidency of Madras as the Local Government may by notification direct.

(3) It shall come into force in any local area to which it may be extended by a notification *under sub-section (2)* on such day as may be specified in that behalf in such notification.

2. (1) In this Act, unless there is something repugnant in the subject or context,—

Definitions.

(a) “Employer” means the planter or maistry for whom a labourer is bound under a labour contract to work.

(b) “Estate” means land not less than *ten acres in extent held by one or more persons and whether the same be in one or more blocks* situated within any local area to which this Act has been extended which is being prepared for the production of, or actually produces tea, coffee, pepper, cardamom, or cinchona or such other products as the Local Government may by notification specify.

(c) “Labour contract” means a contract entered into in accordance with the provisions of this Act to work for hire on an estate otherwise than as a domestic servant.

(d) “Labourer” means any person who enters into a labour contract with a maistry or a planter.

(e) “Magistrate” means a magistrate of the first or second class, and includes a magistrate of the third class when he is specially empowered by the Local Government to perform the functions of a magistrate under this Act.

(f) “Maistry” means any person entering into a contract with a planter for the supply of labourers to work on an estate.

(g) “Planter” means *any person owning, managing or superintending an estate or the chief person for the time being in charge of an estate.*

(2) All words defined in the Indian Contract Act, 1872, and used in this Act shall have the meanings respectively assigned to them by that Act.

*Note.*—The figures in square brackets in the margin refer to sections of the Bill as referred to the Select Committee.

3. From and after the date upon which this Act comes into force in any local area the provisions of the Workman’s Breach of Contract Act, 1859, shall cease to apply within such local area to any contract between a planter and a maistry, or a planter and a labourer or a maistry and a labourer.

*Provided that any such contract entered into before the date of the notification extending this Act to such local area shall continue to be enforceable under the said Workman’s Breach of Contract Act, 1859.*

## CHAPTER II.

## LABOUR CONTRACTS GENERALLY.

Maximum term of labour contract.

4. No labour contract shall be made for a term exceeding one year.

5. No provision in a labour contract which conflicts with or purports to set aside any of the provisions of this Act shall be of any effect.

6. Notwithstanding anything to the contrary in the Indian Contract Act, 1872, it shall be competent for any person of the age of sixteen years and upwards to enter into a labour contract.

*Provided that no woman shall be capable of binding herself by a labour contract, if her husband or lawful guardian (if any) objects.*

7. (1) Every contract between a planter and a maistry, and every labour contract shall be in writing and shall be in such form and shall contain such particulars as the Local Government may by rules made under this Act direct, and every labour contract shall be signed in the presence of a magistrate, or of some other person expressly authorized by the Local Government by name or in virtue of his office.

*Provided that any labour contract for a period not exceeding two months, entered into with a labourer who neither is nor is about to be accommodated in permanent buildings on the estate, need not be signed in the presence of such magistrate or other person, but may be signed in the presence of two witnesses.*

(2) It shall be the duty of the officer or person before whom such labour contract is signed to see that its terms are fully explained to and are understood by the parties.

[9] 8. (1) Any labour contract may be determined by either party thereto on his giving at least three months’ notice of his intention to do so and in case of dispute on his showing to the satisfaction of a magistrate, sufficient cause for such determination of the contract.

(2) Any labourer who desires so to determine his contract shall, before quitting the estate to which the contract refers, complete

Act VI of 1901, section 9.

Act VI of 1901, section 2 (j).

the repayment of any money found by a magistrate to be due by him to his employer.

9. Any labourer may without giving the notice prescribed in the last preceding section determine his contract at any time before the expiration of the period of the contract on his showing to the satisfaction of a magistrate sufficient cause for such determination of the contract and on completing the repayment of any money found by the magistrate to be due by him to his employer, and further on payment to his employer of a sum of annas three for each working day of such unexpired period, or of a period of three months, whichever is less.

10. (1) If any labourer shall by reason of illness or accident be disabled from completing his contract, and the parties are unable to agree as to the terms upon which the contract shall be determined, the employer may, and if the labourer so desire, shall, send the labourer, or, if the labourer is unable to travel shall send notice, to the nearest magistrate, who, if on enquiry he finds the labourer to be permanently disabled from completing the contract, shall declare the contract to be determined and such order shall be final.

(2) The magistrate making such declaration shall likewise make such order as he may deem fit regarding the repayment of any money found by him to be due to the employer by such labourer and may also direct that the employer shall bear the whole or a part of the cost of the labourer's journey to his home.

CHAPTER III.

PROVISIONS AS TO THE LABOUR-DISTRICTS.

11. (1) Every planter shall keep such registers of all the labourers and other persons employed on his estate and of their dependents in such form as the Local Government may by rule or special order prescribe.

12. Any labourer who is incapacitated by illness or accident from work shall during such incapacity be entitled to food or subsistence allowance at the rate of two annas a day and to lodging as well as medical care, at the expense of the planter upon whose estate he is employed.

Provided that such labourer shall not be entitled to receive during such period his wages in addition.

Provided further that nothing herein contained shall prevent the employer from taking steps for the determination of the contract under section 10.

13. Every planter shall provide for the labourers employed on his estate such house accommodation, water-supply, sanitary arrangements and

medical attendance as the Local Government may by rule or special order prescribe.

14. The District Magistrate, the sub-divisional Magistrate, the District Surgeon, and any other officer specially empowered by the Local Government in this behalf by name or in virtue of his office, shall have power to inspect any estate upon which labourers are working under labour contracts, and to enquire into the health and condition of the labourers and into the accommodation provided for them.

15. (1) If it appears to the Local Government upon the report of a District Magistrate that any estate or portion of an estate is unfit for the residence of labourers, or of any class of labourers, by reason of any sanitary defects which can be remedied, they may call upon the planter to remedy such defects within a period to be stated.

(2) If the planter neglects or omits to remedy such defects within the period so stated or if the estate or portion of the estate has been reported as unfit for residence from causes which it is impossible to remedy, the Local Government may declare the estate or portion of the estate to be unfit for the residence of labourers or of any class of labourers.

(3) After such declaration has been made and so long as it remains in force no labourer, or no labourer of the particular class to which such declaration relates shall be bound by any labour contract to work on such estate, or portion of such estate, as the case may be.

16. Any labourer desiring to make a complaint that his employer or any person acting on his behalf has personally ill-used such labourer, or has been guilty of a breach of any of the provisions of this Act or any of the rules made thereunder may without forfeiting his wages during his absence but subject to the provisions of section 17 absent himself from his work for the time necessary for the purpose of proceeding to the nearest magistrate and making his complaint to such magistrate.

17. If after such enquiries as the magistrate thinks fit, he is of opinion that the complaint is frivolous or vexatious he shall dismiss the complaint, and shall specify in his order the number of days during which the complainant has been absent from his work in consequence of such complaint, and may direct that the labourer shall forfeit to his employer a sum not exceeding double the amount of his wages for these days.

18. If after such enquiry the magistrate finds that there is sufficient ground for proceeding with the case, he shall dispose of the case according to law.

**19.** (1) If upon the complaint of any labourer, it is proved to the satisfaction of a magistrate that the wages of such labourer are overdue or that wages due to any person whose labour contract has determined have been withheld after such determination, the magistrate may award to such labourer or person the amount which appears to be then due to him, and also, by way of compensation, such further sum, not exceeding that amount, as to the magistrate seems just.

(2) A magistrate making such an award may, if the labour contract has not already determined, on the application of the labourer, declare *such contract* to be cancelled, without prejudice however to the continued liability of the employer in respect of the amounts awarded.

**20.** Whenever it is proved to the satisfaction of a magistrate —  
 Power to cancel labour contract on conviction of employer.  
 (a) that any planter or maistry has been convicted of any offence causing injury to the person or loss or damage to the property of any labourer working under a labour contract for such planter or maistry, and under the Code of Criminal Procedure, 1898, triable exclusively by the Court of Sessions, or

(b) that any planter or maistry has been twice convicted of any such offence against any such labourer and under the said Code triable by a Magistrate, or

(c) that any such labourer has been compelled by the planter or maistry for whom he works or by any person placed by such planter or maistry in authority over him to perform any *work* while he was unfit for it, or has been subjected to ill-usage by such planter or maistry or person,

such magistrate may, if he thinks fit, on the application of the labourer aggrieved, cancel the labour contract of such labourer, and award to him compensation not exceeding thirty rupees.

**21.** When on complaint made it is proved to the satisfaction of a magistrate that any maistry who has received from a planter an advance of money in consideration of his contracting to supply labourers to work on an estate has failed duly to supply or to maintain the supply of such labourers, the magistrate may direct that the maistry shall repay to the planter such portion of the advance as, taking into consideration the number of labourers, if any, supplied and the period during which they have been supplied, the magistrate shall deem proper.

Provided that if no labourer has been supplied the magistrate may direct that the whole of the advance shall be repaid.

## CHAPTER IV.

### PENALTIES AND PROCEDURE.

**22.** Any maistry who

(a) fails, without sufficient cause to present himself at an estate upon the date specified in his contract; or

(b) having contracted to remain upon an estate for a specified time fails without sufficient cause so to remain; or  
 (c) fails to account for the money advanced to him by a planter in consideration of his contracting to supply labourers to work on an estate;  
 shall be *punishable* with imprisonment which may extend to three months or with fine which may amount to five hundred rupees or with both; and the magistrate may award to the planter out of the fine such compensation as he may deem fit.

**23.** Any planter, or any person acting under his orders, or on his behalf who wilfully obstructs any inspection or enquiry made under this Act shall be *punishable* with fine which may extend to two hundred rupees.

**24.** Any planter or maistry and any person placed by a planter or maistry in authority over a labourer, who compels any labourer to perform any work knowing that he is at the time unfit to perform such *work* shall be *pnnishable* with fine which may extend to two hundred rupees.

**25.** Any planter who wilfully omits to provide house accommodation, water-supply, medical attendance, or sanitary arrangements in accordance with the provisions of this Act or of any rule made hereunder shall be *punishable* with fine which may extend to five hundred rupees.

**26.** Any labourer who without sufficient cause absents himself from his *work*, or neglects or refuses to work, shall on conviction by a magistrate be liable to forfeit his wages for the days during which he has been absent or has neglected or refused to work and to pay to his employer a sum not exceeding four annas of each such day, and shall also be liable to imprisonment for a term not exceeding *seven* days.

*Explanation.*—Ill-treatment of such labourer or failure of the employer to fulfil any condition of the labour contract is sufficient cause within the meaning of this section.

**27.** Whenever an employer or a person acting on his behalf complains to a magistrate that a labourer has deserted from the estate upon which such labourer has

Complaint of desertion of labourer or his failure to present himself.

contracted to work or without reasonable cause has failed to present himself on the estate at the time specified in his contract, such magistrate may, without previously examining the complainant, issue summons for the attendance of such labourer, or a warrant for his arrest, and fix a day for hearing the complaint.

**28.** (1) Every labourer who deserts from an estate upon which he has contracted to work, or without reasonable cause fails to present himself on the estate at the time specified in his contract, shall be *punishable* with imprisonment for a term which may extend to one month or with fine *not exceeding* fifty rupees, or with both.

(2) *Out of any sum received on account of the fine levied under this section shall be paid to the employer any money found by the magistrate to be due to him by the labourer.*

**29.** If it appears to the magistrate trying a labourer for deserting from an estate that such labourer was arrested without sufficient cause, such magistrate may impose a fine, *not exceeding* fifty rupees, on the person at whose instance such labourer was arrested, and the magistrate may award to the labourer out of the fine such compensation as he may deem fit, and may, if he thinks fit, on the application of the labourer, cancel the labour contract of the labourer.

**30.** (1) When any maistry has been sentenced to imprisonment for an offence under section 22 or when any labourer has been sentenced to imprisonment for any offence under this Act the planter with whom such maistry has entered into a contract or the employer of such labourer as the case may be may apply to the magistrate at any time previous to the expiry of such sentence that such maistry or labourer be forthwith made over to him with an order to complete his contract or his labour contract as the case may be.

(2) On such application being made the magistrate may if he thinks fit cancel the remainder of such sentence and subject in the case of a labourer to the provisions of section 34 order that such maistry or labourer be made over or forwarded to the applicant.

**31.** Every person who obtains an order of a magistrate under the *last preceding section* for the purpose of making over or forwarding maistry or labourer of any maistry or labourer shall be liable to defray the expense (if any) incurred in such making over or forwarding; and shall, before the order is issued, deposit with the magistrate such sum as is in the magistrate's opinion necessary to defray such expense.

[31] Act VI of 1901, section 204. **32.** On the expiry of any sentence of imprisonment for any offence under this Act the labourer after conviction shall, subject to the provisions of section 34, make over such labourer to any person appointed on the part of the employer to take charge of him, and no conviction under this Act or imprisonment under such conviction shall operate as a release to any labourer from the terms of his labour contract.

[32] Act VI of 1901, section 205. **33.** When any labourer is convicted under section 26 or section 28 or is sentenced to imprisonment for any other offence under this Act, the magistrate so convicting or sentencing him shall endorse on the employer's copy of the labour contract the period during which such labourer is convicted under the sections aforesaid of being absent from his work or the term for which he is sentenced to imprisonment, or both, as the case may be, and the period so endorsed shall be added to the term for which the labourer contracted to serve, and such labourer shall not be deemed to have completed his labour contract till he has served for the term specified therein in addition to the periods so endorsed.

[33] **34.** Whenever the periods of imprisonment endorsed on the labour contract of any labourer under the provisions of the *last preceding section* amount to nine months the magistrate shall, on application, cancel the labour contract of such labourer, and shall endorse on the labour contract a certificate of such cancellation, or if such contract be not forthcoming, he shall give to the labourer a certificate *in writing* of such cancellation.

Provided that such cancellation shall not bar the institution of a civil suit for the recovery of any money due in respect of such labour contract.

[34] Act VI of 1901, section 208. **35.** (1) Any person who entices or attempts to entice a labourer bound by a labour contract to labour on any estate, to leave such estate, or knowingly employs any such labourer who has, in contravention of the terms of his labour contract, left the estate upon which he has contracted to work shall be *punishable* with fine which may extend to two hundred rupees, or with imprisonment for a term which may extend to one month, or with both, and when any such offence is committed in respect of more than one such labourer may be so punished in respect of each and every such labourer as for a separate offence.

*Explanation.*—Any person who induces a labourer to determine his contract under section 8 or section 9 or to desert his employer for the purpose of employing him on another estate shall be deemed to entice such labourer.

(2) The convicting magistrate may out of

the fine award such compensation as he may deem fit to the employer from whom such labourer was enticed.

36. Any employer who without reasonable [35]  
 cause fails within a rea-  
 sonable time to comply  
 with the provisions of sec-  
 tion 10 shall be punishable  
 with fine which may extend to two hundred  
 rupees.
37. Whoever abets any offence against this [36] Act VI  
 Penalty for abet- Act shall be punishable  
 ment of offence. with the punishment pro-  
 vided for such offence. 213.
38. Whoever commits any offence against [37] Act VI  
 this Act shall be triable for  
 of 1901, section  
 214.  
 Place of trial of such offence in any place  
 in which he may be found,  
 as well as in any other place in which he  
 might be tried under any law for the time  
 being in force.
39. Notwithstanding anything contained [39]  
 in the Code of Criminal  
 Procedure, 1898, offences  
 under sections 22, 24, 26,  
 28 and 35, and the abetment of such offences,  
 may be compounded at the option of the com-  
 plainant.
40. Nothing in this Act shall be deemed [38]  
 to prevent any person from  
 being prosecuted under  
 any other law for any act  
 or omission which constitutes an offence  
 against this Act, or the rules made hereunder,  
 or from being liable under any other law to  
 any penalty higher than that provided by this  
 Act for such offence.  
 Provided that no person shall be punished  
 twice for the same offence.

## CHAPTER. V.

### RULES.

41. The Local Government may make [42]  
 rules—  
 (a) prescribing the form or forms in which  
 labour contracts shall be made ;  
 (b) specifying the particulars which shall  
 be stated in such labour contracts ;  
 (c) prescribing the registers of labourers  
 which planters shall be bound to keep ;  
 (d) regulating the accommodation, water-  
 supply, sanitary arrangements and medical  
 attendance which planters shall be bound to  
 provide for the labourers ;  
 (e) for the guidance of officers appointed  
 under section 44 ; and  
 (f) generally, for carrying out the purposes  
 of this Act.

## CHAPTER VI.

### MISCELLANEOUS.

42. Any money ordered to be repaid under [40] Act VI  
 section 10, or section 21  
 Recovery of sums or any sum awarded under  
 due under Act. section 19 or section 20, or  
 any sum payable to an employer under section  
 17 or section 26, may be recovered on appli-

cation to a magistrate having jurisdiction  
 where the person from whom the money is  
 due is for the time being resident, by the  
 distress and sale of any moveable property  
 belonging to that person which is within the  
 limits of the magistrate's jurisdiction.

- [41] 43. The Local Government may, by notifi-  
 cation, direct that pro-  
 cesses issued by the courts,  
 or by any specified courts,  
 in a Native State under  
 any Act for the enforce-  
 ment of labour contracts in force in such  
 Native State shall subject to such conditions  
 and restrictions as may in such notification  
 be prescribed be executed within the presi-  
 dency of Madras as if they were processes  
 issued under this Act.
44. The Local Government may authorize  
 any officer by name or in  
 virtue of his office to make  
 any enquiry necessary  
 under or for the purposes  
 of this Act and such officer shall be guided by  
 such rules or special order as the Local Govern-  
 ment may prescribe.

A. T. PRINGLE,

Asst. Secy. to Govt. in charge, Leg. Dept.

### PRESS OPINIONS.

We publish to-day the full Report of the Select Committee on the Madras Planters' Labour Bill. It will be seen that the Committee propose certain important alterations in the original draft of the Bill, and these seem to go far towards meeting the objections that have been put forward with regard to the Bill. The most important sections that have been altered in Committee are Sections 3 and 7. To Section 3 has been added a proviso that any contract already entered into before the Act comes into force in any area shall continue to be enforceable under Act XIII of 1859. The drafters of the original Bill had apparently not realised the grave inconveniences of applying the new Act to contracts entered into under the old Act; and naturally there were strong protests when it was found that previous contracts under the old Act would not be enforceable when the new Act came into force. But the Select Committee's proviso satisfactorily meets the difficulty.

At the same time, it is pointed out in connection with the same section that it would be impossible to "revive" Act XIII of 1859 after the new Act has once been applied to any area, if the later Act were found in practice to be undesirable. "We have, therefore," says the Select Committee, "to accept the position that this Bill will, when it becomes law and is extended to any district, have the effect of annulling the Act of 1859 for good and all in that district." It seems a pity, nevertheless, that power is not expressly taken in the Bill to provide for this, for there is a precedent supporting it in the Assam Act. A special reference would no doubt be necessary to the Government of India in this connection; but if it were treated as "urgent," presumably the requisite sanction might be obtained early enough. It makes it all the more obvious, however, that each planting district should carefully consider the desirability of having the new Act applied. And in this connection the Select Committee's remarks on Section 1 are noteworthy, namely:—"We have not changed the terms of this section, but we think it right to put on record our opinion that the Government should always give due notice and await the receipt of and consider local representations before bringing the Act into force in any local area." No less noteworthy, too, are the Committee's concluding remarks on Section 3, namely:—"There is no doubt that the Bill will meet the wants of a great number of planters. The Committee, however, are aware that in certain portions of the country there is a strong feeling that the position under the Bill will be less satisfactory than it is at

present. We have endeavoured as far as possible to meet the difficulties put forward without infringing the principles which are at the basis of the Bill."

Under Section 7—the other important section—the Select Committee have endeavoured to arrange matters with regard to short-term "Coast" and "Local" labour by adding a proviso "that any labour contract for a period not exceeding two months, entered into with a labourer who neither is nor is about to be accommodated in permanent buildings on the estate, need not be signed in the presence of such magistrate or other person, but may be signed in the presence of two witnesses." This ought to meet the objection raised that in some districts where "Local" and "Coast" labour is much employed on very short contracts the provisions of the section requiring the signature of all contracts in the presence of a magistrate would cause great inconvenience, and make the employment of any large number of such labourers impossible. Another alteration in the same section is the exclusion of contracts between a maistry and a planter from obligatory signature before a magistrate, the Committee remarking:—"Such maistries are intelligent men and may be expected to understand what they are doing. There are a number of such petty contracts for weeding and digging portions of an estate, and it would be very inconvenient for the planter if he had to attend before a magistrate for the signing of each of these contracts; and it seems unnecessary that he should be compelled to take this course."

Another hardly less important section is Section 26 (Section 25 of the original Bill). The Committee, in view no doubt of the criticisms it evoked in Council, discussed its terms at length, but are unable to suggest any considerable amendment to the section. "It is impossible to make imprisonment the only punishment for neglecting to work, as the aim we have had in view is not to punish the labourer but to get him to work." The Hon'ble Mr. Srinivasa Rao considers that the provision compelling the labourer to pay his employer As. 4 a day should be omitted. The Committee, however, consider that the power of inflicting a fine instead of or in addition to imprisonment should be retained, but have reduced the period of imprisonment to seven days, which they think will be sufficient for the purpose.

Such are the more important suggestions of the Select Committee. Their Report should be carefully and immediately studied in the planting districts and by all concerned; and any further amendments that may seem desirable should be put forward without delay, for the Council meets in the last week of this month. And this applies not only to planters but to those who may be said to represent the labourers in the Council. The Bill, whatever its provisions may be with regard to dishonest appropriation of "advances," so far as the protection of the honest estate cooly is concerned, is a great advance on any previous legislation; but there may still be points that are worthy of consideration in this direction.—*Madras Mail*.

The Select Committee appointed to consider the Madras Planters' Labour Bill, 1903, have completed their labours. Particulars of their suggestions have appeared in a *Port St. George Gazette* Extraordinary, a copy of which has been published in the form of a supplement to this paper. The celerity with which the Committee handled this matter, and the still more extraordinary celerity with which the Bill in its revised form has been placed before the public, show that the Government is desirous of pushing the Bill through without further delay. There is more than a suggestion of irony in this sudden acceleration of speed. It is now thirty-six years since the planters of the Nilgiris and the Wynaad first appealed to the Government of Madras for special legislation in regard to estate labour. They got a Bill in 1866, but it was of no account. Men who were young have grown old without seeing effect given to one of the great desires of their hearts; and some of those who laboured strenuously to set Government machinery in motion with respect to this matter are now no longer among us to note the progress that has at last been made.

Madras Act V of 1866 was the outcome of early agitation in regard to this matter; but it has been a dead letter from the beginning. In 1876 the Wynaad Planters' Association made fresh representations to the Government of Madras, and after repeated appeals during a period of twenty years, action was taken in the appointment of a Special Committee of Inquiry, consisting of two officials and one planter. The recent Bill was the result of this

Committee's investigation, but it had been under the hands of the Government of India, and was, in several points, entirely out of harmony with that Committee's recommendations. It is worth noting that as far back as in 1866 the Madras Government expressed the opinion that any law which might be passed would probably prove in the end more onerous to the planters than "the caprices of their labourers." Planters have long appreciated the force of these words, though being forewarned, they have been forearmed and have not so far had to complain of the passing of any too onerous law.

If conditions have changed since 1896, when the Committee of Inquiry held their meetings, how much greater are the changes that have occurred during the last 26 years? Yet there is no more need now than there was then, of a law of the type of that which regulates the relations between planter and labourer in Assam. The draft Bill submitted to the Select Committee have not made due allowance for certain changes, and did not reflect a right appreciation of the position. Even in its present revised form it is open to hostile criticism, but it is decidedly improved. As an instance of how planters' requests have been misapprehended, we may say that in pointing out the unsuitability of Act XIII of 1859, planters remarked that it was cumbersome, expensive, and so vague that magistrates themselves felt considerable uncertainty as to what their duties under it were. Still, planters asked only for an amended Act. The Committee of Inquiry suggested an entirely new Act; but their report appears to suggest the idea that Act XIII of 1859 should be retained, running concurrently with the new Act. The Madras Government at first framed the new Bill on these lines, but at a late hour clause 3 was introduced, which in its original form had the effect of summarily withdrawing Act XIII of 1859 from force in any district to which the new law might be applied.

Planters are hot against this innovation; but the Select Committee have had to uphold the general principle while depriving clause 3 of a good part of its sting. As the draft Bill stood at the time it was referred to them, it provided that every labour contract should be in writing and should be executed in the presence of a magistrate. The planter was led to infer that the new law could be applied to all planting districts, that Act XIII of 1859 would then cease to have any force there, and that thus the thousand and one petty contracts, of short duration, that he has to enter into in the course of a year—mostly on the basis of advances—would, if he was to have any protection at all from the law, involve his almost perpetually dancing attendance upon a magistrate.

Reading the revised draft as a whole we are glad to find that important changes have been made in regard to these points. It is obvious in the first place that there is no intention of foisting the new law upon a planting district that would prefer the old. An attempt has been made to differentiate between local and imported labour. Certain other modifications have been introduced that obviate any necessity for the execution of all contracts before a magistrate. In short, the Select Committee have gone a long way towards meeting the chief objections raised by planters, and we shall be surprised if the Bill in its new form is not received with feelings of great relief, though not, perhaps, entire satisfaction.

There has been a certain amount of hostility to the Bill on the part of natives of India. We have not seen a single criticism from an Indian member of the Legislative Council or from an Indian writer in the Madras Press, that need be taken seriously. It is noticeable that the Select Committee considered these portions of the Report of the South of India Planters' Inquiry Committee that deal with the matters embraced in the Bill. It is at least as noticeable that no single Indian Councillor or Indian journalist in Madras has studied this report with the care it deserves. It is to be hoped that this will be remedied before the Bill is again taken into consideration by the Legislative Council.—*Madras Times*.

The Select Committee appointed to consider the Planters' Labour Bill have done their work with commendable promptness. They have submitted a unanimous report, which means that the Honourable Member for the Southern District Boards is in complete accord with his European colleagues. Except in the matter of form and nicety, the Committee do not appear to have introduced any material change in the original Bill either as a concession to public opinion or out of considerations of humanity towards the coolies. We have said that we object to the legislation on principle; and so far no ground has been shown for the belief that without

such exceptional law the planting industry in Southern India cannot stand on its legs. We have expressed, and hold to the opinion, that this law has been needed only because the planter is unwilling to pay adequate wages for the labour he requires. Even under ordinary circumstances the Indian labourer will be helpless against his powerful employer. With the help of a one-sided law such as this, he will be, without doubt, reduced to absolute slavery. Indeed, by the Bill certain protection is secured to him at the hands of the magistrate. But this will be only on paper. In Assam we have seen how partial the magistrates have proved to the planters; and in Madras we do not expect to find magistrates who will care to quarrel with their countrymen for the sake of justice to the poor Indian coolies. The planters, as a rule, would not have other than European magistrates among them, and the Government has always been particularly obliging to them. There is not even the guarantee for the coolie that he will get the opportunity to lay his grievances before the magistrate, much less that his grievances will be considered in a spirit of fairness. These are evils inseparable from a partial legislation of this sort; and in India the European, even though he be only a planter, must himself determine his own rights as well as those of the Indian, though they may conflict with one another. The Indian can have no share in the settlement of these disputes even as a magistrate. The coolie is expected always to be at the service of the planter; his hours of labour will be regulated for him. When he will be permitted to approach the magistrate and represent his grievances to him, we are unable to see from the Bill, either as originally drafted or as amended by the Select Committee.

"Estate" was defined in the Draft Bill as land not less than 20 acres in extent. The Select Committee, being of opinion that several estates are small, have altered twenty into ten acres. The definition of the word "planter" has been extended so as to include not only the owner or manager of an estate as in the Draft Bill, but any person owning, managing, or superintending an estate or the chief person for the time being in charge of an estate. The objection to the repeal of the Workman's Breach of Contract Act has been considered by the Select Committee in a very sympathetic spirit; but it is found impossible to revive the Act after the introduction of the new Act. They have, however, considerably modified the Bill so as to make contracts, entered into before the date of the notification extending the new Act to any area, enforceable under the Workman's Breach of Contract Act of 1859. Hence even when the new law comes into force, the planters will have the remedy of the old Act as regards contracts entered into before the Act is actually announced to be operative in any area. As regards contracts with women, it has been expressly provided that no woman shall be capable of binding herself by a labour contract, if her husband or lawful guardian (if any) objects. This will afford some remedy against poor ignorant women being inveigled by interested intermediaries into contracts binding them to labour on plantations, without any idea of the nature and hours of work and of the wages and conditions of life. The necessity for signing a contract in the presence of a magistrate has been dispensed with in case of "any labour contract for a period not exceeding two months, entered into with a labourer who neither is nor is about to be accommodated in permanent building on the estate." The Committee explain that in some districts where local and coast labour is much employed on very short contracts, the necessity to sign contracts before a magistrate will cause great inconvenience and make the employment of any large number of such labourers impossible, and will interfere alike with the progress of planting industry and the opportunities of wage-earners. In the place of the magistrate, two witnesses are to be substituted. Whatever may be said on behalf of planting industry, we are not prepared to say that the guarantee which the presence of a magistrate will ensure can be equally secured by two witnesses; and we fear the modification will encourage the kind of deception already practised on helpless coolies.

The Select Committee, so far as they have improved the Bill, have improved it against the coolie. The Draft Bill, for example, provided that any labour contract might be determined by either party on his giving at least three months' notice of his intention to do so, provided only that the labourer before quitting the estate should refund any advance he might have received in consideration of his engagement to work during the unexpired period of his contract. But the Select Committee feel such great concern for the planting interest that they are of opinion that a

labour contract should not be determined unless a magistrate is satisfied that the planter or labourer has good cause for such determination; for "the planter by the desertion of a large number of his labourers in the middle of the working season would be caused very serious inconvenience." It is added, in the interests of the labourer, of course, that "the planter should not have the power of summarily dismissing the labourers." The result of this equal concern for the planter and the labourer is the new provision that neither party shall be allowed to terminate the contract unless in case of dispute he is able to show, to the satisfaction of a magistrate, sufficient cause for such termination of the contract. We cannot give our approval either to the new provision or to the reasons which the Committee assign in support of it. We understand them merely to mean that the planter should not be left in the lurch even after a three months' notice. Their concern for the coolie is simply ridiculous in the face of the fact that it is the planter that wants this exceptional law and not the labourer. The latter can well get on without a labour Act; and he has no grievance against his contract being terminated after a three months' notice. The alteration which the Select Committee have introduced can have no other effect than that of denying the coolie the only chance of escaping from oppression even after three months. If a coolie is oppressed and feels his position intolerable, the Draft Bill provided for his securing freedom at least after three months. But the Select Committee, which include the Honourable Member for Southern District Boards, have deliberately deprived him of even this chance, and made the planter's grip over him absolute and complete.—*Hindu*.

A *Fort St. George Gazette Extraordinary* issued yesterday contains the Report of the Select Committee, on the Bill to regulate the conditions of labour in the planting districts of the Madras Presidency, together with the Bill as amended by the Committee. As the Select Committee say, the Bill has been divided into six chapters, with the sections slightly re-arranged, following to a great extent the arrangement observed in the Assam Labour and Emigration Act, 1901. Though the terms of Section 1 have not been changed, yet the Select Committee have thought it right to put on record their opinion that the Government should always give due notice, and await the receipt of and consider local representations, before bringing the Act into force in any local area. Section 3 appears to have undergone much discussion at the hands of the Select Committee and they would have preferred, had it been possible, to provide that this Act should be withdrawn at the option of the Local Government from any district where its operation was found unsuitable, with the power to revive the operation of Act XIII of 1859. But since after the passing of this Act, it will be impossible to revive the Act of 1859 the Select Committee have accepted that this Bill must have the effect of annulling the Act of 1859. To Section 6, a proviso is added preventing women from entering into labour contracts against the will of their husbands and guardians. The convenience of the planter has been very largely considered, and Section 7 says that contracts between a maistry and a planter need not be signed in the presence of a magistrate on the ground that such a procedure besides being "very inconvenient" would make "impossible" the employment of any large number of labourers. In cases of disagreement between master and employed, culminating in dismissal by the planter or in the abrupt desertion by the labourer both parties are given rights to appeal to the magistrate. Unnecessary restriction on the recovery of advances is removed and advances given to the labourers are to be paid "on any account" before they quit the estate. A grant of subsistence allowance to "any labourer who is incapacitated by illness or accident" as an alternative to food is provided for in Section 12. According to Section 26 the period of imprisonment has been reduced to seven days and in spite of the protest of the Hon. Mr. G. Srinivasa Rao against compelling the labourer to pay his employer four annas for each day he absents himself "the power of inflicting a fine instead of or in addition to imprisonment" has been retained by the majority. Some other changes have also been made and we propose to deal with the whole question in a future issue.—*Madras Standard*.

It has taken nearly seven years to evolve a draft Bill out of the recommendations of the South of India Planters' Enquiry Committee, and now this Bill is being dealt with so hastily as to make the former delay look worse than ever it did. The Select Com-

mittee recently appointed have issued their report, and this, with the Bill in its amended form, has been published in a *Port St. George Gazette Extraordinary*. The Committee have done their work excellently on the whole, and theirs is not the fault if clause 3 has not received the drastic treatment it deserved. The Committee have taken the view that it is impossible to revive Act XIII of 1859 after the introduction of the new Act. Certainly, that will be so if the new Act be carried in its present form; but there is no good reason apparent why the two Acts should not run concurrently, the one applying to labour contracts between planter and imported cooly and the other to specific work contracts between planter and local labour. The simple fact is, however, that the Government of India have insisted that Act III of 1902 shall, wherever introduced, annul Act XIII of 1859; and the Committee no doubt feel that it would be labour thrown away to go beyond trying to make the new Act as good a substitute for the old as possible. The objectionable retrospective portion of the amendment clause has been cut out, and the Committee have provided that contracts already executed under the Workman's Breach of Contract Act 1859 when the new Act comes into force, shall still be enforceable. That is a common-sense provision. For the relief of planters in particular districts we may also remark that the Select Committee have recorded their opinion that the Government should always give due notice and await the receipt of and consider local representations before bringing the Act into force in any local area. If this suggestion be adopted, the practical effect will be that planters in a particular district may prevent the enforcement of the new Act in their district, and remain faithful to the old. It appears to be well understood that the Madras Government have no intention of putting the new Act into force in any district where the feeling of planters is opposed to it.

A distinction between imported and local labour has been made by the addition of a proviso to clause 7 of the Bill. As far as this goes it is perhaps as efficient a method as could have been devised for differentiating between labourers imported on regular labour contracts and "locals" contracted with to do specific work of short duration. But one point still remains to be explained: ruled outside the provisions of the new Act, under what law will current contracts of this class come, Act XIII of 1859 being annulled the moment Act III of 1903 is applied to any district? The Committee consider that contracts between a maistry and a planter need not be signed in the presence of a magistrate, as such maistries are intelligent and may be expected to understand what they are doing. This and other modifications suggested provide for the execution, without reference to a magistrate, of very short petty contracts for weeding, digging, etc. Such contracts may be signed in the presence of two witnesses, but the option of execution before a magistrate is still available. As the proviso applies only to labour contracts for a period not exceeding two months, it will not fully meet the necessities of planters in all districts; but the plan suggested is probably as good a one as could be devised to meet the requirements of a complicated variety of systems. The clause in regard to "specific performance of contract" appears to have evoked a considerable amount of discussion. This is the backbone of the planter's case. It is what he has been fighting for during many years past. His plea has always been that no punishment of the labourer will recompense the planter for loss caused by the former's failure to perform the work he has undertaken to do. We are glad to see that the Special Committee have stood firm on this point.

In clause 28 a minor amendment of some moment has been made, the effect of which is to provide that from the fine levied under this section any advance due by a labourer to the employer shall be repaid. The clause dealing with seduction of labour has also been strengthened. Other amendments do not appear to call for special remark. Generally speaking, the amendments suggested by the Select Committee will go a long way to meet the objections raised to the former draft by planters in every planting district of South India. The Bill is by no means perfect in its new form, but it is a great deal nearer to perfection than it was, and it probably marks the most favourable compromise that planters as a body could have hoped for. As we have said, the option of refusing the new Bill is virtually left with the planters of each particular district. The Select Committee are correct in saying that the Bill will meet the wants of a great number of planters. They had a delicate task before them. In certain districts there was a strong

feeling that the position under the proposed Bill would be less satisfactory than it is at present. The Committee had to endeavour to meet the difficulties put forward without infringing the principles that are at the basis of the Bill. If we judge their work aright, the new Bill will now be readily accepted in a majority of the planting districts if not in every one of them. At any rate, no district can be placed in a worse position than before unless with the consent of the planters themselves, for they may elect to cling to the present system rather than adopt the new. This point is not made as clear as might be wished in the Bill itself, but we believe we have correctly interpreted the intentions of the Government of Madras. All we have now to suggest is that these intentions should be stated in some official form to the Governments of the Native States of Mysore, Travancore, and Cochin, so that the true meaning of clause 1 should be fully understood by them. As stated in a previous article on the draft Bill, the idea is that corresponding legislation should be resorted to in all these States, and it is desirable that all the Governments concerned should realise that the intention is that planters should have the option of letting Act XIII of 1859 (or the equivalent regulations in Native States) run, or of accepting Act III of 1903, or its equivalent.—*Daily Post*.

## GENERAL ARTICLES.

### THE CEYLON TEA CESS AND BONUS QUESTION.

Mr A. C. Kingsford, Chairman, Planters' Association of Ceylon, has addressed the following letter to the Ceylon Association in London, with reference to the proposed increase in the tea cess:—

In September last I addressed you, on behalf of the "Thirty Committee" with a view to obtaining through your Association the consent of the Home proprietors to an increase in the cess from 30 cents to 50 cents per 100 lbs. of tea, for the purpose of placing the Committee in a position to encourage to its full extent during 1903 the rapidly-growing green tea industry of Ceylon, thereby considerably relieving the overstocked black tea market.

Your Tea and Produce Committee, after considering my letter, passed a Resolution to the effect that, whilst approving of the encouragement given to the green tea industry, they did not consider it necessary or desirable at the present moment to increase the cess, and the following compromise was suggested by Mr. Rutherford:—"That the Thirty Committee guarantee 4 cents per lb. bonus on 7,000,000 lbs. of green tea out of the 1903 cess, which it is proposed should not be increased over its present rate, and in the event of there being insufficient funds from which to pay a bonus on green tea exported in 1903 in excess of 7,000,000 lbs., then the payment of the bonus of 4 cents on such excess quantity shall be a first charge on the unexpended balances for advertising, etc., and on the cess of the following year."

This Resolution you circulated to the Home proprietors, together with my appeal for an increase in the cess, with the result, I think, that two voted for the abolishment of the cess, thirteen supported the proposed increase in the cess, and the rest, perhaps not, unnaturally, in view of your Committee's resolution, approved of Mr. Rutherford's scheme.

My Committee, with the information at present before them, do not consider Mr. Rutherford's suggestion practicable, and at a Meeting held on the 10th instant, twenty-six members being present, passed the following Resolutions:—

*Resolved*:—"That it be publicly notified that the funds available are only capable of meeting the payment of a bonus at 4 cents on 7,000,000 lbs. spread over the year and that should larger quantities be made, say, than an average of  $\frac{3}{4}$  million pounds per mensem, payment will have to be held over from time to time until funds are available; (II.) that the 'Thirty Committee' considers Mr. Rutherford's proposal to guarantee a bonus of 4 cents a lb. for 1903, payable partly out of 1904 funds, extremely inadvisable; (III.) that proprietors at Home be again approached through the Ceylon Association in London, and that it be represented that in view of the outturn of green tea during December, 1902, having been over 700,000 lbs., and of the estimated manufacture for 1903 (submitted in detail) amounting to 12,000,000 lbs., the Committee

would again ask the Ceylon Association in London to consider the question of an increase of the cess, and would push for an increase up to  $\frac{1}{2}$  cent per lb. limited to eight months from 1st May to 31st December, 1903, thus providing funds for the payment of a further bonus of, say, 5,000,000 lbs. at 3 cents per lb."

The position is somewhat changed, both financially and otherwise, since I wrote in September last. It was then anticipated that we should carry forward to 1903, funds amounting to Rs.20,000, but owing to short shipments during the last months of the year, reducing the estimated cess income, the available carry-over amounts to only Rs.8,592.78. (Amount in hand at the end of 1902, Rs.16,047.53, but of this amount Rs.7,454.75 was required for payment of the balance due of the 5 cents bonus.)

Again, the estimated income for 1903, was calculated in September last at Rs.480,000, being based on a crop of 160,000,000 lbs. Messrs. Forbes & Walker estimate this year's crop at 150,000,000. The P. A. estimate is not yet available, but from the district returns received to date, the estimated crop does not appear likely to exceed last year's estimate of 154,000,000, and as our revenue is based on actual shipments 1st December, 1902, to 30th November, 1903, and December last was a considerably shorter crop than is probably estimated for December this year, we cannot count on the whole 154,000,000, and about 150,000,000 is perhaps a safe working estimate; and the revised financial position is therefore as follows:—

1903 cess income 150,000,000 lbs. at 30 cents per 100 lbs.	...	Rs.450,000
Available balance from 1902	...	" 8,592

Total estimate income .. Rs.458,592

Estimated expenditure voted and sanctioned by Government, Rs.470,000, as follows:—

Green tea bonus 7,000,000 lbs. at 4 cents	...	Rs. 280,000
America	...	" 105,000
Continent of Europe	...	" 75,000
Administration, Contingencies, etc.	...	" 10,000

It will thus be seen that the anticipated unvoted balance of Rs 30,000 mentioned in my last letter, and counted on by Mr. Rutherford in his alternative suggestion, is not now likely to be available, and the Committee are already committed to a larger expenditure than their probable income.

Mr. Rutherford suggests that any further payment necessary on a guaranteed bonus of 4 cents per lb. on the total output of green tea during 1903, that we are unable to meet out of 1903 funds, should be made a first charge on 1904 funds.

This is an unknown liability which the Committee are reluctant to incur. They are quite willing to admit that a smaller expenditure during 1904 is possible, and that a charge on account of 1903 expenditure amounting to perhaps as much as Rs 100,000, could be met, if spread over the year; but to guarantee a bonus of 4 cents on any quantity of green tea made, and to make this a first charge, might necessitate the entire stoppage of all work during the first half or more of next year, as the quantity made, at present unprovided for, may amount to 5,000,000 lbs. incurring a liability of Rs.200,000, or might possibly reach 8,000,000 with a first charge of Rs.320,000 against next year's funds.

When I addressed you last, the output of green tea for the previous nine months averaged about 250,000 lbs. a month; since then the monthly output has averaged over 500,000 lbs., and last month exceeded 700,000 lbs.; several new estates are commencing to manufacture, so that given sufficient encouragement, an outturn of a million pounds a month is not at all unlikely. We have already obtained estimates totalling 12,000,000, and this does not include the crops of several estates, so that full estimates of those now making may amount to 15,000,000, and circumstances may add others to this list. The contingency of a 12 to 15,000,000 output was possibly not seriously considered by Mr. Rutherford, when submitting his alternative proposal. I may mention that already over  $3\frac{1}{2}$  millions is sold on contract, apart from Messrs. Finlay, Muir & Co.'s factory outturn, and most of this is for delivery during the first six months of the year, but all contracts are dependent on the bonus being available. It would seem therefore quite possible that the 7,000,000 pounds for which a bonus is provided may be made before the end of July, unless the deferred payment of the bonus checks the output. If no bonus is available from July on, the manufacture might cease or only be continued on a very reduced scale, as at this period, when prices for black tea

should be rising and green tea possibly lower in value, a drop from a 4 cents bonus to no bonus would be seriously felt. That the output of Ceylon green tea should cease, at a time when China, Japan, and India, are all putting teas on the market, should undoubtedly be prevented if possible, but we do not see our way to do this without increasing the cess for a period.

With regard to the voted expenditure for 1903, it is not possible, to now alter the apportionment. Arrangements have to be made some months in advance, and the sanction of Government obtained.

The "Thirty Committee" in September outline the expenditure for the following year, and having announced some months ago that failing funds for a 5 cents bonus on 12,000,000 pounds, feasible only had the cess been increased from the commencement of the year, they would pay a 4 cents bonus on 7,000,000, it is not now possible to reduce this rate.

The same remark applies to the other votes. Mr. Mackenzie and Mr. Renton have to be advised in advance of the sums available in order to allow them time to make their arrangements for the year, and a smaller sum than £5,000, including salary, could hardly be allotted to Mr. Renton.

Of the £7,000 voted for expenditure in America, £4,000 has been given to Mr. Mackenzie for work in previous channels, and £3,000 has been reserved for preliminary expenditure at the St. Louis Exhibition and work in this part of America, where chiefly green tea is drunk, but this vote may have to be reduced by £800 to meet the deficit in the estimates. I think it would have been folly to have ceased all work in America this year, with the duty coming off and the large increase in green tea that has to be pushed. Our votes are meagre from want of funds and not for lack of appreciation of our Commissioner's work. The work of both our Commissioners has been starved of late for want of money, and realizing this, both Mr. Mackenzie and Mr. Renton offered to work for half salary last year. I may mention that nearly all the expenditure in America during the last two years, has been spent in pushing the sale of our green teas, although where possible, of course, black tea has been included in the advertisements.

If the manufacture of Ceylon greens had been commenced in 1895, when we opened our campaign in America, the result of our campaign would be very different to-day, and the position of Ceylon tea generally during the last few years would have been much firmer. It is only fair to Mr. Mackenzie to point out that from the commencement he has persistently advocated the manufacture of green tea, and the main point in his report, after his first visit to America, was that as Americans drink green tea we should endeavour to supply green tea.

At that time black tea paid us well, over-production was still only a bogie, and we were unwilling to alter our manufacture for what we considered was a mistaken fad on the part of our American friends. We determined to proceed on the peculiarly British lines of refusing to alter our goods to suit the requirements of the market. Green teas were wanted; we would give them black. Mr. Mackenzie was instructed to go back and point out how pernicious green tea was, and offer the people black, an article differing as much as cocoa from coffee. What hold we have obtained in America has been through the displacement of China Congou, but we have made about as much impression on the green tea drinking community, as a Japan green tea crusade would make in England. Adversity brought about a change in our tactics, with the result that this year Messrs. Forbes & Walker estimate (bonus permitting) direct shipments to America at 14,000,000 lbs., thus reducing the amount available for export to the United Kingdom to 94,000,000, a total 10,000,000 less than that shipped last year, and 20,000,000 less than the 1900 shipments, and we have to go back seven years to 1896 to find so low a total shipped to the United Kingdom.

The Cess Ordinance was passed for "increasing the consumption of Ceylon tea in foreign lands," the main object being not so much the laudable one of providing the world with a pure tea, but the indirect gain, by diverting our surplus production from the London market; and whether this is done in black or green tea is entirely immaterial. If this can be effected a good deal easier and cheaper by pushing green tea, this surely is the line to follow. Messrs. Gow, Wilson & Stanton in their annual circular, dated July, 1902, state "The world's annual consumption of green and uncoloured tea amounts to nearly 90 millions. Out of that total Ceylon last year contributed about 1 million pounds, and India only 70,000. Surely it cannot be impossible for British tea-planters to adapt the style of their produce to the wants of the large body

of consumers of such teas, and thus supply some portion at least of a new and almost untried market."

This green tea market appears to be the most promising field for exploiting at the present time. The manufacture of such tea has the additional advantage of reducing the supply of black, as for every pound of green tea made a pound of black would be displaced. Hence the advantage obtained would be two-fold.

The development in foreign markets during the last 11 years has been remarkable, and has had the effect of saving the industry, so far, from a crisis such as may yet be probably averted if strenuous efforts are made in the way of more vigorously opening up existing outlets and finding new means of exploiting hitherto untried markets. I think it was Mr. Rutherford who suggested, in 1901, that we should endeavour to turn out green tea on a large scale; and to enable this being done, the black tea producers should subsidise the green tea manufacturers.

I hope I have now sufficiently emphasised the fact, which does not appear to have been previously understood in some quarters, that the aim and object in encouraging the green tea industry, has been the consequent improvement in black tea prices, by a reduction in the output of black tea. Hitherto the difficulty has always been to get the manufacture of green tea undertaken in sufficient quantity, and although there has been a bonus offered since 1896, it was only in 1898 that the manufacture was commenced in a small way, and in no year since has the amount of bonus available been fully applied for.

We commenced with a bonus of 10 cents a lb., reduced it to 7 cents, then to 5 cents, and are now paying 4 cents. The total amount of green tea on which a bonus was paid to end of December amounted to 6,149,862 lbs., costing Rs.347,549.18, or an average bonus of 5.65 cents per lb.

It appears to me that both high and low-grown estates are interested in preventing the supply of tea exceeding the demand. It is true, perhaps, that when common teas, from over-supply, are at their lowest, high-grown teas may be in greater demand and reap a temporary benefit, but the inevitable result of over-supply brings about the necessity for finer plucking from low and medium grown estates, and it is then that high-grown teas suffer in comparison. I notice that the average of the Uda-Pussellawa and Nuwara Eliya districts dropped 1d. from 1899 to 1901.

If the tea planting industry is in a bad way, high and low feel the loss of credit and want of confidence in the enterprise.

The Committee undertake to return the amount of the additional levy asked for, if not required for the purpose stated, by reducing the cess next year, and they also wish me to state, that although the cess is leviable at its present rate until June, 1905, they hope before that time, possibly from the 1st of January next, to lower the rate, apart from the undertaking above. As mentioned previously, a reduced expenditure next year should be practicable. A smaller bonus on green tea, for perhaps six months, may be necessary, and some expenditure in America will have to be carried out in connection with the St. Louis Exhibition, and it may be advisable to continue pushing green tea to some extent. It must be remembered very little money has been spent in the big green-tea consuming districts, apart from Canada.

The continuance of the campaign on the Continent next year will depend a good deal on the results obtained this year, bearing in mind, of course, that no very appreciable results are likely to be at once visible from the disbursement of so small a sum. Mr. Rutherford's scheme would stop all work from the 1st of January, many bonus payments would have also to await settlement for perhaps six months, and for these reasons the Thirty Committee considered his suggestion extremely inadvisable.

Is the producer therefore willing to agree to an increase in the cess for eight months, amounting to  $\frac{1}{5}$ th of a cent, or say  $\frac{1}{30}$ th of a penny per lb., for the purpose of enabling the Committee to prevent a possible deadlock in the manufacture of green tea from July on, and for the probable removal of an additional five million pounds of tea from the black tea market.

As to whether the Cess funds have been well or badly administered in the past is not the question now to be discussed, although personally I consider the lines our Commissioners have worked on have been the only possible ones with the funds at our disposal, and to those at Home I would draw attention to the remarks made by Mr. Rutherford at the last Annual Meeting of the Ceylon Tea

Plantations Company, Limited, who, in reply to a query put by Mr. Brooke with reference to the tea cess, stated:—"As to the tea cess, I see by this mail that the Ceylon Government have passed an Ordinance to increase the tea cess to 30 cents per 100 lbs. I think this is a wise move. It has been proved up to the hilt that it has resulted in Ceylon teas being sold all over the world, and we can only hope that the planters of India, who have applied for a similar cess to be enforced on Indian teas, will be equally successful."

The total expenditure by the Thirty Committee from the commencement in 1894, including this year's voted expenditure, will barely cost  $\frac{1}{4}$ d. per lb. on this season's crop, whereas the expenditure on green tea only, by which 13,000,000 lbs. of black tea is displaced should alone more than recompense the producer for the whole ten years' outlay.

Your Committee were good enough to issue a circular last year, addressed to all Ceylon tea growers, advocating careful plucking, and quoting Messrs. Thomas, Cumberlege & Moss as follows:—"Of the 187,000,000 lbs. and 145,000,000 lbs. respectively produced in India and Ceylon during season 1900, the last 12,000,000 lbs. from the former country and the last 8,000,000 lbs. from the latter were at a moderate estimate, the actual cause of an aggregate nett loss to producers of over £1,000,000 sterling; this on the face of it, is an absurd situation, and it is not to be doubted that by individual or collective action some means will be found to prevent its recurrence."

The best means we can suggest to prevent this recurrence is to encourage the manufacture of green tea to its full extent, and when we recognise that this over-production of 20,000,000 lbs. in 1900 has cost us £1,000,000 sterling per annum since, and a possibility of taking 12,000,000 lbs. of the black tea market is offered at a cost of under £30,000, or  $\frac{1}{33}$ rd of the above sum, it does not surely require much consideration on our part to decide as to whether the money should be provided or not.

The Chairman of the Indian Tea Association (London) at the last Annual Meeting remarked, "If they could only capture half or even a quarter of the market for greens, they could do away with their over-production at a single blow. Here, again, was a need for funds, for the Association could not expect to do such things without large advertising."

I have not lost sight of the fact that the production of a large quantity of green tea from both Ceylon and India may cause a glut in the green tea market, and bring about a serious fall in prices, but this would probably be more felt by the declining Japan trade, and ultimately result in smaller shipments from that country.

I hope your Association will use its best endeavours to obtain the consent of proprietors to the proposed increase, and I take this opportunity of thanking those who supported the Thirty Committee in their last appeal. I have been obliged to go over a good deal of old ground and explain matters rather more fully than would be necessary had I the further opportunity of answering any questions before a decision is arrived at.

## IMPERIAL LEGISLATIVE COUNCIL.

### THE TEA CESS BILL.

The first Meeting of the Imperial Legislative Council this session took place on January 30th (morning), at Government House, Calcutta. There were present:—His Excellency Baron Curzon, P.C., G.M.S.I., G.M.I.E., Viceroy and Governor-General of India, presiding; His Honor Mr. J. A. Bourdillon, C.S.I., Lieutenant-Governor of Bengal; His Excellency General Viscount Kitchener of Khartoum, G.C.B., O.M., G.C.M.G., Commander-in-Chief in India; the Hon. Mr. T. Raleigh, C.S.I.; the Hon. Sir E. F. G. Law, K.C.M.G., C.S.I.; the Hon. Major-General Sir E. R. Elles, K.C.B.; the Hon. Mr. A. T. Arundel, C.S.I.; the Hon. Sir Denzil Ibbetson, K.C.S.I.; the Hon. Mr. Gopal Krishna Gokhale; the Hon. M.R.Ry. Panapakkam Ananda Charlu, Vidya Vinodha Averal; Rai Bahadur, C.I.E.; the Hon. Mr. L. P. Pugh; the Hon. Sayyid Husain Bilgrami; the Hon. Rai Bahadur B. K. Bose, C.I.E., the Hon. Sir Rameshwara Singh, K.C.I.E., Maharaja Bahadur of Darbhanga; the Hon. Sir M. C. Turner, Kt.; the Hon. Mr. G. C.

Whitworth; the Hon. Mr. R. F. Rampini; the Hon. Mr. G. F. T. Power; the Hon. Rai Sri Ram Bahadur; the Hon. Mr. A. W. Cruickshank, C.S.I.; His Highness Agha Sir Sultan Mohamed Shah, Agha Khan, G.C.I.E.; the Hon. Mr. C. W. Bolton, C.S.I.

After sundry other matters had been dealt with, the Hon. Sir Montagu Turner moved for leave to introduce a Bill to provide for the levy of customs duty on Indian tea exported from British India, and to amend section 5 of the Indian Tariff Act, 1894.

He said: My Lord.—This Bill is the outcome of action taken by the Committee of the Indian Tea Association commencing in December, 1900, with correspondence with the Government of Bengal, and culminating in a petition addressed to Your Excellency in March, 1902, signed by a very large number of tea-garden proprietors and others representing an acreage of tea of 416,000 acres as against the total area under cultivation in British India of 520,000 acres. The Memorialists prayed that legislation might be introduced whereby an export duty on Indian tea would be levied, the proceeds of this tax to be devoted to pushing the sale and increasing the consumption of Indian tea in foreign countries.

In acknowledging the memorial, the Government of India pointed out that the request was both novel and unusual, but that it would be granted if it was shown to the satisfaction of Government that the tea industry was substantially of one mind and that no weighty or widely entertained objections were received. It is quite true as described in the Resolution referred to that the request for compulsory legislation for self-taxation from any body of producers is both novel and unusual, but I contend that the circumstances have justified both the making of the request by the petitioners and the consent of the Government of India to legislate. The justification is the necessity for extending the consuming markets of tea, grown in British India, the production of which has for the time being outrun the demand. The tea industry is quite a sound one. It is an industry which demands and obtains the sympathetic consideration of Government, and I believe it will, before many years have passed, reassume its former flourish condition.

It might reasonably be argued that payment of the tea cess should be purely voluntary. But this, as you are aware, My Lord, has been tried without sufficient success to justify its continuance. At no time did the whole industry subscribe as it should have done and latterly there were indications that in due time the voluntary fund would become extinct. The cause of this decrease in subscriptions was perhaps indifference on the part of some proprietors and dissatisfaction on the part of those who subscribed for the benefit of their more selfish (or less enterprising) neighbours. The Committee who had the management of these funds were hampered in their action by the smallness of the fund and the uncertainty as to the continuance of the subscriptions. For to be successful the efforts made to capture foreign markets must be persistent and continuous. Spasmodic ventures in foreign countries result in no permanent benefit to the trade. Furthermore, it has been proved by experience in Ceylon that the imposition of such a compulsory tax as is now proposed can be entirely successful.

In 1893 to provide funds for making a suitable exhibit of Ceylon tea to the Chicago Exhibition a cess of ten cents on every 100 lbs. tea exported was, at the request of the planters, levied by Government and set apart for that particular purpose, *viz.*, expenditure at the Chicago Exhibition. This proved so successful that the levy of the cess was repeated in the following year and raised to 20 cents per 100 lbs. for the purpose of increasing the consumption of Ceylon tea in foreign lands. The system is still in force, but the cess has been raised from 20 to 30 cents per 100 lbs.

To prove the success of the system in Ceylon, the following figures may be quoted:—

In 1896 foreign markets took 12½ per cent. of the Indian crop; in 1900, 17 per cent.; in 1901, 18 per cent.; in 1896, foreign markets took 21½ per cent. of the Ceylon crop; in 1900, 33 per cent.; in 1901, 40 per cent. The result has been that the amount expended from 1895 to 1901 has been some 18 lakhs of rupees devoted to the exploiting of foreign markets.

In the Bill which I am about to introduce it is proposed that a cess at the rate of one-fourth of a pie per pound shall be levied on all tea produced in British India when exported by sea to any foreign port or when exported by land to any territory to which the provisions of section 5 of the Indian Tariff Act, 1897, may

apply. The Bill, if passed, will be in force for five years, to be extended to a further term if Government on the recommendation of the Committee, shall so direct; and the proceeds of the tax which will be collected (as in the case of other export taxes) by Government agency will be made over month by month to the Tea Cess Committee of twenty members who will be a most representative and reliable body possessing the entire confidence of the contributors to the Fund. Finally, the expenditure of the Committee will be subject to an annual Government audit.

The motion was put and agreed to.

The Hon. Sir Montagu Turner introduced the Bill.

He also moved that the Bill, together with the Statement of Objects and Reasons relating thereto, to be published in the *Gazette of India* in English, and in the local official Gazettes in English and in such other languages as the Local Governments think fit.

The motion was put and agreed to.

## PRODUCE AND PLANTING.

With reference to the movements on foot for approaching the Chancellor of the Exchequer on the subject of the tea duty, we trust they may prove effective. It is unwise, however, to expect any satisfactory result at present. The *Daily Telegraph* was not far wrong when, in commenting on the position of tea and tea-growers recently, it said: "Our import duty of 6d. per pound has told heavily against the growers, and strong pressure to get it reduced is likely to be exercised. Income-tax payers, however, are more numerous; they call for relief with a louder voice, and are nearer the Chancellor's ear than the poor struggling planters of India and Ceylon, so that it would be rash to predict any reduction in duty that would tend to stimulate an increase in production."

The question of green tea *versus* black is likely to form the subject of discussion amongst consumers, and there will be considerable opposition shown to green tea in certain quarters. "Anti-Green Tea," writing to the *Westminster Gazette* apropos the tea cess, says:—"In Ceylon this duty, called 'the tea cess,' has been in operation for some years, and, so far as it has been used for advertising black tea, it has been more or less useful, but so far as it has been useful to promote the making of green tea, it is in part a bounty paid by one class of planters to another class (high estates against low estates), without which bounty green tea cannot profitably be made. It is now generally recognised that though an artificial stimulus, by means of a bounty or otherwise, may apparently benefit the persons immediately concerned, it in the long run works harm to the country depending on it. India is quite right in advocating a cess for advertising purposes, but whether it is wise in promoting the sale of green tea, with all the possibilities of facings, etc., is another thing. Why has green tea ceased to be used in England? Simply because it caused sleeplessness and nervous depression. Why should an attempt be made to reintroduce it? Black tea is free from these objections. Its consumption by the natives in India is rapidly advancing by means of the 'one-pice packet' system, and its consumption will, no doubt, be increased by judicious advertising in foreign countries. The consumption of black Ceylon tea is increasing by leaps and bounds; advertising has done its work, and it is thought by many that it can now go alone." If the sale of green tea is to be pushed in the Home market it will be necessary to combat the prejudice against it now existing amongst many people who regard it as harmful.

In its "Hints" for the New Year the *Grocer* says: One good Resolution for the New Year is—Try to sell more tea. A good name for tea stamps a business with the seal of efficiency. The wholesale blender who has stocked tea, as he ought at the prices and qualities recently ruling, should be in a position to help greatly the smaller grocer in his struggle for a tea trade. But the grocer should liquor his blends carefully and regularly, and keep the firm who supplies him thoroughly up to the mark. For although a name for tea benefits the trade in other goods, yet once break faith with your customers, give them a tea they cannot relish, and no trade is so difficult to regain."

Coffee-planters cannot be expected to take much interest in coffee substitutes, but a French paper calls attention to a new one, called "gombo," about which some information may be useful. The new substitute is found in the form of small, dry fruits, often to be seen among the exotic products in which certain merchants deal. According to our contemporary, this is a very agreeable preparation, decidedly superior to the inferior qualities of coffees, and sometimes even comparable with Mocha. It should be mentioned, however, that to obtain this result only well-selected seeds must be employed, and those which are quite ripe, and which have been roasted with great care. It appears that black coffee is supplied by the *Cassia occidentalis* (a shrub belonging to the Leguminaceæ family), growing in the warm regions of Asia, America, and Africa, and emitting a very disagreeable odour. According to M. Bélanger, black coffee figured very prominently at the Universal Exhibition of 1855 in a number of products from Guadeloupe, and in the notice sent to the exhibition with these products, the following interesting statement by Dr. Desbonne occurs: "These nuts are collected and roasted, and, after having been reduced to powder, a very agreeable infusion can be prepared from them very similar to coffee." In the course of Dr. Desbonne's eulogy of this product he maintains that this infusion would answer admirably as a coffee substitute, being far preferable to coffee and chicory. —H. & C. Mail.

### COFFEE IN LONDON.

With the resumption of the auctions on Tuesday the various parcels of new crop coffees that had arrived during the holidays were offered, and included East India, Costa Rica, and Guatemala, says the *Produce Markets' Review* of January 10, 1903. The quality of the former is very unsatisfactory, but the earliest arrivals are often amongst the worst of the season, and reports state that the general outturn is better than last year. Prices, from an importer's point of view, are, no doubt, disappointing, but if maintained on the present basis a healthy and steady trade may be looked for; but, on a higher range, it is evident from last year's experience that the trade on the Continent will not buy, but will be satisfied with Santos and other Brazil growths, a quantity of which is flooding all markets, and also show a very marked improvement in quality compared with a few years ago. There has been a slight decrease in the world's visible supply, but an increase of about 25,000 tons in the European stock during last month, and the year commences with a total world's stock of 774,330 tons against 641,480 tons. Deliveries, however, in both Europe and the United States during the last few months have shown such a marked falling-off, that it is quite likely that the interior stocks are smaller than usual, and that therefore an increased trade will somewhat lower these figures during January.

### TEA IN LONDON.

INDIAN TEA.—The market continues firm, says the *Produce Markets' Review* of 10th ultimo, and with more liberal supplies, coupled with a good selection of most kinds, the demand has improved. The finer qualities have been well bid for, showing a further advance, and as they are much less plentiful than was the case a few weeks ago, a stronger market is quite probable. This comparative scarcity of really stand-out teas may, to a certain extent, be relieved later on by the arrival of the autumnal growths which are reported to be of better quality than those of last season, and will, no doubt, meet with a good reception at remunerative rates. The medium descriptions have met with a good inquiry, the more useful sorts having been freely taken at improved values and, although showing a rise of  $\frac{1}{2}$ d. to  $\frac{3}{4}$ d. from the lowest point, these kinds are still worth attention as they offer comparatively good value. As the supply becomes more restricted, especially from the Assam gardens, some difficulty will probably be experienced in securing the teas, on such favourable terms. The bidding has not been so active for the common grades, the trade having shown less inclination to follow the rise; consequently a larger proportion was available at  $5\frac{1}{2}$ d., and a smaller quantity was withdrawn. There have been numerous complaints during the past season of irregular bulking, including teas bulked in India, which should

claim the careful consideration of the owners of gardens. To bulk tea at the seat of manufacture is undoubtedly the right thing to do, but unless it is efficiently carried out, it causes distrust in the minds of buyers, and turning out the packages on this side for rebulking invariably depreciates the value of the tea. It is clearly, therefore, in the interests of owners that proper care and attention should be given to this subject, otherwise there will be a prejudice against teas so treated in India.

CEYLON TEAS.—This market opened on Tuesday last, after an interval of three weeks, and, with good bidding, a firm tone prevailed for all descriptions, while some kinds were slightly dearer. The lowest grades of Whole Leaf were well taken at late rates, only a small quantity being available under  $5\frac{3}{4}$ d., and these, for the most part, were of inferior quality. For the medium Pekoes the demand was also good, but no change in values can be quoted. In Broken Pekoes, there was again a noticeable absence of teas under  $8\frac{1}{2}$ d., and very little was sold under  $7\frac{3}{4}$ d. per lb., while dusts and fannings remain scarce and dear. At the public sales, 26,100 packages were brought forward, of which about 2,300 were withdrawn.

CONGOU TEA.—The market has been firm for all descriptions, and a fair business has been done chiefly in the lower kinds. Low-priced Black Leafs have been in demand, a considerable quantity having changed hands, at prices fully equal to those previously ruling.

OTHER CHINA TEAS.—Young Hysons and Sow Mees showed a decided decline at the public sale held on Thursday, and the demand being quiet a considerable quantity was withdrawn. A slightly easier tendency was also noticeable for Gunpowders, but the decline was not so marked as in the other sorts, and a fair business is reported. Capers and Scented Orange Pekoes are quiet, with only a limited demand. The public sale figures for the week are as follows:—3,237 packages of green tea were brought forward, of which 1,448 were withdrawn, and 191 packages of fancy tea were offered.

### RUBBER TREES.

#### SCIENTIFIC METHOD OF PRODUCTION.

In that part of Mexico which is penetrated by the Tehuantepec Railroad a somewhat remarkable experiment is being made in producing rubber for market. American capitalists, who have incorporated as the Tehuantepec Rubber Culture Company, have purchased a tract of 5,000 acres on the isthmus, which they are planting with young rubber trees raised from the seed in the company's nurseries. At present, says an American paper, more than a million plants are under cultivation. It is estimated that the trees will be ready for the steady production of rubber at the age of ten years. Men in the business say that a rubber tree, after reaching the age of ten years, will produce rubber milk worth between one and two dollars for the next 50 years. The Gulf terminus of the Tehuantepec Railroad is at Coatzacoalcas, at the mouth of the Coatzacoalcas River. The rubber plantation is inland on the banks of the river, about 40 miles distant. Rubber is obtained from the milk of the rubber tree. This milk closely resembles the white fluid which flows from the milk weed, of which the rubber tree is a distant cousin. The fluid comes from the tree's bark, and cannot be called its sap. In the last year the tropics have sent out more than 100,000,000 pounds of rubber, and so great has been the demand for this material, which is used more and more extensively each year, that thousands of trees have been destroyed.

Until recently it has been the accepted practice for the native to chop his tree down, and by slashing the trunk draw off the white fluid. In the effort to get as much milk as possible he often girdles the tree, and thus kills it, even if he does not sever its trunk. In consequence of this ruthless destruction of the sources of rubber supply, efforts are now being made to obtain the milk scientifically by planting trees and obtaining their milk without injuring them, the same as is done in securing sap for maple sugar. The proper way to tap the tree is to cut a series of V-shaped notches about two feet apart, one below the other, the whole length of the trunk. Thus the milk will flow in a white stream into a pail or similar receptacle. The rubber milk is then separated by machinery, much as butter, when churned. At the present time, however, the natives separate rubber from the milk in several crude ways. One

is to warm the milk in an earthen pan and keep stirring it with a stick. By dint of much stirring a ball of rubber will form on the end of the stick, which will often weigh 25 pounds.

Other natives obtain rubber by pouring the milk into a pit, the sides of which have been washed with the juice of the moon plant, called by botanists, *Calonyction*. As soon as these two vegetable fluids mingle the rubber milk becomes a spongy, elastic, chalk-coloured mass or mat. Rubber thus obtained contains pieces of dirt or stone, which the consumer may find and wonder how it got there. The species that produces the best and most abundant milk, and which is planted in the Tehuantepec plantation, is called the *Elastica castillia*, commonly known as the Central America rubber tree. It grows to a circumference of twenty-six inches in six years. At the end of ten years it will yield six pounds of milk, or about three pounds of rubber. The average custom house valuation of rubber is 42 cents per pound, which would make a return of about 1 dol. 25 cents from each tree. When rubber trees are fifteen feet apart, with 222 trees to the acre, this would mean an income to the planter of nearly 300 dols. When first planted, however, the trees are much closer together. They are then thinned out gradually, and rubber is extracted from the smaller plants, which are cut down, so that there is some return on the investment after the fourth or fifth year. At the end of ten years the thinning has been completed, and the orchard, with its rows fifteen feet apart, can then be tapped for the next half century.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, December 31, 1902.

A dull market is reported by local jobbers for all grades of teas, green and black, but the tone of the market holds firm through the entire list. The holiday season in London, which was over on January 1, was observed by there being held no auctions on the market there, which is in nominal shape, but firm both in Indian and Ceylons.

MONTREAL, December 31, 1902.

Jobbers report that an improved demand for teas is noticed on all grades this week, and several good orders from the west have been received. This, they believe, is the result of light stocks. The retail trade in December has been very good and now that there appears but little likelihood of lower prices, buyers are commencing to make purchases more freely. This condition of affairs also extends to Japan teas, in which there is a decided improvement in the demand in spite of the continued high prices. There has been no change of importance on any of the foreign markets, and locally the quotations are about the same as a week ago.

### DISTRICT ASSOCIATIONS.

#### INDIAN TEA ASSOCIATION (CALCUTTA).

A Meeting of the General Committee was held on the 20th January, at which there were present: Mr. Lockhart Smith (*Chairman*); Mr. W. Warrington (*Vice-Chairman*); Messrs. R. H. A. Gresson, A. C. Lawrie, T. McMorran, G. Pickford, R. R. Toynbee, and T. Trail.

#### SCIENTIFIC RESEARCH WORK.

The Meeting considered letter No. 381, Agri 172R, dated 13th January, 1903, from the Secretary to the Chief Commissioner of Assam, on the subject of the continuance of the Government grant for the conduct of research work in connection with the cultivation and manufacture of tea. In this letter it was stated that the Chief Commissioner had provisionally sanctioned a grant of Rs.3,000 a year to the Association, for a period of three years beginning from the date of the expiry of the existing grant. The grant would be subject to reconsideration if it should be determined to provide for such research work out of the cess to be levied on exported tea.

In the proceedings of the Meeting held on 6th January, it was stated that the Committee proposed to address the Hon'ble the

Chief Commissioner with reference to his expression of opinion that the cost of the research work in question might be appropriately charged to the cess fund. This had been done, and the Committee now noted with much satisfaction Mr. Fuller's decision to sanction, provisionally, an increased grant. They hoped that, after reconsidering the manner in the light of the arguments advanced in their letter, the Hon'ble the Chief Commissioner would consent to confirm this grant.

A discussion took place as to the possibility of putting into operation the scheme of extended investigations which was described in the proceedings of the Meeting held on 20th May, 1902. The total annual cost of this scheme was estimated at about Rs.27,000. Of this amount the Government of Bengal, and the Administration of Assam, would provide Rs.10,000; and it was thought that the industry would be able to contribute Rs.7,000. For the provision of the remaining Rs.10,000, it was decided to invite the assistance of the Government of India.

#### THE CARRIAGE OF TEA.

The Chairman drew the attention of the Committee to the fact that the existing agreement between the Indian Steamer Companies and Tea Estates for the carriage of tea from Assam to Calcutta would expire on the 1st July next. Together with Mr. J. Buckingham, C.I.E., he had recently attended an informal Meeting of the Companies, at which the question of the renewal of the agreement was considered. From what transpired he believed the Companies would be willing to meet the industry very fairly in the matter of rates. He had brought the matter up in order that ample time might be allowed for the consideration of the position. And he suggested that the views of the London Committee should be invited as to the renewal, with special reference to the possibility of the early opening of the Hill Section of the Assam-Bengal Railway.

This suggestion was agreed to by the Committee, and was to be carried out.

### LIFE'S HAPPIEST PERIOD.

When an ancient Greek philosopher was asked which he considered was the happiest time in a man's life, he promptly selected the period between the ages of forty and forty-five. On being pressed for the reasons which induced him to make this selection, the philosopher added: "At forty a man, if he be intelligent, has lost his illusions, and looks upon the world as it is, not as he would like it to be. He is still young enough to partake of the pleasures of youth, yet has sufficient experience never to permit his heart to rule his head; is moderate in all things, and wisely shy of hazardous enterprises." On being further asked which he considered the happiest time in a woman's life, the philosopher paused a long while, and when at last he replied he prefaced his answer by asserting that this was the more difficult question of the two. Finally he said: "When she is too old to be called a girl, and not old enough to be called a woman without the word 'young' prefixed to it. I am unable to be more definite, for the differences among women are greater than the differences among men. The healthy young woman sees only the brightest side of life, and to her vision the future is filled with golden possibilities of which the mental anticipation is delightful."

In this pronouncement it will be noted that the wise old Greek uses the word "healthy" in a qualifying sense. Omit that word and the sentence at once loses more than half its truth. Here is a case which will prove our statement. "From the age of nineteen until I completed my twenty-third year, I did not know what it was to be well for a single day," writes Mrs. R. Huntley, of 65, Ultimo Road, Ultimo, Sydney, N. S. W., under date 19th June, 1902. "But for mother Seigel's Curative Syrup it is doubtful if I should be here to-day to describe my experiences. My ailment was chronic biliousness and dyspepsia. Words are inadequate to convey a conception of my sufferings during that miserable period. I was then a tailor's machinist, employed in that capacity by Messrs. Grodferson & Smith, of the Royal Arcade, Sydney. Ordinary food was poison to me, and I was obliged to exist on soda-water, milk, plain biscuits, and dry toast. Even that fare would sometimes distress me to an intolerable degree. My skin turned sallow, my eyes sank and were surrounded by dark, hollow circles. I slept only by fits and starts, my slumbers being haunted and harassed

by horrible dreams and nightmares. There was a dull continuous pain between my shoulders and in my right side. I grew thinner and thinner, until I was reduced to mere skin and bone, and became so weak that I could hardly walk to my place of business. Often the noise of my sewing-machine, and the close air of the workroom, would bring on a splitting headache that maddened me. Then there were fits of retching and vomiting, which troubled me with great frequency. When there was nothing in the stomach to come up, I would retch and strain until I became exhausted and faint, when my workmates would improvise a couch for me with their cloaks and jackets, and I would lie for hours unable to move. I was treated by three doctors; but I believe the medicines they prescribed irritated my stomach and did me more harm than good. After four years of misery I was persuaded to try what Mother Seigel's Curative Syrup could do for me, and within a few days began to mend at such a rate that everyone who knew me was amazed at the improvement in my condition. The vomiting ceased, the hue of health returned to my cheeks, my eyes brightened, and at the end of two months I was in every respect thoroughly cured."

## MARKET REPORT.

[Per Mail advices of January 16th, 1903.]

### COFFEE.

The London Commercial Record says:—Fair supplies have been brought to the hammer during the week, and with a fair demand no material change in value has occurred. Plantation Ceylon was nearly all bought in, bids being too low for holders' acceptance. Further arrivals of new crop East India did not show any improvement in quality, but the bulk sold at and subsequent to the auctions at about previous prices. Nyassaland was dull of sale even at a decline of 1s to 2s per cwt. Costa Rica, on the whole, was in fair request and desirable qualities maintained the former value. Santos was in good request and high prices were paid for washed. There have been few fluctuations in the market for "futures," and closing quotations show a slight advance for the week owing to "bears" coverings; yesterday Santos for March delivery sold at 26s 7½d, May at 27s 3d to 27s 6d, July at 28s, and September at 28s 6d per cwt. We quote:—

London	...	Santos	...	March delivery	...	26s 6d.
New York	...	No. 7 Rio	...	...	...	4.40 cents.
Hamburg	...	Santos	...	...	...	27¼ pf.
Havre	...	Santos	...	...	...	32¼ francs.

To-day's auction supplies consisted of 31 half-bales Mocha, 50 bags Nyassaland, 398 bags Costa Rica, 358 bags New Grenada, 139 bags Guatemala, 218 bags Nicaragua, 138 bags Ecuador, 235 bags Columbian, 420 bags Salvador and 16 bags Peruvian. The public sales went off quietly, with prices unchanged.

Brazil futures ruled quiet in all markets, and only a small business passing.

Transactions include: March 26s 6d to 26s 4½d, May 27s 1½d, September 28s 3d to 28s 1½d, December 29s.

Closing quotations:—

	Sellers.	Buyers.
March	26/6	26/3
May	27/1½	26/10½
July	27/9	27/6
September	28/3	28/
December	29/	28/9

Brazil receipts 27,000 bags, against 40,000 and 22,000 the two previous years, and exchange ½ lower at 11½.

Hamburg ¼ lower. Havre ¼ lower. New York opens unchanged.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1903. Tons.	1902. Tons.	1903. Tons.	1902. Tons.

Jan. 15	4.30	4.30	4.40	4.50	4.55
Jan. 14	4.30	4.30	4.40	4.50	4.60

## TEA.

INDIA. — Public auctions included 41,200 packages, compared with 36,000 in the week before and 51,600 for the same period of 1902.

The market for common and medium descriptions, especially leaf, has been somewhat irregular, and a good deal of tea was taken out of sale at offers which, in several instances, showed a decline. On the other hand, the smallest improvement in quality was quickly recognised and fully paid for, a strong demand being experienced for the best in all grades.

Latest private cablegrams advise that the Calcutta export to date shows a shortage of 6 million lbs. for the season compared with the foregoing year. Ceylon also advises a marked falling off in the outturn owing to extremely unfavourable weather, the estimate for the current month being reduced to eight million lbs. In the face of these facts, and if statistics of supply are to be considered of any value at all in respect of influencing the worth of an article, the level of price on which tea generally now rests is untrue. The possibility of a reduction in duty, to an extent, bars progress, but once the trade feels the shorter supply this would take second place, as purchases made on the current prompt need not be cleared for Spring and early Summer requirements before the question is settled.

The situation seems to call for patience on the part of importers; they have already gained much, especially in the advance which has taken place under 6d per lb., by not forcing sales on an irresponsive market, and a steady adherence to this policy appears to be under the circumstances the only course open. It may be remembered that in spite of figures for a long while previously having indicated the position, the rise caused by an inadequate supply in the 1898 crop did not really show itself until February, 1899.

The supply of Calcutta and Colombo bought tea which was available in appreciable quantity ex-ship and quay while good profits were forthcoming is now checked, as shipments of higher cost are coming to hand which holders are scarcely likely to quit at a loss considering the outlook; this should have a beneficial effect.

GREEN TEA.—In view of the increased quantity being manufactured both in India and Ceylon, it is satisfactory to be able to report that dealers here find the new style of "faced" tea suitable to the Home trade, and that it is being introduced in place of China sorts. This market should therefore be able to absorb a fair proportion of the kind referred to, and an additional outlet will thus be provided to the advantage of growers.

For 32,400 packages on Estate Account 7½d per lb. was realised, against 7¾d per lb. for 36,700 and 6¾d for 48,800 in the two preceding seasons.

CEYLON.—Catalogues comprised 26,500 packages opposed to 26,100 on the 6th instant, and 32,100 at the corresponding time a year ago.

There was less spirit in the bidding. Buyers were not so anxious to secure low-priced Pekoes and Pekoe Souchongs as at the previous sale, and these, in most cases, were ¼d per lb. easier. The better grades of leaf teas, went at about former rates, and good liquoring Broken Pekoes passed steadily. Many invoices now coming to hand show a falling off in quality, and for them prices ruled irregularly, and generally against importers. Finest lines also scarcely attracted so much attention for the like reason.

The average is rather over 7½d per lb. On the 8th instant it was 7¾d per lb., and 7¾d per lb. in 1902.

JAVA.—About 1,600 packages were submitted. Demand was not so brisk, and common went with a lower tendency.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From January 1 to 13, 1903	...	8,571,951 lbs.
Do. do. 1902	...	11,682,050 "

During the week the following have been printed for sale by public auction:—

		Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	...	29,205	11,988	41,193
Ceylon	...	20,510	5,683	26,193
Java	...	1,047	558	1,605
Total	...	50,762	18,229	68,991

Also 50 packages from second hands.

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/1½ & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated January 16th, 1903, says :—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903 ... ..	969,274	719,372	47,002
1901-1902 ... ..	998,920	726,594	43,576

41,533 pkgs. INDIAN  
26,598 " CEYLON  
1,605 " JAVA

} Total 69,736 packages were offered in public auction this week.

Since the recent advance the market has shown extreme sensitiveness whenever auctions have exceeded buyers' immediate necessities. Hence the comparatively heavy sales of this week, coming before the new year's business had fully opened, resulted in generally slacker bidding and consequent large withdrawals. At the same time the considerable quantity now offering in Calcutta tends to reduce competition in London by giving purchasers the opportunity of supplying their wants in that market, a course which they have largely adopted during this season with results very satisfactory to themselves.

TRANSHIPMENTS OF INDIAN TEA.

	1902.	1901.	1900.
Transshipments to N. America ...	3,719,566	1,001,174	1,628,644
To other Countries ... ..	994,370	437,345	1,144,201

TRANSHIPMENTS OF CEYLON TEA.

	1902.	1901.	1900.
Transshipments to N. America ...	3,650,800	2,159,275	1,303,477
To other Countries ... ..	228,022	378,348	1,260,615

Stock of all Tea in U K. on 31st December, 1902, 107,780,000 lbs.; 1901, 115,685,000 lbs.; 1900, 119,430,000 lbs. INDIAN.—The comparatively heavy auction somewhat depressed the market, especially for teas under 6d. per lb.; where sales were effected, however, prices did not change much owing to the firmness of importers, who, generally speaking, withdrew those teas for which they could not obtain full valuations. Week's av. of New Season's tea sold on Garden Account 1903, 32,744 pkgs., av. 7.68d. 1902, 36,225 pkgs., av. 7.39d. New Season's tea sold on Garden Account 1st June to date 1902-3, 721,296 pkgs., av. 7.28d. 1901-2, 751,221 pkgs., av. 7.97d. CEYLON.—The weight of tea brought forward this week, including the above mentioned Indian sales, proved somewhat heavy and resulted in a weaker tone among buyers, all grades up to about 9d per lb. occasionally showing a decline of about ¼d, although many teas were withdrawn for higher prices. Average for week 7.55d, against 7.35d in 1902. Ceylon tea sold on Garden Account 1st January to date, 48,573 pkgs., av. 7.68d. 1902, 53,153 pkgs., av. 7.42d. JAVA.—The sale passed off with a somewhat quiet tone, many parcels being withdrawn for higher limits.

COCOA. There was a little or no change in prices at the auctions on Tuesday, when 4,416 bags were offered and about 2,000 bags sold. A steady demand was experienced for the 1,480 bags Trinidad catalogued, and 970 bags sold at 68s for very fine red, 61s to 65s for good to fine, and 58s to 60s for ordinary to middling, being valuations. 51 bags Grenada brought 53s 6d to 57s 6d for fair to good, and 5 bags St. Lucia 52s 6d, whilst 28 bags Dominica realised 52s 6d to 53s 6d. Of 192 bags Jamaica a few lots found buyers at 52s 6d to 53s. 128 bags Esmeraldas sold at 60s to 61s 6d. Of 66 bags Guayaquil only the damages sold. Of 2,185 bags Ceylon offered, 750 bags were placed at prices 1s to 3s in favour of buyers—60s to 70s for middling to good bold and medium, 52s 6d to 58s 6d for ordinary ditto, and 41s to 51s per cwt. for common to good small. Bought-in growths comprised 25 bags Colombian, 98 bags Costa Rica, 50 bags Puerto Cabello, and 107 bags African. Privately sales embrace 400 bags Trinidad at auction rates, 300 bags Grenada at 56s to 57s 6d for good red, and 100 bags Guayaquil at 70s per cwt. for fine Caraquez. PEPPER.

BLACK.—The market has been dull in tone, but the close is steadier. For arrival 100 tons Singapore have been sold, including January-March and March-May shipment at 6½d down to 6¾d. On the spot fair sales at 6½d to 6¾d for fair greyish to fair. At auction on the 14th instant 100 bags Singapore bought in at 6¼d, also 90 bags Aleppy at 6½d, 153 bags Wynaad at 6¾d, and 127 bags Lampong at 6d per lb. WHITE—is steady. Sales of Singapore on the spot at 9¾d for fair, and at 9¾d for fair Penang. For arrival the only business reported is a sale of 20 tons Singapore near at hand at 9¾d per lb. At public sale on Wednesday 243 bags Singapore passed the hammer unsold at 9¾d to 10d, together with 77 bags Siam at 9¾d, and 222 bags Penang at 9¾d to 9½d, except 11 bags in odd lots of the last named description which sold at 9½d. Of 13 bags Ceylon 4 bags realised 11½d for fine, and 10½d per lb. for good. To-day quiet, and offered at a shade less money, but sales unimportant. GINGER. COCHIN.—The quantity of fine A cut available is getting very small, and holders of the little offering require very full rates, say 90s per cwt.; demand, however, for this, as for other grades, is of the most meagre description and bids are difficult to get. Catalogues on Wednesday comprised 63 cases 280 bags, all of which retired unsold at 85s to 90s for cut A's, 75s for ditto medium, 42s for washed rough, and 39s per cwt. for small hard dark rough. AFRICAN.—61 bags good bright were bought in at 42s 6d per cwt. JAMAICA.—40 barrels common washed sold at 37s 6d to 38s per cwt. CINCHONA.

The opening auctions of the year, held on Tuesday last, offered the insignificant quantity of 624 bales, which contrasted with 895

Agents for LEA & PERRINS'

WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S LTD.

By Special Warrant  
Purveyors to  
His Majesty  
The King.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98—t.f.o.]

bales at the previous auctions, and 954 bales at the corresponding sales last year. Demand was brisk, and the bulk of the offerings sold at very full rates, the unit average being  $1\frac{1}{2}$ d, against  $1\frac{1}{8}$ d to  $1\frac{3}{8}$ d obtained at the last Amsterdam auctions, and  $1\frac{5}{8}$ d in the London sales of January, 1902.

342 bales *South American* sold—Bolivian cultivated Calisaya quill 5d to  $6\frac{1}{2}$ d, broken quill and chips  $4\frac{3}{4}$ d to  $6\frac{1}{2}$ d per lb.

*Ceylon* was not represented.

224 packages *East India Cinchona* practically all sold, viz., *Officinalis*, chips 3d to  $5\frac{1}{2}$ d, ditto renewed 3d to  $3\frac{1}{4}$ d, branch 3d; *Succirubra*, mossy quill  $4\frac{1}{2}$ d, root  $3\frac{7}{8}$ d per lb.

58 bales *Java Cinchona* were placed at  $2\frac{1}{2}$ d for *Ledgeriana* stem and branch and  $4\frac{3}{8}$ d per lb. for root.

The shipments of *Java* for the first half of January were 227,000 Amsterdam lbs., contrasted with 570,000 Amsterdam lbs. in the corresponding period last year, and 610,000 Amsterdam lbs. in 1901.

Only 627 packages were offered in auction on January 13. They consisted mainly of cultivated Calisaya and East Indian barks. The bulk was sold, two piles only of Madras quillings of Loxa character being bought in, the limit ( $3\frac{1}{2}$ d.) apparently being too high. The prices were generally firmer, the average unit being  $1\frac{1}{2}$ d, or  $\frac{1}{8}$ d higher than the parity at the last Amsterdam sales.

The following shows the number of packages offered and sold:—

	Offered.	Sold.
South American cinchona (Calisaya) ...	342	342
East Indian cinchona ...	227	151
Java cinchona ...	58	58

The approximate quantities of bark purchased by the principal buyers is thus shown:—

	lbs.
The Zimmer and Frankfort factories ...	21,981
The American factory ...	20,020
Messrs. Howards & Sons ...	14,163
Druggists, etc. ...	10,802
The Brunswick factory ...	7,275

Total quantity sold ...	74,241
Bought in... ..	18,900

Total quantity sold ... 93,141

(AVERAGE FOR ALL INDIA 7'68d., JANUARY 16TH.)

The prices paid included the following:—

**SOUTH AMERICAN.**—Bolivian cultivated Calisaya, fair quill, 5d to  $6\frac{1}{2}$ d per lb.; broken quill and chips,  $4\frac{1}{2}$ d to  $5\frac{1}{2}$ d.

**EAST INDIAN.**—*Succirubra*, bold mossy quill,  $4\frac{1}{2}$ d per lb.; fair quill,  $3\frac{7}{8}$ d. *Officinalis*, good quilly chips, 5d to  $5\frac{7}{8}$ d; stem chips, 3d to  $3\frac{1}{2}$ d; branch, 3d; renewed stem chips, 3d to  $3\frac{1}{4}$ d.

**JAVA.**—*Ledgeriana* root,  $4\frac{3}{8}$ d; crushed stem and branches,  $2\frac{3}{4}$ d per lb.

No Ceylon cinchona was offered.

## QUININE.

Sulphate of quinine has met a much better demand this week on the short shipments of Bark for the first half of the month, and value has advanced to 1s per oz. for B&S or H B spot, 1s  $0\frac{1}{4}$ d for March and 1s  $0\frac{1}{2}$ d for May delivery—an advance of  $\frac{3}{8}$ d per oz. About 80,000 ozs. have been placed.

## INDIA-RUBBER.

The market has been quieter for fine Pará, but prices are steady. Sales of hard fine forward delivery at 3s 11d to 3s 10 $\frac{1}{2}$ d, soft ditto at 3s 9d spot and near delivery. Hard entrefine, considerable sales forward at 3s 9d, soft ditto forward at 3s 7 $\frac{1}{4}$ d, and spot 3s 6 $\frac{1}{2}$ d; negroheads, scrappy sales at 3s 2d to 3s 1 $\frac{1}{2}$ d. Cameta in good demand, and fair business doing near delivery at 2s 7d. Island negroheads at 2s 6 $\frac{1}{2}$ d to 2s 6d. Peruvian, small sales of ball at 3s 1 $\frac{1}{2}$ d, and further sellers at this price. Medium kinds continue scarce and in good demand. There were no auctions here to-day.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, FEBRUARY 14, 1903.

[No. 7.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 20th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*February 9th.—Weather—*Strong East winds, very drying. *Crop—*Mostly gathered, one or two backward places still gathering. *Crop prospects—*Coffee is wintering nicely, and a fine spike is appearing, if favourable rains come about the beginning of March next year's crop should be good. *Works—*Weeding, gathering, pruning. *Health—*Good. *Labour—*Abundant.

#### Kotagiri.

*10th February.—Weather—*has been bright and fine with rather cold nights, except on 5th and 6th on which days from 10 to 45 cents rain fell on different Estates down the Ghaut. *Coffee—*is improving in appearance on most places, but, on the whole, coming crops will be a long way below average; spike is very forward, and the next decent shower will bring out a fair blossom, but it is to be hoped rain will not come yet awhile. *Health—*Good. *Labour—*Plentiful. *Crop—*Stripping is going on steadily on lower elevations, but crop is still coming in on the Upper Estates. The continued fall in prices is causing grave anxiety throughout the District, and even the reduced expenditure on coffee under Leeming's System is heavy enough to reduce profits to a minimum with present prices.

### COFFEE IN COORG.

It is scarcely an exaggeration to say that the depression in Coffee has exercised a great influence upon the Report of the Administration of Coorg for the year 1901-02. The expressions "low price of coffee," "depression in coffee," and similar phrases catch the eye all too frequently; and, unfortunately, there is never a word to point to the presence of a silver lining within the cloud that has overshadowed the

Province. It is remarked in one place that an examination of the land revenue holdings during the year shows a slight increase in the extent held on the coffee tenure (acres 101,711); but this does not mean that there had been an extension of coffee-cultivation. On the contrary, the extent of land recorded as actually cultivated with coffee fell from 68,596 acres to 65,732 acres, the decrease being due to the relinquishment of ruined coffee gardens held by natives. The area under European coffee was not materially altered, but there was a slight extension of planting operations in the Kaggatnad taluk. It is remarked that in comparing the actual cultivation of coffee with the total extent held under the coffee revenue, *viz.* 101,711 acres, it must be remembered that that figure includes considerable areas wholly or partially devoid of coffee. In the first place, there is an area, estimated at 11,663 acres, consisting of what are locally known as "coffee-assessed cardamom *malés*." These number 101, and the coffee upon them have almost entirely died out, the cultivation of cardamoms having taken its place. Then, there is an area of 678 acres also held under the coffee tenure, but actually cultivated with cardamoms. If deductions be made on account of these two items, the coffee-assessed area is reduced to 89,370 acres, of which 23,638 acres consists of abandoned coffee and unplanted jungle, while the balance of 65,732 acres represents the area actually under coffee, including 7,339 acres of immature plants.

Even thus there are about 58,000 acres of land nominally under mature coffee; but we may fairly say that the total crop compared with any such area would show an average yield per acre that would be appalling in its smallness. The report states that the assessment leviable under the coffee tenure is ordinarily Rs.2 per acre, but that since the summary settlement a higher rate (Rs.2½ per acre) has been charged on excellent coffee grown on *báne* land, while *per contra* large areas are held free of assessment or at favourable rates in consideration of a variety of circumstances. The following are enumerated as amongst the most important of these circumstances:—(a) the free allowance of 10 acres granted in respect of the authorized cultivation of *báne* land with coffee; (b) the favourable rates allowed during the opening up of new estates; (c) reductions on account of the deterioration of the coffee growth or its eradication for purposes of pasturage, and (d) the concession allowed in the case of the coffee-assessed cardamom *malés*. From the statistics before us we

judge that, roughly speaking, the assessment averages on the total area held by

Natives	(69,781 acres)	...	...	Rs.1-4 per acre.
Europeans	(31,930 " )	...	...	" 1-12 "

Under normal conditions these cannot be regarded as high assessments; but when crop statistics are taken into consideration as well as the depression in prices, it is easy to understand that even a light assessment acts as a heavy burden to a debilitated industry. In the year under reference coffee suffered severely from unusually early blossoming showers "as also from the reaction after the abnormally heavy crop of the previous year." The combined effect of these causes was an outturn roughly estimated at 2,250 tons, or little more than half the normal crop. Official figures are not always readily adaptable to commercial calculations; but we estimate the land assessment referred to above as equivalent (in 1901-02) to about Rs.62 per ton of coffee placed on the market; assuming, of course, that only coffee was grown on these lands. Even though this was not actually the case it is sufficiently obvious that Rs.1-12 per acre is a serious matter to a planter who can only raise, say, 3 cwt. of coffee from each acre of land actually under mature coffee.

Reference is made in the report to the gradual decline in the interest taken in coffee-planting. The phrase is not a very happy one. There was probably no decline of interest, but there was unquestionably a decline in the old readiness to go on hoping against hope and raising coffee only to find that far more money had been expended than the crop raised would realise. Since 1901-02 the position has scarcely improved. Crops may be more promising, but prices have fallen. What this means to Coorg is apparent from the official statement that Coffee is extensively produced in Coorg, its cultivation forms the chief industry of the Province, every one, European and native, being more or less interested therein. During the past decade, it is added, low prices combined with the ravages of leaf-disease and borer have materially affected the industry, with the result that many estates have been altogether abandoned and the majority hardly pay their way. These words give, in reality, but an outline of what the depression in Coffee means to Coorg, and more particularly to the planting population of that Province.

### COFFEE NOTES.

**The Evolution of Coffee.**—At a recent Meeting of the Botanical Society of Washington, Mr. O. F. Cook discussed "Evolution in Coffee; its mutations described and causes suggested." Coffee, he said, is the most important crop grown from seed for the seeds. Although it has been in cultivation about a thousand years the selection of varieties has not been practised. Nevertheless, he finds, sports or mutations are rather frequent. Where several such varieties from other parts of the world have been tested in the plantations of Guatemala, the new sorts present great diversity in other respects, but agree in being less fertile than the parent stock in actual amount of weight of seeds. It is reasonable to associate this relative or complete sterility with the fact that coffee has been unintentionally inbred, new regions having usually been stocked from single trees. And it is further to be noted that reproductive debility is a general characteristic of other inbred domestic plants and of the so-

called sports or mutations which appear among them. It is suggested that both the sterility and the mutations may be due to the same cause, namely, to the absence of normal cross fertilization. This interpretation accords with what may be called a kinetic theory of evolution, under which evolution is viewed as a physiological as well as a morphological process.

**The U. S. Coffee Market.**—Jan. 14. Trading in actual coffee is more active but prices have not advanced on that account; rather they are slightly weaker and are shaded to purchasers of large quantities. Coffee is really cheap and traders are seemingly awaking to their opportunities. Keen judges predict that at last the market is under natural precipitous forces and prices must quickly sink to their lowest level yet, as warranted by the statistical position of coffee, but the prophecy has been heard a long time, and even should it be finally fulfilled it cannot sink so low as to put present prices out of countenance.

\* \* \*

**Guatemala Crop Estimated.**—C. E. Bickford, of San Francisco, writes as follows regarding the coffee situation in Guatemala:—

"Important estates near the volcano are known to be permanently ruined. Others, more distant, will occupy a season or seasons in recuperating. As the distance increases, the damage lessens and many who felt themselves ruined at first will now partly or largely save their crops. As the distance increases the damage lessens and many who felt themselves ruined at first will now partly or largely save

their crops. As a rough hazard we would put the shortage of this crop at 250,000 quintals, say, 185,000 bags.

"New crop coffees have begun to arrive in small quantities, but no business has transpired in these, and none in old crop worth mentioning. The market has been very dull here during the past month, and is likely to continue dormant until the turn of the year."

C. G. Cambron, a San Francisco coffee broker, says that the Guatemala situation will stimulate prices of mild coffees for some time to come. The receipts this season will be greatly curtailed, he declares, and if any coffee is received at all it will be two months late, arriving in February instead of December. The Guatemalan coffee usually arrives at San Francisco first, and is followed in order by the coffees from Salvador and Porto Rico. The shortage will be a temporary advantage to the market in spot stocks.

San Francisco is one cent per pound away from other stocks of the same grades of coffee. There is nearly one cent differential in cost between California and the Eastern States.

Castle Bros., who usually carry a stock of 6,000 bags of high-grade coffee, have bought all the stock in sight. This has strengthened the market materially. This firm is supposed to have a stock of about 13,000 bags at present.

Karl Krische & Co. estimate the receipts of coffee at Rio during January at 275,000 bags and at Santos 525,000 bags.

**Coffee in the U. S.**—Of the imports of coffee into the United States in 1902 Brazil furnished 82.3 per cent. of the total, other American States, 15 per cent., East India and other countries, 2.7 per cent., included in which were Mocha and Java, which are thought to have a large sale but evidently not—the genuine. Besides, it should be remarked that "Java" coffee is included under the head of "East India." The quantity of British Indian coffee imported into the States is extremely small.

The *American Grocer* of 7th ultimo reports:—This market continues dull and weak, and 1-16c. lower on Brazil sorts. Cheap coffee is a sure thing during this year. The total supply is exceedingly large—big enough to take care of nearly two years' wants. Mild sorts are quiet and steady. Good Cucuta, 8½c. The market closed weak.

**Two Birds with One Stone.**—The *Financial Times* remarks:—A Committee recently appointed by the Agricultural, Commercial, and Industrial Society of San Paulo, in Brazil, to inquire into the causes of the fall in the price of coffee has just issued its report, in which a number of measures for reducing the output so as to establish an even balance between production and consumption are proposed. In consequence of this report the Brazilian Government now contemplates placing a duty of 20 per cent. on all exports of coffee, which is to be exacted in kind. The berries thus taken in taxation will be "denaturised" and sold to the planters as manure. By this means exports will, it is estimated, be reduced by one-fifth, and values will rise accordingly. That the theory will work out so smoothly in practice is another matter. But certainly as a fiscal expedient the proposal is ingenious.

Milwaukee capital is interested in a coffee and vanilla plantation in Mexico. The officers of the new corporation, which will be capitalized at \$150,000, will be Milwaukee men who will take all the stock issued. E. A. Sims, Deputy County Treasurer, who has been conducting the negotiations, and who has recently returned from Mexico, where he has been representing the interests of the Milwaukee investors, states that the plantation embraces about 1,000 acres, planted to coffee trees, sugarcane, and vanilla plants.

The consumption of coffee in the United States in 1902 was 11.04 pounds per capita against 10.60 pounds in 1901 and 9.81 pounds in 1900.

Imports of Brazil coffee into New York during 1902 were 4,836,303 bags against 5,602,860 bags in 1901 and 3,748,624 bags in 1900.

Since December 1st considerable comment has been raised in Philadelphia by a circular letter, issued by a local house. The particular paragraph that has excited so much comment reads as follows: "Arabian Mocha 16.25c. roasted, etc., etc." This offering was not confined to roasted Mocha, as sales have been made of one of the above marks, which is supposed to be the highest standard of Mocha, at 13.25c. green; one bale of which was sent to the importer for analysis, who promptly reported to the sender that the coffee was not genuine and that the seller would be prosecuted for substitution, etc. Later on the Mocha house changed its opinion, saying that a mistake had been made and that the sample bale submitted was found upon second examination to be genuine.

Total stock in United States January 1, 2,600,426 bags against 2,148,270 bags January 1, 1902. Brazil stock in the United States January 10, in store and afloat, 2,632,946 bags against 2,441,557 bags at the same time last year. Other than Brazilian, 242,037 bags, against 258,372 bags last last year.

Brazil coffee in New York January 10, 2,084,854. Stock in New York in other coffees January 1, 212,749, in San Francisco, 25,057 bags and in New Orleans, 4,231 bags. Visible supply in the world of all coffees, January 1, 13,212,775 bags.

Reports from Guatemala verify reports of damage done, and that the loss is almost entirely in the soft coffees. The market in San Francisco has now advanced fully one cent on all washed Central American coffee.

**Coffee and Chicory in the U. K.**—The consumption of coffee has been a little better than stationary. Apparently it has decreased by 1,928 tons, or 11 per cent.; but that is not the case. In 1901 there was a good deal exported in a roasted state to the Cape; owing to the termination of the war the volume of that trade has been much reduced; indeed, of all kinds of coffee we exported 18,287 tons only, compared with 33,830 tons in 1901. It is to be noted, however, that the quantity of chicory sent into consumption has been increased by 125 tons; mixtures of the two therefore contained more chicory and less coffee; the latter is seven times as expensive as the former.

As regards the coffee outlook, Messrs. C. J. Leech & Co., in their weekly report on the coffee market, state that the speculative markets have been exceedingly dull and uninteresting during the week, with but moderate price movements. Receipts at Santos have continued on a full scale again, and this has checked fresh buying, but the crop movement is being closely watched for signs of diminution, for many are waiting for that moment to buy coffee, which is now at a very low price. On Wednesday a little breeze sprang up in Havre on vague rumours from Brazil via Paris of Government measures for checking the over-production of coffee in that country. One report was to the effect that an Act had been passed decreeing the destruction of 20 per cent. of the coffee trees, but chopping down trees will hardly get to the root of the mischief. There is only one way to cure the over-production, and that is for the planter to feel the pinch of low prices. Whether that point has been reached with a currency price of 4\$000 in Santos many are dubious about, and point to the large increase in production since 1900. In regard to the current season's crop, Messrs. W. H. Crossman & Brothers, New York, cabled on Wednesday last that,

according to the best and most reliable authorities, the present Rio and Santos crops together are estimated at  $11\frac{1}{2}$  to 12 million bags, and next season's crops at 14 million bags. Presumably these estimates are from the same authorities that Messrs. Crossman & Brothers referred to in their circular of June 2, 1902, when they wrote: "Regarding the next crop, we have received from the same source an intimation that the total outturn may not be much smaller than the present one (1901-1902, 15,496,000 bags), certainly in excess of all records, excepting the crop of 1901-1902." The drought in 1901, ignored in the above intimation, evidently did great damage, and now from "not much smaller than the  $15\frac{1}{2}$  millions of 1901-1902" there is a reduction to, say,  $11\frac{3}{4}$  million bags, a climb down of over 3 million bags, whilst in this reduced total about  $1\frac{1}{2}$  million bags from previous crops is already counted. Deduct this  $1\frac{1}{2}$  million from  $11\frac{3}{4}$  millions, and there is  $10\frac{1}{4}$  millions growth for the present season, or considerably less than in season 1900-1901 of 10,900,000 bags, and till then a record. The drought damage was ignored, and it is quite possible that the damage by the severe frost in Santos in August last may have also been ignored in the above estimate of 14 million bags for next season, and in due course give rise to a levelling down of as many millions a few months hence.

### TEA NOTES.

In early tea-drinking days, when fragrant Bohea was sold for from twelve to twenty shillings and more a pound, poor folk, who could not afford such a luxury, endeavoured to content themselves with decoctions from less expensive leaves. A great favourite of old was sage tea, which was regarded not only as a pleasant, but a particularly wholesome drink. John Wesley, who was a determined opponent of the Chinese leaf, strongly recommended sage as well as mint and pennyroyal, as an excellent substitute; while another enemy of the cup that cheers ventured to prophesy about the middle of the 18th century that the pernicious foreign leaves would quickly become cheaper, wherein he was right, and that tea would then go out of fashion and be replaced by sage, wherein he was hopelessly wrong.

\* \* \*

Tea ought to be gently treated, says the *Merchants' Review*. It is a delicately organized plant and requires delicate treatment from packer, grocer, and cook. Yet the insides of some teapots would "gar you" (as the Scotchman says) think differently. They are not so bad as the condition of the average shepherd's teapot in the Australian bush, which utensil often goes without cleaning from season to season, and often a long time without the exhausted leaves being removed, the new tea being laid upon the old, until the huge tin kettle becomes so full that there is no room for the water. Then, at last, the acrid, partly fermented mass of old tea leaves is thrown out, and a new start is made. The most careless housekeeper does not go quite so far, but how often are the crevices in the teapot's interior scraped? A little dirt in the wrong place may do much harm, and it is surprising how much the flavour of tea suffers if the utensil in which the leaf is infused is not scrupulously clean. Keep the teapot clean. Infuse the tea from five to ten minutes and then pour the liquor into another pot if it is not to be drunk at once. The water should be freshly boiled. If these rules are impressed upon the customer, the grocer's sales of tea will be better than they otherwise would be.

\* \* \*

It is said that the removal of the tax on tea will restore to the American people "a free breakfast table." Do the

American people make their breakfast on tea? How about sugar to put in it? is the inquiry of the *New Bedford Standard*.

\* \* \*

**Dutch Tea-planters becoming Modern.**—Dutch planters of tea in Java are beginning to take to the modern methods of Ceylon planters in the manufacture of their tea. They have adopted a great many things in manufacture which they scorned not four years ago. They used to sun-dry their teas, whereas they now go in for withering. They are also more modern in their methods of fermentation than they used to be.

\* \* \*

**The U. S. Tea Market.**—*Jan. 14.* Activity in tea has revived sooner than expected and is such now that traders could not well be busier. While some large transactions were reported, most dealings have been in small lots, as expected, from that end of the market that abstained from buying on the belief that tea would weaken in price after the first cries for tea were satisfied and the 85,000,000 pound stock was found to look too large. This stock has evidently disappeared from the market, and belated buyers are having a hard time to find any stock at all, even at the firmest of the firm rates that prevail. In a word, the market, rather than weaker, is stronger than ever.

\* \* \*

**Cochin-China Tea.**—A Singapore correspondent at Hanoi Exposition writes that the exports from Cochin-China and Tonquin have greatly increased in recent years, and in proof he gives the following comparative figures:—

		1897.	1901.
Rice	...	775,154 tons.	911,754 tons.
Pepper	...	1,324 "	2,647 "
Tea	...	10 "	149 "

\* \* \*

**Tea Stocks in London.**—On February 1, stocks of tea in London were as follows:—

Ceylon	...	19,800,000 lbs.
Indian	...	70,100,000 "

At the same time last year Ceylon tea stood at 21,600,000, while Indian stood at 73,800,000 lbs.

\* \* \*

**Disputed Biddings at the Tea Sales.**—Friction has been experienced for some time past at the tea sales owing to uncertainty as to whether bids of  $\frac{1}{8}$  d. per lb. are to be allowed. The present rule is, says the *Grocer*, to advance by farthings. Competition, however, for the lower grades of leaf tea is generally very keen, it being the desire of every buyer to get his bid accepted by the auctioneer, and in the shouting that always occurs with active markets, everyone yelling out at the same time, it is difficult for auctioneers to do justice to all bidders, which naturally causes great dissatisfaction. On these occasions a buyer is often prompted to offer  $\frac{1}{8}$  d. per lb. more. Many breaks are divided into two lines, and the buyer then offers a  $\frac{1}{8}$  d. more and "drop"; or if the break is in only one line suggests that it should be divided, and he will give a farthing advance and drop which works out the increased equivalent of  $\frac{1}{8}$  d. per lb. This innovation is resisted by some brokers for reasons of their own, and objected to by others on the ground that it is irregular, whilst there are auctioneers who refuse these  $\frac{1}{8}$  s. at the public sales, but accept them privately. At the Indian auctions last Wednesday a definite ruling was asked upon the subject by more than one buyer, but only the usual stereotyped answer was forthcoming, which means that the matter remains as it did before. It is a great pity that brokers cannot come to a decision among themselves, as the uncertainty engenders a good deal of vexation and irritation between buyers, besides often rendering the sale-room the scene of most disorderly proceedings. But those auctioneers

who present a firm front and back their own decisions invariably command attention; it is the vacillators who fail to keep order.

\* \* \*

**Tea in the United Kingdom.**—During the year 1902 we consumed 6 lbs. of tea per head of population. This is an increase of over  $\frac{1}{2}$  lb. per head in 10 years, and of nearly  $1\frac{1}{2}$  lbs. in 20 years. As the average value of tea as imported was 6'2d., the duty 6d., and the cost of handling probably 3d. per lb., the amount spent per head last year was 7s. 7d., as compared with 7s. 6d. for a smaller quantity in 1892, and 8s. in 1882 for three-fourths of last year's consumption. We are, therefore, spending some 5 per cent. less and consuming 30 per cent. more than we did 20 years ago.

In the past twelve months there was a decrease of £36,000 in the amount of duty paid, corresponding to a falling away of 640 tons in the quantity of tea consumed compared with 1901. There has been so much speculation at Budget time of late years, it is probable that the decrease is more apparent than real. To the public demand for 113,600 tons China and other countries contributed 9,005 tons, or less than one-twelfth; 10 years ago their share was over one-quarter, and 20 years ago 70 per cent. For the first time during the past few years China succeeded in increasing her sale of tea to us, but the quantity, 760 tons, is small relatively; our imports from that country decreased by 1,300 tons in 1902; her increased sale to us was effected, therefore, from the stock in bond in this country. This stock has not been as low for four years as it is now; it is less by 3,500 tons than it was a year ago owing to clearances of China tea. Our exports of tea were 20,300 tons, an increase, for which Canada was mainly responsible, of 940 tons.

\* \* \*

Mr. Renton's Report for 1902 contains an interesting record of quiet progress in various countries. The writer states that he has adhered to the lines he has previously worked on, and continued to make a feature of Advertisements and "Demonstrations." He still believes the best way to make our teas known is through the retailer, by getting him to advertise and by helping him to do so. The great objection to Ceylon tea on the Continent is that it is too "bitter," and to get over this, in some places spoons were supplied made with perforated holders which contained two grammes of dry tea. With these in use the stewing of tea can be easily avoided. The spoon is placed in the cup or glass and boiling water poured on, the spoon being removed when the tea is strong enough for the customer's taste.

The consumption of tea in Germany is increasing, but so far the increase in Ceylons is not so great as in China and Java sorts. With the temperance movement growing and the duty coming down from 6d. to  $1\frac{1}{2}$ d., Mr. Renton looks for a considerable increase in the consumption of tea in Germany in the near future. Trade there and also in France has been bad, and in France there has been the competition of Annam tea to meet, as Mr. Renton mentioned on his last visit to this country. Though the falling off in direct imports to France is disappointing, the Commissioner says that nearly all those who are working Ceylon tea in that country agree that the taste for it is spreading. In Austria the work is making progress, and the Customs Returns to the end of November denote a slight increase in imports. In Scandinavia the increase is quite satisfactory.

In Russia the Princess Shouvaloff arranged to take over the crockery, etc., procured for the Exhibition, and open a tea room, but owing to the death of her husband there has been delay. In Italy and Spain a start has been made, and in Switzerland, though there has been no grant, importers continue to push the tea.

### NOTES.

#### Rubber in Ecuador.

The planting and growing of rubber trees is considered one of the best investments in Ecuador; but very few trees have been planted, on account of the large supply of wild rubber and the fear that some artificial matter might be discovered to take its place.

#### Calcutta Tea Sales.

At the tea auctions on Monday 25,862 packages were put up. There was generally good enquiry for tea at  $5\frac{1}{4}$ d. and upwards at

fractionally dearer rates. Broken Pekoes were a little irregular, not always reaching the limits really desirable. Assams were selling well.

#### Cocoa in the U. K.

The demand for cocoa and chocolate continues to grow. Of the raw article 20,376 tons were worked up by British manufacturers during 1902; this is an increase of 1,470 tons; and of the prepared kinds grocers and confectioners imported 3,626 tons, which was 190 tons more than in the preceding year.

#### Java Quinine.

The exports of quinine from Java during November amounted to 46 cases, of which 32 cases were shipped to Japan, 12 cases to New York, and 2 cases to Singapore. From January 1 to November 30 the shipments have been

	1902.	1901.	1900.	1899.	1898.
Cases ..	1,409	2,038	1,855	1,600	1,072

#### Indian Tea Shipments.

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association: Quantity of tea entered for export to United Kingdom for the second half of January, 1903, Calcutta, 5,214,271 lbs., Chittagong *nil*. Quantity entered during the corresponding period last year:—Calcutta, 5,830,153 lbs., Chittagong *nil*. Total from 1st April, 1902, to 31st January, 1903, Calcutta, 120,882,436 lbs., Chittagong 19,050,600 lbs. Total 139,933,036 lbs. Total from 1st April, 1901, to 31st January, 1902, 146,890,361 lbs.

#### London Tea Market.

Weekly special telegram dated 5th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for medium-liquoring Pekoes and Broken Pekoes as well as the market for common and Broken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souching is 6d. (the same as last week) and the average  $7\frac{3}{4}$ d. ( $\frac{1}{4}$ d. down). The average for the same period last year was 7d. Reuter reports that fine qualities of Ceylon tea are firm. Fair Pekoe Souchongs are quoted at  $5\frac{1}{2}$ d. ( $\frac{1}{4}$ d. up) and the average for the week is  $7\frac{3}{4}$ d. ( $\frac{1}{4}$ d. down). 23,000 packages of Ceylon tea were offered for sale and 19,000 disposed of; while of the 30,000 packages of Indian tea offered, 25,000 were sold at an average of  $7\frac{3}{4}$ d. ( $\frac{1}{4}$ d. down).

#### Cacao in Ecuador.

The chief industry of Ecuador is cacao growing, which is extremely profitable. The world's supply of cacao amounts to some 90,000 tons, and of this Ecuador produces 27,000 tons, or nearly one-third of the total. Land can be obtained at about \$1 per acre. It requires about five years to bring a cacao estate into bearing, at a cost of 15 to 20 cents per tree. The trees yield on an average 1 pound each. For a plantation of 100,000 trees, it costs to bring into bearing, say, \$17,500. At the end of five years it is worth \$50,000; at seven years \$75,000, etc. The production of 100,000 trees would be 100,000 pounds, worth \$11,000 at present prices. The cost of putting this quantity on the market, including labour, etc., would be \$4,000, leaving a net profit of \$7,000. Estates are easily sold at the above figures, and if a capitalist can wait for results for five years, he is sure of a good income. In the meantime, "catch crops," such as rice or corn, can be grown on the same ground, which is so fertile that for the

growing of rice, etc., it is never necessary to plow; a hole is simply made with a machete and the seeds put in, and good returns are obtained.

#### Planting on the Anamalais.

The *Ceylon Observer* writes:—We were pleased to learn to-day from Messrs. Martin and Bannatine, how well the new planting district—fostered by Sir Arthur Havelock when Governor of Madras—is developing. Out of 15,000 acres taken up, about 3,000 have been opened in tea and coffee with cardamoms, cinchona, and some rubber. The plantations run from 3,000 feet upwards. A cart road is already right into the district. Calicut is the port; but Madras will have to be utilised for the S.-W. monsoon part of the year. The railway is coming nearer. Mr. Martin's tea of good jât has made splendid growth and a factory is now being built. Not a few still believe in coffee, if only prices would keep up. Cardamoms do well, but get a wintering; and produce expected to be all sold locally. Cinchona trees (from 15 p. c. Jara seed) are growing well; and Pará rubber in the flats has made growth equal to 6 feet in six months. Altogether therefore, Mr. Martin has reason to be satisfied with the inspection from which he has returned;—nor are the eight Anamalai planters afraid about a labour supply.

#### Bee-Keeping.

In the way of what the French call *la petite culture*, bee-keeping probably ranks best in importance to poultry-keeping, and it is gratifying to find the number of votaries of this small but interesting pursuit are rapidly increasing. There is a large demand for genuine honey in this country which is likely to increase as the supply gains regularity both in quality and quantity. It should be remembered that the profit on bee-keeping does not lie entirely in the honey or any product of the industrious colony which make the hive their home, for, especially in a fruit country or garden land, they fertilize the blooms of the fruit trees, and so increase and improve the crop. There are two main reasons that go far to check the keeping of bees. One is that many are apt to think that the art is a mysterious one, and beyond the comprehension of ordinary individuals; the other, and perhaps the more weighty reason, is that the stings are greatly feared. Now, the first has no foundation whatever to rest upon, and the second but very little. A sufficient knowledge of the habits and requirements of bees to enable one to make a good profit out of the keeping may be quickly gained by any person of ordinary intelligence. And, for the second, when bees are handled in a proper manner they sting very rarely.

### GENERAL ARTICLES.

#### AMERICAN COFFEE TRUST PROPOSED.

WASHINGTON, December 29th.—An international trust to control the output of coffee of the world, established by a treaty signed by the United States and the Central and South American countries, is the startling and novel recommendation of the International Coffee Congress, which met in New York City in October. This recommendation President Roosevelt transmitted to Congress just before it adjourned for the holiday recess. His message and the recommendation, however, have not yet been printed, as is the usual custom with such communications, although no explanation is forthcoming for the delay.

There were thirteen countries represented in the recent Coffee Congress, including the United States and Porto Rico. The United States was the only country represented which was strictly a consuming and not a producing country. The only countries left out of the Conference were the Argentine Republic, Bolivia, Chili, Colombia, Cuba, Hayti, and Paraguay.

When the Congress began its deliberations it was on the announced premise that there was a crisis in the coffee industry. This crisis, however, was more serious to the producer than to the consumer, and, as the producer was in the ascendancy at the Congress, the views of this side prevailed in the conclusions. The most important of these views is embodied in the suggestion that a treaty be formulated as speedily as possible for the purpose of controlling the output of coffee, to the end that the producer may be assured of a profitable price. This recommendation is declared by the Congress to be "unique." It reads:—

As a unique measure, capable of modifying favourably and with all possible celerity the price at which producers sell their coffee—the elimination from the sale and exportation of such a quantity of the universal production that may reduce the supply to the just, reasonable limits of consumption, besides a balance of not more than 3,000,000 sacks of 132 pounds each, having in the beginning for this balance the tolerance which the unrepresented quantity of the present visible stock might demand.

In other words, the treaty which the Coffee Congress resolved should be entered into at once would prevent the importation of coffee to the market "beyond the just demand," never allowing a surplus of more than three million sacks. In order that this treaty may not be delayed, the Congress further resolved that Brazil be requested to call a second Coffee Congress at once, inviting all the coffee, producing countries to take part, and at which the treaty suggested should be drafted and made operative. Other suggestions were made at the Congress intended to increase the demand for coffee and minimize the supply. These included the raising of only the best coffee; the prevention of the shipment of poor or adulterated coffee; the enactment of legislation preventing the sale of adulterated coffee, and substitutes sold under the name of coffee, and the recommendation that coffee be made a part of the army ration of every country interested.

The United States was represented at the Congress by Percy B. O'Sullivan, President of the New York Coffee Exchange, and Thomas R. Dawley, Jr., of New York. Porto Rico was represented by Antonio Mariani.—*N. Y. Tribune*.

### INDIAN AND CEYLON TEA SHARE VALUES.

#### IMPROVEMENT MAINTAINED.

From the following figures, compiled by Mr. George Seton, of the Indian Tea Share Exchange, it will be seen, says the *Financial Times*, that the market value of the forty-five representative companies registered in the United Kingdom, which had recently risen considerably, remains virtually the same. There have been a good many moderate rises in value, but these have been counteracted by reductions in value, in a few cases, of considerable extent. In a few cases, however, dividends have been deducted since the figures were last computed:—

Face value of 45 companies	...	£ 9,500,000
Market value July 1, 1897 (highest point)	...	12,000,000
" Jan. 1, 1902	...	7,000,000
" July 1, 1902	...	6,225,000
" Sep. 1, 1902 (lowest point)	...	6,050,000
" Oct. 1, 1902	...	6,150,000
" Nov. 1, 1902	...	6,300,000
" Dec. 1, 1902	...	6,600,000
" Jan. 1, 1903	...	6,600,000

As the total share and debenture capital of the one hundred and seventy companies altogether registered in the United Kingdom amount to nearly £19,000,000, the fluctuations of the entire volume, based on the above figures, may be thus estimated:—

Face value of (about) 170 English companies	...	£19,000,000
Highest market value, July 1, 1897	...	24,000,000
Lowest market value, September 1, 1902	...	12,100,000
Present market value, Jan. 1, 1903, say	...	13,250,000

This shows a depreciation of, altogether £10,750,000, or of nearly 45 per cent. from top point. Even these augmented figures, it may

be observed, take no account of the many private-owned estates, nor of the Calcutta, Madras, Bombay, and Colombo companies, registered with rupee capitals—the total amount of which it is difficult to compute, but in which the depreciation has doubtless been at least as great.

Mr. Seton adds that it appears probable that the advance, amounting to about 10 per cent., which has taken place since September, is now likely to stop there for a little, until it can be estimated, with some degree of accuracy, how the results of working for the year 1902 are likely to pan out, which can scarcely be sooner than the end of February in the case of the Ceylon companies, and March or April for the Indian companies.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, January 8, 1903.

The local situation is practically featureless, though it is said local stocks are pretty well absorbed. The demand for Ceylons and Japans is picking up slightly. The market is up in London, the auction there having gone at slightly higher rates yesterday. The Calcutta market closed on Monday. From now until Summer there is likely to be a strong market for teas. Ceylon greens manufactured by special machinery to imitate China young hysons are being offered this week at prices which will favourably compete with the figures ruling for China greens. The cup quality is excellent.

MONTREAL, January 8, 1903.

The holiday weeks were, as was expected, very quiet. And yet, in spite of this, a better movement was noted than previously, due, in a measure, to the requirements of a good part of the trade for immediate deliveries, their stocks having become very light. In the Ceylon and Indian markets no marked change has been reported during the past week or so, and in these teas conditions on the local markets are entirely unchanged. Japans on this market have developed no new phase, and it is yet early for any effect to be felt from the abrogation of the United States duty. Speaking of the oft-heard statements regarding the falling-off in imports of Japan teas, a large importer said to us: "One reason for there being no increase in importations into Canada is that the Association has been trying to do away with siftings on this market. They have succeeded to the extent that in 1901, 1,000,000 lbs. of siftings were imported; last year only 80,000 lbs. were brought in. It is likely that most of the siftings have been shipped to Russia, in the form of bricks, where they meet with a ready sale."

### PRODUCE AND PLANTING.

It is somewhat curious to notice the way in which fads are ministered to by public caterers. A correspondent informs us that on visiting one of the co-operative stores he noticed on the menu that tea could be had at 2d. per cup. This, he presumed, was ordinary Indian and Ceylon tea. China tea could also be had, but this being an article likely to be asked for by faddists, was marked at 3d. Our correspondent asked the distinction between the two, and was told that the China tea was a special scented sort, and very delicate in flavour. This need not frighten producers of Indian tea any more than the advice given by the late Sir Andrew Clark to his lady friends to drink only China tea. For the present day economic reasons prevent the majority of people from indulging in drinks that cost 50 per cent. more than they have been accustomed to pay. It is only right, however, that those who call for special brands should be prepared to pay something extra for the gratification of their tastes.

With reference to the letter we quoted last week from the *Westminster Gazette* on the subject of green tea, we notice that Mr. A. Bethune, the London correspondent of the *Times* of Ceylon, replies to it. He says: "Several statements made by your correspondent, 'Anti-Green Tea,' are open to question, but I purpose to refer only to what he says of Ceylon green tea. During the past ten years about £100,000 has been spent in the U. S. A. and Canada in endeavouring to spread the sale of Ceylon black tea,

but, in the U. S. A. at any rate, the progress made has been slow and disappointing. Seeing this, our commissioner, Mr. William McKenzie, has been urging for years that we should turn our attention to 'greens.' The market in these is a large one, the Americans consuming about forty million pounds of Japan green tea, to say nothing of China sorts. The new Ceylon green tea is much liked across the water. Nearly three million pounds were made in Ceylon in 1902, and it is expected that 1903 will see an export of eight to ten million pounds, all or nearly all of it pure uncoloured tea. Indian may also send some five million pounds. It must not be supposed that Ceylon planters are deserting black tea from any love for green. It is simply that there is too much black tea; prices have fallen in many cases below the cost of production, and the new movement has been started to relieve the black tea market. Under these circumstances supporters of the 'Tea Cess' cannot admit that the bonus on green tea—a purely temporary expedient—is a 'bounty paid by one class of planters to another.' Nor is it intended, as your correspondent appears to think, to attempt to reintroduce green tea into this country. We have given England black tea because England likes it. We now propose to give America green tea because America likes it."

There may be, as Mr. Bethune points out, no present intention of attempting to revive the demand for green tea in the British isles, but all the same that demand may arise. If once the prejudice occasioned by stories of its adulteration were removed a brisk demand for green tea would probably spring up. There is a hankering after it in many quarters, for the imagination of modern tea-drinkers has been stirred by grandmotherly stories of the good old days of green tea, and the present generation would like to have an opportunity of testing the truth of its reputed excellence, especially if they were assured that it was as free from any form of adulteration as black tea.

The *Grocers' Gazette*, commenting on the position of tea with especial reference to the next Budget, says: "The future position of tea 'gives furiously to think,' as our neighbours across the water would say. Quantities are accumulating rapidly, and some of the tea has been in for several months. Unlike wine, tea does not improve with keeping. Much of it, of course, is too common to be affected by these considerations, and we are not now speaking of the make-weight article. Better class teas, too, are apt to lose flavour, and it is astonishing how different even a hard Assam, manufactured on the best principles, will taste after being kept, say, three months. At present the market is far from satisfactory; it is, more or less, a case of 'pull devil, pull baker.' Everything now depends upon the importers continuing to play a strong hand, and the slightest weakness on the part of the holders of tea would be hailed as a glorious victory by that faction whose sole aim is to establish a reign of topsy-turvydom. The present is a fight to the finish—a fitting wind-up to a year pregnant with conspiracies, manipulated markets, and an openly vaunted hostility to everything and everybody connected with the tea industry from the producer's point of view. A large section of the buyers do not as yet quite realise (or, perhaps, affect not to) that there is little prospect of a return to the midsummer rates, which were spelling prosperity to the distributors and ruin to the man who supplies them with the article from which they have made their money and their fame. The regenerators of the tea trade are driven almost to a state of frenzy because their usual tactics have not on the present occasion have been successful in breaking up the market, and according to individual temperament they oscillate between assumed jocularly and bilious misery. Cheerily as some of them carry it off, there is an increasingly noticeable undercurrent of sadness—perhaps almost a surreptitious wish that they could throw off their superior attitude and come into the market and buy tea like ordinary everyday men. But this would never do. One must live up to one's reputations, and having once determined to be something special, it would never do to become ordinary. There will probably by the end of January be a large apparent falling-off in deliveries—that is, as against last January (1902). This feature can, however, safely be ignored, as owing to the duty scare last year the deliveries for the month of all kinds of tea were about 10,000,000 lbs. above normal. For the same reason, but in a lesser degree, February and March were also heavy months. Then, of course, the fear was that duty might be put on. Now, just the opposite conditions obtain, and quite naturally buyers are

avoiding paying duty, except for present requirements. This policy, so far as it goes, is all right, but they surely ought to protect themselves by holding bonded stock. Let us suppose that 2d. per lb. should be taken off in April—it may not look probable, but it is quite within the bounds of possibility—all tea not duty-paid would go up with a bound, particularly as there will be no stock at the end of the season for possible contingencies, even should there be enough tea to go round. How, then, would sold forward contracts look?”

A new use has been found for tea according to the British Consul at Bordeaux, who reports that he is informed that tea is largely used to colour brandy, the tannin giving the brown appearance like that produced by long storage in oak casks.—*H. and C. Mail.*

## CALCUTTA TEA TRADERS' ASSOCIATION.

### ANNUAL GENERAL MEETING.

The sixteenth annual General Meeting of the Members of the Calcutta Tea Traders' Association was held at the rooms of the Bengal Chamber of Commerce, at noon, on the 27th January. Mr. Lockhart Smith (Messrs. Williamson, Magor & Co.) in the Chair.

The Secretary having read the notice convening the Meeting, the Chairman said:—Gentlemen,—I have the pleasure to present to you the Report and Accounts of the Tea Traders' Association for the past year. There has been some unforeseen delay in the printing of the Report and it was, I find, only issued yesterday; but as the Report of your Committee is of a brief nature I have no doubt you have all had an opportunity of perusing it ere this. The “masterly inactivity” displayed by your Committee during the year under review is a very satisfactory feature seeing that one of the main objects of this Association is the adjudication of any claims and disputes that may arise between buyers and sellers. It is also satisfactory to find that notwithstanding the fact that claims on a lower limit of value have been admitted since March last, 17 claims only were submitted to the Association, and, of this number, eight were settled without waiting for the decision of the Committee. The improvement in this respect of recent years is undoubtedly due to more care being given to packing at the factory and to a better class of box being used. Your Association continues to impress the importance of these points on the producers and I trust we shall in time find claims for short weight become merely nominal. From the Report you will observe that we have had some correspondence with the Port Commissioners regarding the facilities, or to speak more correctly, the want of facilities at the Tea Warehouse, and although they have endeavoured to meet our complaints, it is, I think, generally admitted that the existing Warehouse arrangements are not quite satisfactory. It is probably generally known that the Port Commissioners have had a comprehensive scheme of warehousing under consideration for some time past, but before committing themselves definitely they are desirous of having the assurance of all concerned that the scheme, when carried through, will be supported. I have been favoured with a plan giving an idea of the relative position of the proposed new Tea Warehouse to the Docks, Railway and River, which is on the table for the information of those present.

The general outlines of the Port Commissioners' proposal are that a large Warehouse be built at the 80 ft. entrance to the tidal basin of the Kidderpore Docks which will be readily accessible to the Railway and River, and the Steamer Companies will discharge their cargo on to a pontoon which will be close to and in direct communication with the Warehouse. It is suggested that the building be divided off into sections in sizes suitable for the requirements of each firm and rents charged sufficient to cover interest, depreciation, etc., on the land and buildings. The Tea Garden Agents sections would be at the north end nearest the river, the Tea Brokers' sections in the middle and those of the buyers nearest the Docks. Teas for sale in Calcutta could thus be placed by the Steamer Companies straight into the Brokers' sections from the inland vessels, while teas for direct shipment to London could in the same manner go into the Garden Agent's section, where the invoices could be completed and the chests examined

while awaiting shipment by ocean steamers. The Port Commissioners would undertake the transshipment of the tea from the warehouse to the ocean steamer at rates covering only the actual outlay, and in order to further minimise the handling of the tea chests the Port Commissioners have under consideration the adoption of the most approved modern appliances for transshipping cargo of such a nature. In this connection it has been proposed that conveyors should be used between the inland steamers and the sections of the Garden Agents and Brokers, and that the tea be transported from the warehouse to the ocean steamers in trollies which could be so constructed as to allow of the upper part containing the tea chests being deposited bodily into the holds by the ships' slings and thus make it possible to transfer tea chests from the warehouse into the ships' holds without any intermediate handlings. It is estimated that a very considerable saving in the annual cost of transshipping and handling teas while in Calcutta would under the proposed plan, be effected, while the risks of damage to tea chests and loss from thefts would be reduced to a minimum. The Port Commissioners have, I understand, taken the necessary steps for acquiring suitable land for the warehouse between the Docks and the River, and the necessary funds have already been voted towards the cost of the building, and, if the scheme has the general approval of the Meeting, a sub-committee might be formed of representatives of the Garden Agents, Brokers, Buyers, and Steamer Companies to meet the Vice-Chairman of the Port Commissioners and discuss details.

Mr. J. D. West proposed:—“That a sub-Committee be appointed to consider the question of the proposed removal of the Tea Warehouse to the Kidderpore Dock, and that the following gentlemen be appointed to the sub-Committee: Messrs. Lockhart Smith (Williamson, Magor & Co.); H. S. Ashton (Shaw, Wallace Co.); H. G. Begg (Begg, Dunlop & Co.); W. T. Carter (W. S. Cresswell & Co.); G. Binyon Paris (Finlay, Muir & Co.), and J. D. West (J. Thomas & Co.).”

This was seconded by Mr. R. H. A. Gresson, and, on being put to the Meeting, was carried unanimously.

No further remarks having been made the Chairman then proposed:—

“That the Report, as presented be received and adopted, and that the audited accounts to 31st December, 1902, be passed as correct.”

This was seconded by Mr. A. C. S. Holmes, and, on being put to the Meeting, was carried unanimously.

### NEW COMMITTEE.

The result of voting for the Committee for 1903 was then declared to be as follows:—

Sellers.—Messrs. Jardine, Skinner & Co., Williamson, Magor & Co., and Begg, Dunlop & Co.

Buyers.—Messrs. Barlow & Co, Finlay, Muir & Co., and Balmer, Lawrie & Co.

Brokers.—Messrs. J. Thomas & Co. and Carritt, Moran & Co.

The Chairman remarked that the rules provided for the election of three firms to represent brokers. As only two firms had been elected he thought it would be in order if he proposed that Messrs. W. S. Cresswell & Co. be invited to accept to accept the vacancy.

Mr. J. D. West, having seconded the proposal it was put to the Meeting and carried unanimously.

There being no further business, the Meeting closed with the customary vote of thanks to the Chair.

## THE SUGGESTED STANDARD FOR COFFEE AND CHICORY MIXTURES.

On 14th January, at the Meeting of Camberwell Borough Council, the Public Health Committee reported that a communication had been received from the Secretary of the Metropolitan Grocers', Provision Dealers', and Oilmen's Association, upon the subject of the letter recently addressed to the Local Government Board by the Battersea Borough Council, pointing out that there is nothing in the Food and Drugs Acts regulating the preparation of the constituents of articles sold as mixtures, and suggesting that steps should be taken to enforce, by legal enactment, the recognition of such limits as the Board may see fit to determine. The Association submitted that the proposal in question is not a practicable one,

and that no good purpose could be served by a Government standard for coffee and chicory. The following report from Dr. Teed, the public analyst, was submitted, when the question of food and drugs mixtures was considered by Camberwell Council, and it was decided to take no action in the matter:—

With regard to mixtures. The remedy seems to me to lie with the purchaser. If the purchaser asks for a sample and gets a "mixture" he has only himself to blame if the "mixture" he gets is not the "mixture" he wanted but failed to ask for. If the purchaser asked for a mixture of equal parts of coffee, and chicory, and received a mixture containing 70 per cent of chicory, he would be prejudiced and the present law would be sufficient to meet his case. In the old case of *Liddiard v. Reece*, a conviction followed, although the coffee demanded was labelled as a mixture of chicory and coffee, on the ground that the price charged was the price for pure coffee, and, therefore, the purchaser was prejudiced. It is impossible to comment on the "prosecution recently instituted at Chesterfield," as the letter of the town clerk of the Battersea Borough Council does not put us in possession of the facts. We are not informed whether "coffee," "coffee and chicory," or "chicory and coffee," was demanded whether the purchase was labelled, and if so whether the purchaser was orally informed of the composition, and what price was paid for the mixture. All these points must have been before the magistrates who dismissed the summons, and in the absence of this information it would be a gratuitous piece of impertinence on my part to assume that the learned magistrates were wrong in their decision. If the Chesterfield authorities considered the decision of the magistrates wrong, it was their duty to ask for a case, and, in the event of its being refused, to have applied for a mandamus to compel the magistrates to state a case. As it is not reported that they took any such steps it is to be assumed that on reviewing the whole facts of the case they considered the magistrates had some substantial reason for their decision.

A motion was adopted that the Association be informed that the Council had already resolved not to take action in support of Battersea.

## NEW YORK COFFEE EXCHANGE.

The annual Meeting of the Coffee Exchange of the City of New York was held Thursday, January 8, and was presided over by President Percy B. O'Sullivan. The first business was the reading of the report of Treasurer James H. Kirby, which showed receipts of \$32,033.54 and disbursements of \$18,519.10, leaving cash on hand, December 31, 1902, of \$13,314.44. The property account of the Exchange is \$462,598.03 less a mortgage of \$280,000, and the total assets over liabilities are \$203,905.18. The gross rentals of the building were \$49,177.15 and the operating expenses \$23,993.11, leaving a balance in excess of the interest on the mortgage.

The report of the Board of Managers was next listened to. It mentions that the total transactions during 1902 reached 10,662,250 bags, which is the fourth largest volume of business recorded, while the deliveries of coffees on transferable notices so far exceed any previous figures.

Deliveries on contract were as follows:

	Bags.		Bags.
January ...	40,000	July ...	115,250
February ...	8,250	August ...	164,500
March ...	80,000	September ...	358,250
April ...	4,000	October ...	37,250
May ...	82,000	November ...	46,250
June ...	39,750	December ...	164,750
Total ...	...		1,139,250

The deposit of margins was moderate in amount in proportion to the volume of trading, the total sum being \$7,336,600, as compared with \$4,487,592 last year.

In response to widespread demand, arrangements were made at an annual expense of about \$1,000 to receive by daily cable the Santos interior receipts.

Additional warehouse licenses were issued during the year and several new depositories for margins have been designated.

Two important changes in the by-laws were made: The first was the adoption of the new forms of contract for "coffee to arrive in store" and "coffee on cost and freight terms." The second was an amendment to Section 41, by which the initiation fee for membership was raised from \$1,000 to \$5,000. The Board feels that the Exchange is to be congratulated that eleven newly-elected members exercised their privilege of buying certificates directly at \$1,000 before the right to sell them at that price had been abrogated.

The report adds that for some years past it has been necessary to borrow money when the period for the payment of taxes came around. The sum of \$11,000 added to the assets by the sale of these certificates has done away with this necessity, and makes available either for a partial payment on the mortgage indebtedness, or for use in any unexpected contingency, a cash surplus, which, in view of the dignity and importance of the Exchange, cannot be considered excessive.

The new edition of the by-laws and rules, which was ratified by the members on November 26, has been printed and is ready for distribution. The funds of the Exchange have been expended with the usual care and economy. The expenses, as shown in the treasurer's report, are approximately the same as last year, though they include a payment of \$1,099.39 for legal services.

Mr. H. M. Humphrey resigned his position as superintendent in April, and Mr. C. B. Stroud, who had been many years in the service of the Exchange succeeded him. To him, the report concludes, and his subordinates, for the faithful discharge of their duties, the thanks of the Exchange are due and rendered.

The Meeting then adjourned.

## COFFEE IN LONDON.

The new coffee that accumulated during the holidays has soon been disposed of, says the *Produce Markets' Review* of January 17, 1903, and the auctions have not been well supplied. The demand has shown a decided improvement, especially from the Continent, and dearer prices were paid at the early part of the week, but since then there has been some reaction,.....a few lots are reported to have been re-sold on the market at 3s. to 4s. profit. The quality of the new East India continues very unsatisfactory and to effect sales low prices have had to be taken. Larger quantities of Columbian have come to hand, and as merchants have shown a desire to sell they have been easily disposed of. In the terminal market a much larger business has been transacted than for some time past, but prices have fluctuated within narrow limits, and at the close there is little change from last week.

## TEA IN LONDON.

INDIAN TEA.—The market has developed an easier tendency for some grades, says the *Produce Markets' Review* of January 17, but no actual fall in prices can be recorded. The teas most affected are those from 6½d. downwards, but owing to the firmness of holders the bids in most cases were refused, and consequently an increased quantity failed to pass the hammer. This easier feeling is not due to any statistical change in the position, which remains on a much sounder basis than for several seasons past, but to a certain section of the trade holding aloof from the market with the view of buying on more favourable terms later on. The returns for the next month or two will in all probability compare unfavourably with a similar period of the past two or three years, when the duty payments were considerable owing to anticipations of an increased duty. There is no prospect of a repetition of this in the forthcoming Budget, and as the trade will only clear tea to meet their immediate requirements there will doubtless be an accumulation in the bonded stock. This is already apparent in the clearances this month, which are 3,000,000 lbs. smaller than for the same time in January, 1902. The available supply of tea, however, is 8,000,000 lbs. smaller than at this period last year, and, although there may be fluctuations in values accompanied with temporary declines, there is every reason to expect that the present level of prices will on the whole be maintained, as the consumption bids fair to be quite equal to the supply. The more remunerative results of the past few months for the lower grades should not be an inducement to owners of gardens to resort to coarse plucking, which has invariably been the case in former seasons, but they should estimate as nearly as possible the probable consumption. There has been, and more particularly in the past year, an increasing demand for Indian tea for other markets, with every prospect of a further development in this direction, but it is not likely for some time to come to be of sufficient importance to relieve this market of any large surplus imports. There is a matter that has been often referred to, but little or no attention has been given to it, viz., the

condition of the packages which contain small tea. It is surely the business and to the interest of those who are responsible for the packing to see that the packages are in such a state as to retain the contents intact in transit. This might be secured by the introduction and use of veneer packages, which are eminently suitable for small and dust teas. As the matter stands now, carriers refuse to accept delivery where there is even a suspicion of leakage, unless the packages are canvassed—a charge hitherto borne by the trade, but which ought to be the importers' responsibility, as each package is supposed to be inspected and returned in sound condition, unless otherwise described on the weight notes. Of the 41,300 packages submitted to public auction 13,000 were withdrawn, a good proportion of these having been since disposed of at an improvement on the prices bid at the sale.

**CEYLON TEAS**—Good supplies were brought forward at the auctions on Tuesday, but a quieter tone was noticeable, with a slightly easier tendency, although the teas, for the most part, showed a falling-off in quality. The lowest grades of Whole Leaf were unchanged, very little being knocked down under 5½d., as, although lower bids were occasionally made, the lots were withdrawn, merchants refusing to sell at the reduction. Some of the medium Pekoes, however, ruled less firm, and in many cases sold in favour of buyers. Broken Pekoes have maintained recent values, and only a small quantity could be bought under 7½d. per lb. The public sales comprised 26,600 packages, of which about 5,500 were withdrawn.

**CONGOU TEA**—There have been no public sales this week, and consequently business has been limited. A few transactions have been reported privately, at prices fully equal to those previously ruling. There has been a limited enquiry for fine Monings, but most of the business done has been in the lower descriptions.

**OTHER CHINA TEAS**—In consequence of the easier tone in the Green market a better business has been transacted during the past week. Good Gunpowders are now obtainable in the neighbourhood of 1s., and a considerable quantity has changed hands. The demand for Young Hyson remains quiet, and a further slight decline was noticeable at Thursday's auctions. The market is particularly bare of Oolong under 1s., except the common sorts, and Capers remain unchanged. The following are the public sale figures for the week:—1,689 packages of Green Tea were brought forward, of which about 300 were withdrawn.

### COFFEE IN 1902.

#### AN AMERICAN VIEW.

With the world's production largely in excess of requirements, prices have sagged throughout the year, with the average cost of the article the lowest on record.

During the crop year ending June 30, 1902, the total receipts were 15,439,000 bags at the Brazil ports of Rio and Santos, in itself enough to meet annual requirements. When to the yield in Brazil is added that of the East Indies, Mexico, Central America, United States of Columbia, Venezuela, West Indies, there rolls up an aggregate production of over 19,000,000 bags. This in itself is sufficient to account for an increase in the world's visible supply of 4,393,704 bags in a single trade year. On January 1, 1903, the visible supply was 13,212,775 bags, against 10,870,930 bags January 1, 1902.

The imports of coffee for the trade year ending June 30, 1902, were the largest on record, exceeding one billion pounds. The United States Bureau of Statistics reports as follows:

Year ending June 30, 1902.	Pounds.	Value.
Imports	1,091,004,252	\$70,982,155
Exports	34,462,615	2,867,582
Net Imports	1,056,541,637	68,114,573
Net Imports, 1901	809,036,029	58,681,620
Net Imports, 1900	748,800,771	48,777,126

	Pounds.
Total, three years	2,614,378,437
Average per year, 1900-1902	871,459,479

The per capita consumption based on imports is little above 11 pounds, against 10.60 pounds in 1901, 9.81 pounds in 1900, an annual average of 10.47 pounds.

Brazil furnished 82.3 per cent. of the total supply of the United States; other countries on the western continent other than Brazil

15 per cent.; the East Indies and all other countries, 2.7 per cent., and yet Mocha and Java coffee is sold (?) all over the United States, while the imports do not amount to 2 per cent.

The imports for the 11 months of 1902, ending November 30, were 872,491,437 pounds; exports, 41,702,446, leaving net imports of 830,788,991 pounds. Estimating January, it is probable the year's imports will fall below those of 1901.

The year opened with coffee subject to speculative manipulation, with the result that prices were forced to the highest of the year. The bears, however, came out triumphant and have steadily forced prices down, closing on a basis of 5½c. for No. 7 Rio, with the January option \$4.35@4.40. The quality of the 1901-02 crop averaged better than usual, so that the higher grade of Rio and Santos coffee is relatively cheaper than the lower grades. The following table is eloquent of the course of the market and the influence of oversupply to demand.

The following table shows the average monthly and average annual spot cost of coffee:

	No. 7 Rio. Cents.	Maracaibo. Cents.	Padang. Cents.
January	6.31	8.33 @ 8.83	19.25 @ 20.00
February	5.71	7.75 " 8.25	19.25 " 20.00
March	5.68	7.75 " 8.25	19.25 " 20.00
April	5.53	7.62 " 8.25	19.25 " 20.00
May	5.46	7.50 " 8.50	19.25 " 20.00
June	5.25	7.50 " 8.50	18.50 " 19.00
July	5.33	7.58 " 8.65	18.50 " 19.00
August	5.54	7.21 " 8.21	18.00 " 18.50
September	5.46	8.00 " 9.00	18.00 " 18.50
October	5.42	8.62 " 9.00	17.00 " 17.50
November	5.25	8.00 " 8.75	17.00 " 17.50
December	5.25	7.87 " 8.30	17.00 " 17.50
Average, 1902	5.52	7.81 " 8.54	18.35 " 18.96
" 1901	6.42	7.72 " 8.14	18.08 " 19.49
" 1900	8.24	9.74 " 10.39	21.90 " 23.16
" 1899	6.18	7.74 " 8.57	24.50 " 25.59
" 1898	6.30	8.37 " 9.14	24.04 " 24.99
" 1897	7.73	12.92 " 13.45	23.59 " 24.71
" 1896	15.00	13.88 " 19.30	23.68 " 24.41

### TEA IN 1902.

#### AN AMERICAN VIEW.

The year closed with stocks in warehouses nearly equal to a year's consumption. During November imports were 16,667,151 pounds, and withdrawals light, as importers were waiting until after January 1 to withdraw stock in order to have it entered duty free. The following statement shows the movement to October 31, 1902.

	Pounds.
In warehouses January 1, 1902	47,606,789
Imports ten months ending October 30	75,603,734
Total supply ten months	123,210,523
Less exports ten months	823,214
Net supply ten months	122,387,309
Less Stocks warehouses October 31	64,126,785
Deliveries ten months	58,260,524
Imports November	16,667,151

The consumption is about 80,000,000 to 85,000,000 pounds, and as withdrawals were below this quantity, it is certain stocks in first and second hands and in retailers' stocks were never as low as on January 1, 1903.

The Chinese Empire furnished 54.2 per cent. of the total imports; Japan, 33.7 per cent.; all other countries, 12.1 per cent.

	Japan. Good to Medium. Cents.	Formosa. Superior. Cents.
Average, 1902	22.04 @ 31.33	25.12 @ 26.04
" 1901	26.17 " 27.65	25.83 " 26.83
" 1900	26.24 " 27.37	26.08 " 27.54
" 1899	26.50 " 27.50	26.75 " 28.58
" 1898	21.47 " 22.63	24.89 " 25.97
" 1897	17.71 " 18.83	20.42 " 21.47
" 1896	14.62 " 19.62	19.62 " 20.50

## THE INDIAN TEA CESS BILL.

## CONTEMPORARY OPINION.

As our readers know we have never been in favour of a compulsory Tea Cess, says *Capital*, but as it has been decided to legislate on the subject and as the Indian Tea Cess Bill has been introduced in the Council of the Governor-General, it falls to our lot to criticise it, and we must say that a more unsatisfactory shadowy skeleton of a Bill has rarely come under our notice. It will be observed that virtually all the powers of the Bill are contained in Section VII, which empowers the Governor-General in Council to make rules to carry out its purposes.

Now if there is one thing more than another against which the Chamber of Commerce has taken a stand, it is against the pernicious practice of empowering Government to make rules under its Acts. As Sir Patrick Playfair rightly observed at a Meeting held at the Royal Exchange on the 12th of February, 1900, to protest against the proposed Mines Act: "Legislation by rule is an undesirable method. The imperial legislation was created not only to frame the law of the land, but also to prescribe the obligations devolving upon individuals and to define the extent of executive interference and control." His views were entirely supported by the Meeting. We cannot congratulate Sir Montagu Turner on his maiden attempt at legislation.

The speech made at the last Friday's meeting of the Viceregal Council by the Hon'ble Sir Montague Turner, in introducing this measure, does not seem to represent accurately the scope of the cess proposed to be levied. We are not as yet aware that the original plan and purpose of the Tea-Expansion Committee, at whose instance this curious and novel measure is proposed to be passed by the legislature, have in any way been modified. The main objective of that plan was known to be the expansion of the tea-market in India itself. Messrs. Andrew Yule & Co., the agents of the Tea-Expansion Committee, have, for the last two years, or so, been steadily working towards this end; and it is to help this work, primarily, we believe, that the original proposal to levy a cess on all exported tea, was made. Sir Montague Turner, however, has left this out altogether. He said that the tax would be "devoted to pushing the sale and increasing the consumption of Indian tea in foreign countries." He said, further on, in his speech, that the justification for it is *the necessity for extending the consuming markets of tea, grown in British India*, and did not refer at all to "foreign markets" alone. The whole thing thus seems to have been presented in a somewhat hazy, indefinite, and in view of what had been proposed before and what is already being done, in a very suspicious way. This makes it difficult for us to consider the Bill in one of its most important aspects. If the object of the tea-expansion movement be to capture "foreign" markets only, as the Hon'ble Sir Montague Turner said it was, then we have little or nothing to say against the proposed measure, so far as the *principle* of the cess is concerned, though even then it is questionable whether the administration of the cess could be left so absolutely in the hands of a non-official and independent Committee, as the present Bill proposes to do. But, we cannot as yet be fully assured that the money raised by this cess will not be devoted to the expansion of the tea-market in India. And our suspicions on this point are due not only to the previous declarations of the Indian Tea Association on this subject but equally also to the fact that there is very little room for any large expansion of the markets for Indian tea, outside India itself. The United Kingdom is the largest consumer of Indian tea, and it is notorious that there is really no further room for the expansion of our tea-market in the British Isles. Is there any possibility of increasing to any material extent the consumption of Indian tea on the continent of Europe? This also does not appear to be very likely; for, on the Continent, they are already developing a taste for China tea. America consumes very little tea, their preference being for cocoa and coffee, and there is but little hope of a large and immediate demand being created for Indian teas in the American market. These considerations point to Asia, and pre-eminently to India, as the best field of exploitation by the Indian tea-growers. And it is well-known that Lord Curzon, on being acquainted with the present difficulties of the Indian tea-industry, threw out the hint that an attempt should be made to induce the tea-habit in the Indian people. This, as we all know, is the

genesis of this movement, and considering all these, it is impossible to accept Sir Montague Turner's statement that the cess will be used to create new markets and expand the existing markets for Indian tea only in foreign lands as absolutely accurate. Indeed, it will be almost impossible for the Government, and it would be absolutely unjustifiable also, to limit the powers of the Tea-Cess Committee in regard to the countries where they will have to push the sale of their article, with the money raised by this new cess. In spite of Sir Montague Turner's statement, therefore, we are compelled to take it that the object of the cess is to induce the tea-habit in the Indian people, and, therefore, we feel bound to enter our most emphatic protest against this novel measure. On the face of it, this new Bill appears, no doubt, to make for State-socialism and we know that some of our prominent economic thinkers believe that the economic salvation of a people situated as those of India, must and can only be worked out by some sort of State-socialism. We ourselves believe in this doctrine. Having no organised capital in the country, and lacking also the capacities for industrial or commercial organisation, our only chance, strictly speaking, lies, perhaps, in the co-operation of the State with the people, in the development of the natural wealth of the country. In the absence of organised capital in our own hands, and of State-socialism on the other hand, the only way to develop the resources of the country can and must be by means of foreign capital. This, however, is exploitation and not development, and exploitation spells economic serfdom, and not economic progress, which can only be attained through economic freedom. So, on principle, we are for some healthy programme of State-socialism in India. But State-socialism is good only when the interests of the State are absolutely identified with those of the people. This, however, is not the case, in truth, with us in this country. The State in India, as represented by the British Government, is a very curious and complex organisation and has to look to and provide for other interests than those of the Indian people. The State in India has two aspects. On the one side, it is the representative of the ruling country and nation, and has, therefore, to always look to the interests of the ruling race, both commercial and otherwise. Nay, it has to do more: it has to give necessarily preference to those interests over the interests of the Indian people, in all cases where there is conflict and competition between these. On the other hand, the State in India is also a representative of the Indian people, the protector of their interests and the promoter of their well-being. And this curious composition of the Indian Government differentiates it from all other civilised Governments in the world, and, therefore, State-socialism, though it may be accepted as good in theory, cannot, necessarily, work well in practice, in this country at the present time. It would, practically, mean the promotion of the economic interests of the ruling people and the British capitalists, at the expense of those of the children of the soil. This is what the proposed Tea-cess evidently aims to do—namely to create a market for Indian tea, grown by British capitalists in India, with a view to help them to earn their usual dividend on their capital outlay in the tea-gardens in India. We are, therefore, compelled to protest against this measure.—*Bengalee*, Feb. 5.

To return to Sir Montague Turner's Bill, we find it beyond our capacity, we confess, to discover any justification for it, in the long speech with which he introduced it before the Viceregal Council, on Friday last. Indeed, Sir Montague himself seems to be conscious of the weakness of his cause and the only grounds on which he found it possible to support it are practically four. The first of these grounds is that the tea-industry is in a bad plight just now; second that it is really a sound industry and, therefore, deserves sympathy and help; third, that the proposed cess is really of the nature of a voluntary assessment; and fourth that a precedence for it exists in the practice of the Government in Ceylon, who levy a similar cess on all exported teas of 30 cents per 100 lbs. And we feel bound to say that none of these seem to us to justify the strange and unprecedented proposal presented by the Indian Tea Association and accepted by the Government of Lord Curzon with the sanction of the Secretary of State for India of which the present Bill is the direct practical outcome. As regards the first of these pleas that the tea-industry is in a bad plight, little need be said except what we have more than once pointed out in these columns, that these difficulties are the creation of the planters them-

selves. These are due to absolutely preventible causes. The planters ought to have regulated the outturn of their article by the demand that existed for it. This is the right and the universal economic method. That supply should be regulated by demand is a universal law in economics. The planters violated this law, and naturally have to suffer for their cupidity and their unwisdom. They took more lands, especially in Assam, than were needed actually by the necessities of their business and they expanded the cultivation of tea, when such expansion was not only needless but absolutely unjustifiable. There have been Indian tea-planters who never committed this mistake. The Bernerpara Tea Estate, for instance, owned by the Cachar Native Joint Stock Company, as soon as it saw that there was a downward tendency in the tea-market, at once stopped further extension of tea; but to make up for the loss caused by the declining prices, and to find employment for its existing labour force, it at once turned its attention to the cultivation of jute and rice and other agricultural products which could command large and fairly profitable markets in the country. This was a wise method; and if the other tea gardens had adopted it, they could have easily tided over their present difficulties, and really added to the economic strength of the country, by bringing fresh land under rice and other agricultural products, for which an almost unlimited market exists in the world. This they failed to do, and this lack of foresight and a proper appreciation of the real situation in regard even to their own article of trade is entirely responsible for their present difficult and deplorable condition. But because these difficulties are of their own creation, and are the consequences of their ignorance or their unwisdom, or their cupidity, there is no reason why they should not deserve our sympathy or help. This a rue, no doubt; but our sympathies should not be wasted, and our help must be productive of some tangible and real good. In anticipation of this question, evidently, Sir Montague Turner declared that "*the tea industry is quite a sound one.*" Indeed, it is on its soundness alone that he bases its claim to the sympathetic consideration of the Government. But the Hon'ble Member did not attempt to prove his thesis at all, or if any proof be brought forward at all, it was simply the fact that the Government had consented to help it, for such help could be justified only on the ground of the industry being essentially a sound one. Here, however, Sir Montague simply argues in a circle. The tea-industry is sound because the Government of India is willing to help it. The Government of India has been willing to help the tea-industry, because it is essentially a sound industry. This is the plain and simple analysis of Sir Montague's position and statement in regard to this matter. Indeed, the thing seems evidently so plain to the Hon'ble Member that he takes no pains whatever to support his statement by any fact or argument. But men with less faith than Sir Montague will want, naturally, to know how is it, if the tea-industry is really so sound, that it has found itself in such a mess at present. Perplexities are not, we believe, a sign of financial health in any business, nor is decline of prices, and, above all, when this decline is due to the excess of outturn over demand, a proof of the soundness of an industry. The very fact that more tea is produced year after year than is needed by the consumers, proves rather the unsoundness of the whole thing. Nor can it be said that this excess is due to any temporary cause, such as famine or scarcity, or war, or pestilence, in the land of the consumers, which may, for the time being, upset the normal conditions of even the soundest industry. The South African War, with the resulting tea-duty, might have contributed slightly to the difficulties of the Indian tea-growers, but their perplexities commenced much earlier, and are much larger than is covered by this extraordinary cause. It is, as Sir Montague himself admits, and as has been pointed out by Mr. O'Connor, due entirely to over-production. Prices first began to fall—and that was long before the tea-duty was imposed,—in consequence of over-production. And when prices fell, because tea was produced in excess, the fall induced the directors of the different tea-companies to endeavour by further increasing the production to continue dividends to shareholders; and this endeavour to increase quantity was inevitably attended by a reduction in quality, the combination of the two bringing about a further fall in the prices. This is Mr. O'Connor's diagnosis of the present difficulties of the Indian tea-industry. In face of this diagnosis how could the Hon'ble Member say that the tea-industry was a sound one? No industry

is regarded as sound by any rational system of economy which is not in perfect harmony with the actual demands that exist for it. Superfluity in economics is an unerring sign of unsoundness. The Indian tea-industry is unsound for this cause. So, strictly speaking, the only ground on which Sir Montague Turner's plea might be accepted as valid fails to support itself either by the actual facts of the case or by any accepted principles of economics. We must defer a consideration of the other two pleas set up by Sir Montague to a future issue. In the meantime, we may say that we are somewhat surprised and disappointed to find so little attention being paid to this measure by our Press and public men so far. We realise the delicacy with which many people view this question, and the natural hesitancy they feel to oppose a measure which apparently does not seem to affect the general public in any way. The cess is wanted by those who will pay it: what reason then have others to say "nay" to it. This is apparently the feeling in the counters. This was our own feeling at first. But when we examine it closely we find that this Bill is not such a simple thing as it appears on the surface to be. It involves important principles. It creates a dangerous precedent, and as such we have felt it our duty to raise our voice against it, and we hope a mere sense of delicacy will not see the lips of our public men, in regard to the real and inner bearings of this Tea-cess Bill — *Benigalee*, Feb. 6.

## DISTRICT ASSOCIATIONS.

### SHEVAROY.

Extract from Proceedings of a Meeting of the Committee of the S. P. A. held in the Victoria Rooms, Yercaud, at 1 p.m., on Monday, the 9th February, 1903. PRESENT:—Mr. W. I. Lechler, Rev. T. M. Kempff, Mr. J. C. Large, Mr. W. Rahm, Rev. M. Andersen, Mr. R. Gompertz, *Honorary Secretary*.

1. Notice calling the Meeting was taken as read.

2. Read Secretary's Circular No. 2/03.

*Resolved*, that this Meeting agrees with the Chairman that steps should be taken to get Indian coffee represented at the St. Louis Exhibition in April 1904, but thinks the matter should be brought up at the next Conference of the U. P. A. S. I.

3. Read correspondence with the Collector about passes for cutting bamboos in Reserved Forests.

*Resolved*, that the Collector's reply to Honorary Secretary's letter, No. 184, of 5th instant, be awaited.

4. The new Labour Act, as amended by the Select Committee, was read and discussed.

It was unanimously resolved that in the opinion of this Meeting Act XIII of 1859 was better suited to this District than the present Act and that the Honorary Secretary be requested to urge upon the Planting Member the necessity of obtaining the insertion of a distinct clause, when the Act comes on for discussion in the Legislative Council, that the new Act will not be introduced in any District which may submit its objections to it to Government through the U. P. A. S. I.

Also that the Honorary Secretary be requested to ask the Planting Member to obtain a distinct promise from Government that Act XIII shall not be repealed in Districts which do not desire the introduction of the new Act.

The following letters were read and recorded:—

1. Secretary's Circular No. 3/03, dated 20th January, 1903, in which Government decline to remove duty from seeds.

2. Letter of 20th January from Mr. G. L. Acworth who will do all he can to get the new Labour Act made applicable only to those Districts that wish it, but doubts his ability to secure the retention of Act XIII.

3. Secretary's Circular No. 5/03, dated 26th January, 1903, giving criticisms of proposed new Labour Bill from Nelliampathy, N. Mysore, and Neilgherries.

4. Post card, dated 24th January, 1903, from Mr. W. C. Cobbe in reply to ours of 22nd January, 1903 *re* Police constables.

5. Letter of 23rd January from Mr. R. B. Clegg who will reply to Honorary Secretary's letters about Forest Passes in due course.

6. Secretary's Circular No. 6/03, dated 27th January, 1903, in which Coorg proposes further amendments in proposed new Labour Bill.

7. Letter of 30th January from Mr. E. G. Windle proposing that the voluntary Coffee Cess should be abandoned.

8. Secretary's Circular No. 7/03, dated 31st January, 1903, forwarding part of proposed Labour Bill as amended by Select Committee. Planting Member says he has been assured that its application to any District will be optional.

9. Letter from Inspector of Police, Salem, dated 1st February acknowledging complaint that the special constables had not visited Mr. Cobbe's estate and promising to see to it.

10. Secretary's Circular No. 8/03, dated 8th February, 1903, stating that Mr. Acworth has asked Secretary to Government to send twelve copies of the Labour Bill as amended in Committee for distribution to District Associations.

11. A number of books and papers received during the month were laid on the table.

(Signed) ROBT. GOMPERTZ,  
Honorary Secretary, S. P. A.

### WYNAAD.

Proceedings of a General Meeting held at Meppadi Club on February 4th, 1903. PRESENT:—Messrs. Abbott, Armstrong, Atzenwiler, Behr, Day, Mackinlay, J. R. Malcolm, Nicolls, S. H. Powell, Jr., Romilly, Taylor, Trollope, Waddington, and B. Malcolm, *Honorary Secretary*. Mr. Abbott in the Chair.

1. **Proceedings of last Meeting.**—Taken as read.

Resolved *nem. con.*—That the Resolution passed under the heading of "Tea Cess" and referring to the nomination of a planter on the proposed Tea Cess Committee be brought up again at the next Meeting of this Association for reconsideration.

2. **Finance.**—A discussion took place *re* the financial affairs of the Association; and it was decided that the matter be brought up at the next Meeting for decision.

3. **Pepper disease.**—Read letter of 16th January to Mr. Barber and his reply of same date.—*Recorded.*

Read Mr. Barber's letter of January 23rd—covering his preliminary report. The Honorary Secretary was instructed to reply.

4. **Money Orders and Postal.**—Read letter of January 22nd to Postmaster-General *re* late arrival and delivery of Mails at Vayitri; and his reply of 28th idem stating the affair would be looked into.—*Recorded.*

Read letter of January 22nd to Superintendent of Post Offices, Calicut *re* the deficiency of 2-anna bits. Read his reply stating letter had been forwarded to Treasury Deputy Collector, Calicut, for his remarks and to Postmaster, Vayitri, for his explanation.—*Recorded.*

5. **Police Commission.**—Read Honorary Secretary's replies to the list of questions.—*Recorded.*

Read Circulars 1, 5, 6, and 7 of 1903.

Resolved, that a Meeting of the Special Committee of this Association be called immediately on receipt of the report and amendments of the Select Committee to consider them.

(b) *Sale of Tea in S. India.*—Read letter of January 22nd to Secretary, U. P. A. S. I.

(c) *Tea Cess.*—Read letter of January 22nd to Secretary, U. P. A. S. I.

Also read Circular 2/03, St. Louis Exhibition, and Circular 3/03, Import duty on seeds for agricultural purposes.

*Papers on Table*—

Planting Opinion; Indian Planting and Gardening; Commercial Circular 3/02, Rubber; I. T. A. Circulars; Proceedings of Nelliampathy Planters' Association, January 7/03; Proceedings of Shevaroy Planters' Association, January 12/03.

A vote of thanks to the Chair terminated the proceedings.

(Signed) C. E. ABBOTT,  
Chairman.

( " ) BERNARD MALCOLM,  
Honorary Secretary.

## MARKET REPORT.

[Per Mail advices of January 23rd, 1903.]

### COFFEE.

The *London Commercial Record* says:—Supplies at auction during the week have been very moderate, and no material change in the position has occurred. Small quantities of new crop East India have been sold but barely on the basis of previous transactions, whilst fine Costa Rica has fully maintained its value, and Santos went off readily at full rates. Other descriptions are unaltered. A dull tone has prevailed in the market for "futures," and prices show some reduction for the week, owing to large receipts at the shipping ports; yesterday Santos for March delivery sold at 26s 3d to 26s 1½d, May at 26s 10½d, July at 27s 6d to 27s 3d, September at 28s to 27s 10½d, and December at 28s 6d.

London .. .. Santos ..	March delivery ...	26s 3d.
New York .. .. No. 7 Rio...	" ..	4.30 cents.
Hamburg... .. Santos ..	" ..	26¾ pf.
Havre ... .. Santos ..	" ..	32 francs.

Catalogues to-day embraced 313 bags East India, 38 bales Mocha, 173 bags Nyassaland, 50 bags 62 barrels Jamaica, 1,257 bags Costa Rica, 44 bags New Granada, 194 bags Vera Paz, 238 bags Guatemala, 116 bags Columbian and 366 bags Bahia. A quiet market and no change in prices.

Brazil futures opened firmer on smaller receipts and better Continental advices, and a fair business has been passing, including March at 26s 4½d to 26s 3d, May 27s to 26s 10½d, July 27s 9d to 27s 6d, September 28s 1½d to 28s, December 28s 10½d to 29s.

Closing quotations:—		Sellers.	Buyers.
March .. ..	...	26/6	26/3
May .. ..	...	27/	26/10½
July .. ..	...	27/6	27/4½
September ..	...	28/3	28/1½
December ..	...	29/	28/9

Brazil receipts 28,000 bags, against 39,000 and 22,000 the two previous seasons, and exchange ½ higher at 11½.

Hamburg unchanged to ¼ up. Havre ¼ up. New York opens unchanged.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1903.	1902.	1903.	1902.
Tons ...	25,886	13,574	3,283	2,745
	HOME CONSUMPTION.		EXPORT.	
	1903.	1902.	1903.	1902.
Tons ...	806	1,021	1,001	456

The preceding figures exhibit—	Tons.
In the Imports an increase this year of	588
Home Consumption a decrease of	215
Export an increase of	545
Stock an increase of	12,312

Auctions this week have gone off as under:—

EAST INDIA.—534 bags partly sold as follows: *Coorg*, smalls 39s, low middling 42s to 45s 6d, common bold 48s 6d to 52s, peaberry 43s 6d to 51s; *Neilgherry*, smalls 43s, middling 47s 6d to 48s, peaberry 57s.

JAMAICA.—112 bags sold, ordinary to good ordinary palish 30s to 32s 6d, fine to fine fine ordinary greenish 36s to 42s 6d, peaberry 38s.

COSTA RICA.—999 bags sold—smalls 31s to 48s, low middling to middling 44s to 52s, good middling blue 54s to 65s 6d, fair bold 64s to 68s, good to fine blue bold 72s to 81s, very fine 87s, peaberry 55s 6d to 79s.

GUATEMALA.—Of 370 bags offered 70 bags sold—ordinary foxy greenish 30s.

NICARAGUA.—20 bags sold—bold bright pale 40s.

MEXICAN.—82 bags sold—smalls 34s 6d, middling 50s, bold 54s, peaberry 46s.

COLOMBIAN.—Of 1,316 bags damaged offered 850 bags sold—smalls 29s, good ordinary 30s to 31s, fine ordinary to low middling 38s to 43s 6d, bold 42s 6d to 48s 6d.

ST. DOMINGO.—24 bags bought in.

SALVADOR.—55 bags withdrawn.

ECUADOR.—275 bags, country damaged bulked; sold at 25s to 25s 6d for bold palish.

BRAZIL.—Of 1,927 bags Washed Santos Dumont 1,650 bags sold—small 28s to 31s 6d, medium 32s to 41s 6d, bold to extra bold 35s to 51s, peaberry 36s 6d to 51s; of 375 bags Unwashed, quay terms, 200 bags sold—bold bright greenish foxy 37s, peaberry 32s. 500 bags Santos were bought in.

Rio Exchange 11 $\frac{3}{4}$ d, previous day—d.

HAVRE, January 22.—Good average Santos January opened barely steady at 32f. and closed quiet at 32f., March opened at 32 $\frac{1}{4}$ f. and closed at 32 $\frac{1}{4}$ f., May opened at 32 $\frac{3}{4}$ f. and closed at 32 $\frac{3}{4}$ f., September opened at 33 $\frac{3}{4}$ f. and closed at 33 $\frac{3}{4}$ f., December opened at 34 $\frac{1}{2}$ f. and closed at 34 $\frac{1}{2}$ f.

HAMBURG, January 22.—Good average Santos January opened steady at 26 $\frac{1}{4}$ pf. and closed steady at 26 $\frac{1}{4}$ pf., March opened at 27pf. and closed at 26 $\frac{3}{4}$ pf., May opened at 27pf. and closed at 27pf., September opened at 28 $\frac{1}{4}$ pf. and closed at 28pf., December opened at 29pf. and closed at 28 $\frac{1}{4}$ pf.

NEW YORK, January 22.—Closing prices of No. 7 Rio were as follow:—

	Jan	Feb.	Mar.	Apl.	May.
Jan. 22 ...	4.25	4.25	4.30	4.40	4.50
Jan. 21 ...	4.25	4.25	4.35	4.45	4.55

#### TEA.

INDIAN.—Catalogues comprised only 33,100 packages. At the date of our former circular they totalled 41,200 and 47,700 a year ago.

For the time being business passing seems to have relapsed into one of a hand-to-mouth nature, and the moderate offerings for the week proved sufficient for current requirements.

The market ran on much the same lines as last week, improved quality selling freely at a fully proportionate advance, while common and ordinary descriptions were unsteady; sellers were, however, generally firm, and in cases where previous values were not forthcoming, the hammer did not fall. Undesirable common leaf met with offers at from 5d to 5 $\frac{1}{4}$ d, the sweeter kinds bringing 5 $\frac{1}{2}$ d to 5 $\frac{3}{4}$ d per lb. Fannings and dusts from 5d to 7d show a distinctly easier level of value than a short time back.

The remarks in our last issue on the general situation hold good. According to private cables the period since elapsed accounts for a further shrinkage of 1,003,000 lbs. in the Calcutta export to the United Kingdom, making a deficit to date of 7,000,000 lbs. compared with last year, and of 16,000,000 lbs. contrasted with shipments to 15th instant in 1901. The quantity remaining to be sold in Calcutta after this week is estimated at some 20,000 packages, against 30,000 in 1902.

For 26,700 packages on estate account 7 $\frac{3}{4}$ d per lb. was obtained, opposed to 7 $\frac{1}{2}$ d for 42,200 and 7d for 45,000 in the two foregoing season.

CEYLON.—Public auctions included the reduced amount of 21,600 packages contrasted with 26,500 on the 13th instant, and 24,800 twelve months since.

Competition was fairly good, but partly due to the less attractive flavour possessed by most of the arrivals prices showed some irregularity, and often ruled slightly in favour of buyers. Importers, however, inclined to firmness, and with a brighter tone towards the close many lots withdrawn owing to unsatisfactory bids were placed at an advance on offers made in the room. Quotations for common to medium leaf were generally  $\frac{1}{4}$ d per lb. weaker than those for slightly better teas last week, though where quality was maintained not much change was apparent. Broken Pekoes and Broken Orange Pekoes also did not do so well except in the case of the few really stand-out lots. The average is 7 $\frac{1}{2}$ d. On the 15th instant it was rather over 7 $\frac{1}{2}$ d, and 7 $\frac{1}{2}$ d in 1902.

JAVA.—Only 313 packages of direct import were submitted, and met a steady demand, on the whole to the advantage of importers.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From January 1 to 20, 1903	12,871,387 lbs.
Do. do. 1902	18,887,912 ..

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India ...	22,248	10,829	33,077
Ceylon ...	15,673	5,926	21,599
Java ...	242	71	313
Total ...	38,163	16,826	54,989

Also 51 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated January 23rd, 1903, says:—

#### QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1902-1903 ...	1,002,920	741,083	47,315
1901-1902 ...	1,048,587	751,558	47,051
33,646 pkgs. INDIAN } Total 55,670 packages were offered in public auction			
21,711 " CEYLON } this week.			
313 " JAVA }			

Since the 1st June there has been an increase in duty payments of nearly ten million pounds compared with the same period last season.

As it is natural that duty-paid stocks will be reduced to a minimum in view of the coming Budget, it is satisfactory to note that clearances are continuing fully up to normal quantities. This shows that the stocks of tea held in the country out of bond are even now exceptionally small.

It also points to the fact that demand for actual consumption is in close touch with present offerings; consequently any reduction in supplies should be immediately felt.

INDIAN.—The market has not recovered from last week's heavy sale, bidding lacking animation with a tendency to easier prices for all except good medium and better liquoring teas, for which there was a fairly good demand.

The official wire give exports to U. K. for the first half of January as 4,300,000 lbs., against 5,480,000 lbs. for same period last year, making the total exported to U. K. from 1st April to the middle of January 134,690,000 lbs., against 140,961,800 lbs. last season.

Week's av. of New Season's tea sold on Garden Account 1903, 26,666 pkgs., av. 7.70d. 1902, 41,807 pkgs., av. 7.52d.

New Season's tea sold on Garden Account 1st June to date 1902-3, 747,962 pkgs., av. 7.29d. 1901-2, 793,028 pkgs., av. 7.94d.

CEYLON.—Although the sale was somewhat lighter, bidding continued slack, and teas under 6d per lb. were, generally speaking, about  $\frac{1}{4}$ d per lb. cheaper, but for such kinds as possessed distinctive point prices ruled fairly steady. For next week only 16,895 packages are advertised.

Private advices from Ceylon give shipments to U. K. for 1st half of January as 3,500,000 lbs., against 4,200,000 lbs. last year. Average for week 7.45d, against 7.49d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 67,948 pkgs., av. 7.59d. 1902, 78,695 pkgs., av. 7.44d.

JAVA.—Only 313 packages were catalogued, of which 108 "Goalpara" averaged 9 $\frac{1}{4}$ d per lb.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 14 $\frac{5}{16}$ . Colombo 14 $\frac{1}{2}$ .

#### COCOA.

Public sales on Tuesday offered 4,037 bags, the bulk of which was Ceylon, this growth experiencing a good demand at an advance on good and fine, whilst other descriptions, were quiet. Trinidad was represented by 529 bags, of which 255 bags sold at 61s to 64s 6d for good to fine, and 58s to 60s for ordinary to middling, being about previous value. No Grenada catalogued. 40 bags good fermented Dominica realised 56s—a steady price. 191 bags Jamaica and 50 bags Jeremie were bought in. 30 bags Cuba were placed at 53s to 55s. Guayaquil slow of sale, and of

458 bags catalogued only about 100 bags found buyers at 63s for ordinary Caraquez. 25 bags Brazil retired unsold, as did 36 bags African. There was an active enquiry for good and fine grades of Ceylon at 2s to 3s per cwt. advance, but other qualities hung fire somewhat, without, however, being any cheaper; 2,678 bags offered and 1,175 bags sold—fine to very fine bold and medium red 77s to 83s, fair to good ditto 67s 6d to 74s, fair medium 60s to 63s, ordinary medium and small 53s to 58s, common to good small 42s to 52s 6d, collected 53s to 56s, and pickings 33s to 40s per cwt.

Private sales include some fine Trinidad at 66s, 160 bags ordinary Jamaica at 52s, some good red Costa Rica at 55s, Samana at 54s, and small lots of fair to fine red Caraquez Guayaquil at 64s to 70s per cwt.

### PEPPER.

**BLACK.**—The market is lower for arrival and the close is very quiet. About 150 tons Singapore have changed hands since our last, including January-March shipment at  $6\frac{1}{16}$ d down to  $5\frac{1}{16}$ d. On the spot sales of fair Singapore have been made at  $6\frac{1}{16}$ d, being steady.

At auction on Wednesday 332 bags Penang bought in at  $5\frac{3}{4}$ d to 6d, 40 bags Tellicherry at  $6\frac{1}{2}$ d, and 30 bags Aleppy at  $6\frac{1}{16}$ d.

The shipments of Black Pepper for the first half of January compare as follows:—

	1903.	1902.
U. K.—Singapore	40 } 40	10 } 20
„ Penang	nil }	10 }
Continent	20	40
U. S.	30	220
Total tons	90	280

**WHITE.**—quiet. For arrival there are sellers of Singapore January-March shipment at  $9\frac{3}{4}$ d. On the spot a limited business has been done at  $9\frac{3}{4}$ d for fair Singapore and at  $9\frac{3}{16}$ d for fair Penang.

At public sale on the 21st instant of 272 bags Singapore catalogued only 45 bags sold—good fair  $9\frac{3}{4}$ d. 20 bags Siam retired at  $9\frac{3}{4}$ d, and 206 bags Penang at  $9\frac{1}{2}$ d to  $9\frac{1}{4}$ d per lb.

The shipments of White Pepper for the first half of January compare as follows:—

	1903.	1902.
U. K.—Singapore	90 } 130	220 } 340
„ Penang	40 }	120 }
Continent	30	nil
U. S.	nil	nil
Total tons	160	340

### GINGER.

**COCHIN.**—is very quiet. 48 cases 217 bags were offered, but bids being low nothing sold; 85s was the buying-in price of good bold cut, 60s of medium and small cut, and 36s per cwt. of common rough.

**JAMAICA.**—41 barrels common hard lean dark sold at 37s 6d to 38s 6d per cwt.

### QUININE.

Quinine has been very quiet pending the result of the Amsterdam cinchona auctions. A few small sales have been made at  $11\frac{3}{4}$ d to 1s per oz. spot, for German sulphate, the market closing on Wednesday with further buyers at the lower figure.

### CARDAMOMS.

Cardamoms sold at irregular but about 1d per lb. lower rates. Ceylon-Mysore, good bold pale bright, were bought in, but 2s 8d was afterwards accepted privately; medium and bold pale sold at 2s 4d; bold medium pale, 1s 8d to 1s 10d; small and medium pale, 1s 1d to 1s 2d; very small pale, 11d; brown splits and pickings, 10d to 1s; bold pale splits, 1s 7d, and medium splits, 1s 2d to 1s 3d. Decorticated seeds were rather easier, small selling in quantity at from 1s 3d to 1s 4d, but for fine 1s 5d is wanted.

In these tables all packages are chests unless otherwise stated. ½c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, FEBRUARY 21, 1903.

[No. 8.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 27th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*February 16th.—Weather—*East wind and hot sun. Nights rather close. *Crop prospects—*Spike budding nicely, next year should be an average one. *Works—*Gleaning, pruning, weeding, manure. *Plant diseases—*Borer will be above the average. *Health—*Good. *Labour—*Scarcer.

#### Coorg.

*POLLI BETTA, 17th February.—Weather—*Fine with some East wind. All signs of rain have fortunately passed away. Rain now would be premature owing to the backwardness of the bud. *Crop—*Stripping is finished in many cases, and gleaning has been started. Pruning is also making good progress. Manures are being got on to roads for applying to trees.

#### Kotagiri.

*19th February.—Weather—*has been gradually clouding up, and 1 inch 40 cents fell last night. This will bring out a blossom, but not nearly such a good one as would have come had the rain held off for two or three weeks more, as a lot of the spike is not forward enough. *Work—*Stripping is in full swing on most places, and where Leeming's system has not been adopted, pruning is being taken in hand. *Labour—*Plentiful. *Health—*Good, all round.

### THE BRITISH TEA DUTY.

THE text of the memorial lately presented to the Chancellor of the Exchequer on behalf of tea-producers and traders is now available. We give the memorial on another page and would at once say that, while it makes some good points, we regard it as defective in at least one important particular. Dealing with the subject of the British Import Duty on

Tea, the General Committee of the Indian Tea Association (Calcutta), say that "they have always held very strongly that the gradual reduction and ultimate abolition of the duty is one of the objects for which tea-producers should steadily and consistently work." They have observed with much satisfaction that the Ceylon Planters' Association and the U. P. A. S. I. are in substantial accord with this opinion. The Indian Tea Association, London, are, they remark, of the same mind. Yet in the memorial we do not find a word said about the *gradual* reduction of the duty or its eventual abolition! That memorial is signed on behalf of the Indian Tea Association (London), the Ceylon Association in London, the Tea Buyers' Association, and the Tea Brokers' Association. All it asks for is the early removal of the 2d. a pound additional tax levied for the purpose of raising the British Revenue during the continuance of the War in South Africa. It may be that reference to further reductions has been omitted deliberately, with some idea that this is a more tactful course, or that too much should not be asked at once. To us, however, this course savours of either cowardice or a want of straightforwardness. Not for a moment would we have had asked for more than the reduction of the present import by 2d.; but we would certainly have liked to see a clear statement that the eventual aim of the tea-trade and tea-producers is to get the whole tax abolished. There would then have been something on record that would probably prove very valuable in the future.

Our contention is, simply, that the memorial does not go far enough. The present tax is 6d. per lb. A reduction by 2d. would be useful, a further reduction to the same amount would be just as useful; but far more valuable would be the removal of the final 2d. for whenever this comes about the tea-trade of London will be set free from many trammels that seriously hamper progress at present. There is more at stake than the mere removal of the duty; what is needed is, not only reduction of the cost of tea to the producer by admitting it into the United Kingdom free of duty, but the abolition of various burdens that it now has to bear in the form of excessive warehouse charges and other restrictive measures or influences. As far as it goes, the memorial is a good one. It shows, for instance, that the total value of tea imported into the United Kingdom from India and Ceylon last year amounted to £7,300,000, while taxation paid on the same was over £6,000,000, more than 80 per cent. of the

value. This, the signatories point out, is the heaviest burden imposed on any industry, save those engaged in the supply of alcoholic liquors and tobacco. What they do not point out is, that it is a burden that is supplemented by another of about equal magnitude brought about by the artificial inflation of the rupee. Another point is made in regard to the hardship the tax lays on the poorer classes in Ireland, where tea is almost a necessary of daily life. The memorialists draw attention to the state of things in Canada, Australia, the United States, and Germany, where tea is either, as in the case of the first two countries, on the free list altogether, or, as in the latter case, about to be considerably reduced. The last argument for the desired reduction of taxation relates to the immense benefit the tea industry has been to the parts of the Empire where it has been introduced. As a London writer remarks, "an industry which has brought prosperity to countless native labourers, and has caused wide districts of waste land to be brought into cultivation, beside developing communication and providing a healthy outlet for capital deserves encouragement, and ought not to be kept back or harassed by the overwhelming burden of excessive taxation."

All this is good. The opinion seems to be held that the Chancellor of the Exchequer will think so, and that something beneficial to the tea industry will result. But much must depend upon the state of Imperial finances, when Budget estimates are coupled. Our own view is that the memorial should be strenuously pushed. If once we put aside the argument that abolition of duty might help China even more than India or Ceylon, we must press our case. Nothing should be left to chance. The clearest possible arguments should be placed before Members of Parliament as well as before Government. There is scarcely a chance that the idea of a preferential tariff, bearing more lightly on British-grown than on foreign teas would be entertained. But we should certainly let the Government and Parliament know what the tea industry of India and China really is, its importance, its difficulties, and the advantages that would accrue to those interested in it—and through them to various parts of the Empire—if the duty were abolished; and, in a minor degree, if it were reduced. As regards a reduction, the strongest argument available is that the extra 2d. was levied for a specific purpose, and that when once this exists no longer the 2d. should disappear also.

#### INDIAN COFFEE IN LONDON.

To judge from brokers' reports, it is impossible to avoid the conclusion that the quality of Indian Coffee offered in London early this year showed marked deterioration from the standards of a few years ago. It is not as if these reports stood unsupported—though even then there would be no reason to question the good faith of brokers. What they have said finds all too much support in the record of prices realised. Among some of the early sales Nilgiri Coffee actually fetched better prices than well-known brands from Coorg and Mysore; but the average of all sorts was poor, and the highest level reached was below that of some South American offerings. Costa Ricas are also said to show a falling off from the level of last year's quality, but Indians exhibit even greater deterioration, if price be a fair gauge.

In the first fifteen days of the year the top price realised for E. I. Coffee was

64s. ("Adderley", 'A').

For Peaberry nothing higher than 59s. was reached, so we may judge that large berries are still in favour. Chisholm's "Banargalle" and "El Dorado" sold at 59s. Some Peaberry of good marks sold as low as 47s. 6d., and "A" as low as 51s. Yet we gather from various London reports that it is doubtful if even these rates are not too high, when compared with current prices of Brazil descriptions, the supply of which appears to be inexhaustible. There is every reason to believe that Indian Coffee would stand a much better chance in the London market if all "C" and "T" were sold in India. This would raise the average standard of the E. I. coffees placed on the Home market, and would probably go far towards the recovery of lost prestige. This is a point to which we would invite all coffee-planters to give special attention. Good crops will not entirely compensate men for poor prices. It is worth noting, too, that reports of deterioration always seem to gain strength when crops are large. The suggestion has been made to us that this may be due to over-hasty curing, conducted by firms upon whom the pressure of work is very heavy. This is a matter that seems to call for investigation.

#### MR. YULE ON TEA MATTERS.

Presiding at the half-yearly Meeting of the Bank of Calcutta on the 9th instant Mr. David Yule said he could not help wishing that the energy put into the extension of the tea bush, had been available for jute as well. Since 1885 the acreage under tea has increased by 241,030 acres or 85 per cent., while the quantity of tea brought to market is larger by 167 per cent. Keeping in view the even more extraordinary increase in the crop of Ceylon, he thought it beyond question that the Indian tea industry has faced its difficulties with remarkable success. Not only have planters battled against the depression which the enormous annual increase in production was bound to create in the consuming markets, but they have had to bear the strain of high rates of interest and other heavy indirect charges on production brought about by the closing of the mints. There is indeed hope in smoother waters for an industry, which has kept its head above that sea of trouble for so long, and he was glad to say planters were having more time at their disposal for the congenial task of finding new markets for their production.

Mr Yule then said:—

From what has been done in the past in this direction, it is evident that private enterprise has been very much to the fore, and I am inclined to think that the proposed Tea Cess will be more a source of irritation than of advantage to those engaged in distributing tea in foreign markets. Until a very few years ago, London buyers alone attended the Calcutta Auction Rooms, but now there are many representatives of other markets, and this past season sellers welcomed the presence of direct buyers from Russia. There is no doubt that direct purchases for foreign markets will increase rapidly, and if these markets are to be properly served, there must be an end to the conservatism which prompts owners to pass this market at their doors in favour of London, where the shipments create a glut and consequent decline in prices in other markets. The existence of the Cess cannot but create the impression that we have still more tea than we know how to deal with, and I am sorry to say that in many other ways growers help to decry and depreciate the position and value of their own produce. If the men who are yearly responsible for the circulation of exaggerated crop estimates and who frighten buyers

with schemes for destroying millions of pounds of tea, confined their attention to the disposal of their own teas, the industry here would be relieved of an infliction which is much more troublesome and dangerous than red spider and green fly. The tea industry wants peace and freedom from the interference of those whose hysterical fears show how little faith and less knowledge they have of its strength. The Tea Cess Bill now before the Legislative Council is, in my opinion, an indication of the decay of commercial independence in Bengal, and of the power which representative men used to possess of whipping into the fold the willing and the unwilling, when any scheme for the benefit of trade had to be carried through. No one, so far as I am aware, has made any attempt to discover the views of those who are against the Cess, but to save this trouble the Council is called upon to use the machinery of the State to crush out dissent. Legislation of this kind is truly termed novel, but it is also mischievous and dangerous.

### COFFEE NOTES.

The Arabian coffee-maker, having prepared his fire of charcoal and placed it near a huge pot containing water, takes a few handfuls of green coffee berries, carefully culls out all imperfect berries and foreign substances, and then places the best of the berries in an iron ladle held over the fire, says an unknown exchange. The berries are permitted to roast until they begin to smoke and are then, while still uncharred, placed in a small mortar and carefully brayed with a pestle closely fitting the cup of the mortar. The berries are not, however, reduced to a dust. While this process has been going on, a small pot has been half-filled with tepid water from the large pot and placed over the fire. When the water in the small pot has begun to boil, the broken coffee berries are thrown in, and the boiling is permitted to go on for a short time, the decoction being stirred with a spoon when it shows signs of boiling over. The coffee is then served in small cups without cream or sugar.

**The U. S. Coffee Market.**—The coffee market continues quiet and for the most part dull, says *Tea, Coffee and Sugar* of the 21st ultimo. Except for a fairly satisfactory business in the distributing line there is no marked activity and none seems in sight. It had been hoped that the post holiday season would shake off the sloth that usually deadens business at the end of the year but it is not coming to pass. Except for some manœuvre on the part of the speculators there is no reason why now a brisk trade should eventuate, as nothing has happened or is happening to alter the unfavourable statistical position of coffee. Perhaps more would be doing if prices were permitted to reach the level the vast supplies on hand dictate, but that is an old story. Speculatively the market is especially quiet with the leading bull interest buying for distant delivery. There is also not a little transferring of March contracts to September at a difference of about 47½ points. Receipts at Santos still continue heavy for this period of the year. The spot market for invoices close at 5¼c. for Rio No. 7, 6c. for Rio No. 4, and 6¼c. for Santos No. 4. In Milds prices are firm but business for the most part slow. There is plenty of coffee at the ports of Venezuela, but the blockade in force prevents it from assisting the diminished supplies here. Holders are not indulgent of offerings and at the prices ruling sales effected are few. At Maracaibo Cucutás are again being received. East Indias are quiet.

The *Brazilian Review*, commenting upon the recent Coffee Congress says that São Paulo has made up its mind to drive

all other competitors from the field. "In ten years," says the *Review*, "if things go on as they are, São Paulo will practically have coffee all to itself."

**U. S. Coffee Market Review.**—Mr. W. H. Bennett writes in the *Spice Mill*:—

The coffee market for the past month has been rather quiet. This is no more than could be expected for the past two weeks as the coffee buyers from the first to the last of the year will not buy without there are some inducements and as this is stock-taking time there has been nothing to tempt them.

Rio No. 7 has been quoted at 5¼ cents for the past six months and at this price it seems to hold firm.

Good roasting coffees, when you come to search the market, are hard to find, especially so in No. 6 and No. 7 Rios and No. 5, No. 6, and No. 7 Santos.

The price of 6 to 6½ cents which has been quoted for No. 5 Santos is deceiving, as they are very scarce and most of them are poor roasters.

Maracaibo coffees have advanced a half cent per pound within the last week and are firmly held on account of the scarcity of good roasters. The war in Venezuela doesn't seem to have any effect on them whatever.

Java coffees have fallen some and are attracting attention on account of the decline.

The spice market for the past month in a jobbing way has been quiet. Singapore pepper on account of its scarcity has held its price very firmly but I believe that those who are looking for any great advance in this article will be disappointed. The other grades of pepper have remained about unchanged. This is also true of Cassia. Zanzibar cloves are a shade higher.

### A FEW RECEIPTS.

**To Make Coffee the Good Old American Way.**—Take a teacupful of finely ground coffee for every five persons, varied according to the strength desired. Break into it an egg with shell, and mix thoroughly. Add a teacupful of cold water and mix again. Pour on a quart of boiling water and boil for ten minutes. Pour in a teacupful of cold water and let it stand three minutes to settle. Decant into a warm urn and serve immediately in warm cups. Use cream, condensed milk, or boiling milk. Have all the utensils used perfectly clean.

**Café Noir—Black Coffee.**—For one ordinary cup take two tablespoonfuls of coffee. Put in strainer, pressing down slightly. Pour on boiling hot water, put on cover, and leave the water to filter through for about eight minutes. If too strong, dilute with hot water to suit taste.

**Vienna Coffee.**—Use one heaping tablespoonful of coffee for ordinary sized cup. Prepare the same *Café Noir*. When serving to two parts of coffee and one part of hot milk add a tablespoonful of whipped cream which will float on top of the coffee. This will give a charming effect and add a delightful confection to the coffee.

Great is coffee and liberal is its profit! Liberal, but not so much in the actual margin as in the contingent advantages that come from the sale of a good blend.—*Merchants' Review*.

Black coffee is supplied by the *Cassia occidentalis* (a shrub belonging to the Leguminaceæ family), growing in the warm regions of Asia, America, and Africa, and emitting a very disagreeable odour. According to M. Bélanger, black coffee figured very prominently at the Universal Exhibition of 1855 in a number of products from Guadeloupe, and in the notice sent to the exhibition with these products the following interesting statement by Dr. Desbonne occurs:—"These nuts are collected and roasted, and, after having been reduced to powder, a very agreeable infusion can be prepared from them very similar to coffee." In the course of Dr. Desbonne's eulogy of this product he maintains that this infusion would

answer admirably as a coffee substitute, being, far preferable to coffee and chicory. In spite, however, of all this authority had to say with regard to this substance, its employment has always been very limited—principally, perhaps, owing to its high price.

In some parts of the West bogus representatives of New York coffee and tea houses, trading on the high reputation of the city in the tea and coffee lines, are finding a great many victims.

**U. S. Coffee Deliveries and Arrivals.**—Deliveries of coffee in New York during December were 378,171 bags Brazil and 82,267 bags other, against arrivals of 141,074 bags Rio, 121,347 bags Santos; 7,800 bags Victoria, 12,147 bags Bahia, and 83,384 bags other. New Orleans, 9,618 bags Brazil and 1,882 bags of other kinds, against arrivals of 82,237 Brazil, and 3,539 other kinds. San Francisco, 11,212 bags deliveries, against arrivals of 19,698 bags.

Total deliveries in the United States of all kinds, 493,649 bags, against arrivals of 471,226 bags.

### TEA NOTES.

**The U. S. Tea Market.**—*Tea, Coffee and Sugar* of January 21 reports:—The tea market is strong all along the line and especially in Formosas, Japans, and Greens, where advances from one-half cent to one cent have taken place. The continued hardening of the market is encouraging to the optimists of the trade, who point with satisfaction to their predictions as heretofore made and now justified by events. They look for still higher prices. As certain teas, like Formosas, Japans, and Greens, are scarcer than ever, with no hope of adding to the limited supplies from any source anywhere before the next season's teas can arrive some six months hence, their further prediction of still another advance in the market must be accepted with no little credence. A factor in the market for higher prices is the export demand for teas for England. If it continues as large in volume as it has been in the last month the market here will become fancy indeed, and traders will scarcely know what to do for teas. Although the quantity of tea in the United States is estimated at more than 85,000,000 pounds it is the general belief that eight-tenths of this total has been sold, leaving two-tenths in first hands with which to do a business still six months long. That makes a very small quantity of tea to get along with, and the fact ought to indicate in a manner the market during that period.

All of the important tea merchants of Yokohama have formed a syndicate under the name of the Japan Tea Exporters' Union. Mr. Komada, of that city, is now in America, bringing the syndicate in touch with the American market.

The *Interstate Grocer* says:—The tea situation in this country is peculiar. It is a fact that we get tea from China, Japan, and India that the poorest labourer in England would turn up his nose at. We do not know what good tea is, because we have never tried it. The consumption of tea in this country for this very reason is one-tenth what it is in Great Britain.

The American people would, observes the *Merchants' Review*, soon become water-logged if they tried to equal the British consumption of tea without cutting out the coffee-drinking. It is because our people prefer coffee that tea is not more commonly drunk here. As regards quality, the tea inspection act excludes very low-grade teas from this country—teas

that would be admitted in Great Britain. The grocers here are not so ignorant as the article of *Interstate Grocer* implies. They know what good tea is, and they offer it for sale at from 50c. to \$1.00 a pound.

The appearance of samples of tea marked 30c. and 40c. in windows where the lowest grades quoted last year were at 40c. and 50c. is, says a New York paper, a sign that the consumer will reap in cash the full benefit of the removal of the duty, at least in the large New York stores, such as we refer to above. In many of the smaller stores the consumers will probably get half the saving in cash and half in improved quality. The exposure of tea in the show-window should be done with discretion, for the strength and flavour suffer when the tea is long uncovered, and when contaminating odours are allowed in the window the exposed leaf suffers doubly, losing its own subtle excellences and gaining foreign flavours that make but poor substitutes.

A Philadelphia young man visits Chinatown of that city regularly, and drinks the special tea which is brewed there at twenty-five cents a bowl. He will put away, in an evening, fifteen or twenty bowls, becoming finally as boisterous and silly as though he had put away as many cocktails, though he will not stagger. He says he remembers nothing after the ninth or tenth bowl of tea, and that on the day after one of his sprees he has a wretched headache and a sore, parched mouth.

According to official report received by *Tea, Coffee and Sugar*, the tea transactions at the port of Boston during December, 1902, were as follows:—

Balance in warehouse December 1, 2,708,095 lbs.  
Amount entered during December, 1,352,537 lbs.  
Amount withdrawn during December, 105,186 lbs.  
Balance in warehouse December 31, 1902, 3,955,446 lbs.

**Tea in San Francisco, January 1.**—Tea movement at the port of San Francisco during December, 1902:

**Caterpillar Pest.**—Mr. J. T. Withers writes from Neboda—Should you have room for the following details of the tea pest known as the *Stauropus Altermus* (Lobster Caterpillar), I would feel much

obliged if you would through your valuable columns, show to those that are interested, the danger there is, in not taking it in hand the instant that it is seen, or found on the tea-bush. The caterpillar is a very handsome beast, and is much like the Pussy Caterpillar that one used to hunt for, in the mother-country when collecting all sorts of butterflies and moths. The first that I heard of it was on the 5th of January, 1903, when a neighbour brought a few specimens to show me, telling me, that there were a great number on his field, which adjoins this estate, so I naturally was keen to see what it had done, and also to do my best to stop the poochies from spreading over my side, but alas! they had, on inspection already spread over an area of about two acres of my tea. I set to work at once, and had the patch that was attacked carefully gone over, and all the caterpillars cleaned off, as far as one was able to see, but to my astonishment, in the course of about sixteen days, the same kind of poochie appears again, not in hundreds as previously, but in dense masses on each tree.

The field referred to on the next door estate (24 acres) is eaten up, and merely the skeleton of the tree left, and other fields in the near proximity, are also full of the pest. Picking off is out of the question now, so I am pruning the whole of the 24-acre field, and burning the prunings, so as, if possible, to prevent the insect going through its natural course of life, and turning into the chrysalis, and afterwards into the moth which lays its myriads, (as the case may be) of eggs.

I might say that I am supervising the work on the adjoining estate now, and that it is a very serious affair, and I hope that some of your readers will let me know if they have experienced heretofore such trouble with the same insect and what their remedy was. Several of my neighbours and planters of the district have come over at my request, to see the barbaric work and devastation that there is going on.

Our local Chairman has also seen, and now knows that it is, what it is (serious), and a letter has been sent to Mr. Green to ask him to make a special visit to the district, to see the extent of damage that has been done, and also to give his advice about the matter.

Now while writing this I have a note from my conductor saying that he has found the poochie on another field. Those that have seen the fields attacked were not only surprised at the numbers, but at the rate that the tea was disappearing before their eyes, actually being able to hear the tea leaves being ripped off the bush by these impetuous insects.

## NOTES.

### The St. Louis Exposition.

We give some details elsewhere of the arrangements in regard to exhibits of tea, coffee, etc., at the St. Louis Exposition, and would call special attention to the statement that *free* space will be granted to exhibitors.

### Java Cinchona.

The shipments from Java for the first half of January were 227,000 Amsterdam lbs., and second half 360,000 Amsterdam lbs., total 587,000 Amsterdam lbs.; which compares with 975,000 Amsterdam lbs., in January, 1902, 1,000,000 Amsterdam lbs. in 1901, and 603,000 Amsterdam lbs. in 1900.

### The Preservation of Wood.

According to the *I. P. G.*, Mr. T. H. Blower, an experienced Darjeeling tea planter, has discovered a solution which will preserve wood from the ravages of insects, especially the "Borer," so well known to planters. Mr. Blower claims that his remedy will make timber, of any kind, proof against insects of all kinds, both internally and externally. It will, moreover, prevent the growth of Fungi, which he asserts, give to tea the peculiar cheesy flavour

sometimes complained of, and, in addition, will harden the wood and make it practically damp proof.

### Coffee as an Investment.

In explaining a call of the stockholders of the Enterprise Coffee Co., of Baltimore, to double the capital stock of the company, Henry V. Casey, the President, said: "The market to-day on the Coffee Exchange is about two cents a pound lower than this time a year ago. The market was considered low a year ago, and no one would care to sell it short but the professional speculator. At the present low level of prices I consider coffee the best commercial investment to be had, and deem it a most opportune time to extend the business of the company."

### Journal d'Agriculture Tropicale.

### London Tea Market.

Weekly special telegram dated 12th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally shows a fractional advance and that the market for medium-liquoring Pekoes and Broken Pekoes is steady; while the market for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is 6d. (the same as last week) and the average 7½d. (¼d. up). The average for the same period last year was 7d. Reuter reports that common qualities of Ceylon tea show a slight advance, and good to fine qualities of Broken Pekoe are in demand at full rates. Fair Pekoe Souchongs are quoted at 5¾d. (¼d. up) and the average for the week is 7½d. (¼d. up). 18,000 packages of Ceylon tea were offered for sale and 16,000 disposed of; while of the 29,000 packages of Indian tea offered, 25,000 were sold at an average of 7½d. (½d. up). Calcutta advices dated 17th instant state that at the London sale on the 16th instant there were 26,419 packages. The market continues to gain strength. Very little clean leaf is purchasable even at sixpence. Pekoe kinds just above common are also moving.

### New Tea Warehouse for Calcutta.

The Calcutta Port Commissioners have had a comprehensive scheme of warehousing under consideration for some time past. The general outlines are that a large Warehouse be built at the 80 ft. entrance to the Tidal Basin of the Kidderpore Docks, which will be readily accessible to the Railway and River, and the Steamer Companies will discharge their cargo on to a pontoon which will be close to and in direct communication with the Warehouse. It is suggested that the building be divided off into sections, in

sizes suitable for the requirements of each firm and rents charged sufficient to cover interest, depreciation, etc., on the land and buildings. The Tea Garden Agents' sections would be at the north end nearest the river, the Tea Brokers' sections in the middle, and those of the Buyers' nearest the Docks. Teas for sale in Calcutta could thus be placed by the Steamer Companies straight into the Brokers' section from the inland vessels, while teas for direct shipment to London could in the same manner go into the Garden Agents' section where the invoices could be completed and the chests examined while awaiting shipment by ocean steamers. The Port Commissioners would undertake the transshipment of the tea from the Warehouse to the ocean steamer at rates covering only the actual outlay. It is estimated that a very considerable saving in the annual cost of transshipping and handling teas while in Calcutta would, under the proposed plan, be effected, while the risks of damage to tea chests and loss from thefts would be reduced to a minimum. The Port Commissioners have, it is understood, taken the necessary step for acquiring suitable land for the Warehouse between the Docks and the River, and the necessary funds have already been voted towards the cost of the buildings.

## GENERAL ARTICLES.

### PRODUCE AND PLANTING.

Hopes are entertained in some quarters that the Chancellor of the Exchequer will reduce taxation. Mr. Ritchie was playfully vague on the subject on Wednesday when speaking at the Crystal Palace. He said that South Africa would entail upon us a great expenditure, perhaps more than most people imagined; but he did not want them to believe that, considering all this, he should feel himself in a position to be unable when the Budget came on to reduce taxation. On the contrary, he believed he would, but the reduction would not be so great as most people seemed to imagine. Income tax payers and tea-growers are amongst those who hope for some relief, but it is unwise to form great expectations where Chancellors of the Exchequer are concerned.

The New York correspondent of the *Grocer*, referring to the demand for coffee and tea in the United States, says: "During the trade year ending June 30, 1902, the net imports of coffee were over a thousand million pounds. The *per capita* consumption is now about 11 lbs. Of the total supply Brazil furnished 82.3 per cent. The deliveries for the calendar year 1902, as officially reported by the New York Coffee Exchange, were 6,463,999 bags of 132 lbs. each; in Europe, 8,580,780 bags, making a total for the two countries of 15,044,779 bags, which is a fair statement of the average annual requirements of Europe and the United States. This is a beer and coffee consuming country. The use of tea seems to fall off rather than increase. On January 1, 1902, there were 47,606,789 lbs. of tea held in warehouse; on December 1, 1902, the quantity had reached 78,772,930 lbs., and probably on January 1, 1903, was over 85,000,000 lbs. The imports for eleven months of 1902 were 92,270,885 lbs.; exports, 866,749 lbs., leaving net imports of 91,404,136 lbs. The average annual consumption for three years ending June 30, 1902, is officially reported by the United States Bureau of Statistics at 80,501,993 lbs., or just about 1 lb. *per capita*. From 1892 to 1897 the average was 1.4 lb. *per capita*; that of coffee 9.2 lbs. The use of tea has declined four-tenths of a pound *per capita*; that of coffee increased one and eight-tenths pounds. This is surprising in view of the increase in population and the great prosperity of the country. Of the total imports of 92,270,885 lbs., the Chinese Empire furnished 49,565,928 lbs., or 54.3 per cent.; Japan, 30,843,714 lbs., or 33.7 per cent. The balance came from the United Kingdom, British North America, and the East Indies. If we call it all British-grown teas it would amount

to 12 per cent. of the total imports. We have no doubt that the judicious expenditure of at least £100,000 annually for the next five years would place British-grown tea in the second place, and if kept up another five years in the first rank. Is the game worth trying for?" asks the correspondent, and we imagine that producers will answer "Yes."

As will be gathered from letters we have printed from the *Westminster Gazette* on the subject, the respective merits of green and black tea have been discussed in the columns of that paper. The following additional correspondence has appeared:—"A Producer of Black Tea" writes: "I am pleased to see you admit the letter of 'Anti-Green Tea' on the subject of the hardship of an export tax in India and Ceylon on black tea in order to give a bounty to green, which without the bounty could not be profitably made, and thus taxing high estates for the benefit of the low. The tax, however, falls heaviest on estates, not quite the lowest in altitude, producing black tea just on or just below the paying point, as is, unfortunately, a Ceylon estate of mine. The export tax being per lb. falls most heavily on teas of lowest value. Your correspondent says that 'the consumption of black Ceylon tea is increasing by leaps and bounds; advertising has done its work, and it can now go alone.' He is certainly right, except as to advertising, if he means that paid for by the export tax. The countries where the 'leaps and bounds' have been greatest are just those where no public money has been spent—e.g., Great Britain, consuming 50 per cent. more of Ceylon tea than all countries, and Australia, or Russia, where little has been spent. The Ceylon export tax has existed now since 1893, when it was raised to provide funds for one year for the Chicago Exhibition, and then continued in order to advertise Ceylon tea. Prices since its imposition have steadily fallen from 9d. to 6½d. This fall has brought ruin to some, misery to many; but it has with the excellence of the tea itself increased consumption by 'leaps and bounds' in countries where none of the proceeds of the export tax has been spent. It is yet, after nine or ten years' experience, to be shown that the tax has benefited Ceylon planters one iota, and it is certainly wrong to continue it (for the benefit of growers of green tea."

To this another producer of black tea writes: "With reference to the letter appearing in to-day's issue, signed 'A Producer of Black Tea,' I beg the indulgence of space in your columns to invite a reply to this conundrum. What would have been the price of the 'producers of black tea' to-day but for the encouragement by means of the bounty given to producers of green tea in Ceylon? The writer must know that nearly four million pounds of black tea was taken off the market last year by being converted into 'greens' for the American and Canadian markets, and he may be unaware of the fact that this year the quantity is estimated to be increased to ten million pounds, thus making a corresponding decrease in shipments of black tea to this and other markets. The export tax or cess is at present 3 cent per pound in Ceylon currency (or 30 cents per 100 lbs.), and, considering the average price of Ceylon tea is at least 1d. per pound higher than it would have been but for the bounty offered to producers of green tea, I think your correspondent is hardly justified in grumbling at being taxed for his own benefit. With the continuance of the bounty the export of green tea will before long increase to twenty million pounds, and the result can only be to reduce the supplies of black tea to an extent that will bring production and consumption into line; and as the former is practically stationary, while the latter is progressing by leaps and bounds, it will be interesting to see how long the game now being played by the 'Combination of Buyers' to depress prices is likely to last."

There is every prospect, we learn, that the Clearing House will accommodate itself to circumstances and be reconstituted on wider lines. The recent dispute bids fair to have solved one or two knotty points, and as a friendly spirit now animates all concerned some useful result is hoped for.

A Consular report just issued (!) in reference to Mexico states that the amount of coffee exported in 1901 was 308,453 cwt., valued at £679,503, as against 431,361 cwt., with a value of £1,049,972 in 1900, showing that there was a decrease not only in quantity, but

also in amount. This was due to the failure in the crops in several of the plantations, the export representing what was over after the Home demand for consumption. The best-known coffee-growing districts are in the States of Vera Cruz, Michoacan, Oaxaca, and Colima, but many of the plantations started by American Agricultural Companies on the Isthmus of Tehuantepec are now commencing to bear fruit, "so that it may fully be expected," says the report, "that under normal conditions the exports for the present year (1902) will be greater."—*H. & C. Mail.*

## THE BRITISH TEA DUTY.

### THE JOINT LONDON MEMORIAL.

The following is the memorial, receipt of which has been acknowledged by the Chancellor of the Exchequer:—

To the Right Honourable CHARLES T. RITCHIE, M.P., Chancellor of the Exchequer.

SIR,—We, the undersigned Associations, representing the producers of tea in India and Ceylon, and the buyers and brokers engaged in the importation, sale and distribution of tea in London, have the honour to address you on the subject of the import duty on tea.

In February last, when it was feared that the tea duty might be increased, a deputation from these Associations was received by your predecessor in office, and had the honour of placing before him considerations against such an increase. The deputation did not press for a reduction in the duty, bearing in mind that the additional 2d. per lb. imposed in 1900 was admittedly a war tax, and that heavy war expenditure was still going on.

Now, however, that peace has happily been restored, we venture to approach you on the subject, and to submit for your favourable consideration our appeal for a reduction of the duty to the rate at which it stood before the outbreak of the war, *viz.*, 4d. per lb. In March next the extra duty will have been in force for three years, and we most respectfully beg to urge that the time has now come when we are justified in asking that the industry may be relieved from the additional burden put upon it.

We have no hesitation in saying that, contrary, we believe, to the wish and intention of the Government, at least half the extra 2d. per lb. imposed in 1900 has been borne by the producers. The consumer, whom the increase in the duty was intended to reach, has, owing to various causes, so far partially escaped the burden.

As was pointed out to Sir Michael Hicks-Beach in February last, the tea planting industry has been suffering under severe depression for a considerable time, and the past three years have seen a serious reduction, and in many cases an entire disappearance of profit, resulting in great hardship and distress to the large body of investors in tea estates in India and Ceylon.

The following figures relating to the working of 45 Indian Tea Companies in the last ten years bear out these statements:—

Result of the working of 45 representative Indian Tea Companies registered in London—

Average Div.,	1892	7 %	Average Div.,	1897	5 %
Do.	1893	6½ %	Do.	1898	5½ %
Do.	1894	9 %	Do.	1899	5 %
Do.	1895	8 %	Do.	1900	3 90 %
Do.	1896	7½ %	Do.	1901	2 72 %

Depreciation in value of the capital of the above Companies—

Face value of 45 Companies	...	...	£9,500,000
Market value 1st July, 1897	...	...	£12,000,000
Do. 1st January, 1902	...	...	£7,000,000
Do. 1st December, 1902	...	...	£6,600,000

The figures relating to Ceylon Companies also show a very serious depreciation.

We do not contend that the results shown above are altogether due to the extra duty placed on tea in 1900, but we put them forward as evidence of the existing depression, which we submit is partly traceable to the heavy duty.

So far we have only dealt with the question as it affects producers. When we point out that the value of the tea imported into England from India and Ceylon last year amounted to £7,300,000, while the duty paid on it was over £6,000,000, or more than 80 per cent. of the value, we think you will realize how heavy the burden is on the consumer also. Excepting the trades engaged in the supply of

alcoholic liquor and tobacco, no industry, we venture to say, has such a heavy tax laid on it.

It is not our part to speak for any but those directly interested in the production and distribution of tea, but we think it is not out of place to refer to the hardship which the heavy duty on what may be termed a necessary of life, imposes on the poorer classes, especially in Ireland, where tea forms such an important item of daily consumption.

We would further urge that in all other English-speaking countries, the tendency is to recognise the importance of encouraging the consumption of a beneficial and wholesome beverage such as tea, and with that view the duty on tea is being generally reduced or abolished. In Canada tea is duty free, and we would refer you to the recent decision of the Australian Commonwealth to put it on the free list there also. In the United States of America the duty (put on as a war tax) was removed at the end of last year. We understand that in Germany a substantial reduction is to take effect almost immediately.

From the Government point of view, we would respectfully point out that the Tea Industry has been of very material benefit to India and Ceylon. Large Tracts of unhealthy waste land have been brought under cultivation, contributing substantially to the land revenue of the Empire. Hundreds of thousands of native labourers have been removed from the congested districts and are now employed on tea estates, or comfortably settled down in villages in hitherto unexplored jungle land. It has been the means of opening out railway communication in both countries, and is by far the most important industry in the Province of Assam and in the Island of Ceylon. The public revenue of the abovementioned Province is dependent in a great measure on the prosperity of tea, while in Ceylon the revenue derived from the Tea Industry is the back-bone of the treasury receipts.

We have the honour to be, Sir, your most obedient servants,

Representing—

## IMAGINATION AND THE TEA TRADE.

### A CHAT WITH THE VILLAGE GROCER.

I live in our village because it is so quiet. Only when Dobson, the crazy man who lives by doing anything from obligingly slaughtering the home-fed pig of a too tender-hearted inhabitant to cleaning the windows of the one inn, makes a night of it is there any stir in the place. For I don't call it a stir when Mrs. Twifley accuses Mrs. Scrutton of tale-bearing, such accusations being as common as beautiful sunsets.

Our village grocer is named Baxter. I know he is a grocer by reason of his sign-board, which runs, "Family Baxter Grocer." Punctuation and difference of lettering were alike foreign to the good fellow who created the sign. The windows of Baxter's shop suggest nothing of the grocer proper, who scorns to sell pickled herrings and picture postcards. But Baxter is not so fastidious: he will sell anything on which there is a profit. I know for a fact that he will, although he raises both hands and holds them towards you palm outwards as if for your personal inspection when the mere word "profit" is insinuated, however adroitly, in the course of conversation.

A *Man of Parts*.—Well, a little while ago Baxter imported a wonderful poster from town. The weird thing referred to tea in no hesitating manner. Nearly two-thirds of its loud surface was taken up with a most fanciful figure of a juvenile Chinese lady. The remainder of the space bore the words, "New Century Tea." There, I thought, was inspiration. Just think of coming out with "New Century Tea" in the third year of the century. But such reflection only proved my ignorance, for later Baxter informed me that tea of the quality he dispenses requires time to mature. Think of it—tea and wine should be put down to mature. Take care that your butler sees to the tea next time you put down wine. Don't

take any excuse, since Baxter's word on tea is worth something. He wouldn't be the superintendent of our Sunday-school if he were not a man of parts, as the rector is not everybody's money. He once had five Sunday-school superintendents in eighteen months.

"Granted that good tea must mature," I said "we may safely conclude that this particular tea which the poster proclaims is four years old."

"I should say it is at least that," replied Baxter with over-ready tongue.

"Then it isn't this century's tea at all," I snapped.

"You can't pick the tea trade up like that," came complacently from Baxter. "I've been in the trade for forty-two years, and I'll warrant I have something to learn about it yet."

"I'll be bound you have," was my reply, inwardly realising that with every pushing youngster who has imagination and who is brought up in the tea trade fresh surprises will come.

*Thicker than Water.*—Baxter handed me a small booklet bearing on tea, and as I glanced at page 6 I read: "Our one-and-six is excellent. It is full-bodied, rich in the cup, and of finely-defined flavour. Give it a trial, and you will be delighted."

I looked at the words again, and to make sure that I was not dreaming and in bed I put forth my hand and touched the old cracked counter behind which the faithful Baxter has patiently stood so many years. From the booklet I looked up at Baxter. There he stood clad in dusty black and wearing an apron that, like the tea, must have matured.

"What does 'full-bodied' mean?" I asked of Baxter as he stood as if awaiting further challenge.

"It means that you can tell you are drinking tea; that it is thicker than water; that it will bear comparison with what you can get at Duntown market for 1s 10d. 'Full-bodied' is a term well known to all tea experts. The tea world is big enough to have its own expressions, and 'full-bodied' exactly describes what it is intended to lead the customer to expect when our one-and-six is ordered."

From this definition I easily gathered that I had hit upon Baxter's inborn subject. It is a theory of mine that every man has his inborn subject. There is, for instance, a dean of my acquaintance whose inborn subject is shell-fish. Baxter's, as it fortunately happens, is tea. His inborn subject made a grocer of him, while the dean's relatives put him into the Church because an uncle of the lad's was a bishop. Therefore Baxter is a self-made man and the dean is not.

*Sticking to Facts.*—"But," I ventured to say to Baxter, "I should scarcely have imagined that the term full-bodied was delicate enough to apply to your one-and-six. It is a term that savours of brute strength and a high stomach, or a stiff neck. Now if you had been selling shrimps, or even poultry, I could have fallen into your odd way of putting things. Why don't you say of it that it produces a thick fluid, or that it is so strong that it will support an erect spoon without any assistance from the sides of the cup?"

"Ah, you're joking," said Baxter with a tolerant half-smile. "We in the tea world don't let our imaginations run away with us; we stick to facts, and that's why we do the trade we do. Besides, people are not taken in with advertisements as they used to be."

"Are they not?" was my rejoinder. "Then you think they believe your words when you tell them that your one-and-six is full-bodied, rich in the cup, and of finely-defined flavour?"

"Of course they do—they as understands it," said Baxter, making his first noticeable grammatical slip.

"Some folk don't quite follow your phrases, you suggest?" I hazarded. "Now I should have thought that you would have had some grand but simple terms for a tea that it is manifestly everybody's advantage to buy. Why not make out some such title for it as 'grateful and comforting'?" I am told that that title has sold some hundreds of tons of cocoa."

"That's only a catchy description used by members of the cocoa world. The tea world is quite different; you see. We are here for ever, whereas the cocoa and the coffee and the liquid beef purveyors are here to-day and gone to-morrow. It's tea we fly to when we feel we need what other drinks have not got to offer us. Any one who has reached middle age and who speaks the truth will tell you that for solid comfort and for solid ground for gratitude there is nothing to beat a good cup of tea."

*Art and Mystery.*—"What about the aroma of your one-and-six?" said I, feeling positive that I had put a spoke in Baxter's wheel at last.

"There again you betray what you might have known had your application been turned to the tea trade," came from Baxter as pat as pat. "We don't label our teas under 2s. with any hint of 'aroma.' 'Aroma' belongs to teas of another class, a higher class, you understand. A draper doesn't stick a ticket with the words 'quite new' on calico, however new it may be, does he? In the same way we keep 'aroma' for 2s. and upwards as the draper keeps 'quite new' for muslins and silks. I only give that as an illustration, as there's no real comparison between the tea trade and the drapery trade."

"There are mysteries in both, eh?" I ejaculated. "Say what you please, but I don't know of any mysteries in the tea world," answered Baxter, as if from honest conviction. "Art is one thing and mystery is another. What tea-blending is to the tea trade, colour-producing is to the artist. Your great artist would be impatient if asked how he mastered the mysteries of his craft, but speak to him of his art and he will talk till your pen wears out."

"You talk me down, Baxter, upon my word you do," I said. "I'm no match for you to-day, though one fine afternoon I shall run round and ask what you mean by saying that in addition to being full-bodied your one-and-six is rich in the cup and of finely-defined flavour, and that if one gives it a trial one will be delighted. Really, if you tea men are not imaginative, I don't know who is."

And I left him just as he was about to hold up both his hands palm outwards at me.—C. C. in the *Daily Mail*.

## THE TEA OUTLOOK AT HOME.

VIEWS OF MR. SMITHETT.

Mr. Smithett, the senior partner of Messrs. Wilson, Smithett & Co., the well-known London tea brokers, says the *Times of Ceylon*, is on a voyage round the world and is at present at the G. O. H. waiting for the *Valetta* by which he will proceed to Japan.

He has often been to Ceylon before, and is well-known to planters and others. A representative of the *Times of Ceylon* this morning asked him for his views as regards the prospects for tea at Home this year, and, in reply, he said that though the senior partner of his Firm, he was not directly connected with the tea branch of the business, though, of course, constantly brought into contact with it. "Our opinion," he said, "is that the market will maintain its own if the production and sale more or less fit in, production not being so large as it was, but present prices as far as they are established must not be very much exceeded, or China will have to be taken into account."

In explanation of this, Mr. Smithett went on to say "The Chinese are not an exporting nation at all. If you go to them with your dollars and say 'here are dollars, give me tea' they will give you tea, otherwise they would not trust you; but if the houses there can get a rise to a fair average price, you will find that they will at once put their teas into England."

With regard to the likelihood of the tax being taken off tea, Mr. Smithett says there is not the remotest chance. "The Chancellor," he said, "speaking the other day to his constituents said most distinctly that he had very little money to deal with and he has to arrange the question of African finance, and then in addition there is the income-tax at 1s. 3d., which must be reduced first."

## THE U. S. TEA MARKET, 1902.

Mr. A. R. Robertson writes in the *Spice Mill*:—

To review the tea market from beginning of the season until this date, is something of an easier matter than usual, as prices have been in the ascendancy since then, and almost anyone could buy tea, put it away and make money, without any remarkable smartness or skill.

The Chinaman is the gentleman who proves himself the successful manipulator, and although the black tea market opened with phenomenally low figures, the result of importing for the last year or two had been such that few cared to venture; some of the largest houses bought well, but immediately this buying began, prices in the East advanced.

For a long time a great many hesitated, with the expectancy that values must recede, and that any inrush for buying in large numbers would simply uphold to strengthen the market. Several

commercial journals took the matter up and advocated buying sparingly, waiting for later developments.

At this time of writing the warehouses and shipping depôts are blocked with tea, everyone using strong efforts to get the tea distributed throughout the country, but in the natural course of things, this must take a little time, and until the jobber and grocer has received supplies which he bought for January delivery, it is impossible to say what the outcome of this season may be. At present it looks as if tea would be good all season, buyers will carry more in stock, and the hand-to-mouth supplies will be a thing of the past.

There are some good trades in tea, especially Congous, which might be put away to advantage. Formosas are not likely to be any cheaper, and green teas have every prospect of going higher.

The sale of Indias and Ceylons increases quietly, and there is no doubt but that these teas are steadily making their way into the markets of the United States. Since the making of green tea has been pursued in these countries, that is, teas to take the place of China Green and Japans, they promise to be an item of consumption.

### THE TEA CESS BILL.

The tea industry like ancient Gaul may be said to be divided into three parts, says *Capital*, the growers of the tea, the purchasers of the tea in Calcutta for sale in London, and the blenders and distributors.

The tea growers, who have agitated for a cess are one of those little bands of philanthropists, who desire that a tax should be put on other people.

Virtually all the tea grown in India is sold by auction either in Calcutta or London. A very large proportion is sold in Calcutta, and after it has passed the hammer, the subsequent proceedings interest the producers no more.

Sir Montagu Turner laid stress in introducing this novel form of taxation, on the fact that tea producers representing an area of 416,000 acres out of a total of 520,000 acres, desired that a tax may be imposed upon the persons who purchase their tea for the benefit of the tea industry generally.

We think that before this tax is levied, the views of the buyers of tea should be taken, because presumably they are the people who will have to pay the tax.

If it is intended that the cess shall fall on the producers of tea, it should be legal for the buyers at the auctions in Calcutta to deduct the cess from the amount of their payments, and it should only be levied by the Government on tea shipped direct by the gardens.

We would commend to the Government the remarks of Mr. David Yule at the Bank of Calcutta on Monday. Lord Curzon is always anxious to know why capital does not come to India, he should surely know that capital is one of the most sensitive of things, and that when the machinery of the State is used to crush dissent and legislation of not only a novel but of a mischievous kind is introduced by empirical statesmen, such action is not calculated to induce capital to come freely forward. Capitalists desire to embark their capital in countries where legislation is conducted on reasonable and common sense principles, and when a responsible Government departs therefrom, capital also takes its departure.

### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

### The Indian Tea Cess Bill.

The following Bill was introduced in the Council of the Governor-General of India for the purpose of making Laws and Regulations on the 30th January, 1903.

No. 2 of 1903.

THE INDIAN TEA CESS BILL, 1903.

#### CONTENTS.

#### Sections.

1. Short title and extent.
2. Definitions.
3. Imposition of duty on exports of Indian tea.

4. Constitution of Tea Cess Committee.
5. Application of proceeds of tea cess.
6. Keeping and auditing of accounts.
7. Power to make rules.
8. Amendment of Act VIII of 1894, section 5.
9. Time during which sections 2 to 7 are to remain in force.
10. Disposal of surplus proceeds of tea cess.

A Bill to provide for the levy of customs duty on Indian tea exported from British India, and to amend section 5 of the Indian Tariff Act, 1894:

Whereas it is expedient to provide for the creation of a fund to be expended for the promotion of the interests of the tea industry in India by a Committee specially constituted in this behalf;

and whereas for this purpose it is expedient to levy customs duty on Indian tea exported from British India, and to amend section 5 of the Indian Tariff Act, 1894;

It is hereby enacted as follows:—

1. (1) This Act may be called the Indian Tea Cess Act, 1903; and

(2) It extends to the whole of British India except Aden.

2. In this Act,—

(a) "Collector" means, in reference to tea exported by sea, a Customs-collector as defined in clause (c) of section 3 of the Sea Customs Act, 1878, and in reference to tea passing out of British India by land, the Collector of the district;

(b) "Tea Cess" means the customs duty imposed by section 3 of this Act and by section 5 of the Indian Tariff Act, 1894, as amended by this Act; and

(c) "Tea Cess Committee" means the Committee constituted under section 4.

3. On and from the first day of April, 1903, a customs duty shall be levied and collected on all Indian tea exported from any customs-port to any port beyond the limits of British India or to Aden at the rate of one-quarter of a pie per pound, or at such lower rate as the Governor-General in Council may, on the recommendation of the Tea Cess Committee, prescribe by notification in the Gazette of India.

4. (1) The Governor-General in Council shall constitute a Committee to receive and expend the proceeds of the tea cess.

(2) The Committee shall in the first instance consist of twenty members, who shall be appointed by the Governor-General in Council on the recommendation of the following bodies and authorities, namely:—

(a) three on the recommendation of the Bengal Chamber of Commerce;

(b) seven on the recommendation of the Indian Tea Association, Calcutta; and

(c) tea on the recommendation of such respective bodies or authorities interested in the production of Indian tea, and established in British India, as the Governor-General in Council may appoint in this behalf:

Provided that if, within the period prescribed in this behalf by rules made under this Act, any of the said bodies or authorities fails to make any recommendation, or to make the full number of recommendations which it is entitled to make, the Governor-General in Council may appoint the required number of members of the Committee of his own motion without such recommendation.

(3) Whenever any member appointed either on the recommendation of any body or authority referred to in sub-section (2), or in default of such recommendation, dies, resigns, leaves British India or becomes incapable of acting as a member of the Committee, the Governor-General in Council may, in his discretion, on the recommendation of such body or authority, or in default of such recommendation, appoint another person to be a member in his stead.

(4) No act done by the Tea Cess Committee shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of, the Committee.

5. (1) At the close of each month, or as soon thereafter as may be convenient, the Collector shall pay the proceeds of the tea cess, after deducting the expenses of collection (if any), to the Tea Cess Committee.

(2) The said proceeds shall be applied by the Committee towards meeting the cost of such measures as the Committee may consider it advisable to take for pushing the sale and increasing the consumption of Indian tea in India and elsewhere.

6. (1) The Tea Cess Committee shall keep accounts of all money received and expended under section 5.

(2) Such accounts shall be examined and audited annually by auditors appointed in this behalf by the Governor-General in Council; and such auditors may disallow any item which has, in their opinion, been expended out of the proceeds of the tea cess otherwise than as directed by or under this Act.

7. (1) The Governor-General in Council may, after previous publication, make rules to carry out the purposes of this Act.

(2) All such rules shall be published in the Gazette of India. 8. In section 5 of the Indian Tariff Act, 1894, for the words "shall be levied at the rates respectively prescribed in the second, third and fourth schedules on goods passing by land out of, and in the fifth schedule on goods passing by land into" the words "at such rates as may be prescribed by or under any law for the time being in force relating to customs duties on imports and exports, respectively, into and from ports, shall be levied on goods passing by land out of or into" shall be substituted.

9. Sections 2 to 7 shall remain in force only until the thirty-first day of March, 1908:

Provided that the Governor-General in Council may, on the recommendation of the Tea Cess Committee, declare, by notification in the Gazette of India, that the said sections shall continue in force for any further period specified in such notification.

10. If any proceeds of the tea cess remain unexpended when sections 2 to 7 cease to be in force, they shall vest in His Majesty.

#### STATEMENT OF OBJECTS AND REASONS.

The object of this Bill is to provide for the levy of a small cess on Indian tea exported from British India, with the object of creating a fund for pushing the sale and increasing the consumption of such tea. It is proposed to entrust the administration of the fund to a special Committee, consisting of members representing the tea interest and recommended by local mercantile bodies. Those interested in the tea industry are practically unanimous in recommending that the proposed legislation should be undertaken.

2. The opportunity afforded by the present Bill has been taken to make an amendment in section 5 of the Indian Tariff Act, 1894 (VIII of 1894), which will have the effect of extending the proposed tea cess to exports to foreign territory by land.

MONTAGU C. TURNER.

The 28th January, 1903.

### THE U. S. COFFEE MOVEMENT.

#### CONSUMPTION.

The deliveries for the first half of the current crop year fall behind the corresponding period in 1901 by 471,884 bags, says the *American Grocer*. The total deliveries were as follows:

	1901.	1902.
	Bags.	Bags.
United States ... ..	3,489,532	3,289,962
Europe ... ..	4,862,486	4,590,172

Total United States and Europe .. 8,532,018 7,880,134

The average semi-annual deliveries for the past three years were 7,717,517 bags, from which it would appear that consumption during the past 6 months had been only normal, in spite of low prices and extensive advertising. As compared with the first half of the trade year 1900-01, deliveries show a gain of 959,735 bags, or 13·8 per cent., but as compared with 1901-02 a loss of 5·7 per cent., so that coffee for the past three years has not increased in use as much as growth of population and low prices warrant. The normal increase is placed at about 8 per cent. annually.

#### VISIBLE SUPPLY.

The world's visible supply compares as follows:

	Bags.
January 1, 1903 ... ..	13,212,775
January 1, 1902 ... ..	10,870,930
January 1, 1901 ... ..	7,560,345
Increase, one year ... ..	2,341,845
Increase, two years ... ..	5,652,430

These figures indicate the tremendous strides made in cultivation, most pronounced in Brazil, where there is still an immense area of uncultivated coffee-bearing land.

#### THE BRAZIL CROP.

The receipts at Rio for the first half of 1902 were 2,555,000 bags; at Santos, 5,670,000 bags; at both ports, 8,225,000 bags, against 10,546,000 bags in 1901-02; 7,060,000 bags in 1900-01. During

three previous semi-annual crop years the receipts for this period averaged 69 per cent. of the total crop. On this basis the total receipts for the year should reach nearly 12,000,000 bags.

#### DECEMBER MOVEMENT.

The following statement shows the December movement in detail:

	Bags.	Bags.
Stocks, December 1, 1902 —		
United States ... ..	2,622,849	
Europe ... ..	6,745,052 —	9,367,901
Receipts during December —		
United States ... ..	471,226	
Europe ... ..	1,112,746 —	1,583,972
Total supply, January 1, 1903 ... ..		10,951,873
Less stocks, January 1, 1903 —		
United States ... ..	2,400,426	
Europe ... ..	7,168,149 —	9,568,575
Deliveries, December, 1902 —		
United States ... ..	493,649	
Europe ... ..	689,649 —	1,183,298
Deliveries, December, 1901 ... ..		1,303,777

Decrease as compared with December, 1901 .. 120,479

Deliveries, July, 1902 ... ..	1,211,088
Deliveries, August, 1902 ... ..	1,302,949
Deliveries, September, 1902 ... ..	1,396,975
Deliveries, October, 1902 ... ..	1,545,611
Deliveries, November, 1902 ... ..	1,240,213
Deliveries, December, 1902 ... ..	1,183,298

Total deliveries, six months, 1902 ... ..	7,880,134
Total deliveries, six months 1901 ... ..	8,352,018
Total deliveries, six months 1900 ... ..	6,920,399
Total deliveries, year ending June 30, 1902 ... ..	15,516,663
Total deliveries, year ending June 30, 1901 ... ..	14,329,925
Average deliveries monthly year, 1901-02 ... ..	1,293,055
Average deliveries, six months, 1902-1903 ... ..	1,313,356

The December sales of options were 725,250 bags. The lowest price for No. 7 Rio was 4·35 cents for January; the highest, 5·35 cents for October and November.

Of the total deliveries in the United States, 398,288 bags were Brazil and 95,361 bags of all other sorts. About 80·5 per cent. of the total deliveries were of Brazil sorts and 19·5 per cent. of all other kinds.

The year 1903 opens with prospects of continued low prices and a supply of higher average quality than usual. It is one of the most favourable of years for a retailer to increase his trade in coffee and make a liberal profit.

It is the opinion of Herman Sielcken, the great coffee operator, that "the only remedy for the over-supply of coffee is a price which would curtail the production, but that price has not yet been reached, as the Brazilians, while making a poor mouth and complaining about the hardship of low prices, are constantly increasing their crops, as is shown above.

"It is now generally known," he says, "that the Brazilians have not only been raising large crops, but they have been raising a high quality of coffee as well, and while a certain quality is dealt in as a basis on the Coffee Exchange, the quality that is delivered on contracts costs about two cents more, so that the Brazilians receive over 40 per cent. more than the option basis in New York would show."

### INDIAN TEA ASSOCIATION.

#### ANNUAL REPORT OF THE GENERAL COMMITTEE.

The General Committee, in submitting to the members their Report for the past year, say *inter alia* :—

*American and Foreign Market Fund.*—The subscriptions received during the year for this Fund amounted to Rs.55,564-11-6. A sum of Rs.52,500 has been devoted to the export bounty on green teas. The tea rooms at 48, Faubourg St. Honore, Paris, have been also maintained; and work in Italy, Turkey and other European countries has been pushed on as vigorously as the limited funds at the disposal of the Association would permit. In the early part of the year advertising in America had to be discontinued owing to the uncertainty about funds. The result was that Indian teas lost ground to a certain extent; while Ceylon teas—which have been and are still being actively pushed—made

greater progress even than before. Later in the year it was found possible to renew the advertisements which are at present appearing as formerly. Now that the Cess is practically an accomplished fact, it may be confidently said that much more strenuous and sustained efforts will be made in America than have been made in the past. An excellent opportunity for a good start is afforded by the great International Exhibition which is to be held at St. Louis, U. S. A., in 1904. Recently the Hon. John Barrett, a Commissioner of the United States Government for this Exhibition, gave an instructive address before the members of the Bengal Chamber of Commerce upon the advantages of Indian industries being well represented at it. At the present moment it is not possible to indicate the extent to which Indian tea will be able to take advantage of the Exhibition. But to the General Committee there would seem to be no reason why a portion of the Cess Funds should not be expended on an exhibit; although this is of course a matter which the Cess Committee will be called upon to decide. At the same time the existence of the Cess affords no reason why Government should not be asked for financial assistance. And doubtless the incoming General Committee will take up the question so far as this aspect of it is concerned.

Another opportunity of pushing Indian tea in what is believed to be a promising market, will be afforded by an Exhibition which is to be held at Cape Town in November, December, January, and February, 1903 and 1904. So far but little has been done in South Africa by Indian tea producers. But during the past year an arrangement was made by the London Association with an agent in Johannesburg to sell a minimum quantity of 1,200 half-chests of suitable tea in consideration of a bonus of  $1\frac{1}{2}$ d. per lb. The tea was to be bought in Calcutta by Messrs. McLeod & Co., who, up to date, have shipped 490 half-chests. No information is of course available at present as to the reception the teas have met with in South Africa. But it is stated that the quality of the tea usually sold in the Transvaal is very inferior and that the price is about four shillings a pound. If this is so, there would seem to be no reason why Indian teas at moderate prices should not find a ready market.

*Compulsory Cess on Indian Tea.*—The Committee are glad to be able to record that the Government of India have consented to levy a Compulsory Cess on all tea exported from India.

A scheme had been generally approved by the different district Associations, before it was submitted to the Government of India. The views of Government upon it, and the final decision of H. E. the Governor-General in Council upon the main question of the Cess, were received about the middle of December. It appeared that no weighty or widely-entertained objections to the impression of the Cess had been lodged. Consequently the Government decided to proceed with the necessary legislation. The proposed scheme of administration was generally approved by Government: and the Bill providing for the imposition of the Cess was introduced into the Imperial Legislative Council by Sir Montagu Turner, Kt., on the 30th January.

*Consumption of Tea in India.*—Throughout the year the Indian Tea Markets Expansion Commission has vigorously pushed the sale of tea in India.

It has been thought that the work of the Commission has been hampered by the sale in the Calcutta bazaars and elsewhere of tea refuse. Large quantities of this commodity are sent to Calcutta; and although a fair proportion is sold to reputable European firms for the manufacture of caffeine, there is no doubt that much is disposed of for local consumption. At the instance of the Committee, Messrs. Andrew Yule & Co. have made enquiries into this trade; but without the co-operation of all producers, there does not appear to be any prospect of its being suppressed.

*Foreign Markets.*—It was stated in the last Annual Report that the Committee were giving attention to the possibility of developing the Russian market. In the absence of funds for advertising purposes, they have since been making enquiries as to the different routes by which Indian tea is carried to Russia. In March they invited the attention of the Bengal Chamber of Commerce to the question. They asked if the Chamber could take any action which might be calculated to promote the establishment of a direct line of steamers between Calcutta and Russian ports.

More recently the Committee suggested to the Bengal Chamber of Commerce that an attempt should be made to persuade the Russian Government to reduce the import duties on tea. The Chamber represented the matter to the Government of India, who

referred it to the Home Government, through the Secretary of State for India. No action in the way of approaching the Russian Government will however be taken, as His Majesty's Ministers think there is no substantial case so long as the duties do not differentiate against Indian tea.

A detailed reference was made in the last Annual Report to the difficulties connected with the development of the tea trade in these countries. No progress appeared to be possible as regards either country. But it occurred to the Committee that advantage might be taken of Sir James Mackay's mission to China, in connection with the revision of the Tientsin Treaty of Commerce, to induce the Chinese authorities to make certain changes in their tariff regulations.

And quite recently the Chamber have been informed by Government that there is a possibility of negotiations being opened with the Chinese Commissioners with a view to the fixing of a tariff on Indian tea imported into Tibet. An expression of opinion was invited by Government as to what would be a reasonable rate of duty having regard to (a) the cost of transit from India to Tibet, and (b) the price at which China tea is sold at Lhasa. The General Committee, to whom the point was referred, expressed the opinion that the duty should not exceed that levied on China tea imported into India.

At this point the question stands at present, at least so far as Tibet is concerned. The Government of India have not yet given any indication as to whether they can take action in regard to Chinese Turkestan.

*British Import Duty on Tea.*—Since the last Annual Report was published it has not been found possible to take any definite steps with the object of obtaining a reduction of this duty. At about the time when that Report was being written it was thought that a further enhancement of the duty might be in contemplation. A vigorous protest was accordingly entered against any enhancement; and H. E. the Viceroy supported this by a telegram to the Secretary of State. No change was, however proposed by the Chancellor of the Exchequer, and the duty consequently still remains at 6d. per pound. The Committee have so frequently stated their views upon the whole question of the duty as to make repetition here hardly necessary. But it may not be inappropriate to say that they have always held very strongly that the gradual reduction and ultimate abolition of the duty is one of the objects for which tea producers should steadily and consistently work. During the past year they have not unfortunately had an opportunity of giving practical expression to this opinion. They have, however, observed with much satisfaction that the Ceylon Planters' Association and the United Planters' Association of Southern India are in substantial accord with it. The Indian Tea Association, London, are of the same mind, and at the present time are arranging with the Ceylon Association in London for the presentation to the Chancellor of the Exchequer, of a memorial asking for the reduction of the duty to 4d. per pound.

*Ceylon Import Duty on Tea.*—The Committee referred in their last Report to a representation which they had made to the Government of India upon certain matters relating to this duty. It is unnecessary to recapitulate here the details of the case which the Committee submitted, but it may be said that their main suggestion was of a two-fold nature. Firstly, that the Ceylon Government should be asked to exempt Indian tea from the payment of the import duty of four annas per lb.; and secondly that, if necessary, the Indian Government should similarly exempt Ceylon tea from the payment of the 5 per cent. *ad valorem* duty levied in this country. Further, the Committee proposed that, if the Ceylon Government decline to make this exemption, the Indian duty should be enhanced to a protective rate.

In June the Government of India intimated that they were not prepared to adopt any of these proposed courses of action. They submitted, at the same time, a statement of the views expressed by the Ceylon Government on the question. From this it appeared that the Lieutenant-Governor of Ceylon was unwilling to exempt Indian tea from the payment of import duty. In their representation the Committee had complained of the heavy transshipment charges at Colombo; and had asserted that it was cheaper, in the case of teas destined to Russia for example, to tranship at Singapore. The Ceylon Government denied that the charges were high, but they did not controvert the assertion that transshipment at Singapore was cheaper. They further contended that Indian teas competed on actually level terms with all Ceylon teas which are

sold and exported without being blended, or made into packets. It was recognised in Ceylon that the object of Indian growers was to obtain facilities for blending in Colombo. This was considered both by Ceylon planters and merchants to be undesirable; their object being that pure Ceylon tea only should be exported from the island.

Looking at the question purely from the Ceylon point of view, but little fault can be found with this decision. But the Committee still think it is unfair to Indian growers that Ceylon tea should be freely admitted into India for blending or any other purposes. For if Ceylon will only admit Indian teas under certain restrictions, it is but right that similar restrictions should be enforced in India against the produce of the island. As matters at present stand, however, there is nothing to prevent the sale in India of blended Indian and Ceylon teas; while the sale of such in Ceylon, or their export from Colombo, is debarred. So far the Committee have not re-opened the question with Government, but possibly their successors will consider the advisability of making a further representation.

#### SCIENTIFIC OFFICER.

Throughout the year Mr. Harold H. Mann the Agricultural Chemist employed by the Association, has been principally engaged in the investigation of three questions: (a) the life-history of, and the means to be taken to deal with the mosquito blight of tea; (b) the soils and methods of culture in the Surma Valley, and (c) the changes which take place during the manufacture of tea. By permission of the Committee, and at the request of the Government of India, Mr. Mann has devoted a portion of his time to thoroughly revising Sir George Watt's book on "The Pests and Blights of the Tea Plant." The revised edition of the book is now in the Press, and will be published by Government at an early date, under the united names of Sir George Watt and Mr. Mann.

Mr. Mann's existing agreement with the Association expires in May, 1903. Early in the year the Committee took into consideration the arrangements to be made for the renewal of this agreement. In the first place they invited Mr. Mann to state his views as to what should be done. This he did in a comprehensive memorandum, in which he laid down a scheme for the formation of a scientific department of the Association. The main features of the scheme were: (a) the engagement from England of an assistant qualified in agricultural and organic chemistry; (b) the establishment in the tea districts of a central experiment station; (c) the engagement of a qualified Indian assistant for the Calcutta Laboratory. It was estimated by Mr. Mann that the total cost of the complete scheme would not exceed Rs.27,000 per annum; as compared with Rs.15,000 the cost of the existing establishment. The Committee approved of the scheme, as did also the different Local Associations interested. It is the opinion of the Committee that the cost of the department cannot be legitimately charged to the Cess funds. But even if it could be so charged they do not think that the Local Governments should, for that reason, contemplate the withdrawal of their grants. For the Cess funds are derived, not from the public revenues, but directly from tea producers. And that being so, the existence of such funds is no reason why financial assistance should not be continued by the Governments interested. The Committee have, within the last few weeks, placed this view of the case before both H. H. the Acting Lieutenant-Governor and the Hon the Chief Commissioner. The Committee would like to add that the members of the Assam Branch have expressed their willingness to increase their subscription to Rs.3,000 annually, and that the Terai planters are willing to continue their contribution of Rs.300 annually. It is also proposed by the Surma Valley Branch to make a special effort to contribute; and the Committee hope that the Dooars Planters' Association will continue their contribution of Rs.1,000 annually.

#### GREEN TEA.

It is with much satisfaction that the Committee record a considerable advance in the manufacture of Indian green tea during the past year. At the time the last Annual Report was written the chances of green tea being extensively taken up by producers appeared to be somewhat remote. But the difficulties which were then prominent have been surmounted; and at the moment there is every reason to believe that this particular branch of the Indian industry will quickly attain large proportions.

The steps which have been taken by the Committee during the year may perhaps be summarised with advantage. On the last day of May they notified to the members of the Association that the bounty would be paid at the rate of  $1\frac{1}{2}$  annas per lb. on 400,000 lbs. of green tea. Of this quantity the Baraora (Sylhet) Tea Co., Ltd., had

offered to make half, which offer the London Association had accepted. From enquiries which had been made of the recipients of the bounty paid in 1901, it appeared that teas of the unfaced China type were in the greatest demand. But in view of the fact that during 1901 upwards of a million pounds of Ceylon green tea were exported to America, there seemed to the Committee to be a market for both classes. They accordingly decided to place no restrictions upon the class of tea to be manufactured. By the middle of October the whole of the 400,000 lbs. had been manufactured, half by the Baraora Tea Co., Ltd., and the remaining half by other Companies. In order, still further to encourage producers the Committee then offered a bounty at the rate of 9 pies per lb. on an additional 160,000 lbs. Some time previously the Baraora Company had expressed their willingness to manufacture an additional 160,000 lbs. if the bounty at 9 pies per lb. were paid to them. This offer was accepted. By the middle of December the whole of the first named 160,000 lbs. had been manufactured, and the greater part of that arranged for by the Baraora Co. Before the end of the season, therefore, the bounty will have been paid upon 720,000 lbs. of Indian green tea. When it is remembered that last season the quantity upon which the bounty was paid did not exceed 30,000 lbs., the nature of the advance which has been made will be readily perceived. With the advent of the Cess and the consequent possibility of a bounty on more extended scale the prospects of Indian green tea would appear to be distinctly good.

#### COFFEE IN LONDON.

The *Produce Markets' Review* of January 24, 1903, remarks:—"The auctions have again been of a very limited character, smaller even than last week, and as a result there has been a slight hardening of prices. The very few lots of really good Costa Rica found keen competition, and the bold sizes in particular are from 2s. to 3s. dearer, while the second size is about 1s. above the opening prices. There has not, however, yet been any general buying, and unless there is a very decided improvement in the demand there is no reason why prices should advance when the heavy supplies which usually come towards the end of February are put on the market. For the common grades quotations are a little easier, in sympathy with the Santos terminal quotations. A very small business has, however, been done in the latter market, as the receipts have continued heavy, and in consequence speculation is checked."

#### TEA IN LONDON.

THE CLEARING HOUSE DISPUTE.—The *Produce Markets' Review* of January 24, 1903, says:—"We have not recently mentioned the difficulties that had arisen in the trade, because a prospect happily appeared of their being settled in a friendly spirit, so that it was not an appropriate time to accentuate points of difference. We are pleased to say that there is now every probability of the Clearing House being reconstituted on its proper basis and on broader lines. There is further a hope that it will serve as a neutral meeting-place for the various sections of the producing and distributing trade, to meet from time to time and to discuss the various reforms so urgently wanted in connection with tea."

INDIAN TEA.—Prices are less firm and in some cases lower, importers having shown more disposition to meet the market, although a large quantity was withdrawn from the public sales. The easier position is most pronounced in teas from 7d. downwards, but up to the present buyers have not responded freely to the lower rates, and consequently the demand does not show much improvement. A good deal will depend on the quantity brought forward at the auctions; if the offerings are in excess of requirements, a further concession in values is practically certain; on the other hand, with moderate supplies present rates will probably be maintained. The deliveries of duty-paid tea this month, as was to be expected, are upwards of 6,000,000 lbs. smaller than for the same period last year, but the actual stocks held by the trade are no doubt smaller to this extent, and, therefore, the statistical position is unchanged. At the public sales, 33,100 packages were brought forward, of which 22,248 packages were sold, and only a moderate quantity of the withdrawals has since been disposed of at sale rates. For the finer sorts there was a good demand, especially for those with useful autumnal flavour, at improved rates, while the medium teas were irregular in value with a drooping tendency. A larger proportion

of the lower descriptions was obtainable under 5 $\frac{3}{4}$ d. and the market closed weak at the decline.

**CEYLON TEAS.**—A smaller quantity was brought forward at the auctions on Tuesday, but a quiet tone again prevailed, and a great proportion of the lower grades was withdrawn. Pekoes and Pekoe Souchongs from 6 $\frac{1}{2}$ d. downwards showed the most weakness, the bidding being about  $\frac{1}{4}$ d. under last week's rates; but the merchants would not meet the market, and most of the offers were declined. In Broken Pekoes, the medium kinds were also slightly easier, more particularly between 8d. to 10d. per lb., and these descriptions now show exceptionally good value. The lower sorts, however, under 7 $\frac{1}{2}$ d., remain scarce and dear, only a very small quantity being obtainable. At the public sales 21,600 packages were brought forward, of which about 4,800 were withdrawn.

**CONGOU TEA.**—Business has again been extremely quiet for all descriptions. At the public auctions, held on Wednesday, some 778 packages were offered, and sold fairly well, previous prices being obtained where sales were effected.

**OTHER CHINA TEAS.**—There was a steady demand for all descriptions at the sale held on Thursday, and there is no alteration to quote. A considerable quantity of Indian and Ceylon green tea was brought forward, and the bidding for these kinds was very animated. There has been a somewhat better enquiry for Caper, and a fair business has been transacted privately; only about 900 packages were offered for public auction on Wednesday. 1,385 packages of green tea were catalogued for Thursday's sale, of which about 430 were withdrawn.

### A POOR YEAR FOR COFFEE.

Mr. Hermann Sielcken writes in the *Spice Mill*:—

The year 1902 has been very unsatisfactory to the dealers in coffee. On December 31, 1901, the January option was \$6.80 bid and the December option of 1902 was \$7.80. The December just closed shows a decline against the bid price of a year ago of 340 points, which is about \$4.50 on each bag of coffee. The spot month is 240 points lower, which, with carrying charges added, will show for the year a decline of \$4 a bag.

While these losses have occurred in the United States and in Europe, the entire benefit has accrued to Brazil. The low prices prevented actual short sales, the sellers being the importers who paid Brazil a price in proportion to the one at which they sold.

The only reason for the decline has been the unexpected large outturn of the second half of the 1901-02 crop and the large receipts of the present crop, entirely contrary to the predictions made from Brazil. The Brazilians are not so much to blame for the biased and incorrect estimates as dealers and speculators in consuming countries were for believing them, considering the experience in this line during the last six years.

To what extent the community of interest between the holders of coffee in consuming markets and the producers in producing countries exists, is best shown by the International Coffee Conference, held last fall in New York, at which representatives from the different coffee-growing countries advanced propositions to raise the price. Suppose the cotton-growers in the South should ask for a Conference in Manchester of all the European countries interested in cotton in order to raise the price of cotton. The proposition is identically the same. New York is the largest consuming market for coffee, just the same as Manchester is the largest consuming market for cotton.

Since 1895 the price has gone down steadily, with an occasional reaction, based, in every instance, on false crop news. The low prices ruling in late years have induced a new speculation of a formidable nature. But neither capital nor future crop alarms can keep up the price when the enormous production is rolling up supplies to an extent that nearly enough stocks are now in sight for one year's average consumption. The abolition of slavery in Brazil in 1888 has had the same effect upon the increase in production as did the abolition of slavery in the United States on cotton.

The crops in Rio and Santos from 1891 to 1896 averaged 6,000,000 bags; from 1896 to 1901, about 9,500,000; from 1901 to 1903, about 13,500,000. The minimum prospect for the 1903-04 crop is 14,000,000 bags, with the possibility of reaching even 16,000,000 or more.

The only remedy is a price which would curtail the production, but that has not yet been reached, as the Brazilians, while making

a poor mouth and complaining about the hardship of low prices are constantly increasing their crops, as is shown above.

It is not generally known that the Brazilians have not only been raising large crops, but they have been raising a high quality of coffee as well, and while a certain quality is dealt in as a basis on the Coffee Exchange, the quality that is delivered on contracts costs about two cents more, so that the Brazilians receive over 40 per cent. more than the option basis in New York would show.

A large proportion of the intelligent Brazilians are aiming to teach the farmers to raise their crops at as low an expense as possible and to increase the production so as completely to outdo all other producing countries, even if this should involve still lower prices for some time. If this is carried out and we continue to have large crops, then the outlook is not favourable to the large holders of to-day, who, in Europe, and this country as well, have suffered enormous losses in the last six years.

The United States, as a whole, is naturally the gainer by the low prices. Figuring on a consumption of 6,000,000 bags a year and the difference between the present value and the prices ruling from 1891 to 1896, the country is saving from \$61,000,000 to \$70,000,000 a year from the low prices of coffee.

The amount of coffee raised in Java for importation to this country has shrunk to such small proportions that not even 1 per cent. of the total imported here is genuine Java. Of the Mocha, there is no doubt that a large quantity comes from Brazil, where the Mocha tree has been transplanted, and the consumer cannot detect the difference in the taste of the Mocha as grown in Arabia and the Mocha as grown in Brazil.

It is certain that not more than 5 per cent. of the coffee sold as Mocha and Java has ever seen Arabia and Java, and if the public desires to be deceived and buys coffee simply by the description of Java and Mocha, paying an exorbitant price for it, the fault lies at its own door.

While the country at large gains by the reduction in the price paid to a foreign country, the trade itself has learned by necessity to be very careful. With the present outlook and the large actual, as well as prospective, supplies, something unforeseen has to occur in the year 1903 to change the present gloomy aspect; and unless the unexpected happens the coffee trade in the United States is likely to continue in the cautious ways it has adopted during the year 1902.

Speculation may again try to resist a further decline, but the law of supply and demand rules supreme in a staple, where the low price cannot create a new field of consumption as it does with corn, cotton, and other staples.

### TEA IN AUSTRALASIA.

SYDNEY, January 17.

**TEA.**—Values for this commodity although distinctly better than when last reporting, have failed to respond in any appreciable way to the higher costs ruling at both Colombo and Calcutta. During the past week or 10 days prices obtained for Ceylons, both privately and under the hammer, have been considerably in advance of those current at the close of last year. Stocks are light, and supplies coming to hand show an advance of fully 2d. per lb. on those paid for old supplies. Importers are fully seized with the position of the market at producing and export centres, and are reluctant to quit unless at something near covering rates.

MELBOURNE, January 19.

**TEA.**—High cost and quiet demand with fair prices about describes the tea market for the month. Importers evince a disposition to hold stocks rather than quit at a loss. The demand for Indians is pretty good, and prices have been decidedly higher than last month; in fact, from 6d. to 9d. has been about the usual thing. A consignment of good liquoring Indians came to hand by the "Fortunatus," and although only a small quantity has been offered, yet from 10d. to 1s. was secured. The market for Ceylons is quiet, and the quality rather poor for late arrivals. Very little has been sold, owing to high cost at producing centres. All old season Chinas will be sold before the new season's can come to hand.

ADELAIDE, January 17.

TEAS also have seen a lot of business, and all desirable sorts offered have been quickly taken up. The various blends packed by proprietary teamen almost monopolise the trade.—*Australasian Grocer.*

## THE ST. LOUIS FAIR.

### ARRANGEMENTS FOR THE TEA, COFFEE, AND SPICE TRADE EXHIBITS.

The tea, coffee, and spice trade is to be well housed at the Universal Exposition of St. Louis in 1904. The revised classification of exhibits to be made in the department of Agriculture and Horticulture show that free space and power are to be afforded all who wish to exhibit tea, coffee, and cocoa plants and their products in the agricultural palace.

Under the classification of sugar and confectionery, equipment, processes and products, there will be installed in the agricultural palace displays as follows:

*Sugar and Confectionery—Condiments and Relishes:*—Sugar, glucose, confectionery, chocolate, brandied fruits, preserves, jellies, substitutes for coffee, coffee, tea and aromatic drinks, maté, chicory and sweet acorns, vinegar, table salt, spices and extracts: pepper, cinnamon, allspice, etc.; flavouring extracts, mixed condiments and relishes: mustard, curries, sauces, etc.

*Equipment and Methods of Preparation.*—Sugar manufactories and refineries, manufacture of chocolate and confectioneries, preparation of ices and sherberts, preparation and roasting of coffee, and vinegar works.

There will be no charge for space occupied by exhibits, and a limited amount of power for the operation of mechanical devices to illustrate processes of special interest will be furnished to exhibitors without charge.

## TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, January 15, 1903.

Locally the condition in teas is unchanged. It is almost impossible to get low-priced Japan teas and young hysons are none too plentiful. There has been a little activity in flavoring teas. The outside markets retain their strength, and at the tea market held in London on Tuesday last, the first since the holidays, an advance of  $\frac{3}{4}$  penny on flavory Ceylons was reported. Deliveries for consumption at that date were larger than importations. With the Calcutta market closed there is little room to expect lower prices until next fall, when the weight of the new crop of tea then coming forward will determine the position.

MONTREAL, January 15, 1903.

The market is dull this week and what demand there is chiefly for small lots for immediate requirements. Ceylon teas have not altered their position to any extent, and no quotable change is reported either locally or on the primary markets. While the general view of Japan teas is that the situation is unchanged and the prices are still firm, one buyer considers the market for low-grades somewhat easier. He states that he was offered some low-grade teas at 16c., which in December were held at 18c. On the higher qualities, however, we hear of no change, the market seemingly retaining all its firmness.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Extremes during the week ending December 26th, were  $11\frac{3}{4}$ d.— $11\frac{7}{8}$ d. for 90 d/s Bank paper and  $11\frac{3}{8}$ d.— $11\frac{5}{8}$ d. for private.

The average Bank 90 d/s counter drawing rate for the week comes out at  $11\frac{5}{8}$ d., the corresponding sight rate being  $11\frac{7}{8}$ d. against  $11\frac{3}{8}$ d. the average sight rate of the *Camara Syndical*.

Ninety days' Bank rate on London opened on Monday at  $11\frac{3}{8}$ d. fell to  $11\frac{3}{4}$ d. on Friday at which closed this evening with the Banco da Republica giving  $11\frac{3}{8}$ d. for the market.

The weakening tendency was accentuated during the week by reports of dissensions at the Bank of the Republic and final resignation of Dr. Castro Maia. On Saturday, however, matters improved a bit on a good deal of repassed paper making its appearance and rates closed firm at  $11\frac{3}{4}$ d. for bank and  $11\frac{5}{8}$ d. at the Bank of the Republic for the market.

*Embarques* during the past week produced £439,000 as against £346,000 the previous week and £523,000 last year. Declared sales were 171,000 as against 174,000 the previous week and 207,000 last year. The export value for the crop on 26th instant was £3,924,945 less than last year.

**Coffee.**—Joint entries at Rio and Santos during the week ended 26th December fell off a little being 43,678 bags, less than the previous week's, partly in consequence of the 25th being a holiday, but were only 11,618 bags less than the corresponding week's last year of which they represent 94.1 %. The falling off compared with the previous week was entirely at Santos entries here showing, as was expected, an increase of 9,273 bags and were positively 6,251 more than the corresponding week's last year.

Up to the 26th instant crop entries here and at Santos are 2,456,254 bags less than last year of which they represented 76.7 %. Should the same percentage be maintained to the close of the crop, as seems not unlikely, the total will be nearer twelve than eleven million bags exclusive of Victoria and Bahia. *Embarques* for the week ended December 26th were very large again being 79,496 bags over the previous week's and 40,819 more than the corresponding week's last year. Declared sales were only 3,000 bags smaller than the previous week's but 36,000 less than last year. Currency prices were lower, the average for the week for No. 7 New York type being 4\$289 as against 4\$357 the previous week and 5\$400 last year. There was no alteration in New York spot average which was maintained at an average of 5.25 as against 6.97 last year.

The owner of a plantation of Santa Clara in the district of Santa Cruz do Rio Pardo (S. Paulo) with 2,000 *alqueires* of land, 240.00 coffee trees, a comfortable dwelling house, a saw mill, a grist mill, coffee machinery and other improvements, some years ago, before the machinery was put up, rejected an offer of 300,000\$. Recently it went to auction at a valuation of 128,230\$. On this valuation and on successive reductions no bids were made and the plantation was finally knocked down to the highest bidder for 30,500\$.

## DISTRICT ASSOCIATIONS.

### INDIAN TEA ASSOCIATION.

#### COMMITTEE MEETING.

The following is from an Abstract of the Proceedings of a Meeting of the General Committee held on February 6, when there were present: Mr. Lockhart Smith (*Chairman*), Mr. W. Warrington (*Vice-Chairman*), Messrs. A. C. Lawrie, G. Pickford, T. Traill, and R. R. Toynbee.

Letters dated 9th and 16th January, from the Secretary, Indian Tea Association, London, were brought up for final consideration and disposal after previous circulation. The chief matters dealt with in these letters were:—

(a) *The British import duty.*—It was stated in the proceedings of the Meeting held on the 26th January, that a joint memorial to the Chancellor of the Exchequer upon this question was being prepared by the Indian and Ceylon Associations in London. The memorial asked for the removal of the twopence per pound, which was added to the duty on account of the South African War. Mr. Tye now informed the Committee in his letter dated 16th January, that the memorial had been presented to the Chancellor of the Exchequer.

The question of the most effective manner in which the memorial might be supported in India was discussed by the Committee. At the Meeting on the 16th January, they had decided to make enquiries from the Ceylon Planters' Association, as to whether the Ceylon Government had been invited to move in the matter. A reply, dated 20th January, had been received, in which it was stated that a Resolution adopted by the Planters' Association had been placed before the Ceylon Government, by whom it had been transmitted to the Secretary of State for the Colonies. H. E. the Governor had since intimated that the Resolution had been forwarded, by the Secretary of State, to the Treasury for the consideration of the Chancellor of the Exchequer.

It seemed to the Committee that the time had now arrived when the Government of India should be invited to adopt a line of action similar to that followed by the Ceylon Government. They accordingly decided to address a letter to the Finance and Commerce Department, referring to the memorial to the Chancellor of the Exchequer, and suggesting that H. E. the Governor-General in Council should accord to it the weight of his powerful influence and support.

The Committee thoroughly discussed the Bill to legalise the Tea Cess, which was introduced into the Council of H. E. the Governor-

General on the 30th January. It appeared to them that certain clauses required to be somewhat modified; and with reference to these the Chairman agreed to interview Sir Montagu Turner, Kt., who was in charge of the Bill.

Towards the end of December, the Committee asked the Director-General of Statistics for statements showing: (a) the imports of tea direct from China, Java, and Japan into each province of British India for the last three years; and (b) the re-exports by sea of foreign tea from Bombay and other provinces for the same period. These statements were required in connection with the question of the Ceylon import duty of 4 annas per lb., and the proposal to enhance the Indian duty to a protective rate. A letter, dated 26th January, from the Director-General of Statistics was now discussed. From it and from statistics previously obtained the Committee gathered that so far as Bombay is concerned the particulars for the three years 1899-1900, 1900-1901, and 1901-1902 were as follows:—

		1899-1900.		lbs.
Imports from China	...	...	...	1,918,958
" " Japan	...	...	...	2,108
" " Java	...	...	...	203,099
" " Ceylon	...	...	...	429,183
Total				2,553,348
Re-exports from Bombay	...	...	...	1,342,706
Left in Bombay				1,210,642

		1900-1901.		lbs.
Imports from China	...	...	...	2,528,762
" " Japan	...	...	...	60
" " Java	...	...	...	431,456
" " Ceylon	...	...	...	1,293,064
Total				4,253,342
Re-exports from Bombay	...	...	...	1,883,711
Left in Bombay				2,369,631

		1901-1902.		lbs.
Imports from China	...	...	...	1,717,226
" " Japan	...	...	...	18
" " Java	...	...	...	150,660
" " Ceylon	...	...	...	617,264
Total				2,485,168
Re-exports from Bombay	...	...	...	1,246,922
Left in Bombay				1,238,246

The Committee had no information before them as to whether the quantity not re-exported is consumed in India, or whether the bulk of it goes to Central Asia. But they were inclined to think that a fair proportion of it is consumed in the Bombay Presidency. In either event they were of opinion that some action to prevent the importation of foreign tea in such large quantities was desirable, in order to conserve the Indian and Central Asian markets for the Indian product. At the same time they recognized that the bulk of the imports came from China; and they understood that the duty on tea imported into China through the treaty ports was not more than 5 per cent. *ad valorem*. That being so, there would, they feared, be but little chance of the Government of India consenting to enhance the Indian duty as against China tea. So far as Ceylon tea was concerned, the Committee observed that the imports were not large, and were not apparently increasing. And seeing that Government had already definitely declined to enhance the duty as against Ceylon tea, they thought that it would be useless to take action at present.

In the proceedings of the Meeting held on the 16th December, reference was made to a letter, dated 5th December, from the Hon'ble Mr. G. L. Acworth, Peermad, Travancore, with reference to the importation of Ceylon tea waste into India. Mr. Acworth asked if all tea consigned for Persia *via* Bombay could be inspected at that Port. If this were impossible, he thought the Ceylon Association might be approached with a view to inspection in Colombo of all teas shipped for India or Persia.

The Committee had delayed answering this letter, pending certain enquiries into the extent of the trade. They now considered Mr. Acworth's proposal; and came to the conclusion that it was not feasible. Mr. Acworth was to be informed accordingly.

Considered a letter, dated 24th January, from Mr. H. H. Mann, the Agricultural Chemist employed by the Association, stating that he proposed to go on tour on the 9th February, in connection with his experiments against Mosquito blight. Mr. Mann also asked the Committee to decide whether, on the completion of this tour, he should work up the soils of the Dooars and Darjeeling Districts, or whether he should continue his work on manufacture.

The point was carefully discussed by the Committee, who were of opinion that the investigations into manufacture were the more urgent, and should take precedence over the soils of the two Districts named.

In the proceedings of the Meeting held on the 6th January, it was stated that the Committee were making enquiries as to the quantity of tea exported by rail from Calcutta to Bombay. The result of these enquiries showed that during the year 1902 the quantity of tea so carried was 1,007,468 lbs. This information was to be conveyed to the London Committee, and to Messrs. Gow, Wilson, & Stanton, by whom the point had been raised.

Arrangements had also been made by the Committee for statements of the exports in question to be supplied to the Association monthly. The figures so obtained were to be included in the Export circular issued by the Association, on or about the 15th of each month.

### CENTRAL TRAVANCORE.

The Annual General Meeting was held at Penshurst Bungalow, on Saturday, 7th February, 1903. PRESENT:—Mr. F. M. Parker (*Chairman*), Hon'ble Mr. G. L. Acworth, Messrs. H. M. Knight, B. Laurie, F. Bissett, D. McArthur, W. K. H. Leahy, Hon'ble V. B. Wilbraham, and E. Latter (*Honorary Secretary*).

The notice calling the Meeting having been read and the minutes of the last Meeting taken as read, the Chairman proceeded to address the Meeting as follows:—

GENTLEMEN,—Another year has passed away, a bad year, a year of disappointment and low prices. May it rest in peace. A new year has been born, better, brighter, and more hopeful than 1902. May it fulfil the promise of its youth. Prices have improved, and from the strength of the statistical position ought to advance still higher, and there is a prospect of the Duty in England being reduced in the near future. We may congratulate ourselves on the Tea Cess being adopted by the Indian Government. It is a step in the right direction, but to my mind does not go far enough. A cess of  $\frac{1}{4}$  of a pie per lb. is calculated to yield about £20,000, which is but a small sum with which to ensure successful attacks on new markets. Still, it is a beginning, and, the principle of the scheme once accepted by Government, there would probably be no difficulty in our being permitted to tax ourselves more heavily, should such a course seem desirable.

The Labour Law has been introduced, but on this topic I will say nothing, as our Planting Member will give us all the necessary information. All I will say is this, that the whole of us, planters of Southern India, owe the Hon'ble Mr. Acworth a deep debt of gratitude for the enormous amount of work and trouble he has devoted to the subject.

Thanks to the energy of Mr. H. M. Knight our section of the scheme for the exploitation of tea in Southern India has been fairly started. I will ask Mr. Knight to let us know presently what progress has been made.

In conclusion, gentlemen, I thank you all heartily for the support you have given me during the past year, and it only remains to wish you all happiness and prosperity in the new one.

### Honorary Secretary's Annual Report.

U. P. A. S. I.—The most important matters discussed at the Annual Meeting were—Tea Cess, Labour Bill, and Sale of Tea in South India.

Tea Cess.—This the Government of India have decided to legislate on and impose from 1st April, 1903, at the rate of  $\frac{1}{4}$  pie per lb. on all tea exported from India. The proceeds to be paid over to and administered by a Committee of 20 composed of

3 members nominated by Bengal Chamber of Commerce,	
7 " " " I. T. A.,	
10 " " " Associations or local bodies inter-	

ested in tea, of these last 2 are to be from South India,

*The Labour Bill* has been read in the Madras Legislative Council and published, so that all members are no doubt acquainted with its contents; a select Committee has been appointed, of which the Hon'ble Mr. G. L. Acworth is a member, and it is to be hoped clauses will be inserted to meet our requirements.

*Sale of Tea in South India.*—Messrs. Parry & Co., Madras, have commenced operations—100 chests of tea from this district have been forwarded to Madras and subscriptions of 3 annas per acre from all members of this Association and Ladrum Estate have been paid. Subscriptions have also been received from South Travancore and several merchant firms on the Coast. A Sirocco has been bought for repacking purposes in Madras.

*Harbour on the West Coast.*—H. E. the Governor of Madras on his recent tour visited Cochin and although he seemed in favour of the construction of a harbour at that port, I understand, nothing definite has so far been settled.

*Roads and Bridges.*—During the last year very little progress was made with the Periyar Bridge, and it is to be hoped the work will be pushed forward this year. Some of the wooden bridges on the district roads, to which the Executive Engineer's attention has been drawn, are still in a very dangerous condition. The main road from Kottayam is in a fairly good state of repair.

Several bad slips occurred on the Kumili Ghaut Road during November and considerable difficulty was experienced in getting rice carts up. The Madura Local Fund Board have executed temporary repairs and intend spending a large amount on thorough repairs.

*Membership.*—17 estates are on the rolls of the Association, representing 6,299 acres in cultivation.

*Finances.*—In addition to 4 annas per acre voted as subscription for the year it was found necessary to call for another  $\frac{1}{2}$  anna per acre. The total expenditure for the year was Rs.1,825-3-1 which includes the subsidy paid to the Government Medical Officer. The balance to be carried forward is Rs.121-7-6.

*Quarterly Meetings* were discontinued as many members were absent in England. There is a Resolution on the agenda paper that this be resumed.

*Paris Exhibition, 1900.*—The Diploma for the Honourable mention obtained has been received and is upon the table.

*Post Office.*—To our request for a Post Office at the Periyar Crossing, the Postmaster-General replied that the subject had his best attention, but I have heard no more.

Mails have been very irregularly delivered at times, the local Superintendent has been instructed by Postmaster-General to take all steps possible to prevent delays.

Mr. McArthur was Honorary Secretary till the latter part of October.

I now tender my resignation.

(Signed) E. LATTER,  
Honorary Secretary.

A vote of thanks was passed to both Honorary Secretaries for their services.

The Report was adopted and accounts passed.

*Subscription* for the year was fixed at  $4\frac{1}{2}$  annas per acre, and members reminded that same is now due.

*Land Tax.*—Proposed by Hon'ble Mr. G. L. Acworth and seconded by Mr. H. M. Knight, "That H. H.'s Government be requested for the convenience of all concerned to separate the Peermaad plateau and Cardamom Hills area, from the jurisdiction of the Kottayan Dewan Peishkar for all revenue purposes and place them under that of the Cardamom Hill Department."—Carried *nem. con.*

Mr. Acworth said that he moved the Resolution on account of the inconvenience of the present system and also the evident inaccuracy it entailed in the keeping of accounts. A short time since he was startled by a demand made on him by the Tahsildar of Meenachel for some Rs.2,000 odd alleged arrears and some hundreds of rupees for current year's tax. He replied these had all been paid and he held the Dewan's receipts for them. A week or two later the Tahsildar sent

**FOR  
OLD & YOUNG**

the vigour and buoyancy of health are secured by the timely and regular use of Mother Seigel's Curative Syrup—a natural tonic and blood purifier compounded of fruits, roots and herbs. It tones the liver, regulates the bowels, promotes the thorough digestion of food and thus sustains and nourishes both brain and body with an abundant flow of pure rich blood.

**SEIGEL'S  
SYRUP**

"Six years ago," says Mr. T. Martin, of 91, Brougham St., Sydney, N.S.W., "I began to suffer from quite a complication of complaints. I was both bilious and dyspeptic, and suffered excruciating agony in my back. One doctor told me I was suffering from dyspepsia and enlargement of the liver, but his treatment failed to cure me, and not until I used Mother Seigel's Syrup and Plasters did I find permanent relief. I continued with the remedies for nine weeks, by which time I was permanently restored to good health."

Made of  
**Fruits, Roots & Herbs.**

up two of his office clerks with a second demand, but of a reduced amount. To these men were shown the Dewan's original letters and receipts, but the only answer Mr. Acworth could get was, that the money was owing and must be paid. On his refusal to pay, the clerks served him with warrants, ordering him to pay within a certain date, and shortly afterwards he received a notice from the Tahsildar, giving him warning that, unless payment was made within ten days, his moveables would be distrained and sold by auction. Mr. Acworth, who had previously been in communication with the Dewan, at once wired him informing him of the situation and the Dewan immediately wired the Tahsildar to stay all proceedings. The Dewan further reprimanded the Tahsildar and issued a general order, that no Tahsildar was in future to threaten Europeans with such action as had the Tahsildar of Meenachel, without previous reference to himself. Mr. Acworth wished to emphasise the consideration and courtesy shown him by the Dewan—still the present system of tax collection was annoying and vexatious, and moreover liable to lead to friction with the authorities. He thought that were the method suggested in the Resolution adopted, it would prove more convenient both to the land-owner and H. H.'s Government.

Mr. Knight, in seconding the Resolution, said he had paid certain taxes on 11th August, 1902, and held a receipt from the Assistant to Cardamom Superintendent, yet on 3rd February, 1903, he had received a demand notice in Malayalam and a letter from the Tahsildar of Meenachel demanding payment of some disputed taxes, together with the amount paid on 11th August, 1902.

Mr. Laurie also supported the Resolution and said he had suffered great inconvenience from the erratic ways of the Revenue Officials. Last July the Tahsildar of Changanacherry sent a peremptory demand for Rs.90-0-10 for taxes said to be due from Glenmary Estate, which was paid under protest and a request made for an explanation as to what taxes these were, seeing the usual taxes had all been paid. No answer has been received, though seven months have elapsed; the Dewan has been twice addressed urgently on the subject, and the only reply obtained is that a *reminder* has been sent to the Tahsildar of Changanacherry. Another case happened this month, the Tahsildar of Meenachel wrote and demanded payment for Land Tax on Leg of Mutton Shola

for M. E. 1077... Rs.25 7 0  
 " 1076... " 25 4 8

both of which amounts had been paid and for which Mr. Laurie held receipts. To stop these vexatious and unjust demands, entailed a visit to the local Magistrate to explain and complain.

**Meetings.**—Proposed by Mr. F. Bissett and seconded by Mr. H. M. Knight, that "This Association again hold its Meetings quarterly."—Carried *nem. con.*

**Agenda Paper.**—Proposed by Mr. F. Bissett and seconded by Mr. F. M. Parker, that "In future the agenda paper shall contain detailed information regarding the subjects to be brought forward."—Carried *nem. con.*

**Medical.**—Messrs. H. M. Knight, B. Laurie and D. McArthur were appointed as a Select Committee to interview the Durbar Physician.

**Labour Bill.**—Hon'ble Mr. G. L. Acworth briefly explained the Bill as amended and the Association expressed their complete satisfaction with it.

A hearty vote of thanks was accorded to Hon'ble Mr. G. L. Acworth for all the time and trouble he has devoted to the subject.

**Election of Officers.**—The ballot resulted as follows:—

Mr. F. M. Parker, *Chairman*.  
 Hon'ble Mr. G. L. Acworth, *Vice-Chairman*.  
 Mr. E. Latter, *Honorary Secretary*.  
 Mr. H. M. Knight, } *Committee*.  
 Mr. B. Laurie. }

Mr. Parker thanked the members for the compliment paid him in re-electing him Chairman.

With a vote of thanks to the Chair the Meeting ended.

Papers laid on the table—

Travancore Government Gazette.  
 Planting Opinion.  
 Indian Gardening and Planting.  
 Proceedings of District Associations.

Examined and found in order,

(Signed) E. LATTER,  
*Honorary Secretary*.

(Signed) FRANK BISSETT.

17th January, 1903.

## MARKET REPORT.

[Per Mail advices of January 30th, 1903.]

### COFFEE.

*The London Commercial Record* says:—Supplies during the week have been rather more extensive than of late, but a fair demand has prevailed, and the tone of the market has been stronger for all desirable descriptions. There has been more East India of the new crop on offer, and with the comparatively easy prices ruling previously, it has commanded a little more attention, the lower grades selling at previous rates, and home trade qualities showing an improvement of 1s to 2s per cwt. Jamaica quiet and rather in favour of buyers. Colory lots of Costa Rica sold at extreme rates, and there was a steady demand for fair as well as for other descriptions of Central American at about former prices. Santos sold at 1s advance on washed. There have been few fluctuations in the market for futures, and the latest quotations show a slight advance; yesterday Santos for March delivery sold at 26s 3d to 26s 6d, May at 27s, July at 27s 9d, September at 28s 1½d to 28s 3d, and December at 28s 10½d to 29s per cwt.

London ...	Santos ...	March delivery ...	26s 6d.
New York ...	No. 7 Rio...	" ...	4'30 cents.
Hamburg...	Santos ...	" ...	27 pf.
Havre ...	Santos ...	" ...	32½ francs.

Auction supplies to-day embraced 121 barrels 61 bags Jamaica, 19 bags Nyassaland, 86 bags Nicaragua, 23 bags Peruvian, 303 Vera Paz, 988 bags Costa Rica, 81 bags New Granada, 56 bags Guatemala, 302 bags Colombian, 31 bags Salvador, 13 bags Mexican, 150 bags Rio, and 68 bags Santos. Tho sales passed off with a fair demand, with prices unaltered.

Brazil "futures" opened steadily, but eased during the day, although Continental markets remained unchanged, and receipts were lighter. Transactions include—March at 26s 6d to 26s 3d, May at 27s 1½d to 26s 10½d, September at 28s 1½d to 28s, December at 28s 10½d to 28s 9d.

Closing quotations:—

	Sellers.	Buyers.
March ..	26/6	26/3
May ...	27/	26/9
July ...	27/6	27/4½
September ...	28/1½	28/
December ...	28/10½	28/7½

Brazil receipts 23,000 bags, against 47,000 and 23,000 the two previous seasons, and exchange, 11½ being ¾ lower.

At the Dutch Trading Co.'s sale, held in Rotterdam on Tuesday, 26,040 bags Java sold; good ordinary realised 29 cents, against 31½ cents valuation, and 35 cents obtained at the last sales held in Amsterdam. The following are some of the particulars:—

No.	Bags.	Valued at.	Result.
		Cents.	Cents.
1 ...	2,519	32	31 @ 31½
2 ...	474	32	30¾ " 31
3 ...	1,067	31½	28½ " 29
4 ...	734	32	28 " 28½
7 ...	296	8	8½ " ...

Rio Exchange 11 $\frac{3}{4}$ d, previous day 11 $\frac{1}{2}$ d.

**HAVRE, January 29.**—Good average Santos January opened barely steady at 32f. and closed quiet at 32f., March opened at 32 $\frac{1}{4}$ f. and closed at 32 $\frac{1}{4}$ f., May opened at 32 $\frac{3}{4}$ f. and closed at 32 $\frac{3}{4}$ f., September opened at 33 $\frac{1}{4}$ f. and closed at 33 $\frac{3}{4}$ f., December opened at 34 $\frac{1}{4}$ f. and closed at 34 $\frac{1}{4}$ f.

**HAMBURG, January 29.**—Good average Santos February opened steady at 26 $\frac{3}{4}$ pf. and closed steady at 26 $\frac{3}{4}$ pf., March opened at 26 $\frac{3}{4}$ pf. and closed at 27pf., May opened at 27 $\frac{1}{4}$ pf. and closed at 27 $\frac{1}{4}$ pf., September opened at 28 $\frac{1}{4}$ pf. and closed at 28 $\frac{1}{4}$ pf., December opened at 28 $\frac{3}{4}$ pf. and closed at 28 $\frac{3}{4}$ pf.

**NEW YORK, January 29.**—Closing prices of No. 7 Rio were as follow:—

	Jan.	Feb.	Mar.	Apl.	May.
Jan. 29 ...	4.15	4.15	4.30	4.35	4.45
Jan. 28 ...	4.20	4.15	4.30	4.35	4.45

#### TEA.

**INDIAN.**—Public auctions included 31,200 packages against 33,100 in the week before, and 48,700 at this time last year.

The position and market remain practically unaltered, the strength of the former not yet having declared itself in the prices paid; if anything values under 8d, especially for leaf, are again cheaper. Improved quality, when met with, has continued to attract brisk competition at firm to dearer rates.

Purchases as made are quickly taken up, and deliveries are satisfactory considering that there is no inducement in duty possibilities for clearing a pound of tea unless for actual and immediate requirements, consequently the indications here are good.

Sellers are firm, and, wisely for the time being, assimilate offerings to the present hand-to-mouth business; any endeavour at this juncture to force an unwilling trade to go into stock would only be to court a lower market.

Meanwhile, the consumer continues to drink tea uninfluenced by what may be termed the side issues, such as duty, etc., which may temporarily affect Mincing-lane, and eventually the inexorable

law of "supply and demand" must, if experience has taught aright, assert itself. The balance is once again in the growers' favour, and in this connection the following movements of Indian tea for the 12 months ending December 31st last, compared with the two previous years, are interesting:—

	1902.	1901.	1900.
Imports ..	153,266,379	160,446,304	152,334,701
Deliveries ..	158,347,924	157,615,467	144,704,803

There is little more to sell in Calcutta, and the closing offerings are, as usual, mostly undesirable for general purposes, being red and mixed.

The average for the London weekly sales has recently been comparing favourably with that for a similar period in the former season; this, however, is a more apparent than real advantage owing to the Autumn crop now offering being infinitely superior to last year, and the smaller proportion of common tea being dealt with consequent on the condition of the market.

For 25,800 packages on estate account 7 $\frac{3}{4}$ d per lb. was obtained, opposed to 7 $\frac{1}{2}$ d per lb. for 42,400 and 6 $\frac{5}{8}$ d per lb. for 50,000 in the two foregoing seasons.

Printed for importers for January:—

	1903.	1902.	1901.
141,570 pkgs.	225,200 pkgs.	239,400 pkgs.	
making 910,700 packages of the 1902 crop offered, against 1,009,000 packages in the same portion of 1901-02. On this showing, and taking into account the shortage in our imports, it would appear that in spite of the smaller quantity recently brought forward, it is doubtful if the total remaining to be dealt with appreciably exceeds that at this time last year.			

**CEYLON.**—Sales totalled 16,500 packages contrasted with 21,600 on the 20th instant, and 26,800 twelve months ago.

There was a fairly good inquiry, though some irregularity was observable in the biddings. Finest grades received more attention, and as a rule sold well. Medium to fine sorts passed unevenly, but without material change in value. Common and ordinary descriptions were in moderate request, though here and there, in sympathy with other growths, quotations showed signs of weakness. The average is the same as on the 22nd instant, when it stood at 7 $\frac{1}{2}$ d per lb. In 1902 it was 7 $\frac{1}{4}$ d per lb.

Submitted during the month:—

	1903.	1902.	1901.
90,700 pkgs.	115,300 pkgs.	146,000 pkgs.	
(Avge. 7 $\frac{5}{8}$ d per lb.)	(Avge. 7 $\frac{3}{8}$ d per lb.)	(Avge. 6 $\frac{5}{8}$ d per lb.)	
<b>JAVA.</b> —Rather over 2,200 packages passed the hammer, previous values being upheld.			

Offered in January:—

	1903.	1902.	1901.
6,500 pkgs.	10,500 pkgs.	8,800 pkgs.)	
(Avge. 6 $\frac{5}{8}$ d per lb.)	(Avge. 6 $\frac{3}{8}$ d per lb.)	(Avge. 5 $\frac{3}{8}$ d per lb.)	

**Deliveries.**—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz:—

From January 1 to 27, 1903	...	17,184,944 lbs.
Do. do. 1902	...	24,146,832 "

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India ...	21,208	9,987	31,195
Ceylon ...	14,248	2,220	16,468
Java ...	1,636	596	2,232
Totals ...	37,092	12,803	49,895

Also 100 packages from second hands.

**Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated January 30th, 1903, says:—**

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Pkgs.	Pkgs.	Pkgs.
1902-1903 ...	1,034,957	757,978	49,547
1901-1902 ...	1,098,407	778,798	44,724
32,037 pkgs. INDIAN } Total 51,164 packages were offered in public auction			
16,895 " CEYLON } this week.			
2,232 " JAVA }			

Buyers continue to operate with extreme caution, and with business generally quiet in the country, they have not much

immediate inducement to add to their stocks. Consequently the market has shown a rather dragging tendency during the week, although no actual change has taken place in quotations.

The distribution of the total tea exports from Ceylon for the past twelve months is shown below, and marks a good increase to the Russian market, for which probably much of the tea sent to China was also destined. The larger quantity of green tea exported is encouraging.

Distribution of Tea Exports from Ceylon from 1st January to end of December.

INDIAN.—The auction was light for the time of year, but demand was somewhat quiet and consequently bidding showed much irregularity, although owing to the firmness of merchants, prices were practically unchanged, many teas being withdrawn when offers were too low.

Revised Customs figures showing the Imports of Indian and Ceylon Tea from 1st June to end of October.

Bengal Presidency (including Calcutta and Chittagong) ...	71,058,950	1902. lbs.	67,765,724	1901. lbs.
Madras Presidency (including Travancore) ...	2,025,472	73,785,561	1,556,952	69,896,793
Bombay Presidency	701,139		574,117	
Ceylon Tea		47,203,577		41,340,428

Week's av. of New Season's tea sold on Garden Account 1903, 26,028 pkgs., av. 7.55d. 1902, +2,371 pkgs., av. 7.40d.

New Season's tea sold on Garden Account 1st June to date 1902-3, 773,990 pkgs., av. 7.30d. 1901-2, 835,399 pkgs., av. 7.92d.

CEYLON.—Very little change was noticeable in the market, teas generally selling up to about late quotations, better liquoring kinds attracting most attention. The quality, as often happens at this time of year, is now showing some falling off.

Average for week 7.47d, against 7.25d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 83,163 pkgs., av. 7.56d. 1902, 103,587 pkgs., av. 7.39d.

JAVA.—The teas brought forward were all of direct import and met with fair competition. Quality showed a slight falling off, which may partly account for the rather lower prices offered. 216 packages from "Goalpara" averaged 9¾d per lb.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1/4<sup>5</sup>/<sub>16</sub>. Colombo 1/4<sup>11</sup>/<sub>32</sub>.

COCOA.

A good demand prevailed at the auctions on Tuesday, and of the 10,611 bags catalogued, about 6,500 bags sold at about valuations.

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

Of 2,401 bags Trinidad offered, about 1,000 bags found buyers at 67s 6d for very fine red, 61s to 64s for good to fine, and 58s to 60s for ordinary to middling red, being occasionally 1s down. Of the large supply of 4,961 bags Grenada, 4,450 bags were placed at somewhat irregular, but generally steady, rates—good to fine at 56s to 58s 6d, common to fair 52s to 55s 6d. Of 576 bags Jamaica, 90 bags ordinary quality sold at 50s. Of 98 bags Dominica, only one lot sold at 54s. 2 bags St. Vincent brought 50s. 17 bags Demerara and 2 bags Montserrat were bought in. 91 bags Esmeraldas realised 60s for defective grey. Of 93 bags Costa Rica, 20 bags fair sold at 53s. Of 37 bags Colombian, a few bags sold at 53s 6d for greyish defective. 55 bags Java garbling sold privately. 77 bags African retired. Ceylon quiet, but unchanged in value; of 2,156 bags catalogued, 520 bags sold—fine bold red at 77s 6d, fair to good bold and medium at 65s 6d to 73s 6d, ordinary to middling ditto 58s 6d to 62s, fair to good small 48s to 57s 6d, and picking 20s to 48s per cwt. Privately sales include 400 bags Guayaquil at 64s for fair Caraquez, and 77s 6d to 78s per cwt. for Summer Arriba.

### PEPPER.

**BLACK.**—The market has been dull in tone and value easier, but it is steadier at the close. On the spot a limited business has been done in fair Singapore at 6d to 6½d, and for arrival 100 tons are reported sold, *viz.*, January-March shipment at 6d down to 5½d, closing at 6½d, and March-May at 6½d down to 6d, closing at 6½d.

100 bags Singapore were offered at auction on Wednesday and sold "without reserve" at 6d to 6½d per lb for fair.

**WHITE.**—The market is very quiet and for arrival no business is mentioned. On the spot sales of fair Singapore have been made at 9½d and of fair Penang at 9½d per lb.

At public sale on the 28th instant 178 bags good Singapore retired at 10d to 10½d, also 21 bags Penang at 9½d per lb. (9d bid and refused).

### GINGER.

**COCHIN.**—was not represented at auction. Value of good medium and small washed rough is 40s per cwt. The new crop is arriving lean and unsatisfactory generally.

**JAPAN.**—Reports of a very heavy crop—amounting, it is said, to 40,000 piculs, have depressed the market. Spot value is in the neighbourhood of 32s, and at auction on Wednesday 30s was bid in vain for 54 bags of fair limed, 32s 6d per cwt. being the buying-in price.

### QUININE.

In spite of the 3 per cent. advance in the Amsterdam bark-sale last week, the market has remained extremely quiet, and speculators are now waiting the figures relating to the cinchona-shipments for the month, which were not known up to Wednesday. Business was done at close of last week at 11½d spot, but there are few sellers, and 1s is the spot-price to-day (Wednesday).

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, FEBRUARY 28, 1903.

[No. 9.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 6th proximo. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*February 24th.—Weather—*East wind. Hot days. Cold nights. There has been a little thunder, so rain may be soon expected. *Works—*Finishing up of crop, pounding coffee, weeding and pruning. *Crop prospects—*The trees are now ready for rain, and, if it falls within ten days, a very average crop may be expected. *Coffee diseases—*Leaf-disease hardly anything. *Health—*Good. *Labour—*Abundant.

#### THE MÖCKERN EXPERIMENT STATION.

APROPOS of our remarks at various times about the need of Scientific Aid for Agriculture in India and of the establishment of an Agricultural Department upon a broad foundation, we propose to give a general review of the work done on an Experiment station in Germany. We do not single out the Möckern station as the best of its kind, or the one that has done the greatest service to agriculture. We select it because it was the first of its kind in the world, and because it marks the beginning of the Experiment Station as a public institution. The particulars we give are taken from the *Experiment Station Record*, Washington, which makes due acknowledgment of the Möckern station as a pioneer and observes that the history of its establishment is of unusual interest. That history, which was recently summarised in an address delivered by the present director of the station, shows that LAWES and GILBERT in England and BOUSSINGAULT in France had, for several years, carried on systematic and continuous field experiments, supplemented by laboratory work. LIEBIG had, through his field and laboratory studies and his generalizations in science, aroused interest in the fundamental principles underlying plant and animal intuition. A first step towards the establishment of an Experiment station in Saxony was the providing by the Saxon Gov-

ernment of a chair of agricultural chemistry in the Forestry and Agricultural Academy at Tharand, in 1847. Subsequently, plans were laid for the establishment of a station, to be located on the farm of the Leipsic Economic Society at Möckern. It is of special interest to us, in India, to note that the Saxon Government committed itself to the undertaking and promised an appropriation for its maintenance. It eventually carried out this promise, and on December 28, 1852, an institution was definitely established, after being provided for during a period of some eighteen months by private means.

The purpose of the station was defined as follows: "to extend the knowledge of the practice of agriculture and the industries connected with it by means of scientific investigation, closely associated with practical experiments of various kinds, and to disseminate the useful results thus obtained." Though the programme laid out in the Act of its establishment covered the whole field of agricultural experiments, it was naturally found necessary to confine the operations of the station within a comparatively restricted field. Since 1867 the Möckern station has been primarily a station for investigation in animal physiology, yet it now embraces four additional divisions, each presided over by a separate officer: one for the analysis of fertilizers, one for the examination of food-stuffs, agricultural products, water, etc.; a third for soil studies, for judging of the quality of sorts, their cultural relations, laying out of estates, etc.; and a fourth for vegetation experiments, to study the fertilizer-requirements of Saxony soils. In its early days this station was the guiding star of the experiment station movement. Now we may say of it:—It has shown what an experiment station may accomplish for both the science and the practice of agriculture. It has commanded the respect of the farmer and the scientist alike. Its example has led directly to the establishment of a large number of other stations, and the sphere of its influence has extended far beyond the confines of the country in which it is situated. Had the first station of its kind failed, what would have been the probable result? Indefinite delay in the spread of the movement whose beginning it marks. We may now regard other stations as more important, as doing better and more varied work; but it is to the day of small things inaugurated in Saxony that we must trace that brighter day of greater things that dawned long ago in the United States.

It has been observed that the fifty years that have elapsed since the Möckern station entered upon its work, almost hesitatingly and tentatively, have witnessed the establishment of a system of stations as State or Government institutions in practically every civilized country. Is India, then, not a civilized country? There are so-called Experiment stations or farms here; but there is still not one of them of which it can be said, as has been long said of Möckern in words quoted above, it has commanded the respect of the farmer and the scientist alike. An occasional scientist who has read annual reports may regard some one farm or more with respect; but there is not one worthy of comparison with the American stations, there is not one that can be truly said to have commanded the respect of the farmer. In other countries experiment stations have steadily grown in strength, in importance, and in useful influence; they are ranked as permanent institutions; they have become necessities. In India they are still regarded by Government as luxuries, and by the people they are virtually ignored. From a financial or commercial point of view, no class of institutions makes a better return for money invested; none reaches with more directness a large proportion of the people in whose interest such stations are labouring. The agricultural population of India is, in proportion to the total population, enormous; yet here, where the work of such stations should give greater scope than in almost any other country, experiment stations are not valued, perhaps because no good system has ever been adopted in regard to their establishment and management. We urge that this be altered. To say that the time has arrived would be to utter a platitude and to prove oneself behind the times. The day came many years ago; but never yet has there been any well-organized attempt to establish stations of the kind needed, or any general exhortation to the Government to cease to neglect one of the most vital necessities of the country. The day of reformation may be at hand, for the Madras Government have at last determined to appoint an Agricultural Chemist, but we presume that this officer will have to work under non-scientific officials. If so, his efforts at progress will be greatly impeded.

#### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

At yesterday's Meeting of the Legislative Council of Fort St. George the Hon'ble Mr. G. Stokes was to present the Report of the Select Committee on the Madras Planters' Labour Bill, 1902, and move that the Bill and Report be taken into consideration at once.

Notice had been given of amendments which occupy about 15 printed pages of foolscap.

#### A MATTER OF DEFINITION.

The *Madras Mail* states that Mr. F. Hannington, I.C.S., Head Assistant Collector and Magistrate of the Nilgiris, has called the attention of the Government of Madras in the Legislative Department to the fact that the definition of the word "employer" in the Bill is defective inasmuch as it does not include a person in charge placed as the head of the estate by the owner or manager. As an illustration of the point he means to convey, he mentions the Oucherlony Valley estates in South-East Wynaad, where one planter or manager has charge of no less than eleven estates which are directly looked after by overseers. These latter do all the contracting for labour, the manager merely supplying the funds. He thinks that unless the definition of "employer" is amended to in-

clude this class of contracting parties, difficulties in enforcing contracts in these cases will arise.

He also asks that coolies coming to work in the Wynaad from Mysore, Coimbatore, and Malabar, in the height of the South-West monsoon should undergo some sort of a medical examination as to their fitness for work. This is what he has to say in support of his proposal:—The coolies to work on coffee estates are generally imported from Mysore Province, Coimbatore, and Malabar Districts. The time when work on coffee estates begins is the height of the South-West monsoon. Being ill-clad and sickly on their arrival they soon fall ill and are then sent to the Gudalur hospital for treatment. When discharged from hospital, these people are unable to work through weakness. They start begging in Gudalur, the result being that they are sometimes picked up by the Police half-dead and sent to the hospital where they die soon after. In September 1900 several people had to be sent away from Gudalur to their native places at the expense of Government.

To remedy this, provision might be made in the Act to have the coolies examined by the Medical officer of the District from which they are imported to ascertain whether they are fit for service in the Wynaad or other Districts to which they are to be imported. The maistries must produce the certificates granted by the Medical officers to the employers on the estate. In default, the services of the coolies should not be accepted on pain of a fine.

#### THE POLICE COMMISSION.

Mr. Bernard Malcolm, Planter and Honorary Secretary, Wynaad Planters' Association, in his written evidence before the Police Commission stated that his opinion in regard to the manner in which the police generally discharged their duties was that so far as superior officers were concerned, generally speaking, he considered their energies misdirected. Constables and Head Constables were as good as could be expected, seeing the opportunities they had for accepting bribes and the very small amount of European supervision they got. It seemed evident, judging from the fact of this Commission having had to be formed, that the heads of the Police Department had not the proper training and knowledge that should be theirs to enable them to organise an effective force. Were they selected men who had had a thorough training, as boys in a Military college, and as young men in the Police force, it seemed to him that a large number of the questions put to witnesses would never have arisen. He was of opinion that the number of Assistant Superintendents was not sufficient to secure adequate supervision over the subordinate police. He would increase their number and insist on greater activity in inspection work and less office work. He was not in favour of employing natives of India in the superior ranks of the police. The Inspector-General ought to be ordinarily an officer of the Police Department. The man who had been through the mill should be the best qualified to organise and reform. The best system in his District did not appear to be effective, nor did he think it was possible it could be. The daily beat over certain fixed areas might be dispensed with in favour of a weekly or bi-weekly beat, and constables be instructed by the Station-house Officer to go and examine special areas and routes at irregular and unknown intervals. At present, it seemed to be the custom that beat books might be signed by any irresponsible person a constable chose to ask. Only responsible persons of a certain position should be allowed to sign. He had known of the beat book being signed by estate maistries and such like persons of no authority at all. In the District it had been very generally found that, regarding coffee-stealing, the detection of this depended entirely on the energy of the Superintendent of Police. In Mr. Fawcett's time, theft of coffee had been almost entirely stamped out, and it was generally conceded that the police in the District were altogether more alert and efficient owing to

the fact that they were never aware when they would be subject to a sudden and unexpected visit from this energetic officer. His arrangements for the detection and prevention of coffee-stealing were such as met with general approval, and if his methods were followed, the stealing of coffee, pepper, and tea, would become rare. Judging from general report blackmail was a regular institution, and only closer European supervision would keep it in check. In reply to the question whether there was a sufficient European element in the classes below that of Assistant Superintendent, witness said that for reasons that were obvious from his previous replies, he would suggest that all Inspectors should be Europeans. They could be recruited admirably from Army reservists.

COFFEE NOTES.

**Aroma of French Coffee.**—"The delicious flavour which all travellers in France discover in the coffee of that country is got, it is said, by the addition of a little butter and sugar during the roasting process," says *Harper's Bazaar*. "To every three pounds of roasting berries a tablespoonful each of butter and powdered sugar is added. These, in melting, spread over the beans in a thin coating, which holds the aroma and contributes a caramel flavour that is delicious and distinctive."

There is a new coffee roasting concern in New York, located at 71, Watts street. This is the Coruba Plantation and Trading Company, the incorporators of which are well-known business men. They represent direct coffee importing interests, and the name Coruba is derived from coffee, rubber, and bananas. A complete plant of machinery is being put in the new factory for work on green and roasted coffee, beginning at coffee hulling and ending with a system of storage bins for finished goods, having outlets both in the packing room and on the shipping floor. The latest Burns 7-ft. open cylinder roasters will be used and all details of the plant will be of the most approved sort.

**Making Coffee.**—Coffee is a good bean which ought to be more popular in this country, but there is a lot of leeway to be made up before British cooks and housewives know how to make it decently. On an American can of coffee appears the following recipe :—

**DIRECTIONS FOR MAKING A PERFECT CUP OF COFFEE:**—In judging the quality of coffee a great deal depends upon the way it is made. People sometimes think they have secured inferior coffee, when the fault lies wholly with themselves in the preparation of the article. For this reason we give below directions for making a perfect cup of coffee. *First.*—The coffee pot must be thoroughly scalded before being used. *Second.*—The coffee must always be ground fine, as it is impossible for water to percolate through the coffee bean, and if this is not done much of the nutritive qualities will be lost. *Third.*—The water must be boiling before it is poured on the coffee. *Fourth.*—If you do not use a vessel specially adapted for making fine coffee an egg should be used for settling. *Fifth.*—Use a full tablespoonful of ground coffee to each half-pint of boiling water, and be sure to always measure; do not GUESS. *Sixth.*—Set aside to simmer, not boil. If these directions are carried out an excellent cup of coffee will be the result.

"Never monkey with bad coffee" is the expressive and wise advice our American contemporary offers to the trade with the above. The retailer's object should be to gain a reputation for coffee that his customers like so well that they

talk about it. One or two letters in the current issue suggest that the question of roasting on up-to-date methods might be usefully discussed just now.

**Coffee in London.**—The advance of last week has somewhat checked the demand which, particularly, says the *Produce Markets' Review* of January 31, 1903, from the Home trade, has shown a very decided falling-off from the earlier part of the month. Notwithstanding this the market has remained firm, due possibly to a curtailment in the supplies, and also, as far as Costa Rica is concerned, to some improvement in the quality. What advance there has been is mostly in the finest of the bold sizes, but the medium and lower grades have sold steadily at the recent values. The few lots of East Indian, though slightly better than the first shipments, are still most disappointing in quality, and unless there is a marked improvement later the Home trade will have to rely more than ever upon Costa Rica. In the terminal market quotations have hardly fluctuated, though the tone has been a little steadier and the closing quotations are about the same as last week.

**The Making of Coffee.**—Unless the coffee pot is kept sweet and clean, says a receipt, the best coffee will lose its delicate aroma. Take a knife and pass it around in the crevice about the bottom of the pot. If you find that stale sediment has collected there you will understand why your coffee seems to have lost its delicious freshness. Clean this crack out thoroughly. Then take sandsoap and scour the pot. Lastly, pour in boiling water and scald it three or four times, until not the least odour of coffee remains. See that you do this every time you use the pot.

A company is being formed at Rockland, Me., which will push a coffee precipitate to clarify and settle coffee, invented by a Rockland man.

Messrs. G. Duuring & Zoon observe in their Monthly Market-Report dated Rotterdam, January 31st, 1903.—Business has been slow during the month under review, purchasers being restricted to actual requirements. Importers were free sellers, but the trade has been quite able to cope with supplies, without affecting values to an appreciable extent. The sales chiefly consisted of Plantation Java, main part consisting of faded and undesirable qualities, between 24 and 28cts., which occasionally sold 1ct. lower, whilst fine colory grades sold at fully previous rates. Liberian almost unchanged.

The Dutch Trading Company's first this year's sale was advertised for January 27th. to contain 26,040 bags. The 12,121 bags stored at Amsterdam, were ultimately withdrawn, on account of the strikes and will be put up for sale again after those will have

ended. Consequently only 13,881 bags passed the hammer, nearly all good ordinary descriptions. It was evident that previous values could not be maintained, since private imports have been selling at declining rates ever since October last. Valuations were made at the basis of 32 cts., the result being about 3 cts. lower, Malang selling at 31 cts., other good ordinary descriptions at 28 to 29 cts., Madioen even at 26½ cts.

Next sale to be held March 17th.

Second hand dealings chiefly consisted of Santos, at previous values, the better descriptions are not abundant and rather dearer.

Arrivals were moderate, from Santos 97,200 bags, deliveries amounting to 100,400 bags, leaving our stock at 897,900 bags, against 901,100 bags last month.

Terme business was languid, dealings 103,500 bags. Values slowly receded and are ½ ct. cheaper for the month. March 16 cts., May 16½ cts., September 16½ cts., and December 17 cts. Sellers predominated.

The general position is unchanged; the invisible supply being much reduced, there is more enquiry, which ultimately will not fail to sustain the market. The situation chiefly depends on daily receipts, which tend to decrease. Very likely there will be a marked falling-off during the next months to come, contrasting favourably with last year. Stocks in Santos continue to diminish, which accounts for the firm tendency of Brazilian holders.

Next Santos crop has undoubtedly suffered from frost and falling-off of fruit, estimates vary from 6 to 8 million bags, but we see no reason to modify our last month's estimate of 7½ million bags. There are no estimates current concerning the Rio crop, which leads to the belief that it will be a full one, taking into account the extension of cultivation in the State of Minas, where new trees are now coming into full bearing.

The *Salvador* crop is estimated at 600,000 quintals.

European stocks show another increase of 25,350 tons last month, but visible supply was 9,030 tons less, at any rate a diminution, however small it may be.

#### FIRST HAND SALES.

DUTCH TRADING COMPANY

in public Sale at Rotterdam on January 27th, 1903.

1,600 bags Java, Panaroekan palish ..	..	28	28½	cts.
2,000 " " Probolingo, green ..	..	29½	30½	"
5,091 " " Passaroeang, greenish to green	..	28	31½	"
728 " " Banjoewangie palish ..	..	25	25½	"
1,258 " " Madioen greenish ..	..	26½	27½	"
147 " " Kadoe ..	..	28	..	"
2,515 " " Liberian ..	..	19	22½	"
500 " " Blacks and broken ..	..	8½	..	"
42 " " Seadamaged ..	..	..	..	"

Total 13,881 bags.

In their February report Messrs. G. Duuring & Zoon state:—Values decline in proportion to the improvement of figures and so quotations receded another 1 ct. This state of things is only attributable to a total want of interest. Business was confined to the execution of small orders, at the close however, there is a better feeling with more enquiry at ½ ct. advance and an upward tendency. Last month we had to report a moderate crop from Singapore and a small one in Tellicherry, this time, Java mentions disease of the trees in some estates, which is likely more or less to curtail production.

In the terme market the difference between near and distant positions is getting narrower, without any other reason but selling short in the absence of speculative buying. Dealings amounted to 12,600 bags and quotations are ¾ ct. cheaper for the month, viz.: 30 cts. per February-April, 30½ cts. per May-August, 30½ cts. per September-November, and 30½ cts. per December. January sales and tenders 3,000 bags.

Stocks of all kinds on the principal markets of Europe.

The U. S. Senate Committee on Porto Rico and the Pacific Islands finds much reason for encouragement in respect to the coffee industry in Hawaii, and recommends a bounty of four cents a pound on coffee for 10 years.

\* \* \*

"There is only one way for coffee to go, in the long run," says Willett & Gray's Statistical. Hasn't it always been the case that coffee goes down? All consumers send it that way.

\* \* \*

A rose by any other name would smell as sweet—why not "Mocha" and "Java" coffee? Why not cease using these empty, meaningless terms? Brazil coffee is sold as Mocha that would make the old-time Mochas look like thirty cents in counterfeits of rankest character, and even the fabled virtues of interior Padang, aye, even the merits of Java "fancies" might well grow dim and pale before the fine aroma and flavor of the very choicest Santos or other South American coffee. Call your best coffee "No. One" or "The Gem," or "The Superba," anything except the eternal (and infernal) "Mocha and Java," and it will sell as well—perhaps a great deal better. People intelligent enough to appreciate the finer coffees are generally well enough informed to know that "Java" and "Mocha" are but ghosts of their former glory.

#### TEA NOTES.

The position of tea in the United States is, says *Tea, Coffee and Sugar*, so strong and the consequent activity so intense that there is probably no other line of business endeavour in the land in a condition so satisfactory to itself. Certainly, no one hears of anyone going out of the tea business, as in coffee, for instance, according to rumour, and the envy of the coffee men is often heard. A "slump" by this time has often been prognosticated, but with  $\frac{8}{10}$ ths of the stock sold, leaving only  $\frac{2}{10}$ ths to do a half year's business in this seems improbable. The tea men have disposed in the main of their stock and it is up to the consumer to pay the bill. Here he should not grumble very much, if at all, for on effecting the purchase of his favourite leaf he will find it cheaper even though only a little. Thus he will not feel he should stint himself in tea drinking and the largely increased stock of tea in the land should find its way into the tea pot making room for the 1903 chops. An oddity and at the same time a somewhat portentous sign is the presence of England in our own market a purchaser of tea. The Englishmen even outbid us in our fancy bidding and the fear is that they will leave us no tea of the kind so much like here—the greens. The market is certainly being complicated and into unusual strength, and that too from a source that has been a fretful complainant of a plethora of tea of Colonial growth. Surely this world is one of strange and unexpected compensations and if the consumer does not object too hard, why, as they say, "let her go Gallagher."

\* \* \*

**A Question of Import.**—An appeal of Catton, Bell & Co., San Francisco importers of tea, is before the Secretary of the Treasury for action. In 1898 the firm imported 350 cases of tea which the customs officials adjudged of inferior quality and deported to Honolulu. There the tea remained in storage until recently, when another effort was made to bring it through the San Francisco custom house and again it was ordered back.

It is the contention of the importers that as Hawaii has been annexed to the United States the tea is already in this country, consequently it is simply a question of transporting it from one part of the country to another, and not an import question at all.

The strength of the tea market ever since last fall would, says the *Merchants' Review* (New York), be more encouraging to the members of the tea trade if the strength were spread over all grades instead of being most conspicuous on the cheaper qualities. Will the time ever come when a great deal of the tea supplied to the public ceases to be bought "for price" and is selected for its intrinsic merits? It is most devoutly to be hoped that the advancing tea market will not induce a greater preference for the commoner kinds, but judging by the past it may have no other effect. When dealers are accustomed to say: "I want a 20c. tea," instead of saying: "I want a tea with certain characteristics," an upward movement of prices may have serious effects in consumptive channels.

\* \* \*

Tea should be used in the proportion of a tea-spoonful to a half-pint of water, or a half-teacupful to a quart of water. The water must be boiling.

\* \* \*

The domestic South Carolina teas are more nearly related to some of the Indias and Ceylons than to Chinas and Japans, but they will probably never closely approach either kind, owing to climatic differences.—*Merchants' Review*.

\* \* \*

**Pruning of Tea.**—Messrs. Geo. Steuart & Co., of Colombo, offer a prize of Rs.500 for the best essay on the Pruning of Tea in Ceylon. They say:—"We should like the essays to embrace the questions of manuring and plucking for a certain period, both before and after pruning, so far as these works may be said to be regulated by the time and style of pruning, root development, and the effect of various methods of pruning on food supply should also be touched upon as well as the burying of prunings. We should like the Judges not to attach undue importance to literary merit, so that none may be deterred from competing by a feeling that they cannot give ready expression to their views, but reasons should as far as possible be given for conclusions arrived at. The copyright of the winning essay might be considered the property of the writer should he so desire." The Planters' Association of Ceylon has taken the matter in hand, and all essays are to be submitted for the Secretary, under a *nom-de-plume* by the 31st March, 1903.

\* \* \*

**Tea in Uganda.**—In a report on Exotic Plants of Economic Interest in the Botanic Gardens at Entebbe, Uganda, Mr. J. Mahon states that Tea grows with but moderate rapidity. The rainfall is not great enough. During a period of rains it flushes nicely, but its cultivations on even a moderate scale would necessitate resort to irrigation. Mr. Scott Elliot, the naturalist and traveller, seemed satisfied from his exploration in the Ruwenzori country that large areas there offered a fine field for cultivating tea on a large scale.

\* \* \*

The *Journal of Commerce*, interviewing the wholesalers, finds that last month was the most active January in the history of the trade. We quote from the *Journal*:

Mr. Thomas W. Ormiston, of the firm of Austin, Nichols & Co.: "We have had a very active and steady business since the first of the year, consisting mostly of spot business, which has been general rather than in any particular lines. In fact, trade has been unusually good for this time of the year. The Spring buying season has hardly opened yet, and it is a little too early for very much business in futures. There has been a big trade in tea, both spot and

in orders placed earlier in the season for delivery of teas in bond after January 1. The stocks of tea throughout the country in the hands of retailers were very low, and as soon as the duty of 10 cents a pound was taken off, everyone wanted tea at once. Some delay, naturally, has been experienced in getting the tea from the warehouses, but the bulk of it has now been moved, although we still have some to be delivered yet. The outlook is bright for a very good season."

\* \* \*

**A Visitor from Japan.**—Mr. H. R. Barnard, of Yokohama, representing the well-known firm of Barnard & Co., Japan tea merchants, has been in Montreal for the past few days calling on the tea trade in connection with next season's business. Mr. Barnard says that the present position of teas in the United States will undoubtedly cause higher prices at the opening of the season, but more reasonable values will be looked for later on. As the quality of the crop is likely to be improved, unless affected by unforeseen weather conditions a material increase in the Japan tea business with Canada in the ensuing season may be expected.—*Canadian Grocer*.

## NOTES.

### The British Tea Duty.

The Indian Tea Association, Calcutta, has sent a memorial asking the Viceroy to state that a reduction of the British Tea Duty would be approved by him.

### Proposed Experimental Farm.

Mr. H. Mann has made some interesting suggestions in regard to the proposed establishment of an Experimental Tea Farm in Assam. Pressure on our space debar us from giving particulars to-day.

### M. de Nicéville's Successor.

It is understood that Mr. Lefroy, a distinguished Cambridge biologist, who has been for some time engaged in investigations connected with the insect pests of the West Indies, has been appointed Agricultural Entomologist to the Government of India.

### Land Exports of Indian Tea.

The exports of tea by land from British India continue below those of the previous year. The latest figures to hand are for the seven months ending with October, giving as exported 1,715,392 lbs. The quantity of Indian tea crossing the Frontier causes the deficit. The exports of foreign tea is exhibiting an increase showing nearly 100,000 lbs. This is an increase of tea in bulk transported to Kashmir, Kabul, and Ladakh. Kabul has shown the greatest preference for foreign teas.

### An American Version.

People who really believe that grocers charge excessive prices for coffee should, says the *Merchants' Review*, hie themselves to any of the Roulston stores in Brooklyn Borough, where they would find roasted coffee, whole or ground, offering at 20c. a pound, with 3½ pounds of granulated sugar thrown in. The same quantity of sugar is given with every pound of new crop tea at 35c. a pound. The margin on the tea is apparently wide enough to admit of a present of 3½ pounds of sugar with it, but the coffee offer gives a flat contradiction to some newspaper slanders of recent date.

### A U.S. Pepper Combine.

A New York paper writes:—The large pepper stock of Charles Nordhaus & Co., the well-known East India firm in New York

City, has been attached by certain banks and reports are current that it is the plan of the bankers to control the pepper market of the United States for the present. The creditors of the firm found that they could form a syndicate that could dispose of 18,000 out of 29,000 bags of pepper in the United States, and so make not a little profit. They agreed to combine and have placed the pepper in the hands of a prominent commercial banking house which will strive to dispose of the stock so as to realize the expectations of the pepper's new owners.

#### Indian Tea Shipments.

Exports of tea by land from British India still continue below those of the previous year, though greater than in 1900-01. The latest accounts to hand are for the seven months ending with October, 1902, and give the quantity exported as 1,715,392 lbs. as compared with 1,966,384 lbs. in the same period of 1901. The quantity of Indian tea crossing the frontier is the cause of the deficit, exports of foreign tea exhibiting an increase. Indian tea fell from 1,706,544 to 1,383,200 lbs., and foreign tea rose from 259,840 lbs. to 332,192 lbs. The bulk of the Indian tea was transported to Kashmir; Kabul and Ladakh taking the next largest supplies. Kabul also has shown the greatest preference for foreign tea.

#### Java Cinchona Bark.

The shipments from Java for the month of January which were cabled as 587,000 Amsterdam lbs., were corrected to 828,000 Amsterdam lbs., which compares with 975,000 Amsterdam lbs. in January, 1902, 1,000,000 Amsterdam lbs. in 1901, and 603,000 Amsterdam lbs. in 1900, but subsequently it was stated that the original figures were the correct ones. The exports from Java during January of the following years were as under :—

	Amst. lbs.		Amst. lbs.
1903..	... 828,000	1897..	... 390,000
1902..	... 970,000	1896..	... 970,000
1901..	... 1,000,000	1895..	... 657,000
1900..	... 615,000	1894..	... 893,000
1899..	... 509,800	1893..	... 900,000
1898..	... 956,000		

#### Ceylon and S. I. Labour.

The Committee appointed to give effect to Mr. Westland's resolution *re* labour, have decided as follows :—

(1) That two Commissioners be sent over to the recruiting district of Southern India to report on the possibilities of securing labour for Ceylon Estates.

(2) The salary to be allowed the Commissioners is fixed at Rs.500 per mensem each, and all expenses.

It is probable that the trip will extend from six weeks to two months.

(3) The Commissioners on their return will lay their report before the Committee of the Planters' Association and their recommendations will then be fully discussed.

(4) To enable the Commissioners to take advantage of any labour that may immediately offer and also to test the practical working of recruiting without the aid of Kanganies, it is considered advisable to empower the Commissioners to engage labour up to a limited point. It is, therefore, suggested that the first twenty applicants, who are prepared to risk, say, Rs.600 each, do send in their names to the Secretary of the Planters' Association accompanied by a cheque for Rs.400 and 40 tin tickets.

The coolies are to cost not more than Rs.10 per head landed at Tataparai (and will be delivered there by the Commissioners or their Agents), and should therefore not average more than about Rs.15 per head landed on the estate, including cost of tin tickets.

(5) To cover the cost of sending over the two Commissioners it is proposed to ask all Estates to subscribe Rs.10 each, and Secretaries of all District Associations are asked to circulate lists in their Districts asking for subscriptions and to return the same with as little delay as possible to the Secretary of the Planters' Association.

#### London Tea Market.

Weekly special telegram dated 19th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally shows a fractional advance and that the market for medium-liquoring Pekoes and Broken Pekoes as well as for common Pekoes and Broken Pekoes also shows a fractional advance. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (½d. up) and the average 7¾d. (½d. up). The average for the same period last year was 6¾d. Reuter reports that fine qualities of Ceylon tea are rather dearer and common ¼d. to ½d. up. Fair Pekoe Souchongs are quoted at 6d. (¼d. up) and the average for the week is 7¾d. (½d. up). 21,000 packages of Ceylon tea were offered for sale and 19,000 disposed of; while of the 29,000 packages of Indian tea offered, 25,000 were sold at an average of 8½d. (¼d. up). An *Englishman* special cable states :—Messrs. Ewart, McCaughey & Co. state that at the auctions on the 23rd instant 31,551 packages were offered, and a further advance was recorded. The most satisfactory feature was a strong inquiry not only for common but for every grade. Tea for price was ¼d. to ½d. dearer, and comparatively little went under 6½d. per lb.

### GENERAL ARTICLES.

#### PRODUCE AND PLANTING.

That the Chinese growers lost rather than "gave up" the supremacy they once held in the tea markets of the world is a fact too well established to admit of much argument. The struggle which Indian growers entered upon some twenty-five years ago, before the days when Ceylon had advanced beyond the experimental stage in tea planting, will be remembered by all who took part in it. China began to lose its hold of the market here so soon as the consumer learned to appreciate the value and strength of Indian tea, and the victory became a rout when Ceylon planters joined forces with the Indian growers in supplying the market with teas which consumers recognised could be relied upon for strength and purity. Chinese growers and importers made a feeble attempt to hold their lost market, but it was futile, and as since then they appear to have recognised that they were hopelessly beaten in the struggle, they have contented themselves with a few spasmodic but unsuccessful efforts to regain some of their lost trade, although they have done little or nothing to improve their methods of manufacture. We frequently hear that they are about to achieve great things by making further vigorous attempts to rehabilitate their tea trade, but there is not much chance of any considerable reaction, now that the consumer here is accustomed to British-grown tea, and is quite indifferent to the stories told him about the palmy days of the China tea trade. But the slight movement in favour of Chinese tea should not be entirely lost sight of. In certain exclusive circles a limited demand for these teas may be found, partly because some medical men have favoured it, partly because there is a fashion in these things, and also because the tradition is still current amongst the few who claim to "really know" that they are so very superior in flavour to those "coarse" teas from India and Ceylon. In those select circles which claim to be exclusive even in the matter of tea, there is a certain affectation on the subject, and it is regarded as evidence not only of profound dietetic wisdom to decry India and Ceylon teas, but it is considered proof of superior knowledge on all points to insist with lofty emphasis that of course "we," who are amongst the initiate of the earth, "never dream of drinking anything but Chinese tea." "We know the best of it goes to Russia, but yet we contrive by paying a good price and knowing where to go to get something very delicate and fine," etc. This talk finds imitators, and the vogue in a small way is in this manner established.

A correspondent who has had an opportunity of observing the development of this slight movement in favour of China tea which has extended from the Westend to the suburbs, and is almost accepted as a domestic creed by a few of the second-hand devotees of fashion, mentions an incident which recently came under his notice. One of these champions of China tea recently offered her cook some choice tea from the Flowery Land as an especial treat. It was the real thing, and too exquisite for ordinary consumption, but as it was the cook's birthday the occasion was considered a suitable one for astonishing the kitchen by a display of taste, and some of the "real tea" from China was presented amidst a flutter of excitement. Never doubting that a sensation had been created, the donor in due time asked her servant how she liked the delicacy, expecting a reply indicative of the enthusiasm she had sought to arouse. But in the kitchen the taste runs on something with a fuller flavour. The humble recipient of the gift, instead of becoming ecstatic over it, had to confess that in the kitchen they could not drink the delicacy because its flavour suggested "smoked hay." This was both ungracious and unappreciative, for doubtless the tea was of a delicate and subtle flavour, but it serves to show some of the difficulties attending the regaining of a lost trade, and it is also evidence that the present generation of tea-drinkers are oblivious of the past fame of China teas, and are content with the teas which the gods in the form of the blenders send them. It may be very dreadful from the point of view of the self-styled epicure, but it is clear that before China tea again finds favour with the masses the consumer will have to acquire a taste for it, and so long as the blenders continue to exercise their skill and succeed in pleasing the majority there is not likely to be any feverish desire on the part of the consumer to take his China tea neat except at a few ladies' clubs or gatherings where they possess profound knowledge and taste, or imagine that they do.

The hopeful feeling of planters that the prospects of tea are decidedly brighter all round is shared in the "Lane." A correspondent of a contemporary, who signs himself "Mincing Lane," writes: "I see in a daily contemporary of yours an allusion to the present very interesting position of the tea trade, and the important part being played by the blending houses in the struggle between importer and buyer. Whatever the rights of this question may be, it is a fact that the present position of the market is unusually interesting, and sufficiently so for each one to look well into it for themselves. It is now apparent that for this season the supplies of Indian tea will be considerably less than the consumption. The shipments for the season from Calcutta are 6½ million pounds less than last year up to the middle of January, and there is good reason to believe that on the total crop this shortage will be between 8 and 10 millions. Last season was also a short one, the total imports being then 6¼ millions less than they were in the previous year. Deliveries, on the other hand, for the first seven months of the new season (June 1 to December 31) are 10 million pounds in excess of last year, but the figures for the next three months (January to March) are likely to be misleading because large quantities were taken out of bond last year in expectation of a rise in duty. Exactly the reverse is probable this year, and only actual requirements are being cleared, and therefore the stocks of tea in bond will be no real indication of the actual position. All that it is safe to conclude is that the stocks of tea are very considerably more reduced from those of last year than is indicated by the Custom House figures. How much? is the question. Some tea circulars express the opinion that in view of these circumstances there is room for a rise in values during the next few months. They apparently have in consideration that while prices are above the lowest level of recent years they are much below those of four years ago, when the conditions closely resembled those of the present time. Under these circumstances the far-seeing man would probably take care not to run his stocks too low, for it is evident if the above is correct a further sharp rise in prices is likely to occur directly the shortage becomes more felt."

From Paris we learn that the Customs Commission on Tuesday last approved the Bill authorising the Government to issue a decree provisionally applying the minimum tariffs to foodstuffs the products of the countries or their colonies which shall before the 24th instant have concluded agreements with France providing for

the granting of such minimum rates. This provisional arrangement will enable such minimum rates to be applied pending the ratification of these agreements where ratification is necessary. The States with which agreements have already been concluded are Nicaragua, Honduras, and Holland. An agreement has also been concluded with Great Britain as regards the Seychelles and Jamaica, and negotiations regarding British India, Ceylon, and Mauritius are approaching a satisfactory conclusion.—*H. & C. Mail.*

TEA IN CANADA.

The Canadian Grocer reports:—

TORONTO, January 22, 1903.

There is an increasing inquiry from jobbers for Indian and Ceylon greens, with considerable buying. The demand is caused by the improvement in prices in Calcutta and Colombo. The London market continues very strong for all blacks. China greens and Japans are scarce. Flavoring Ceylons are difficult to obtain and command high prices in London in comparison with two months ago. Some large orders have been sent to Ceylon for faced-green Ceylon teas to take the place of Japans. The latter are so high as to be practicably unavailable for sale at 25c. retail. We quote:

MONTREAL, January 22, 1903.

The demand for teas shows little, if any improvement this week. As a rule, January is a good month with wholesalers, but this month trade is disappointing, buyers apparently being determined to hold off as long as possible. A dealer, who has just come from a trip through the West, states that everywhere he found the same complaint. Nothing of importance has happened on the Japan tea market since our last report. Ceylons appear to be firmer, and the lower grades show an upward tendency. Green Ceylons also are firm. Representatives from Japan have been on the local market after orders for the new crop, but not much business was effected.

TEA IN LONDON.

INDIAN TEA.—The *Produce Markets' Review* of January 31, 1903, says:—The quantity submitted to public auction has been but moderate, and, although the bidding has been more active, it has been ample to meet requirements. There was a fair selection of the finer kinds, and as the teas were of good useful character they met with a ready sale at improved rates. This more particularly refers to the Autumnal growths, which are superior to those of several seasons past, and, as the supply of these will be comparatively limited, there is every prospect that present prices will be well maintained. The medium sorts have not materially changed in value, but some from the Sylhet Dooar and Travancore gardens, in consequence of improvement in the quality, have brought better prices, but for the less desirable kinds the market has shown an easier tendency, and occasionally lower rates have been established. Importers have pursued the same course for the lower

grades as during the past few weeks. When bids have been made in public sales at a slight reduction in prices, they have refused to meet buyers, and consequently a considerable quantity has failed to pass the hammer. However, unless the demand shows a decided improvement, a lower market seems probable, which would undoubtedly stimulate the inquiry. For the public sales 31,200 packages were printed and 22,000 sold, as compared with 47,000 catalogued last year.

**CEYLON TEAS.**—With smaller supplies on offer, there was more animation at the sales on Tuesday, the bidding being keener, and firm prices generally were realised. The lowest grades of Whole Leaf were in more request at recent rates, and a much smaller quantity was withdrawn than of late, while the medium kinds sold readily at fully previous quotations. Broken Pekoes also met with a ready sale, but showed no change, and the lower sorts are still very scarce, 7½d. being practically the lowest public sale quotation, only a few Colombo bought teas having sold under that figure. The supply of dust and fannings continues very limited, and the finer grades realise extreme rates. At the public auctions 16,890 packages were brought forward, of which about 1,700 were withdrawn.

**CONGOU TEA.**—At the public auctions held on Wednesday, only a small quantity was offered, consisting chiefly of the medium and lower descriptions. These were not wanted except at somewhat lower rates, which holders would not accept, and consequently a large proportion had to be withdrawn. In all cases, however, where sales were effected, fully recent prices were obtained. Of the 702 packages offered at public sale, 577 failed to pass the hammer.

**OTHER CHINA TEAS.**—This market remains quiet, and there is little of interest to report. At the sale of Green Tea held on Thursday the demand for all descriptions was quiet and a considerable quantity was taken out. A rather better business is reported in Formosa Oolongs, and the market for Capers remains steady. The public sale figures for the week are as follows: 938 packages of Green Tea were brought forward, of which about 400 were withdrawn, and 1,173 packages of Fancy Tea were offered, 470 being taken out.

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange, 10th January, 1902.**—Ninety days' Bank rate on London opened on Monday, 5th instant, at 11½ and closed this evening steady at 11¾d.

The week tendency of the market we referred to in our last number seems to have alarmed importers who during the early part of the week were heavy takers. Rates consequently fell rapidly and speculators making up their mind that the long expected fall had arrived bought all they could obtain. Fortunately money is so tight that no one can afford to hold bills for so long when they disgorged again rates rose even quicker than they fell. Of course the usual twaddle about loans was circulated, this time the *dens ex-machina* being Knowles and Foster with a loan of £1,000,000 to the State of Rio de Janeiro!

It seems a pity whilst they are about it that brokers cannot invent something more probable; it reflects on their imagination.

The economic situation is not yet, we believe, absolutely unfavourable. Imports in November were very large £2,120,000 and exports comparatively small, £3,190,000, but still seem to be sufficient to meet current demand for bills though they cannot be much over. Indeed, we seem at present to be at the turn of the tide when speculation one way or the other becomes decisive. In a month or so it may be otherwise, and unless supplemented by other resources such as would be supplied by the sale of the Sorocabana, it seems quite possible that the supply of bills may fall below the demand and with speculation to help a slump ensue. In fact the only factor that prevents speculators even now from having their way is the tightness of money. The banks all want to draw but are prevented thinking rates too high and shippers who are of the same way of thinking sell only ready bills. There is in fact a regular snag in the speculative market that with the extremely low price of coffee and prospects of lower rates of exchange may last a long time and perhaps after all prevent any slump at all taking place.

With regard to exchange the situation may be summed up in a few words,—a weak economic but strong money position. Which will gain the day?

On 30th November in the branches of the five foreign banks cash decreased since 31st October by 922 contos whilst sight deposits had fallen off 923 contos and fixed deposits 996 contos. The net credit with Head Offices had also fallen 2,061 contos. Percentage of cash to sight deposits fell from 87·7 % to 87·6 %, the conclusion being that to keep up their cash the bank had been obliged to draw an amount equivalent to the deposits withdrawn.

The balance-sheet of the Bank of the Republic (new account) shows a loss of 2,140,000\$ for the year.

Only part of this, we understand, attributable to exchange operations; but if with everything in their favour in 1902 the effort to maintain exchange steady has proved so costly what will it cost in 1903 when all the chances seem against us!

As far as the coffee movement was concerned the week was fairly good, *embarques* having yielded £311,000 as against £401,000 the previous week and £409,000 last year. Declared sales were also very large 180,000 as against 101,000 the previous week and only 96,000 last year, promising a fair supply next week too. Coffee prices fell it is true and are a most disquieting and dangerous feature if the coming crop be as small as is generally expected and is to be marketed at these figures.

From Pernambuco and Bahia bills were freely offered and for the present the feverish taking that characterized the opening has ceased.

**Coffee, January 6.**—Entries at Santos during the week were 11,092 bags more than the previous week, but those at Rio were 1,275 less compared with the corresponding week last year entries at Rio and Santos were 10,306 bags more.

Aggregate entries at Rio and Santos for the current crop to date are 2,443,948 bags less than for the corresponding period of the former crop.

*Embarques* showed a falling off of 13,870 bags compared with the previous week but were 31,245 bags more than during the same week last year.

Declared sales were 20,000 bags smaller than the previous week and 2,000 bags larger than last year.

Stocks fell off 106,024 bags since the previous week.

Both gold and currency prices remained almost the same as last week but were 25 and 20 % lower than last year's, respectively.

Entries at Rio and Santos during the week ended 9th January were 33,865 bags less than the previous week's but 9,086 more than the corresponding week's last year of which they represent 104 % the increase being entirely in Rio and Minas entries. Entries for the crop up to 9th instant were 2,436,862 or 22 % less than on the same date last year.

Shipments or *embarques* were 60,870 bags under the previous week's but 7,168 bags more than for corresponding week last year.

Sales were again very large being 39,000 over the previous week's and nearly double, 84,000 more than for the corresponding week last year. Stocks have consequently diminished 77,887.

With regard to stock we desire to point out the great difference between our own and the stocks generally given by other journals and authorities. Commencing in January 1899 with the same stock, at one time our own stood at a figure considerably over others, but have gradually fallen until at the present moment they are 225,308 bags less than the *Journal do Commercio*.

We are unable to say to what the difference is to be attributed as we are not acquainted with the systems by which they are arrived at. But in regard to our own belief that it is impossible to exercise greater care or diligence in obtaining exact details. We are inclined to believe that the difference originates in the transit coffee which perhaps is not taken sufficiently into account by others. In any case a difference of bags would be appreciable at any moment and is specially so now when stocks weigh so heavily on the market.

We understand that a Commission will shortly proceed to verify stocks in this market and the sooner it is done the better.

No estimate has been yet issued by the Rio commissi of the coming Minas and Rio crop. It is to be regretted because such delay is prejudicial and has already given rise to misinterpretations.

**S. PAULO January**—The new year cannot be said to be promising for Paulistis, indeed a more wretched and gloomy prospect would be hard to imagine. For four years or more planters have been struggling with ever increasing difficulties until at last many of them, overwhelmed, have given up the struggle alto-

gether. Paulista planters who for any reason lose their commissario to-day are lost indeed, because not only can they find no one to replace him but at the present moment commissarios are refusing to advance to any one whatsoever except against consignments. There are said to be hundreds of planters in the city of S. Paulo vainly hunting for money for *custeio* or maintenance until next crop. The failure of the bank at São Carlos has completely deprived a large number of planters of Banking facilities, and how they are to get on till next crop Heaven only knows. As most of them are owing to their *colonos* or plantation hands, they will probably come to some arrangement with them to work on shares,  $\frac{1}{2}$ ,  $\frac{3}{4}$  or anything for peace and quietness. The *colonos* in their turn will negotiate their coffee with the local storekeeper who will pass it on to the dealer, and he to the importer until it gradually filters into the Santos market.

But on many plantations frost and bad treatment have this year so reduced the bearing as to make a loss on working almost certain unless prices rise considerably. This the *colonos* understand perfectly well and on such estates they will refuse to work on any except cash terms, and consequently they will be unworked.

The damage done by the frost has been generally underrated. There are very many plantations that have lost a third and in the newer districts, like Jaboticabal, plantations of 6 and 7 years have been literally wiped out. I know of one with 200,000 trees of 6½ years in splendid condition and bearing heavily on which 180,000 trees have been absolutely destroyed. To cut them down to the root and care for them for years until they bear again wants money and courage. Both are exhausted and so the owner throws up the sponge. This instance might be multiplied almost indefinitely, though of course the damage is not general. So far as I have been able to glean the districts that suffered most are Jaboticabal and Araraquara. Speaking generally the next season's crop on the Sorocabana district is expected to be about the same as this year, that on the Mogyana district better, and on the Paulista worse. Some of the districts injured by the frost are the most productive in the State, as for example is Jaboticabal, where the yield in 1901-1902 was nearly 200 arrobas per 1,000 trees!

Besides the terrible want of money and the frost there is another factor that may be expected to seriously affect the volume of the coming crop and that is the lack of labour, immigration being sure to fall off in view of the actual situation and inducements that are being offered by the Governments of the Transvaal and Orange free state. In fact, the only thing that keeps most of them here at all is that the planters are in their debt and many have no remedy but to stay on and try to collect what and how they can. In this they are being assisted by the Italian Government, who, it is said, is bringing diplomatic pressure to bear, a special agent having been sent out from Italy to watch the liquidation of the S. Carlos bank in which Italians are creditors for over 1,200,000\$. These deposits gained 5 to 6 % interest and though the money might have been invested to far greater advantage in the purchase of land or plantations at almost nominal prices, and thus convert the *colono* into a proprietor and make him independent for life the desire to return to the fatherland is too powerful and in their eagerness they too often sacrifice the substance for the shadow. In Argentina it is not so, or at any rate there are always a large number of *colonos* who become proprietors and remain in the country. In other parts of Brazil such as Espirito Santo and Rio Grande they seem happy and contented to settle down. But in S. Paulo they refuse to assimilate and get away as soon as their little pile is enough to start them comfortably in Italy. It is on this account that this kind of immigration is so undesirable, because it keeps the country poor by draining it of a great if not of the greatest part of the fruits of labour, instead of re-investing it in the country itself and thus making it reproductive.

It is often argued that the crisis at S. Paulo will be resolved by the natural process of selection if left to itself and that even if the planter disappear altogether he will be replaced by the *colono* and things will go on just the same or better than ever. No doubt the fittest will survive but unless the Italian can overcome his repugnance to settling in the country it is the fittest of the planters, who by reason of superior energy, capital or other conditions are able to stand the racket whilst most others succumb, that will finally come out on the top. If Italians could be tempted to remain it might be different and the semi-feudal planting system give way entirely to small holdings on which the cultivation of coffee would

be but an accessory and corn, beans, cotton, sugar, and the hundred products of a rich soil and generous climate form the back bone of production. Under such circumstances competition by planters would be impossible and the extension that planting would take would be so enormous and the cost so small that prices might fall to a great deal less than they are at present and still leave a profit. The true evolution would seem to consist in planters adapting themselves to the conditions that characterize their semi-feudal relations with labour, as they did on the abolition of slavery. In Argentina, foreseeing the inevitable, they divided up estates into lots and sold them to the *colonos* in alternate lots at low prices and profited by the increment that accrued to their reserve by the competition for purchase that ensued. Some such scheme should be practicable here, if only the right kind of occupant were found. In Europe there are millions who would be glad of such a chance if only it could be brought home to them.

The volume of the current S. Paulo crop is generally put down at 8,000,000 bags though there are some who stoutly maintain that it cannot exceed 7 or 7¼ million bags at most. On the statistical basis we may expect 8 millions. But against this it is urged that never has money been so tight as this year, which is incontrovertible, or *commissarios* so exacting. In consequence it is maintained coffee has been hurried down in an unprecedented manner until there remains little more to send, probably not over 1,600,000 bags. It is pretty certain that before the end of the crop the interior will be absolutely bare of stocks and that the new crop will commence in that respect with a perfectly clean slate, but whether the anticipation of a total of 7½ or 8 million bags for the current crop be correct is now of secondary importance as it is not a difference of ¾ or even 1 million bags that will influence markets much with the coming crop already in view. What will the 1903-04 crop be? That is the *crux* on which prices will turn perhaps for years to come, because should it really be as large as in some few quarters is predicted prices must fall yet more and even the few planters who have resisted up to the present be compromised whilst the mass would go to the wall altogether. If by any combination of circumstances a monster crop like 1901-1902 were really marketed, it would necessarily be the last of its kind, as prices would fall to a level that could not possibly leave anything for the following year's working expenses.

When we come to figures the difficulties of a fair and impartial estimate of next crop's prospects are enormous. It is admitted that the crop on the trees was in July excellent if not a bumper. Then came the frost and difficulties with labour, money and falling prices at Home and abroad all of which must exercise some untoward influence. How much? That is the question to which it is so difficult and so impossible to reply. In some districts plantations have, as we showed, been literally wiped out; in others damaged severely, and in others been untouched. Every one too has suffered from the lack of credit but some more than others, whilst the terrible fall of prices has hit everyone all round. How appreciate factors like these exactly or reduce them to numbers saying the crop will be so much and no more, or so little and no less? Without a far more thorough organization for the purpose than exists at present it is impossible. Guesses more or less approximate may be made, but in the end the only guide is experience and even that under conditions so changeable is terribly uncertain.

In 1892 there was a frost, that planters say was not nearly as bad as this, which reduced production in S. Paulo from 3,214,000 to 1,719,000 bags, in 1893-94 a shrinkage of nearly 47 %. If the higher yield of 91-92 be taken the shrinkage is 53 %.

Will history repeat itself now? It may be so, indeed it may be worse because there can be no doubt but that in 1893 much greater care was exercised in locating plantations and that with the feverish expansion of the last ten years conditions as regards climatic influences have certainly deteriorated, not only by extending old plantations unsuitably but by locating whole new districts within the first area.

The difficulty of finding any positive grounds to go upon is the reason why estimates vary so immensely. Each one argues from his own knowledge of restricted areas and has no grasp of the problem as a whole.

So far as I have been able to discover the minimum estimate of next seasons S. Paulo crop is now 6,000,000 and the maximum 8,000,000 bags. Supposing that the crop in June really represented a monster, equal to 1901-1902, of 10,000,000 bags, if

the injury caused by the crop were similar to that of the frost of 1892, viz. 47 % the coming one would not be more than 5,300,000 bags and if the maximum injury caused by the frost in 1892 be taken as a basis of comparison, the yield of the coming crop at S. Paulo would not exceed 4,700,000 bags. We do not know on what the estimates of 8,000,000 bags are based. And though reasoning from analogy there seems considerable ground for anticipating a repetition of 1893-94's experience. Conditions we repeat are so altered as to make conclusions extremely risky.

Still we find that Government has acted on their convictions and estimated the revenue from export duties on the basis of only 6,000,000 bags.

As for myself and not being in possession of sufficient duty to work upon I can only chronicle the opinions of others better informed and leave conclusions to our readers. It is generally believed that the coming crop will be early and that a good deal of coffee will be down by May.

Many objections are urged to the law taxing fresh plantations at the rate of 2,000\$ per *alqueire* the chief being that is impracticable. In point of fact so long as planters keep their estates going they have no remedy but to plant as new ground must be broken annually for raising cereals. To cut down forest for the purpose only would not pay, so coffee is planted too. If there is to be no new planting there will be no cereals unless they are planted between the rows of older trees, a process which is like burning the candle both ends because it ruins the trees and ruins the cereals too.

**Coffee Report, SANTOS, 9th January.**—Coffee eased off on the other side in the beginning of the week to 31 $\frac{3}{4}$  francs in Harve, the lowest point for years (the lowest was 30 $\frac{3}{4}$ , September 1899) and in consequence business was done at 3\$900 to 4\$000, Commissarios basis, but since then quotations came higher from Europe and the States and to-day a full 4\$100 basis was paid for good lots. Sales were larger than officially stated and dealers, at a bit higher prices, were offering large blocks.

Receipts during the week showed a small decrease against the previous week. S. Paulo (passagens) to-day only amounted to 16,397, the lowest of the crop to date, the medium estimate of entries being 500,000 for the month. According to Messrs. Duuring & Zoon's statistics the world's visible supply shows a decrease of about 9,000 tons.

Shipments during the week were fair and our stock came down to 1,258,000 bags.

Europe continues still a far better buyer than the States. Good average was executed at 26s. and 20s. 6d., orders for Superiors being 27s. 6d. A few orders are said to have been placed for Lewisohn's order.

Low coffees are out of demand: Good regulars fetched still up to 3\$600. Prices for goods ruled between 3\$900 and 4\$000 and Superiors were paid for between 4\$250 and 4\$400. Primes demand a premium over Superiors of 200 réis to 300 réis. Large bean Primes were sought for at about 5\$200. Peaberry is neglected and their prices practically equal to flat bean coffee. Washed coffees show no demand and for really fine colory washed offers only reached 6\$000, no sellers however at this rate.

Exchange fluctuated between 11 $\frac{2}{3}$ d., and 11 $\frac{1}{3}$ d., but had little effect on the local coffee market.

Outside Messrs. Tromell's estimate of at least 8 million bags for the next crop no further estimate has been published so far and even these gentlemen stated that it is too early yet to form a proper idea about the real size of the next crop. It is reported that the next crop will be early and that the picking will start in April.

**Coffee Journalism.**—A new Journal has been started in S. Paulo called *Uniaodos Lavradores*, which is supposed to advocate the interests of planters. The *Brazilian Review* remarks, it cannot, however, be congratulated on its *debut* on which the useful middlemen are denounced as the cause of all our evils and planters are urged to do everything themselves, from planting to roasting and even retailing direct to consumers. If the new Paulista gospel be right, then division of labour is a mistake and our most cherished principles, must go by the board, and everyone insist on doing everything himself, without the assistance of outsiders and plant, hoe, and harvest his own coffee, carry it on his back and then swim with it to France or the United States, and roast and sell it in the streets, for fear someone else may make a profit out of it. The *Uniaodos Lavradores* tries to show how all the profit on coffee goes into the pockets of third parties without benefit either to producers or consumers.

The taxation of coffee by foreign Governments as also profits of intermediary agents, of course, must raise the cost to consumers, but, only in-so-far as universal prices are affected by the consequent restriction of consumption, are producers affected one way or the other. Were there no taxation and no intermediary profit, prices would be certainly lower for consumers and consumption perhaps be consequent higher, but otherwise we should sell our coffee just the same, and prices be determined then, as now, by the relations of demand and supply.

In North America middlemen have been eliminated in the coffee trade to an extent unknown anywhere else and coffee is bought, shipped, imported, roasted, and sold to the retailer, all by the same firm.

There are, moreover, no import duties to pay and the conditions are as close to the Paulista ideal as it seems possible to get. And the result is that coffee is sold, roasted, and ready for consumption, in New York often cheaper than in Brazil itself, where the price ranges from 500 to 2,000 réis against only 716 to 761, the current rate for *Ariosa* or *Lion* brands in the States.

For Paris the price rules 4 francs or 3\$179 per kilo. But it is the French consumer who loses in the one case and the American who gains in the other, though we ourselves neither gain nor lose by cheapness or dearness except in a very indirect manner. However, we may grumble at the limitations thus imposed on consumption, import duties and other local charges are always in the long run paid by consumers and not by producer, and, if anyone has cause to grumble, it is they, not us.

**Sao Paulo.**—A Meeting was held lately in S. Paulo attended by a large number of planters at which the "indifference" of the Government to the position of the coffee industry was loudly denounced and a Committee appointed to visit the President of the State and agitate for the following measures:

- (a) Reduction of railway tariffs.
- (b) Exemption from taxation of all articles of general consumption and intervention of the State in federal taxation with the aim of reducing the cost of labour.
- (c) Issue of more paper money.

Desperate men demand desperate remedies and are all the more dangerous because they are not only desperate but destructive. Still the situation is grave enough and it behoves Government to be up and doing to counteract in some manner by act or precept ideas that are now simmering but may boil over at any moment.

Dr. Campos Salles with his invariable good sense, when interviewed on the subject, said that in his opinion the State could do little or nothing, the remedy for low prices lying with planters themselves, seeing that by abandoning plantations that don't and cannot pay and giving their attention exclusively to the rest they would produce a better article and reduce the supply in a manner that would ensure improvement. Stocks held abroad by dealers and speculators are so enormous that interested as they are in a rise they are powerless to bring it about so long as supplies continue on the existing scale. Let each separate planter exercise a little selection on his own estate and let non-paying trees go and there will soon be a change in the scene. Anyhow, Dr. Campos Salles added, the remedy lies with themselves and no one else.

## DISTRICT ASSOCIATIONS.

KANAN DEVAN.

Proceedings of Quarterly General Meeting held in Munaar Reading Room, on Saturday, the 14th February, 1903, at 3 P.M. PRESENT:—Messrs. H. L. Pinches, J. M. Bridgeman, C. Bell, W. O. Milne, E. E. Williams, C. E. Hancock, G. H. Danvers Davey, E. R. Howlett, J. C. Swayne, W. D. Martin. Mr. H. S. Holder, *Honorary Secretary*.

VISITORS: Messrs. Gwynne, Pottie, and Redmayne.

(*Proxies from Messrs. Wright, Forbes, and Baron von Rosenberg were handed in too late for the Meeting.*)

Proceedings of last Meeting were taken as read.

Proceedings of Committee Meeting held on the 30th January were read and the Meeting was also informed that Mr. H. L. Pinches had been added to the Committee under Rule No. 8, para. 2. Mr.

Williams proposed that the Committee's proceedings be confirmed in General Meeting. Seconded by Mr. W. D. Martin and carried.

**Bodi Ghaut Road.**—Read Mr. Burley's letter saying that the work of repairing the road would be put in hand as soon as possible.

**Munaar Mettu Road.**—Read Mr. Sealy's letter of the 5th January stating what terms would be allowed for repairs.

Proposed by Mr. Call that the terms of Mr. Sealy's letter be accepted and that Mr. Sealy be written to, to this effect. Seconded by Mr. Pinches and carried.

**Local Labour Rules.**—The Honorary Secretary said that in laying before the Meeting the Report of the Sub-Committee appointed to draft Local Labour Rules, he would point out that rules had been drafted to meet with only three contingencies, but that these were of the most frequent occurrence. It might be possible later on to add rules to those now formulated, but that it was hardly possible to provide for every case of dispute that possibly might and probably would occur in connection with labour.

The Sub-Committee had therefore recommended that a Standing Labour Committee be appointed to which disputes could be referred for settlement, and he thought that by having such a Committee a great deal of good would result and a great deal of ill-feeling be spared, and further that it would be a great pity if every member did not bind himself to abide by such Committee's decision by signing the rules.

The Report of Sub-Committee was then read, each member having a copy.

Proposed by Mr. Pinches—That the Report of the Labour Sub-Committee be adopted and confirmed in General Meeting, as also the Labour rules drafted by them, and their suggestions as to a Standing Labour Committee which he proposed should be elected annually, in the same way as Association office-bearers usually were. Seconded by Mr. W. O. Milne and carried unanimously.

**St. Louis Exhibition, 1904.**—Read Circular No. 2/03 and Baron von Rosenberg's remarks as to the uselessness of pushing Indian coffee where it could not compete with Central American kinds of mild quality, and that it would be far more to the point if any funds available were utilised in pushing it where already to some extent known and appreciated. Messrs. Williams and Davey supported this view and it was resolved to convey this to the U. P. A. as the opinion of this Association.

**Travancore Export Duty on Coffee.**—The Secretary stated that in accordance with instructions, the British Resident had been approached on the subject and copies of correspondence had been sent, he expected a reply very shortly which would be circulated to members chiefly interested.

**Labour Bill.**—Copies of the draft Labour Bill and amendments as prepared by the Select Committee were gone into.

The Meeting considered that the Select Committee appeared to have dealt satisfactorily with most sections of the Bill to which exception had been taken, and that all further comment should be reserved.

Papers laid on the table—

U. P. A. Circulars to date.

T. and A. do.

Letter Book.

H. S. HOLDER,  
*Honorary Secretary.*

## PLANTERS' ASSOCIATION OF CEYLON.

### FORTY-NINTH ANNUAL MEETING.

The forty-ninth Annual General Meeting of the Planters' Association of Ceylon was held in the Ferguson Hall, Victoria Commemoration Buildings, Kandy, on February 17th, at 3 o'clock in the afternoon. Mr. A. C. Kingsford, Chairman, presided.

### CHAIRMAN'S SPEECH.

The CHAIRMAN:—Is it your wish, gentlemen, that I follow the usual procedure of taking the annual Report as read? (Applause.) Before proceeding to moving the adoption of the Report, gentlemen, there are a few remarks I should like to make. The principal work of the year I alluded to at our last Meeting as recently as November

last and will not go over the ground again. The position of tea at the present moment, I think, is stronger than it has been for many years past. Not only are stocks low but we know there is a growing foreign trade and there was a possibility of a larger amount of green tea being manufactured during the current year; but even if our total shipments exceed those of last year we are pretty confident that the shipments for London will be considerably less. Two things, gentlemen, are necessary to strengthen our position; the one is to drive home the advantage we now have by continuing the present careful system of plucking and another is to endeavour by every effort to get as much green tea made as possible. Bearing on this subject is a letter I have received to-day from a leading London buyer which may be of interest. "Ceylon greens are at the present moment very satisfactory, India is also producing some exceedingly good green teas. Between the two should they effect a material diminution in the production of the lower grade black teas during 1903, I feel clear that we shall reach a greatly improved position for all tea, and get back to something like the prosperity of a few years ago." Later on the same letter says "If you can only restrict your yield for 1903 to something not in excess of that for 1902, and India produces correspondingly, I am sure the price of all tea in January, 1904, will average 1d. or 2d. per lb. higher than it does to-day." (Applause.) That is a letter from a gentleman whose name has been once or twice mentioned. He is a large buyer. I think he has interest more as a buyer than a producer and he opposed the motion for the proposed increase of the cess.

\* \* \*

The question of

### THE HOME DUTY

has occupied our attention. At our last Meeting we passed a Resolution asking the home Government to favourably consider the reduction. In times of war we bore with the increase duty. We think now it is very reasonable in times of peace we should get a reduction (Hear, hear). The Resolution passed by your Association has been forwarded by our Government to the Colonial Secretary at home for favourable consideration and it has now reached the Chancellor of the Exchequer. Similar Resolutions have been passed in India and a memorandum has been sent home from those representing all parts of the tea trade of London. We also know there is a very strong representation of the tea trade in the House, so that I think that as soon as the Chancellor of the Exchequer possibly can see his way to give us that reduction we shall get it. It is true that the increase that the duty for the first two years did not show any diminution in the consumption of tea. In fact the tea showed the same normal increase, due no doubt to the fall in prices, but last year there was no increase in consumption. In fact, there is a decrease of one million. That decrease will probably show itself when the prices rise and the extra 2d. on the lb. will certainly begin to make an effect on the consumption.

### THE ST. LOUIS EXHIBITION.

When I addressed you last, gentlemen, I stated that it was the hope of the "Thirty Committee" that it would be able to provide some sort of representation for the St. Louis Exhibition. At that time we thought that possibly the expenditure would amount to, say, six or seven thousand pounds; but after meeting the travelling Commissioner, the Hon. John Barrett, and learning from him more fully the scope of the Exhibition and the sum which was to be spent by other exhibitors it seemed to us that it would be more or less unwise to go into any expenditure at all unless we could expend a sum similar to that expended at the Paris Exhibition 14 or 15 thousand pounds. We were assured by His Excellency that we had his sympathy and he promised us his support when we could show him a clear scheme. It would possibly be said, by some that exhibitions do very little good. It is necessary, however, that we should show there not only to give the people an increased knowledge of our products but to maintain the hold we previously gained. And further, in articles like tea which is an article of consumption which you can push in restaurant form, we have more chance of getting success from an expenditure than on dry produce. Mr. Figg, as you all know, was kind enough to go to St. Louis and make a preliminary report and he deserves the thanks of this Association for the trouble and time he has given to forwarding this good work on our behalf. (Applause.) I am glad to be able to report that I had a telegram from Mr. Figg last week to the following effect:—"I have secured space for Ceylon Court (a space 150' by

250 feet) and recommend exhibiting in the main buildings. I have arranged also steps for the sale of tea in cup and packet. I will appoint agents. Leaving on Sunday night." As the time was limited, gentlemen, and I had no opportunity of consulting anybody else, I simply wired to Mr. Figg, thanking him. I see on reference to the plants, the plot of ground selected is about an acre in extent and opposite the biggest building in the Exhibition, the Agricultural building covering 22 acres. I think there is no doubt from what I can see that Mr. Figg has secured us a very desirable site. (Applause.)

The Roll of the Association shows that the.

#### NUMBER OF MEMBERS AMOUNTS TO 957.

That is the largest number, gentlemen, we have ever had on the Association (applause), and I think we may take the Association as more representative of the island of Ceylon than it has ever been at any previous period. It is true there are still a few estates on outlying small districts where the number of planters is insufficiently large to have a District Association and I think that during the coming year an attempt should be made to draw them in so that during the coming year, the 50th year of the Association we shall have a roll of thousand members. Finance, gentlemen, we show a balance in hand of Rs.1,100 compared with Rs.5,000 last year. The decrease is due chiefly to expenditure in connection with the Coronation—we presented a casket and an address—but chiefly to the balance having been paid on the cost of this building. But your Committee recognise that the expenditure is larger than it used to be; for not only have heavy rates to be paid but there is the upkeep of this building and the necessary repairs that have to be made; so we consider that some economy must be shown in the future to make both ends meet.

Turning to the work of the "Thirty Committee" the chief expenditure last year has been on green tea. More than half of the money was spent in subsidising and paying bonuses on green tea. The production of green tea increased from  $1\frac{1}{2}$  million to 4 millions.

#### THE PRODUCTION THIS YEAR

will depend very much on circumstances, but I may mention that our estimated crop is 154,000 lbs. (Applause.) That seems to me with 14,000,000,—assuming that green tea goes on in the same promising way and there is a bonus—the crop may produce 140,000,000 lbs. black teas. For green tea to date this year certificates have been granted for 1,132,000 lbs. Turning, gentlemen, to the expenditure on green tea we spent £5,000 in America, of that £5,000, £3,000 was spent in general advertising, and the balance in assisting firms which had previously assisted us. In Europe, we spent £4,500. I regret that the result from

#### THE COMMISSIONER IN EUROPE

up to date does not show very satisfactory figures. Still we cannot get over the fact that in a continent like that where there are people who are not tea-drinkers a mere expenditure of £4,000 or £5,000 is not likely to show very much of a result at once; and when we went into the Commission we should have been prepared to tax it for some years. And it will be some years before we shall see any result for that expenditure. A small start was made in Afghanistan by Mr. Foley who was sent out there. As no traders are allowed inside the country he stayed at Quetta and managed to dispose of 17,000 lbs. of tea. (Hear, hear.) He has been handicapped in several ways, but especially in the original invoice having had all grades of tea sent and he could dispose of the first grade; and with others he has had some difficulty. Before I leave the subject of the "Thirty Committee" I will endeavour to dispel

#### A FEW POPULAR DELUSIONS.

I use the word endeavour, advisedly, having in mind the definition once given of a popular delusion. "Nothing is more remarkable for its persistency than a popular delusion. Born of error and bred by ignorance it sneaks into life unnoticed and takes centuries in the killing." Now the first of those delusions, that does indeed seem to take centuries in the killing, is that our Commissioners distribute the money entrusted to them in secret subsidies. What are the actual facts, both our Commissioners' accounts state to whom payments are paid, and the amount paid, those accounts are audited and laid on the table at the Annual Meeting of this Association, are printed in the annual Book of Proceedings, and distributed among all the members of the Committee, about 130 in

number. Copies are also sent to many other gentlemen both at home and in Ceylon interested in the work of the Association, and I think copies will be found in many of the mercantile offices, and in also the newspaper offices in Colombo. Then these

DETAILS ARE NOT PUBLISHED IN THE PUBLIC PRESS, as although the particulars are at the disposal in confidence of any member of this Association, it would in the opinion of the Thirty Committee be bad policy, and hamper the work of our Commissioners, if each recipient was to know exactly what help the other was getting, and would cause needless jealousy. I ask you, gentlemen, would a Colombo firm consider it business to proclaim to the world, exactly on what terms it conducted its business, and who were its clients, or would a newspaper proprietor consider it advisable to tell his subscribers, who were on the free list? (Laughter.) Another popular delusion gentlemen, but one held by few here I venture to hope, is the idea that favouritism is shown in the disbursement of cess funds. Now with our limited funds working in a vast continent like America, and where advertising is so expensive, it would have been simply folly on our Commissioner's part to attempt to help all alike, the sum they would have each received would have been so small, that they would not have been much the better for it, but by materially helping a few strong firms we force others to handle our teas, and by assisting one or more firms to push vigorously in a large city soon.

#### AROUSES THE EMULATION OF MANY OTHERS

and this method has proved most effective. Our methods have been Press advertising, and assisting those who advertise, demonstrate, canvas, issue leaflets, and send out samples. A somewhat smaller matter perhaps, in the recent charge made in the public Press, that the "Thirty Committee" had shown favouritism, in appointing one firm of brokers to pass the green teas for cess bonus. The actual facts of the case are these, the Committee considered it desirable, in case of disputes, that they should have one firm to deal with, rather than a Committee, as likely to facilitate the work and they appointed Messrs. Forbes and Walker, and the reputation of that firm is to us a sufficient guarantee that the work will be effectively carried out, but as it had been appointed out to us, that Messrs. Forbes and Walker got to a certain extent an advertisement by signing the certificates, so it was decided towards the end of 1901, that each broker should be allowed to grant certificates, and sign the same—subject to the teas being first passed by the Committee's Inspector. There was a Committee in Colombo consisting of all the brokers appointed to go into this very question. One of the rules by which they are guided is that any broker may call a Meeting to reconsider the passing or non-passing any invoice of Messrs. Forbes and Walker, and can bring it before the Brokers' Committee, which consists of the whole of the brokers. The charge for a certificate is Rs.5, but of this amount Messrs. Forbes and Walker got only Re.1, when passing teas for the other brokers. I deny the imputation that any favouritism was shown. We considered it advisable to select one firm, in the same way that one firm is selected by Government in other ports of the world to inspect teas. It has been said several times that

#### OUR COMMISSIONERS DRAW LARGE SALARIES

and do very little for the work. I may mention that this is more or less a mistake. Mr. Mackenzie, I think from the first, has never drawn a full salary. I think he has drawn on an average £800 a year, not a very large allowance, seeing that he has to make two trips to America every year; and last year, recognising our position, he drew £600 and Mr. Renton £500, so that shows, I think, that they have their hearts in the work. Another very favourite cry of the anti-cessites, is that the countries where least cess money has been spent show the best results, and Australia and Russia are quoted as cases in point. Now, in the case of Australia, the trade was sufficiently secured when we commenced operations, and when the cess was advocated, great stress was laid by Mr. Renton, the then Chairman of the Chamber of Commerce, that no more money should be spent in Australia, where Rs.15,000 of the Tea Fund money had done useful work; they also omitted to point out that Australia had hitherto drawn her supplies of China tea, chiefly from London and that with the change in the trade at home, and with facility for direct shipments from ports so adjacent as Colombo and Odessa, the trade was naturally diverted to those ports and India.

## WITH REGARD TO RUSSIA

a considerable amount of money has been spent there, no less a sum than £9,000 or £10,000, and that this money has been well spent, the following opinion of our statement shows:—"The Thirty Committee has never in my opinion, spent any money to greater advantage than that spent through Mr. Rogivue, who might well claim much of the credit for the present satisfactory consumption of Ceylon tea in Russia." That statement was made by a gentleman whose words have considerable weight with this Association, on his completion of a visit on our behalf to Russia, made in 1897. We are now treating the Russian market in the same way we treated the Australian, considering that the trade is sufficiently established. Another argument has been deduced lately against the further manufacture of green tea: that of the possibility of China tea coming back into England. Now, gentlemen, the whole history of the tea trade has been an expensive one—most of all to China. For every increase China has had to give way, but we have also had to give way in prices. If China tea comes back again, I think it is a good sign, for it proves that we are producing less tea than there is a demand for

## OUR PROGRESSIVE POLICY.

Finally, gentlemen, I would remark that Ceylon planters have prided themselves in the past on their progressive policy, and I think we can justly claim to have been the first to have realised the necessity of pushing our teas, in the future we have not only to endeavour to make further headway, but we shall have to strive, in the face of keener competition to retain the hold we have obtained. India has now obtained its cess, a small beginning perhaps, but the funds at their disposal will considerably strengthen their hands. Japan, it may not be generally known, is making efforts to revive its waning trade, and in spending I believe about £7,000 annually, chiefly in America. China also, you may have recently read, is endeavouring to introduce her tea and other produce into Europe by direct trade, without the aid of European agents, and the new Siberian railway, and this is a new force to contend with. It is stated by some that the cess worked only in the interests of the low-grown teas. Gentlemen, I don't think that is the case, and if you consider the constitution of the Committee you will see that high-grown teas are very fully represented on that Committee, and those gentlemen are of the opinion that it is to the advantage of all to continue the success. A point in this connection that I would like to mention for the consideration of the high-grown buyers is what have we done, but chiefly to push their teas in foreign countries, in America and the continent and where did their best prices come from, but from continental and American demands. Those, gentlemen, are all the remarks I have to make, and with these remarks I move the adoption of the report. (Loud and continued applause.)

FORTY-NINTH ANNUAL REPORT, FOR THE YEAR ENDING  
17TH FEBRUARY, 1903.

Your Committee now herein submits the Forty-ninth Annual Report of the Planters' Association of Ceylon for the year ending 17th February, 1903, and, in doing so, would congratulate members on progress maintained with vigorous prosecution of the varied business that has been presented for consideration and disposal during the period under review. The Register of Estates and Voters stands to-day at 957 being the highest number reached since the establishment of the Association on 17th February, 1854.

\* \* \*  
PLANTING PRODUCTS.

## TEA.

The past season has been, on the whole, unfavourable for yield. A drought in the early part and an excessive rainfall during the last three months of the year, account for the crop falling considerably short of the estimate, but total shipments of tea were notwithstanding the largest recorded. Foreign markets however continue to expand, so that shipments to the United Kingdom were 2,000,000 lbs. less than the previous year, and 10,000,000 lbs. less than 1900, when Ceylon and India over-supplied the Home trade to the extent of 20,000,000 lbs. The average price of Ceylon tea sold in London during 1902 was 6½d. per lb., further decline of ¼th of a penny, as compared with previous year, and 1d. per lb. less than 1899, the last season of normal stocks. The quality has been, on the whole, good, and the poor prices obtained can only be attributed to the large stocks carried forward from 1901. The position is now

gradually improving, total stocks at the end of 1902 being 8,000,000 lbs. less than at the beginning of the year.

The most encouraging feature at the present moment is the rapidly increasing manufacture and demand for Ceylon green tea. Commencing slowly in 1898, the manufacture rose to 500,000 lbs. in 1900, 1,500,000 lbs. in 1901, and 4,000,000 lbs., last season. This rate of increase appears likely to continue during the coming year, and will very materially assist in the further reduction of the stocks of black tea.

The new year therefore opens with brighter prospects, but the future depends largely on the present style of careful plucking being maintained, and shipments to London continuing on a moderate scale. The last two years have been unfavourable flushing seasons in both India and Ceylon, there is also a considerably acreage not yet in full bearing, so that the maximum output from either country has not yet been reached. Your Committee do not therefore consider that the pushing of Ceylon teas in new markets can at present be relaxed.

\* \* \*

## Tea distribution from 1st January to 31st December, 1902.

	United Kingdom.	Russia.	Other countries in Europe.	America.	
	lbs.	lbs.	lbs.	lbs.

Green }					

The following show an increase over 1901: Africa, America, Austria, Belgium, China, Germany, Italy, Malta, Mauritius, Russia, Singapore, Spain, Sweden, and Turkey; while Australia, France, Holland, India, and the United Kingdom show a decrease.

## TEA BLIGHTS.

Till lately the tea bushes have been very free of either brown or gray blight. The wet weather of the last three months of 1902, has induced a re-appearance of these blights in some Districts but not of an alarming nature. Helopeltis and shot-hole borer have not been so much observed in 1902 as 1901. It is to be regretted that the Tortrix has been very much in evidence in one or more Districts. Advantage is freely taken by planters of the advice so willingly placed at their disposal by the Scientists at Peradeniya.

## CACAO.

The crop shipped for the year was cwt. 61,476 against cwt. 47,471 in 1901, and is the largest crop yet shipped from Ceylon. It would have been considerably larger but for the very unfavourable weather of the last three months of the year. Continuous rain caused a recrudescence of Canker especially amongst the pods, and the Autumn crop suffered severely in consequence. Canker of the pod is the most serious agricultural difficulty that Cacao planters have to face, and the experiments now being carried out by Government at Gangarooka are of the greatest interest to them. It is to be hoped that a cheap and effective remedy will be found, and if this is done the crops of Ceylon cacao will very largely increase. Dealing with Canker of the trees is now pretty generally understood by planters and the precautions taken, together with the steady substitution of Forastero varieties for the red, have rendered this pest far less dangerous than it was. Prices have improved during the past year and it is satisfactory to note that Ceylon Forastero cacao is now going steadily into consumption in England, whilst the few lots of really pure red which are now put on the market command exceptional prices. The stocks in London are smaller than they have been for several years. Your Association at a General Meeting on the 4th November, 1902, unanimously adopted

\* According to the Thirty Committee returns 1,164,017 lbs. of green tea have been manufactured in addition to these shipments.

a Resolution brought forward by the Chairman of the Matale Planters' Association asking for special legislation for the protection of Cacao crops, by an extension of the Praedial Products Ordinance to cover ripe cacao on the same lines as the protection given to cinchona by the Ordinance No. 22 of 1886, and similar to the protection given to cacao in Grenada and vanilla in Mauritius. The objection to a purely Receivers Ordinance is that both in India and Grenada such Ordinances have been proved failures. It is stated that in India this is due to the difficulty of reaching the owners of small gardens, and this is precisely the difficulty which arises in Ceylon. His Excellency Sir West Ridgeway wishes to appoint a Commission of inquiry. Assuming that this is necessary it is difficult to understand the very considerable delay which has taken place in getting the business in hand.

\* \* \*

## CARDAMOMS.

The cultivation of this product continues to attract the attention of European and native cultivators and has lately been added to the Experimental products in the Government Experiment Station at Peradeniya. It is believed that the total area in Ceylon devoted to Cardamom cultivation is probably 10,000 acres, the larger areas being in Matale and Medamahanuwera, according to Ferguson's Directory which gives 45 of the 52 divisions of Districts as now growing cardamoms, while many of the native gardens have their small patch under this product. The crop shipped during 1902 was 615,922 lbs. and but for the prolonged wet weather during the last quarter, it would, in all probability, have been much larger. The difficulty of curing on the estates in wet weather delayed despatch, and led to large quantities being cured in Colombo. The shipment during the earlier months of 1903 will be heavier and in consequence add considerably to its crop despatch account. Prices have been generally lower than last year, but Cardamom growers who are fully aware of the danger of the supply exceeding the demand, will, it is expected, take steps for making their produce better known throughout the world. The estimate of crop for 1903 is 650,000 lbs.

\* \* \*

## RUBBER.

This product continues to receive increasing attention, particularly in the low-country, where it is being planted in all Estate swamps and ravines. It has not yet been determined what is the highest elevation at which it can be grown to pay, but trees are known to be making strong growth in places at an elevation of over 2,500 feet. Exports of cured rubber are steadily increasing, for the year ending 31st December, 1902, amounts to 189 cwts. The prices realised have been very satisfactory, Pará biscuit having been sold as high as 4s. 4d. per lb. and cured scrap 2s. 8½d. The demand for seed still continues large, orders have been booked both for export and local planting during the coming season.

\* \* \*

## RUSSIAN TEA TRADE—BRITISH EXHIBITION, ST. PETERSBURG.

In connection with the important Russian Tea Trade your Committee learned with regret during the year that the British Exhibition at St. Petersburg would not take place. It is worthy of record that Russia which in the year 1890, according to the Ceylon Customs Return took only 80 lbs. of Ceylon tea in that year imported direct from Colombo during the year ending 31st December 1902, no less than 12,550,856 lbs.

## CUSTOMS DUTIES ON TEA AND OTHER PRODUCTS ENTERING FRANCE FROM COUNTRIES WHICH DO NOT ENJOY MOST-FAVOURLED-NATION TREATMENT.

The question of Increased Customs Duties on tea and other products entering France from countries which do not enjoy Most-Favoured-Nation Treatment has continued to occupy the attention of your Committee. It will be in your recollection that the French Law of the 24th February, 1900, on the subject was suspended for a year and since then it has been intimated that the French Government has issued a decree extending the application of the Minimum Tariff to Ceylon until 23rd February, 1903. According to the Secretary of States despatch of 19th August, 1902, the position is as follows:—In return for the Grant by the French Government "denrees coloniales de consommation" produced in Ceylon, of the benefits of the minimum general tariff the Government of Ceylon will continue to give to the products of France Most-Favoured-Nation Treatment, provided that the right is fully reserved to make exceptional arrangements in favour of the British

Empire. By a recent cablegram it is indicated that negotiations concerning Ceylon are approaching a satisfactory conclusion.

## TEA TRADE IN JAPAN.

Through the good Offices of the Ceylon Chamber of Commerce interesting Reports by the British Consul at Yokohama upon the Japanese Tea Industry and by the British Consul at Amoy on the Formosa Tea Industry were obtained and circulated for the information of members and your thanks are herein recorded to the writers and to the Chamber for valuable information and co-operation in the matter.

## FREIGHT TO AUSTRALIA.

The subject of Freight to Australia and the Southern Colonies has been brought under the notice of your Committee and it would appear that the rate of freight to the Australian Colonies is in excess of what it should reasonably be. It was pointed out that the exports of tea according to the Chamber of Commerce from Colombo to Australia amounted in 1901, 20,638,208 lbs. and that if the rate of freight could be reduced to ½d. per pound the large export is capable of being still further greatly increased, thus increasing the outlet of Ceylon tea very materially. There is no doubt the question of freight charge to Australia is one of material interest to the Planters' Community and should not be lost sight of. The attention of your Committee was also drawn to complaints regarding the indifferent manner in which certain shipments of Ceylon tea were packed and to the fragile nature of the packages used more particularly those of country manufacture. The correspondence was made public and it is hoped that the improvement desiderated has taken place. As regards the existing regulation relating to shipment of tea to Australia your Committee asked the local Agents of the Principal Liners to alter the clause on Bills of Lading limiting their liability to any damage incurred in transit to packages weighing under 100 lbs. nett to from 100 lbs. nett to 130 lbs. gross on tea for Australia. Your Committee regrets to report that the reply was unfavourable and accordingly it was decided that the matter should be brought to notice of the Ceylon Association in London. The result of the representation has been that the Agent of the P. & O. Steamship Company at Colombo is again to be moved in the matter.

## OFFICIAL ESTIMATE OF TEA CROP FOR 1903.

Your Committee estimates the Tea Crop for Export during the year 1903 at 154,000,000 lbs. The Returns received are believed to be more full and accurate than in any previous occasion, though some improvement in the form of return may be introduced next year. As regards the distribution of the crop, the following is submitted:—

	lbs.		lbs.
Russia ...	14,000,000	Africa ...	1,000,000
Europe ...	2,000,000	America ...	14,000,000
India ...	1,000,000	United Kingdom ...	96,000,000
Australia ...	21,000,000	Far East ...	5,000,000

\* \* \*

## REDUCTION OF BRITISH TEA DUTY.

It will be remembered that in January, 1901, both by despatch and telegram, His Excellency supported the prayer of the Planters' Association in forwarding the following Resolution to the Secretary of State:—"That this Association would urge on His Majesty's Government a reduction, at as early a date as is compatible with the financial needs of the Empire, of the Import Duty on Tea in Great Britain, which is now equal to nearly 100 per cent. *ad valorem*, whereby consumption is checked and the stability of the tea-planting enterprise in this colony is seriously threatened." At the General Meeting held in November, 1902, the following further Resolution was unanimously passed:—"That in view of the small margin which exists between the average cost of production and selling price of tea involving in many cases an actual loss, the Planters' Association would again urge on His Majesty's Government a reduction at an early date of the Import Duty on Tea. (2) That a copy of the above Resolution be forwarded to the Secretary of State for the Colonies." It was submitted in forwarding the above Resolution that the financial position of the Empire—owing to peace in South Africa—has materially improved and that it should now be found possible to at least remove the extra 2d. per lb. Imperial War Tax on Tea—put on in March 1900, in the next Budget. The late Chancellor of the Exchequer (Sir Michael Hicks-Beach) in his Budget Speech on April 15th, 1901 said:—"I turn to tea. Tea has already been taxed up to 75 per cent. of its value. It is

produced mainly in India and Ceylon and it is a product in which our fellow-subjects at Home and abroad are deeply interested, and the trade largely I think owing to over-production is not in a very satisfactory condition. I do not think we ought to increase the duty on tea," and when speaking on the Finance Bill, "if it should ever be my happy lot to be able to reduce taxation I should be disposed to reduce the Duty on Tea rather than on Beer and Spirits." As regards the great interests represented it was pointed out when a deputation waited on the Chancellor of the Exchequer last year that there are 387,000 acres of land under tea cultivation in Ceylon, producing 145,000,000 lbs. of tea, and representing an invested capital of £15,000,000 sterling. That tea is very highly taxed in proportion to its value is officially admitted as a matter which any Chancellor of the Exchequer would be bound to consider, and the Planters' Association therefore confidently relies on early favourable consideration and a reduction of the Tea Duty at an early date by His Majesty's Government. The above representation having been transmitted by His Excellency the Governor to the Secretary of State for the Colonies a despatch has since been received intimating that the communication has been laid before the Chancellor of the Exchequer.

\* \* \*

## SPECIAL LEGISLATION RE PLANT SANITATION.

The question of what measures in the nature of Legislation if any should be recommended to Government with a view to preventive steps being taken for the safety of the Tea Industry in reference to the spread of "shot-hole borer" and other insect pests and of the Cacao grower in respect of Cacao disease has received consideration and in the ensuing year the matter will have further attention.

## SPECIAL LEGISLATION FOR THE PROTECTION OF RUBBER.

During the year the question of the theft of Pará rubber was brought under the notice of your Committee as in the opinion of the Kalutara Association special protection will shortly be required to prevent theft of the products. The matter is one that will not be lost sight of, meantime it is recommended that evidence should be collected showing in what way rubber is liable to deprecations by thieves.

## ORDINANCE NO. 13 OF 1902 ENTITLED AN ORDINANCE TO PROVIDE FOR THE INCREASE OF THE EXPORT DUTY ON TEA.

The above-mentioned Ordinance came into operation as from and after the 1st day of June, 1902. It provides for the levy upon all Ceylon tea exported a duty not exceeding 10 cents per 100 lbs. in addition to the levy imposed under the provisions of Ordinance No. 4 of 1894. The proceeds of the levy so enacted shall be applied towards the increase of the consumption of Ceylon tea in Foreign lands, in such manner as may from time to time be desired and determined by the joint Committee appointed for the purpose by the Planters' Association of Ceylon on the 17th day of February, 1902, and by the Ceylon Chamber of Commerce, the 7th day of March, 1902, or the successors in office of such Committee, provided that the manner of applications of proceeds of the said levy be subjected for the approval of the Governor in Executive Council.

\* \* \*

## CEYLON IMPORT DUTY ON INDIAN TEAS.

Early in the year Government forwarded a letter from the Government of India with the accompanying copy of a letter from the Secretary Indian Tea Association, Calcutta, relative to the Duty levied on tea imported into Ceylon and invited an expression of the views of your Association thereon. The proposal which the Indian Committee ventured to advance was first that an attempt should be made to induce the Ceylon Government to exempt Indian tea from the payment of Duty and second that if necessary Ceylon tea should be exempt from the payment of Duty in India, but that the existing duty should be maintained in the case of non-British teas. Your Committee in reply stated that the question had received very full consideration by your Association so far back as 1894 when the following Resolution was passed in August 1895:—"That in reply, it be stated that in the opinion of the Committee it would be highly detrimental to the interests of Ceylon tea that the prayer of the petition from the United Planters' Association of Southern India be granted. That Ceylon has for many years worked hard to introduce her teas into foreign countries and to raise their credit for purity, and now that some success has been achieved, it seems unwise to admit other countries on equal terms to the jeopardy of

Ceylon's interests. That, regarding the question of *blending*, the Committee desires again to draw the attention of Government to the Resolution on the subject transmitted to Government with the Secretary's letter of the 26th January, 1894, which Resolution and connected statement the Committee again fully endorses."

Your Committee added that since 1894 growers of Ceylon tea had expended about 2,000,000 rupees in making known their produce in the markets of the world and that your Association feels that it is more important than ever that no possible mistake or confusion should arise from teas other than Ceylon being shipped from Colombo with an implication of Ceylon growth. Your Association is further of opinion that no hardship exists in the matter of Indian teas being sold in Colombo, as at present except possibly in the case of small invoices and that it would appear therefore as if the object of the request to remove the duty was to facilitate the blending of Indian teas with Ceylon rather than that of merely obtaining a market for Indian teas as such. Your Association fears that with such blending establishments in existence there must be unless stringent precautions are taken, a risk of certain teas other than those grown in the island being shipped as Ceylon teas. From recent proceedings published it appears that the Ceylon Government was averse to the Indian Committee's proposal and that the Government of India was also in agreement with Ceylon hence the Indian Committee in view of the definite and final nature of the reply decided it would be useless to proceed further.

## THE TEA INDUSTRY AND OVER-PRODUCTION.

During the year considerable criticism and discussion have been in evidence as regards the most effective means of combating over-production of your staple tea, and of maintaining prices on remunerative terms. A general reduction of the Import Duties on tea in all principal countries is greatly to be desired not alone as a certain means of relief in the interest of tea-growers generally, but as unquestionably of far reaching benefit to the masses of population which are at present prevented from enjoying a remarkably refreshing and wholesome beverage by the highly enhanced price necessary owing to the rate of Import Duty levied when added to the value per lb. of tea at the point of landing. The matter is one which is worthy of consideration by the responsible Statesmen of all countries for the good of the subject peoples throughout the world.

## CEYLON ASSOCIATION IN LONDON.

In connection with the important question of the British Import Duty on Tea, Warehouse Charges in London, Fire Insurance Premiums, Freight to Australia and other matters the Ceylon Association in London has lent its services while in respect of several other matters there has been consultation and reference with a view to safeguarding the producers' interests.

\* \* \*

## FINANCES.

The Statement of Accounts made up to the close of the financial year 31st January, 1903, and laid on the table to-day in terms of Rules VIII, XII, and XIX of your Association show a credit balance of Rs.3,234.48. Included in this amount however is the sum of Rs.1,585, collected as a special fund towards the cost of the proposed Bust or Statue of our late Sovereign Majesty Queen Victoria to be placed in the Victoria Commemoration Buildings, Kandy, the balance of the Portrait fund Rs.131.50, also Rs.135 on account of the Ceylon Contingent Monument already referred to herein.

The year will be memorable by three Historic events—the conclusion of Peace at the close of the War in South Africa; the sudden, serious illness, and remarkable restoration to health of His Majesty King Edward the Seventh;—the Royal Coronation Celebration in Westminster Abbey, when Their Majesties the King-Emperor, and Queen Alexandra were crowned. It goes without saying that Ceylon and your Association evinced keen interest in these matters sharing with other Dependencies through the Planters' Contingent of Mounted Infantry in the defence of the British Dominions beyond the seas, and being honoured through His Excellency the Governor at the public pageants and festive functions of 1902. In resigning office your Committee recommends a continuance of the efforts being made to obtain a reduction of the British Duty on Tea in Great Britain, expansion of the Green Tea Industry, avoidance of coarse plucking, control of the London Market, and the further exploitation of Ceylon tea throughout the world with a view to increased demand for and consumption of your staple in all countries.

Mr. Kingsford was re-elected Chairman and Mr. Philip, Secretary.

The Committee of the Planters' Association of Ceylon, for the year ending 17th February, 1904, was then appointed.

#### ELECTION OF THE "THIRTY COMMITTEE."

The names are:—Messrs. A. C. Kingsford, A. Philip, Hon. Mr. J. N. Campbell, Messrs. T. C. Huxley, Wm. Forsythe, Fred Hadden, Hon. Mr. E. Rosling, Messrs. Joseph Fraser, James Westland, E. Turner, R. A. Galton, W. D. Bosanquet, W. D. Gibbon, T. G. Hayes, R. Morison, E. D. Harrison, A. Wardrop, W. R. Tatham, Wm. Gibson, W. Saunders, W. J. Smith, H. O. Hoseason, Frank S. Vowler, W. L. Strachan were elected.

#### EXTRACTS FROM COMMITTEE MEETING.

Minutes of Proceedings of a Meeting of the Committee of the Planters' Association of Ceylon, held at the Victoria Commemoration Buildings, Kandy, on Tuesday, the 17th February, 1903, at 7-30 A.M.

#### PRIZE FOR ESSAY ON PRUNING OF TEA IN CEYLON.

Read letter from Messrs. George Steuart & Co., stating that they desire to offer a prize of Rs.500 for the best essay on the pruning of tea in Ceylon, and that they will be glad if the Planters' Association would take the matter in hand by publishing the same and appointing judges. They add they should like the essays to embrace the question of manuring and plucking for a certain period both before and after pruning, so far as these works may be said to be regulated by the time and style of pruning. Root development and the affect of various methods of pruning on food supply should also be touched upon as well as the burying of prunings. They should like the judges not to attach undue importance to literary merit, so that none may be deterred from competing by a feeling that they cannot give ready expression to their view, but reasons should, as far as possible, be given for conclusions arrived at. The copyright of the winning essay might be considered the property of the writer should he so desire.

*Resolved*:—" (1) That a hearty vote of thanks be recorded to Messrs. George Steuart & Co. for their proposal; (2) that a Special Committee consisting of the Hon. Mr. E. Rosling, Hon. Mr. J. N. Campbell, Messrs. Joseph Fraser, Keith Rollo, the Chairman, Planters' Association of Ceylon, and the Secretary, Planters' Association of Ceylon, be appointed to deal with the essays. All essays should be submitted within six weeks, being forwarded under *nom-de-plume* to the Secretary by the 31st March, 1903; (3) that the letter be published."

#### OSAKA EXHIBITION, JAPAN.

Read letter from Mr. G. W. Woodhouse, Police Magistrate, Galle, mentioning that he proposes to proceed to Japan in March, 1903, and to be present at the Osaka Exhibition, with an enquiry whether he can be of any service to the Planters' Association in that country. *Resolved*:—"That Mr. Woodhouse be thanked for his letter, and that he be invited to obtain any information possible regarding the manufacture of green teas; further that cacao and cardamom growers would wish to furnish him with samples for enquiry regarding the possibility of trade in these products. Any expenses to which Mr. Woodhouse is put in connection therewith the Association will be prepared to pay."

#### TEA PEST—SPREAD OF "SHOT-HOLE BORER."

Read letter from Government, forwarding copy of letter received from the Director of the Royal Botanic Gardens, together with copy of the letter from the Government Entomologist therein referred to regarding the continuous spread of the "shot-hole borer" pest in tea, and stating that His Excellency the Governor will be glad to be favoured with an expression of the opinion of the Planters' Association on the subject. *Resolved*:—"That the correspondence be published and copies be sent to all the District Associations for observation and report."

Submitted Royal Botanic Garden Circular, Vol. 2, No. 3, January 1903, the Tea Tortrix.

#### BRITISH IMPORT DUTY ON TEA.

Read letter from Government, intimating that His Excellency the Governor has received a despatch from the Secretary of State for the Colonies stating that the representation urging a reduction of the Import Duty on Tea in Great Britain had been forwarded to

the Treasury for the consideration of the Chancellor of the Exchequer.

Read correspondence with the Secretary, Indian Tea Association, Calcutta, on the subject.

Read letter from the Secretary, Ceylon Association in London, enclosing for information copy of memorial from the London Association interested in Indian and Ceylon tea to the Chancellor of Exchequer on the subject of Import Duty on tea.

#### OFFICIAL ESTIMATE OF TEA CROP FOR 1903.

Read the following report:—Your Committee estimates the tea crop for export during the year 1903 at 151,000,000 lbs. The returns received are believed to be more full and accurate than in any previous occasion, though some improvement in the form of return may be introduced next year. As regards the distribution of the crop the following is submitted:—

Russia .. ..	14,000,000 lbs.	Africa .. ..	1,000,000 lbs.
Europe .. ..	2,000,000 "	America .. ..	14,000,000 "
India .. ..	1,000,000 "	United Kingdom ..	96,000,000 "
Australia .. ..	21,000,000 "	Far East .. ..	5,000,000 "

*Resolved*:—"That the report be and the same hereby is adopted."

#### WAREHOUSE CHARGES, LONDON: TEA CLEARING HOUSE.

Read letter from the Secretary, Ceylon Association in London, forwarding copies of the closing letters in correspondence with the Tea Clearing House, giving the decision arrived at by the general meeting of the members of that body on the 22nd December, adding that the understanding is that the present Committee will continue to direct the business of the Clearing House till 30th June, 1903. In the interval it is proposed to amend its constitution in such manner as may be approved by the various sections of the trade interested.

Read letter from Mr. Thornton A. Williams, mentioning that the Tea Clearing House has resolved to rescind Rule 3 so that there will be nothing to prevent importers in sending their tea to any warehouse. *Resolved*:—"That an expression of thanks be conveyed to Mr. Thornton A. Williams for the trouble taken by him in the matter throughout."

#### FINANCES.

Laid on the table statement of accounts for the financial year ending 31st January, 1903.

Read the following report of the Sub-Committee of the Committee appointed to report on the financial position of the Association:—On considering the Chairman's analyses of accounts for the past year, the Sub-Committee is of opinion that the following recommendations are necessary with a view to economy, and the advisability of forming a reserve for the upkeep of the Victoria Commemoration Building: (I.) That the Secretary's remuneration be, hereafter, fixed at Rs.2,500 per annum, this amount to include clerical, peon and cooly allowance, excepting a cooly as night and day watchman to be charged to Victoria Commemoration Buildings upkeep. (II.) That some economies might be shown under the heading advertising meetings, printing book of proceedings, etc. (III.) The Sub-Committee is of opinion that the Thirty Committee should pay Rs.500 per annum under the heading rent. (IV.) As regards water, that it should be laid on the Victoria Commemoration Buildings; and that the question of electric lights be deferred for future consideration. (V.) That the question of Municipal rates and taxes should be again brought under the notice of the authorities with a view to a reasonable adjustment.

#### REPORT OF THE "THIRTY COMMITTEE."

*Report of the "Thirty Committee" appointed to administer the proceeds of the Export Duty on Tea, levied under Ordinance No. 4 of 1894 for increasing the consumption of Ceylon tea in foreign lands for the year 1902.*

#### MEMBERS OF THE "THIRTY COMMITTEE," 1902.

The following is a list of the "Thirty Committee" at 31st December, 1902:

Messrs. James Westland, C. E. Welldon, A. C. Kingsford, Frank S. Vowler, Hon'ble Mr. J. N. Campbell, Messrs. E. Webb, Alex. Wardrop, Edgar Turner, R. A. Galton, H. O. Hoseason, Gordon Pyper, W. D. Bosanquet, T. C. Huxley, Wm. Forsythe, A. Philip, W. J. Smith, Joseph Fraser, W. R. Tatham, R. Morison, Captain H. Gordon, Messrs. W. D. Gibbon, Hon'ble Mr. Edward Rosling,

Messrs. Fred. Hadden, H. V. Masefield, W. Shakspeare, H. J. Scott, J. F. Headrick, G. H. Alston, A. J. Denison, Hon'ble Mr. Stanley Bois.

For part of the year Hon'ble Mr. W. Henry Figg, Messrs. J. B. Coles, Wm. Saunders, J. P. E. Ryan, E. D. Harrison, Oliver Collett, George Hathorn, G. F. Traill, R. S. Templer, Duncan Skrine, served as members.

## FINANCES.

The total collections paid into the Ceylon Tea (New Markets) Fund on account of the Export Duty on tea from 1st January to 31st December, 1902, amounted to Rs.374,450.65. The balance in the Bank, brought forward from 1901 was Rs.22,984.74. The final balance available at 31st December, 1902, was Rs.15,830.02.

The usual interim summary of accounts for the half yearly periods ending 30th June, 1902, and 31st December, 1902, with various connected statements of Charges and Discharges are appended, also statements showing total Receipts and Expenditure as from 1894 to 31st December, 1902.

## MINUTES OF PROCEEDINGS.

The Minutes of Proceedings of the Meetings of the "Thirty Committee" have been regularly forwarded to Government for information and guidance after confirmation.

During the year the approval of the Governor in Executive Council was obtained to the following appropriations of the proceeds of the levy as from time to time desired and determined by the "Thirty Committee."

## GOVERNOR IN EXECUTIVE COUNCIL.

1. *Ceylon Tea on the Continent of Europe.*—Amount appropriated and sanctioned by the Governor in Executive Council per letter dated 11th February, 1902, for advertising Ceylon tea on the Continent of Europe during 1902, £2,500 Sterling at Exchange 1/4 per Rupee .. Rs.37,500.00  
Do. do. letter 18th March, 1902  
£1,000 @ 1/4 .. " 15,000.00  
Rs.52,500.00

## CEYLON TEA ON THE CONTINENT OF EUROPE.

The Remittances made to Mr. J. H. Renton for pushing and making known Ceylon tea on the Continent of Europe from 1st January, to 31st December, 1902, have been as follows:—

1902.	£	Rs.	c.
February 1st To Remitted to Mr. J. H. Renton	1,000	=	14,941.63
May 23rd Do. do.	1,000	=	15,058.82
August 21st Do. do.	1,000	=	15,029.35
Sept. 20th Do. do.	1,000	=	22,500.00
	4,500	=	67,529.80

In addition to the above a sum of Rs.119.80 was debited to Credit Opened on account Continent of Europe for sundry payments made locally, thus bringing up the total expenditure for the year 1902 to Rs.67,649.60 as per Summary at printed page 38.

[37 pages follow of statistical recapitulations of material already published periodical in the Press, chiefly regarding the green tea bonus, and the "Opening of Credits" in connection with the general fund.]

## CEYLON COMMISSIONER FOR EUROPE.

## REPORT FOR 1902.

## General.

I am glad that it was found possible to considerably augment the original sum placed at my disposal for this year's work on the Continent. Owing to savings effected in the grant for 1901, in salary and in the St. Petersburg Exhibition, an extra £2,000 was made available; and though the total sum did not permit me to do all I should have liked to do, nor to extend the operations of the campaign, yet it has sufficed to keep most of those interested in the work, who received support last year, and to induce them to work even harder.

The lines on which I have worked remain the same as last year, viz., Advertisement and Demonstration. The best method of advertising is through the retailer, by getting him to advertise the tea, and by helping him to do so. If he obtains help to bring a new article before the public, he is bound to interest himself in it, and to push it. But it is also most important that the tea should be presented to the public properly prepared. The great objection to Ceylon tea is, that it is bitter in the cup. We can only overcome this prejudice against the tea by teaching the public how to make it, and hence the necessity of demonstration by every possible means in our power.

I have this year confined the grants to Germany, Austria, France, Russia, and Scandinavia.

## TRAVELLING.

I have made two journeys in France. In the Spring, I visited all the towns where demonstrations have been held during the previous Winter; and in the Autumn, I went to the towns in the east, south, and centre of France, where demonstrations had either been given this year or have been arranged for. In Germany, I have visited the Provinces of Brandenburg, Pommerania, Posen, and Silesia, all the centre and South of Germany, besides making

a second special trip to Stuttgart. I made two special journeys to Russia, to settle the engagements undertaken for the Exhibition, and to arrange for the proposed tea room in St. Petersburg. On my return from St. Petersburg I visited Warsaw, the Austrian Province of Galicia, and Vienna.

## GERMANY.

In Germany trade has been bad this year. The stagnation in the manufacturing and machinery trades still continues. This, combined with the increased prices of provisions, especially of meat, consequent on the excessive restrictions imposed upon imports from America, has affected the spending power of the lower and lower middle classes. In the tea trade, the demand has been mainly for the cheaper qualities. Owing to the reduction in the Chinese export duties, China teas of fair quality have been cheaper, and dealers have met the demand for lower priced teas by supplying larger quantities of China and Java sorts. There can be no question that, owing to their cheapness, combined with improvement in quality, Java teas are steadily growing in favour with the German importers. The same importers complain that Ceylon teas continue to show deterioration in quality, and that they would willingly pay up to 2/6 per lb. for fine flavoury teas if they were available, which they aver is never now the case with Ceylon, and that they are therefore obliged to buy Indian. These fine teas are of course only wanted for blending purposes.

The extensive propaganda made in the interests of Ceylon tea has caused some of these importers to do all they can to discredit it and bring it into disfavour. At the same time, the sale as pure Ceylon tea of blends composed of Ceylon or Indian, and China or Java, is, I consider, also prejudicial to the interests of Ceylon tea. I do not object to blends, provided that the countries of origin are described on the packets; but I have bought as pure Ceylon tea in Berlin stuff which was afterwards described and valued by Messrs. William James and H. Thompson of London as mostly inferior China, value 2d. I am glad to say that all the leading German dealers do describe the composition of their blends on their packets. Notwithstanding this increased opposition and bad trade, our teas continue to make fair progress with the public. Up to end of November the direct export to Germany, including that *via* Holland and Belgium, is 674,810 lbs. against 561,890 lbs., at corresponding date at last year. In 1899 the total direct export was 391,594 lbs. The consumption of tea in Germany is increasing; but so far the increase in Ceylon tea is not equal to that from China and Java. The German Customs returns to end of November are as under. The falling off in the quantity imported this year so far from India and Great Britain is instructive:—

Countries of Origin.	1901.	1902.
Great Britain ..	422,300 kilos.	377,500 kilos.
Holland ..	64,700 "	53,400 "
British India ..	267,400 "	264,500 "
Ceylon ..	196,000 "	220,100 "
China ..	1,750,600 "	1,871,500 "
Java ..	339,900 "	385,700 "
Elsewhere ..	79,200 "	37,000 "
Total ..	3,120,400	3,209,600

The increases are therefore 120,900 kilos. from China, 45,800 kilos. from Java, 23,800 kilos. from Ceylon. The decreases: 44,800 kilos. from Great Britain, 11,300 kilos. from Holland, and 3,000 kilos. from India.

The growing movement in Germany in favour of Temperance, the formation of Temperance Societies, supported by the Medical Faculty, and the Professors in the Universities and High Schools, combined with the fact that the new tariff, whereby the duty will be reduced to 1½d. per lb., instead of 6d., comes into force next year, leads me to hope that the consumption of tea will increase considerably in Germany. I think now is the time to push our teas in Germany, and above all pure self-drinking Ceylons, so that the public may learn to know and appreciate their flavour; and every effort should be made to keep up the quality.

As I was informed in 1900 that the Dusseldorf Exhibition would be confined entirely to exhibit from the Rhine Provinces and Westphalia, and as I expected to be in St. Petersburg at the Exhibition to be held there in the Spring and Summer of this year, I made no effort to obtain space for a demonstration at the Dusseldorf Exhibition. I much regret now that nothing was done. On visiting the Exhibition in May I found that "outside shows" were permitted; and that, had I applied in time, space for a kiosk would have

been willingly granted. I made the next best arrangement I could. I found the Restaurants were being run by the same proprietor who had the Restaurant in the German Pavilion at the Paris Exhibition. I accordingly arranged with him to placard Ceylon tea all over, and to keep and sell only pure Ceylon tea in his buildings. I could come to no arrangement with the cafés. Very little tea was, I fear, sold in the Restaurants, but we obtained an excellent advertisement, the Dusseldorf Exhibition having been a great success, and most extensively visited.

The advertising and general propaganda has this year been carried on by eleven firms, two of them being new allies. While I am somewhat disappointed that a more effective propaganda has not been made in Hamburg, Saxony, Westphalia, and the Rhine Provinces, I am much pleased with the vigorous campaign which has been maintained in Wurttemberg and Bavaria, the great progress made in Berlin, and the good commencement in Pommerania and Silesia.

Our last year's friends in Bremen have succeeded in establishing new agencies in Berlin and Stettin. The Berlin Agency has within the year established 196 depôts in Berlin and the Province of Brandenburg for sale of pure Ceylon tea. In Stettin and the Province of Pommerania, Prussia, and Posen 96 new depôts have been opened. In Silesia the number has been increased from 13 to 46; Schleswig-Holstein from 43 to 159. All these firms work principally through distribution of circulars and show-cards, and through advertisements on behalf of the grocers in the local papers; but in Berlin, big street posters have also been largely used.

The importers in Stuttgart and Munich have worked specially hard this year. Their main propaganda has been by advertisements, and special little articles in the daily and weekly papers appearing in these towns, and in those in Nürnberg, Renensburg, Bregenz, Dresden, and Kufstein. In addition the Stuttgart firm has distributed 1,000 calendars, 2,200 metal sign-boards, 2,000 window canisters, 10,000 Bamber's pamphlets, 30,000 leaflets "How to Make Tea" 3,000 sample tins, and a free supply of tea to the street kiosques in Winter.

From Frankfort the agent of plantations owned by Germans in Ceylon has continued the extensive circulation of their special circular, which was issued as a supplement to 14 weekly and daily papers—some 800,000 of these circulars have been distributed. I still think that the way in which China tea is run down by this circular is too severe. In a country where so little tea is drunk it is a question whether it is a wise policy to make the general public disgusted with any kind of tea. Our aim should be, not to discourage the use of tea of any description, but that of coffee.

The two firms of dealers in Frankfort and Berlin have continued to give Ceylon tea special prominence in their circulars and price lists. The Frankfort firm has opened a branch in Berlin this year, and has given Ceylon an advertisement every alternate week on its donkey cart, which parades Berlin, ostensibly to deliver teas, but mainly for advertising purposes.

#### DEMONSTRATION.

I am glad to be able to report that a commencement has been made in this important part of the work.

A very nice demonstration was made at the Food and Cookery Exhibition held in Stuttgart this Summer. One of the results of this demonstration has been, that it has been found possible to open a small tea room in Stuttgart this Autumn, where Ceylon tea only is served in cup. This establishment commenced work only in November; but already another tea dealer has arranged for a Wine Restaurant to supply tea in cup, both China and Ceylon being obtainable to suit the tastes of the customers. The firm of coffee dealers in Westphalia who last year placed pure Ceylon tea in all their shops throughout Germany have promised to make an attempt to popularise the tea by serving it in cup in some of the principal places, and sixty samovars and teapots have been supplied to them for this purpose; but as the experiment has hardly yet been started, I am not able to report on it.

The most gratifying result of this year's campaign has been the placing of the tea in several of the best cafés and in the refreshment rooms of two of the largest drapery establishments in Berlin. It has taken a great deal of time and work to induce the cafés to take it up. The great complaint against Ceylon tea is, that it is too strong, and gets too bitter when it has stood any time. Busy cooks in cafés will not take the trouble to make it properly. Teapots, cups, saucers, milk jugs, and sugar bowls take up too much

space on the small tables of these cafés. The Berliner café frequenter prefers tea in a glass. So the difficulty of making good tea, and the objection to the numerous dishes, have been met by making teaspoons with perforated holders at one end to contain 2 grammes of dry tea. When tea is ordered, a teaspoonful with dry tea is placed in the glass and boiling water poured on it. The tea is thus served hot and fresh with sugar and lime or milk to each customer, at 30 pfennig per glass. There is no chance of the cook making a second and third brew from the same leaves; and the customers can make the tea any strength they like by withdrawing the spoon when it suits them. The glasses which were presented to the cafés will no doubt disappear in a very short time and commoner ones be supplied; but so long as the spoons are used our object will be attained, and I hope the public will thus be educated to know the difference between pure, mild, self-drinking Ceylon tea and second crop Foochow. A considerable quantity of tea is served in these cafés in the Winter, between the hours of 4 and 7 o'clock and 10 and 12 o'clock P.M., the Kaiser Café alone disposing of 500 to 600 glasses per day.

I saw this year several vacant rooms in Berlin, any of which would have been very suitable for a tea room. But the opinion of those best qualified to judge was, that the enormous rents asked render such an undertaking prohibitive without the guarantee of a big subsidy for at least two years.

Appendix A contains details of the advertising done and of expenditure to date. As I closed my books on 30th November, I have not received final accounts for all the work done this year, and have still £500, promised for Germany. Expenditure, so far, has been £1,995 15s. 11d., of which I have contributed £803 5s. 4d.

#### AUSTRIA.

In Austria the work has this year been carried on by the three firms who have their head-quarters in Vienna. A very active and extensive propaganda has been made, specially by the firm directly connected with Colombo. The advertising done by them benefits the others; and I fear that they themselves have obtained little results for all the time and money they have spent in bringing Ceylon tea before the notice of the Austrian public. There is no doubt that a demand has been created for Ceylon tea; but this demand is supplied, not by the advertisers of the article, but by the regular tea dealers, who all now stock pure Ceylon tea, and some of whom have started their own brands. The opening of a retail establishment in one of the main thoroughfares of the City of Vienna solely for the sale of pure Ceylon tea is a most excellent advertisement for our staple; but whether it will, within a reasonable period, give return to the enterprising proprietor is very doubtful. Our other friends of last year had a very excellent six weeks' demonstration at the Woman's Cookery and Food Exhibition, which was held in the Spring. I was very pleased with the style of the kiosk, and the way in which the tea was prepared and served. This house has increased the number of its depôts for the sale of pure Ceylon tea by 214. It has now 814 throughout the Austrian Empire. The methods adopted by the three firms have been the following:—advertisements in the newspapers, circulars, street posters, photographs in the shop windows, special articles in the Press, and distribution of Bamber's pamphlets.

The Austrian Customs returns to end of November are as under:—

From	1901.	1902.
Germany .. ..	17,400 kilos.	16,600 kilos.
Italy .. ..	200 "	200 "
Roumania .. ..	" "	200 "
Switzerland .. ..	100 "	200 "
France .. ..	600 "	500 "
Great Britain .. ..	21,700 "	24,400 "
Russia .. ..	30,800 "	31,100 "
Turkey .. ..	600 "	800 "
Belgium .. ..	100 "	400 "
Holland .. ..	3,500 "	2,500 "
Free Port Trieste .. ..	200 "	800 "
Japan .. ..	100 "	" "
U. S. of America .. ..	400 "	" "
Brazil .. ..	1,000 "	1,600 "
China .. ..	770,900 "	789,800 "
India, Ceylon .. ..	49,600 "	36,700 "
Java .. ..	200 "	1,600 "
Total ..	897,400 kilos.	907,400 kilos.

I am sorry to see the falling off by 12,900 kilos. in the imports from India and Ceylon, and the increase in China teas of 18,900 kilos. The direct exports from Colombo to Austria at end of November were very slightly in excess of the quantity exported at the corresponding date last year.

From Appendix B it will be seen that the expenditure in Austria was £1,329 3s. 7d., to which I have contributed £544 15s. 6d.

## FRANCE.

In France, this year, as in Germany, there have been great complaints of the badness of trade, and the tea trade seems to have been no exception to the rule. Two small tea importers in Marseilles, both of them supporters of Ceylon tea, have closed their doors and transferred their business to others. I confess that I am much disappointed at the great falling off in the direct exports to France this year. There can be no doubt that returns given on importations in 1900 and 1901 induced importers to lay in extra stocks, especially as they were under the apprehension that an enhanced duty might be imposed in either last or this year. This may be one reason, and the increased import of Annam teas, paying only half the ordinary rate of duty, combined with the bad trade generally, may be another reason for the decrease in the direct Ceylon exports. A decrease in the exports for one year does not, however, necessarily mean a decrease in the consumption. All those who are engaged in the campaign assure me that their sales have increased this year; and I think Ceylon tea is growing in favour. Unfortunately the name of Ceylon is often used, especially in Paris, as a description for all kinds of tea. I myself purchased many samples, some of them evidently packed in France, and submitted them to London brokers, who reported that they doubted if Ceylon tea was contained in any of them. The general opinion is, that the consumption of all tea in France, more especially in Paris, is on the increase. The increase in the number of tea rooms, and in the numbers frequenting these tea rooms, would seem to support this opinion; yet the French returns for 1901, published only in 1902, do not apparently support this view. From the figures given below it will be seen that British India, which includes Ceylon, is the only country that shows an increase in imports over 1899 and 1900. Even the imports from Annam show a falling off, as compared with the previous year. For comparison's sake I give the exports from Colombo, Calcutta, and Great Britain of Ceylon and India teas for the same period.

## IMPORTS INTO FRANCE, PER FRENCH RETURNS.

	1899.	1900.	1901.
	kilos.	kilos.	kilos.
Great Britain .. ..	168,146	197,952	133,314

## EXPORTS FROM UNITED KINGDOM.

	1899.	1900.	1901.
	lbs.	lbs.	lbs.
Ceylon .. ..	83,867	133,111	104,298
India .. ..	50,533	88,890	75,381

## DIRECT EXPORTS FROM COLOMBO AND CALCUTTA.

	1899.	1900.	1901.
	lbs.	lbs.	lbs.
Ceylon .. ..	98,952	326,800	317,866
India .. ..	17,759	23,983	23,983

In my Report for last year I expressed a doubt as to whether the whole of the export from Annam to France was the actual production of Annam. From the Report of the Meeting of the Joint Chamber of Commerce and Agriculture of Annam, held on 9th January, 1902, it would appear as if some of the producers in Annam shared my doubts. At any rate it is acknowledged that Annam imports 180,000 kilos. of China tea, and that three-fourths of this quantity is of most inferior quality. Although the proposal to raise the duty on China tea imported into Annam from 50 francs to 208 francs per 100 kilos. was negatived, yet the Conseil Supérieur has now imposed a duty of 104 francs, and it is to be hoped that this regulation will ensure that only the actual product of Annam is exported as such.

The question of an arrangement between France and Great Britain, whereby Ceylon and Indian teas shall not have to pay the higher rates of duty, is, I am assured, not yet settled; but good progress is being made, and a settlement is shortly anticipated.

In carrying on the work in France the same lines have been followed as last year. Grants have been given to five firms; and as regards advertising and general propaganda, each of these firms has worked in its own way. The methods adopted have been various; but the most general were advertisements in the Paris and Provincial papers, more especially in the weekly and monthly provincials; special circulars to pensions and families; advertisement in guide books and directories; street placards and posters; distribution of canisters, fancy tins, show-cards, and enlarged photographs to the retailers; and distribution of free samples of tea wherever it was judged advisable.

The demonstration campaign in the Provinces has been carried on with more vigour than ever by the same house which commenced the work last year. The demonstrator has visited 56 towns in the course of the year, given demonstrations on 84 days at 28 places in 16 of these towns, served 23,014 cups of tea, sold 9,772 packets of tea, and secured 71 new clients; 1,245 posters have been put up in the towns, and printed matters to the extent of 3,232,000 copies in the shape of circulars, leaflets, price lists, and cards have been distributed.

As stated above, I have visited nearly all the towns where demonstrations have been held; and all the proprietors of shops were very much pleased with the result of the demonstration. They acknowledged that it was the best advertisement possible for the tea. The clients will now require constant looking up, and looking after. When I visited the North of France in May I was disappointed to find so few of the show-cards and signs that had been so freely distributed in evidence inside the shops or in the windows. Attention was called to the matter, and more durable articles have now been distributed. Three of the special Ceylon tea rooms in Paris continue to be well patronised, and do a good business. I am sorry that the Ceylon planter, the proprietor of the 4th, who opened his tea room in 1900, at the Rue des Pyramides, decided to leave Paris in October. I understand that the room will be carried on by a French gentleman, who advertises that his family own plantations in Ceylon. I have not, however, seen the establishment since the change of proprietorship. Arrangements have been made whereby the Cafe Riche is to supply Ceylon tea, and the Cafe Vogade in Nice is also to supply pure Ceylon instead of China. A new Ceylon tea room has also been opened this Winter in the Casino at Nice; but as I have not yet seen it, I am unable to make any report.

Two special demonstrations were given in Paris at the Exhibitions held in the Cours La Reine and at the Grand Palais in the Summer. The first show only lasted six weeks; but the latter, the Furniture Exhibition, was open till the middle of November, and was well attended. Ceylon secured ample space for a tea room, and obtained an excellent advertisement. Owing, however, to difficulties arising between the administration and the refreshment contractor, who had sublet the space for the tea room to our Paris friends, they had in October to abandon the control; and I cannot say that the service in the last two months was all that could be desired.

Expenditure in France will be found in Appendix C. The total spent on propaganda and demonstration is £3,808 8s. 4d., to which I have contributed £1,265 11s. 1d.

## SCANDINAVIA.

In Scandinavia, operations have been carried on by the same firms as last year, viz., three in Stockholm, one in Christiania, and one in Copenhagen. The principal Stockholm firms has increased the number of its provincial depôts, and has this year spent a large sum on travelling and on free distribution of samples. The second firm has done a good deal of advertising in newspapers, while all the three seem to favour the distribution of canisters and fancy tins to the grocers. The Swedish and Norwegian houses report an increase in the imports in 1902 over 1901 of 35,863 lbs. The Danish house has imported less: it received a large supply in the end of last year, which sufficed for all its wants for the first half of this year. It has continued the propaganda by circulars and newspaper advertisements.

I see that to end of November the exports to Sweden from Colombo are entered as 73,725 lbs., against 56,302 lbs. at same

period of last year. The term Sweden evidently includes Norway and Denmark. I make the figures as follows:—

	lbs.
To Swedish Ports .. .. .	49,255
„ Norwegian „ .. .. .	6,562
„ Danish „ .. .. .	17,908
	73,725 lbs.

As those who receive help for the Ceylon propaganda draw half, or more than half, their supplies of tea from London, and a small quantity from Germany, the increase in direct exports is, I consider, satisfactory. The general consumption of tea in Sweden and Norway does not seem to be increasing. The figures for 1902 are not yet published; but for 1901 the imports for Sweden were less than those in 1900 by 76,000 lbs., and in Norway by 17,967 lbs. From Great Britain the falling off in import of all tea is 15,213 lbs. The London brokers' figures, however, show that the increase in exports of Ceylon tea from great Britain to Sweden and Norway in 1901 over 1900 was 32,782 lbs., and to Denmark 26,074 lbs.

The direct expenditure on propaganda incurred by these firms has amounted to £1,463 3s. 1d.; and if the special expenses on establishing new depôts is included, to £2,015. My contribution to this expenditure amounts to £251 13s. 3d. The details will be found in Appendix D.

#### RUSSIA.

In Russia, arrangements were made with the lady who was the prime mover in organising the Exhibition at St. Petersburg that a well appointed tea room should be opened in St. Petersburg; the furniture and crockery made for the Exhibition tea room to be handed over with a grant of £200, the deposit paid for the space in the Exhibition to be refunded. The death of this lady's husband, and also the death of the proprietor of the rooms selected for the proposed tea room, have unfortunately retarded the opening of the establishment. The necessity of obtaining another site has compelled a postponement of the opening of the rooms till next year.

#### ITALY.

In Italy, only one firm, the one in Naples, has continued an extensive advertising programme. A special delivery van has been ordered for Naples, 30,000 circulars have been issued, and advertisements inserted regularly in four of the daily papers, while special advertisements have been made at Capri and Sorrento. As the accounts for the year were not completed when I closed my accounts, no expenditure is shown as having been incurred on Italy this year. All payments will be included in next year's accounts.

#### SPAIN.

In Spain, one of the German firms in Stuttgart has induced some of their friends to take up the tea in Barcelona, has distributed a large number of placards, show-cards, and circulars, and has made some small shipments direct from Colombo.

#### SWITZERLAND.

In Switzerland, no grant has been paid in this country this year, and I have therefore received no detailed reports; but if the advertising programme has not been as extensive as last year's, most of the firms who received support last year have this year continued the sale with unabated vigour.

BUCKEBURG,  
31st December, 1902.

J. H. RENTON.

#### DETAILS OF PROPAGANDA.

Rent for space for service of tea in the Exhibition at the Grand Palais. Advertisements in 10 weekly and monthly periodicals, posters along the railway lines, illustrated blocks for advertising, street posters, placards, and show-cards.

Advertisements in 9 weekly papers, posters in Paris and country, sample boxes, signs and photographs for grocers, dummy packages and blocks for grocers' windows, and show-cards.

Tea room at the Bon Marché, further expenses in installation and purchase of lease.

Expenses of demonstration in the provinces, crockery, tea, cakes, sugar, milk. Printing and invitations. Salary of traveller and travelling expenses.

Leaflets, newspaper advertisements, show-cards, advertisements in tram-cars.

Circulars and price lists to hotels, families, and pensions.

Special tins and canisters and special show-cards. Advertisements for clients in the provincial papers. Free samples of tea to certain regiments.

#### REMARKS.

These are returns on teas imported in 1901, which did not come forward till the beginning of 1902.

Printing 10,000 copies of translation of Dr. Dorkovitz's pamphlet for free distribution.

#### DETAILS OF PROPAGANDA.

Contributions towards rent, fittings and furniture of a shop in the Kohlmarkt.

50,000 circulars, 2,000 posters in main streets and railway stations, 10,000 Bamber pamphlets.

Advertisements in 34 newspapers all over the Empire, advertisements in the covers of newspapers in 20 cafés, advertisements in calendars, special Christmas articles in 12 newspapers, advertisements on Grand Hotel blotting-pads.

Established a tea room at the Woman's Exhibition held in the Spring in Vienna, posters in the streets, circulars as supplements in the newspapers, newspaper advertisements, photographs as show-cards to principal depôts.

Regular monthly advertisements in 10 Vienna and provincial papers, and occasional special artists.

#### REMARKS.

This firm, through its extensive advertising programme and general propaganda, keeps Ceylon tea before the Austrian and Vienna world.

Number of depôts in Austria for sale of Ceylon tea is now 814.

	lbs.
Imports in 1901 .. .. .	10,410
Do. in 1902 .. .. .	11,225

This was a contribution towards legal expenses to get prohibition removed on teas packed in *lead* packets.

Cost of 1,000 Dr. Dorkovitz's pamphlets.

### INDIAN TEA ASSOCIATION.

#### ANNUAL GENERAL MEETING.

The Annual General Meeting of the Indian Tea Association was held at the Bengal Chamber of Commerce on Tuesday, the 17th instant. Mr. Lockhart Smith presided.

The Chairman in presenting the Report for the year ended 31st December, 1902, said:—

GENTLEMEN,—I have the pleasure to present the Annual Report and Accounts of the Indian Tea Association for the past year.

You will observe that early in our Session we lost the service of Mr. H. S. Ashton and I am sure that all who have had the pleasure of work with that gentleman will cordially re-echo the sentiments expressed in the Resolutions recorded by your Committee.

Well, gentlemen, the one really combined effort of the Industry seems likely to be crowned with success. The Tea Cess Bill has been presented to the Legislative Council and I have every hope the Act will be in force during the coming season. Considering that His Excellency the Viceroy is such an avowed admirer of the doctrine of self-help it was only natural that our memorial for the imposition of a Cess should receive His Excellency's favourable consideration. The distribution of the Cess Funds will be in the hands of a representative Committee who will, no doubt, deal with them wisely and judiciously. The Cess Committee will probably receive many suggestions as to the best means of utilising the funds at their command. But care will have, in my opinion, to be taken to avoid having too many irons on the fire. The funds available will not be sufficiently large to admit with any hope of success of an indiscriminate attack on all possible markets and it will, I venture to think, be much better to concentrate every possible effort on the markets of recognised tea-drinking countries such as America and Russia where there exists large fields for extensive operations. The increase in the consumption of British-grown tea in these countries during the past few years has been very marked especially so in the case of the latter but a glance at the interesting and instructive diagrams showing the world's consumption of tea issued by Messrs. Gow, Wilson & Stanton,—diagrams which, in my opinion, should be kept steadily before the Cess Committee, shows how much there is yet to be done. Everything points to an increasing demand from Russia. Russian buyers have been busy operating in London, Colombo, and Calcutta during the past year and as a taste for our produce has evidently sprung up we have an "open door" there through which I hope to see our produce go in largely increasing quantities.

The manufacture of Green Tea which I understand is to be taken in hand in earnest during the coming year should assist the Cess Committee to work America with more certainty of immediate suc-

cess than has been the case in the past as an article will be offered with which they are familiar and I have every confidence that the merit of our Green Teas will, in time, assert itself as emphatically as our Black Tea has already done on the markets of the world. And I am sure, gentlemen, we will all wish the Cess Committee every success in their efforts to push the sale and increase the consumption of Indian tea.

The teaming millions of India is a common, almost stereotyped, expression and we are not unaccustomed to find suggestions made to utilise Indian labour outside of India. Delegates from South Africa have, I understand, arrived in this country to confer with Government on the subject of labour and I see it reported that there are at present 26,474 people employed on famine relief works. This would all lead one to suppose that there is a superabundant labour supply available in this country. It is therefore suprising to find that the industries of the country are frequently in want of labour and in the case of the 'Tea Industry, the industry, with which we are concerned, the pinch is being distinctly felt. We have now had 19 months' experience of the Assam Labour Emigration Act VI, and although it has in actual working been found undoubtedly defective in many ways, more especially in its restrictive influence on Arkutte recruiting I am not inclined to ascribe the check which emigration has unquestionably received so much to the actual provisions of the Act as to the manner in which it has been administered. Matters will probably right themselves in time; in fact, the tendency is towards smoother working and seeing that the Association has taken up the administration of the Act very fully with Government in September last I can only trust that the suggestions made by it will reserve the sympathetic consideration they deserve.

\* \* \*

The announcement that His Excellency the Viceroy had decided to devote a considerable portion of Mr. Henry Phipps' munificent donation of £20,000 to the formation of a Laboratory for Agricultural Research, and His Excellency's weighty remarks at the Chamber of Commerce dinner on the subject of the Industrial development of the country, were, I am sure, welcomed by all interested in the economic progress of India. We may therefore expect that Agricultural Research work will now be taken up thoroughly and systematically. But when we consider that India is a recognised Agricultural Country with about four-fifths of its population dependent upon the produce of the land for their subsistence it is simply surprising to find that so little has been done and that little quite within recent years. Seeing that the funds which will have called the Agricultural Department into being have come from America, a glance at the splendid system of research work carried out in that country cannot but prove interesting and instructive. From the Report of the Chief of the Bureau of Plant Industry, U. S. Department of Agriculture, it will be learned that vegetable, pathological and physiological investigations, botanical investigations and experiments, grass and forage land investigations, pomological investigations, experiments in the production of tea, foreign seeds and plants, etc., are systematically carried out, and that no less than 39 trained Experts are actively employed in the work. Separate reports are submitted by the various Executive Officers and much valuable information afforded. Among these Reports are to be found articles on diseases of fruits, diseases of forest trees, diseases of cotton, plant-life history, plant nutrition, plant breeding, studies on the identification of seeds, cereal investigations, fibre investigations, field work, water pasturage, extermination of noxious grasses, clearing new land, earth roads, insecticides, and unicides, etc.; in fact, the Bureau covers an enormous field of investigation and must be of great assistance to Agri and Horticulturists.

The Tea Industry is quite alive to the importance of Scientific Research and with the assistance of grants-in-aid from the Governments of Bengal and Assam Mr. Harold Mann, a skilled Agricultural Chemist, has for the past three years been employed by the Tea Association in the conduct of scientific investigations and researches into the cultivation and manufacture of tea. From the Report of your Committee you will have learned that Mr. Mann's agreement will expire in May and that in view of a renewal of his agreement Mr. Mann had been asked to state his ideas as to the lines on which the research work should be continued and his proposals based on the experience of his three years' work, are in brief the formation of an organised Scientific Department. The scheme

has been approved by your Committee and the different local Associations interested. The Governments of Bengal and Assam on being approached have sanctioned provisionally increased grants-in-aid and your Committee now propose to lay the scheme before the Government of India. It will hardly, I think, be necessary for me to recapitulate the arguments used by your Committee in replying to the proposal of the Chief Commissioner of Assam that the cost of the scheme might appropriately be charged to the proceeds of the Cess. But I cannot refrain from pointing out that the Chief Commissioner seems to have overlooked the fact that the Cess is being instituted for a specific purpose and that the Cess Funds are not likely to prove excessive by any means for the successful exploitation of India and the leading markets of the world. I have every hope that the Government of India will give the application for assistance their favourable consideration. It must, I think, be evident to them that a Scientific Department of the nature proposed must ultimately be for the general good and I look forward to the time when we shall see an experimental farm under trained experts not only in Assam but in each of the Provinces of this country.

Well gentlemen, my remarks have extended to some length but there is another point that I should like to touch on briefly. We had a disorganised market at Home in the fall of the year in consequence of a Warehouse dispute and it may be a coincidence but it is not the first occasion in which the Home market has been upset by a trade dispute to the advantage of our friend the buyer. Were these disputes to occur on this side I would recommend that the producers should settle all conditions relating to the sale of their teas, before the season began and that these conditions should be rigidly adhered to by all concerned throughout the year. It would surely be possible for the producers to arrange, say, at the close of the season a meeting of the trade and discuss any grievance that any section might have to bring forward and to right it if possible. But the rules once settled should be in force for the year and I do not think I am oversanguine in thinking that such an arrangement is within the range of practical politics. (Applause.)

Before proposing the adoption of the report I shall be glad if some of the other gentlemen present will address the Meeting.

In response to this invitation, Mr. T. McMorran said:—

MR. CHAIRMAN AND GENTLEMEN,—One of the most important matters before the Committee during the past year was the completion of the memorial to H. E. the Governor-General in Council requesting—(on behalf of tea-growers representing four-fifths of the area under tea in India) that a cess of  $\frac{1}{4}$  of a pie per lb. be levied on all tea exported from British India with the object of creating a fund for pushing the sale and increasing the consumption of Indian tea. No weighty or widely entertained objections to this proposal have been put before Government, and a Bill providing for the imposition of the cess was introduced into the Imperial Legislative Council by Sir Montagu Turner on the 30th January. There seems little doubt that this Bill will in due course become law. Its introduction is a sufficient reply to those who confidently asserted that because of the novelty of the proposal, Government would never consent to legislate in the matter. In certain quarters the legislation referred to is still described as mischievous and dangerous, and we are pointed back to the representative men of a former day who serenely confident in their ability to "whip into the fold the willing and the unwilling," when any scheme for the benefit of trade had to be carried through would have scorned to invoke the aid of Government to make it practical. It is also asserted that no attempt has been made to discover the views of those who are against the cess, and that to save this trouble the machinery of the State is used to crush out dissent. Let us remember that the question has been publicly discussed for about two years, and that in a Resolution of 1st August last those who objected to the proposals were invited by the Government to express their views (before the 1st of December), and it is difficult to reconcile the complaint with the facts. The objections submitted to Government were only three in number, and were neither weighty nor widely entertained. In these circumstances and with a majority of four to one in favour of the measure, it is surely extravagance of language to speak of the machinery of the State being used to crush out dissent.

It has also, I understand, been objected to the Cess Bill that power is retained by Government to make rules, to carry out the purposes of the Act. It is argued that it is dangerous to confide

to Government the making of rules and that it would be sounder in principle to have these included in the Bill itself. There is something to be said in favour of such a view where legislation is imposed by Government of its own initiative, and where the rules it retains power to frame may impinge on the rights of those concerned. But the Cess Bill is an entirely different category, because, in the first place, it is introduced at the request of the tea-growers themselves; and, in the second place, its purpose is clearly defined. That purpose is to collect certain funds, to return them to certain persons, to further certain objects. The collection is defined, so is the returning, so are the persons, so are the subjects. Everything essential in principle has been included, and there need be no fear of interference from Government in giving effect to the clearly defined purpose of the Act. In the working of a new Act, moreover, there may arise need for alteration in the rules. It is desirable alike in the interests of despatch and freedom of working that in this event the rules should be modified without restoring to the elaborate procedure of an amending Act. If and when there is need for alternation, we may feel confident that the Government of India will be willing to regard the recommendations of the Committee appointed under the Act, and that power to make rules will not be used in an arbitrary or harmful way. Then again some candid critics have expressed doubt as to the ability of the Tea Association to manage the Fund. This criticism is ineffectual, however, except to reveal ignorance as to the provisions of the Bill. The Cess Funds will not be administered by the Tea Association but by a Committee of twenty appointed by the Governor-General in Council, three on the recommendation of the Bengal Chamber of Commerce, seven on the recommendation of the Indian Tea Association, Calcutta, and ten on the recommendation of such respective bodies or authorities interested in the production of Indian tea and established in British India as the Governor-General in Council may appoint. It is not our province to control the policy of the Cess Committee. It will be for the members of that Committee when they meet to consider the means at their disposal, and the way in which these can most effectively be employed in promoting the objects for which the Cess Fund has been formed. No doubt they will welcome helpful suggestions, and one can only wish for their labour the same measure of success that has attended the work of the Thirty Committee in administering the Tea Cess raised in Ceylon. In 1899, 29 per cent. of the Ceylon tea crop went to foreign markets. In 1902 the proportion rose to 42 per cent. In the same period the quantity of Indian tea sent to foreign markets increased from 16 per cent. to 21 per cent. only. These facts speak for themselves, and show how greatly the cess legislation is needed by the Indian Tea Industry. (Applause.)

The proceedings of the General Committee during the past year were confirmed, the Report adopted, and the Accounts, as audited, passed as correct.

The rate of subscription for the current year from each garden belonging to the Association was fixed at one anna per acre under tea cultivation.

The Chairman reported that the election for the General Committee of the Association for the year 1903, held under Rule 5 of the Rules of the Association had resulted as follows:

Messrs. Balmer Lawrie & Co., Begg Dunlop & Co., Duncan Bros. & Co., Finlay, Muir & Co., Jardine Skinner & Co., Kilburn & Co., Shaw Wallace & Co., Octavius Steel & Co., and Williamson Magor & Co.

## MARKET REPORT.

[Per Mail advices of February 6th, 1903.]

### COFFEE.

The London Commercial Record says:—No changes of importance can be noted in this market during the week. Supplies at auction have been moderate, but recent arrivals, which have been partly offered and will be further put forward in the course of the next few days, have made buyers cautious in their operations, and, with the exception of really fine qualities which are fully firm, the general tendency is to rather easier prices for nearly all descriptions. There have been further sales of new crop East India, but samples still show evident signs of unfavourable weather, and until supplies of really fine quality are obtained prices will probably maintain only a low range. Santos brought a slight advance. In the

market for "futures" there was scarcely any alteration till the last day or two, when some reduction in the receipts, reports of a further prospective falling off, and an estimated decline of 17,000 tons in the world's visible supplies imparted firmness, and closing rates are rather higher. Yesterday Santos for March delivery sold at 27s, May at 27s 6d to 27s 7½d, July at 28s 3d, September at 28s 9d, and December 29s 6d. We quote:—

London ...	Santos ...	March delivery ...	27s 0d.
New York ...	No. 7 Rio...	" ...	4.45 cents.
Hamburg...	Santos ...	" ...	27¼ pf.
Havre ...	Santos ...	" ...	33¼ francs.

To-day's auction supplies comprised: 1,079 bags East India, 766 bags Costa Rica, 201 bags Salvador, 32 bags Guatemala, 18 bags New Granada, and 13 bags Santos. A quiet market and prices unchanged.

Brazil futures opened steadily, gradually firmed up on a scarcity of sellers and better Continental advices, but subsequently gave way slightly on Continental advice coming easier. Transactions include March at 27s, May 27s 6d, September 28s 7½d and 28s 9d, December 29s 3d and 29s 4½d.

Closing quotations:—		Sellers.	Buyers.
March ..	...	27/1½	26/10½
May ..	...	27/7½	27/6
July ...	...	28/3	28/
September	...	28/9	28/6
December	...	29/6	29/3

Brazil receipts 24,000 bags, against 45,000 and 37,000 the two previous seasons, and exchange ⅓ higher at 11¼.

Hamburg unchanged on the day. Havre ¼ lower on the day. New York opened unchanged.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.	
	1903.	1902.	1903.	1902.
Tons ...	27,097	14,142	5,975	4,129
	HOME CONSUMPTION.		EXPORT.	
	1903.	1902.	1903.	1902.
Tons ...	1,483	1,560	1,661	733
The preceding figures exhibit—				Tons.
In the Imports an increase this year of				1,846
Home Consumption a decrease of				77
Export an increase of				928
Stock an increase of				12,955

Auctions this week have passed off as under:—

CEYLON.—Plantation—6 casks 4 barrels sold—small 36s, low medium to bold 50s to 52s, peaberry 40s.

EAST INDIA.—1,734 bags mostly sold as follows:—Mysore, small 36s to 45s 6d, low middling 45s 6d to 50s, middling 52s to 56s, common bold 51s to 60s 6d, fair to good bold 62s to 74s, peaberry 49s 6d to 74s; Coorg, small 36s to 43s, low middling 45s 6d to 51s, common to fair bold 53s to 62s, peaberry 54s 6d to 60d.

MOCHA.—17 half-frazils bought in.

JAMAICA.—Of 149 barrels 61 bags offered, 165 packages sold—ordinary to good ordinary 29s to 35s, fine to fine fine ordinary grayish 41s to 43s 6d, low middling 43s 6d to 50s 6d, bold colory 63s, peaberry 40s to 50s 6d.

COSTA RICA.—2,181 bags sold—small 38s to 48s, low middling to middling 47s to 59s, common bold 57s 6d to 62s, good to fine blue bold 67s to 78s 6d, very fine 82s 6d to 83s, peaberry 56s 6d to 78s 6d.

VERA PAZ.—104 bags sold—low middling to middling 51s 6d to 58s.

GUATEMALA.—135 bags mostly sold—small 35s to 36s, low middling to middling 48s to 52s, bold 55s to 63s, peaberry 55s 6d to 59s 6d.

ECUADOR.—412 bags bought in.

SALVADOR.—299 bags mostly sold—middling dull colory 47s 6d to 48s, bold 53s, peaberry 56s.

COLOMBIAN.—Of 130 bags damaged offered, 100 bags sold—middling greyish 40s 6d to 42s, bold 46s 6d to 47s.

BRAZIL.—Of 768 bags Washed Dumont Santos, 660 bags sold—small 29s to 32s, medium 33s to 40s 6d, bold 36s to 51s, peaberry 38s to 50s 6d; of 1,750 bags Unwashed Dumont Santos on quay terms, 1,120 bags sold—small 27s to 30s 6d, medium 31s 6d to 33s 6d, bold 33s to 39s 6d, peaberry 32s 6d to 35s.

## TEA.

INDIAN.—Catalogues comprised 30,100 packages, against 31,200 previously, and 51,900 at the corresponding time a year since.

The week's business has presented no new feature, and the character of the market remains as before. Common and ordinary descriptions met with a ready demand on the lower basis lately established, while fine to high grade tea, especially when of Autumn flavour, made good prices.

In spite of January deliveries having been practically governed by immediate requirements for consumption and showing a contraction of some 6 million lbs. contrasted with last year, when a Duty scare prevailed, it is noteworthy to find the stock reduced by 3<sup>1</sup>/<sub>2</sub> millions, owing to the shrinkage in imports. The smallness of the trade holdings, not shown in the published figures, compared with a year ago, is difficult to estimate; suffice it to say that this is not the least satisfactory feature in the position. Clearances from the London Bonded Warehouses during the month were at the rate of 171 millions per annum. The exports from Calcutta are now some 7 millions under last year, the total for the season then being 152 millions.

For 25,500 packages on Estate account 7<sup>3</sup>/<sub>4</sub>d per lb. was obtained, opposed to 7<sup>1</sup>/<sub>2</sub>d for 46,700 and 6<sup>1</sup>/<sub>2</sub>d for 49,900 in the two foregoing seasons.

The following are the monthly figures issued by the Tea Brokers' Association:—

	1903.	1902.	1901.
	lbs.	lbs.	lbs.
Imports ...	* 16,220,000	21,101,000	23,122,000
Deliveries ...	* 14,269,000	20,349,000	18,256,000
Stock, 31st January	70,163,000	73,776,000	74,789,000

CEYLON.—Public sales have aggregated 22 500 packages. On the 27th ultimo 16,506 were submitted, and at this period twelve months ago 28,100 packages.

There was a good enquiry for fine and finest kinds which attracted strong bidding and mostly sold at firm to dearer rates. On the other hand, common to medium were in less request, and when any falling off in flavour was noticeable quotations were barely maintained. The average is 7<sup>3</sup>/<sub>4</sub>d per lb. contrasted with 7<sup>1</sup>/<sub>2</sub>d at the date of our last, and 7d per lb. in 1902.

Monthly statistics are as under:—

	1903.	1902.	1901.
	lbs.	lbs.	lbs.
Imports ...	+ 7,938,000	11,109,000	13,099,000
Deliveries ...	+ 8,073,000	9,182,000	10,065,000
Stock, 31st January	19,796,000	21,638,000	27,895,000

\* These figures include 602,459 lbs. landed and delivered "ex quay," but not hitherto taken into warehouse returns.

† These figures include 29,128 lbs. landed and delivered "ex quay," but not hitherto taken into warehouse returns.

JAVA.—Rather over 3,100 packages passed the hammer, and nearly all were sold in the room at steady rates.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From January 1 to 31, 1903	...	19,885,694 lbs.
Do. do. 1902	...	27,299,121 "

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India ...	22,588	7,536	30,124
Ceylon ...	17,658	4,887	22,545
Java ...	3,029	112	3,141
Total ...	43,275	12,535	55,810

Also 181 packages from second hands.

Arrivals of Tea:—	From Calcutta.	From Colombo.
	lbs.	lbs.
Ex Orontes ...	...	235,000
" Peninsular ...	295,000	36,000
" Magician ...	805,000	276,000
" Collegium ...	582,000	199,000
" City of Sparta ...	1,075,000	100,000
Total ...	2,757,000	846,000

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated February 6th, 1903, says:—

## QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1902-1903 ...	1,065,262	780,665	52,688
1901-1902 ...	1,150,888	807,249	52,405

30,305 pkgs. INDIAN } Total 56,133 packages were offered in public auction  
22,687 " CEYLON } this week.  
3,141 " JAVA }

The figures at foot show the position of tea to be a strong one; imports of all tea from the commencement of the season are 11<sup>1</sup>/<sub>2</sub> millions below the same period last year, and 23<sup>1</sup>/<sub>2</sub> less than during the previous season, while the bonded stock of all tea in London at the end of January was 9<sup>1</sup>/<sub>2</sub> millions less than at the same time last year, and 14<sup>1</sup>/<sub>2</sub> than the previous year. These figures seem to indicate that present prices are on too low a level, especially when the reduced stocks of duty-paid tea in the country are taken into consideration.

INDIAN.—Offerings continue small. Demand was rather better than last week, and competition more general, better class teas specially meeting with attention. A few "last of the season" invoices are already in print, while an autumnal character is becoming generally more noticeable. The official wire gives exports to U. K. for second half of January as 5,210,000 lbs., against 5,830,000 lbs. same period 1902; making total from 1st April to 31st January 139,900,000 lbs., against 146,791,800 lbs. last year.

Week's av. of tea sold on Garden Account 1903, 25,609 pkgs., av. 7.38d. 1902, 46,555 pkgs., av. 7.23d.

Tea sold on Garden Account 1st June to date 1902-3, 799,599 pkgs., av. 7.30d. 1901-2, 881,954 pkgs., av. 7.88d.

CEYLON.—No actual change can be quoted in the market, but there seemed more disposition to buy, with slightly more animation in the bidding, last week's prices, as a rule, being easily obtainable. Teas with special point were well competed for. The official telegram gives exports to U. K. during January as 8,000,000 lbs., against 9,250,000 lbs. same month 1902, and estimates the quantity for February as 7<sup>1</sup>/<sub>2</sub> to 8 millions.

Average for week 7.33d, against 7.00d. in 1902.

Ceylon tea sold on Garden Account 1st January to date, 103,731 pkgs., av. 7.51d. 1902, 128,711 pkgs., av. 7.31d.

JAVA.—A comparatively large quantity was brought to auction, comprising a varied selection in which 16 Estates were represented. The teas sold with good competition at steady to improving prices, very little being withdrawn from sale.

Bank Rate 4 per cent. Exchange on London three months' sight:—  
Calcutta  $1\frac{5}{16}$ . Colombo  $1\frac{1}{4}\frac{1}{2}$ .

### COCOA.

Tuesday's auctions offered 8,929 bags which experienced a fair demand at considerable irregularity in prices. Of 1,668 bags Trinidad brought forward about 800 bags found buyers at barely valuations—67s for very fine red, 61s to 64s for good to fine, and 58s to 60s for ordinary to middling. 2,181 bags Granada practically all sold at a slight decline for the good qualities, but at fairly firm prices for other grades; good to fine realised 56s to 58s, and common to fair 53s to 55s. 124 bags Jamaica mostly sold at 52s for fair, being steady. Of 987 bags Dominica catalogued 500 bags were quitted at a decline of 1s to 2s per cwt., fair to fine selling at 52s to 54s, and ordinary at 50s. Of 76 bags St. Lucia 50 bags found buyers at 56s for fine and 50s for common. 38 bags Esmeralda sold at 60s to 60s 6d for defective. 38 bags good African sold at 54s. Good and fine qualities of Ceylon were well competed for and realised an advance of 2s to 3s, but there was not much competition for less desirable grades though they brought steady rates, with the exception of Native collected, which was cheaper; 3,798 bags were offered and 1,500 bags sold—fine bold and medium red at 74s 6d to 75s, fair to good at 60s to 72s 6d, ordinary medium and small 53s 6d to 55s 6d, common to good small 40s to 50s, pickings 31s to 39s, and fair collected 52s per cwt. Private sales include 300 bags Trinidad and 400 bags Dominica at auction rates, and 100 bags good to fine Caraquez Guayaquil at 66s to 70s per cwt.

### PEPPER.

BLACK.—A dull market and prices lower. About 100 tons Singapore have been sold during the week at  $6\frac{1}{16}$ d down to  $5\frac{1}{2}$ d January-

March and March-May shipment; on the spot sales reported at  $6\frac{1}{2}$ d down to  $6\frac{1}{16}$ d.

At auction on Wednesday 200 bags Lampong retired at  $5\frac{1}{2}$ d, 155 bags good Wynaad at  $6\frac{3}{4}$ d, and 401 bags Acheen at  $5\frac{1}{4}$ d.

The shipments of Black Pepper for the month of January compare as follows:—

	1ST-HALF.		2ND-HALF.	
	1903. Tons.	1902. Tons.	1903. Tons.	1902. Tons.
U.K.—Singapore	40 } 40	10 } 20	210 } 210	20 } 20
„ Penang ...	nil }	10 }	nil }	nil }
Continent ...	20	40	570	140
United States ...	30	220	170	160
Total tons ...	90	280	950	320

WHITE—is lower. On the spot small sales of Singapore have been made at  $9\frac{1}{16}$ d down to  $9\frac{1}{2}$ d, and fair Penang at  $9\frac{1}{8}$ d. For arrival no business reported. Singapore January-March shipment has sellers at  $9\frac{1}{16}$ d, and Penang January-March at  $9\frac{1}{8}$ d.

At public sale on the 4th instant of 247 bags Singapore catalogued 70 bags sold “without reserve” at  $9\frac{1}{2}$ d to  $9\frac{5}{8}$ d for fully fair, 237 bags Penang were bought in at  $9\frac{1}{2}$ d per lb.

The shipments of White Pepper for the month of January compare as follows:—

	1ST-HALF.		2ND-HALF.	
	1903. Tons.	1902. Tons.	1903. Tons.	1902. Tons.
U.K.—Singapore	90 } 130	220 } 340	60 } 120	110 } 110

“All Sorts and  Conditions of Men”

USE

# ST. JACOBS OIL

**F**OR RHEUMATISM, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Stiffness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains,

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price  $1\frac{1}{2}$  &  $2\frac{1}{6}$ .

# CONQUERS PAIN

## GINGER.

COCHIN—quiet but steady. 52 cases 190 bags were offered, of which only 10 bags bright rough D's sold at 33s. Medium and bold cut retired at 80s, medium and small at 55s, and washed rough at 42s per cwt.

JAMAICA.—57 barrels offered and sold at 41s for low middling washed, 37s to 37s 6d for good ordinary of 1899 import, and 37s per cwt. for lean and shrivelled, part dark, new crop.

## CINCHONA.

In auction, 10 serons good bright Loxa quill were sold at 11½d per lb. Fourteen bales of good bright Calisaya quill and chips sold at 7d, and dull and dark quill at 5½d to 5½d per lb.

## QUININE.

The announcement of the small Java shipments of cinchona for January strengthened this market at the close of last week, a fair

business being done on the spot at 1s to 1s 0½d per oz., and May delivery 1s 0½d for good German sulphate. With the correction of the shipments, however (see Cinchona paragraph), by which 300,000 Amsterdam lbs. have been added to the original figures, an easier feeling has prevailed this week, small spot-sales being reported on Wednesday at 1s. and to-day there are further buyers at 1s, but no sellers under 1s 0½d.

## CARDAMOMS.

Cardamoms were slow of sale at irregular but lower prices generally, especially as regards small and splits. The following prices were paid:—Ceylon-Mysore. medium and bold pale, 2s 7d; extra bold pale, but partly open, 2s 6d; bold medium pale, 1s 7d to 1s 11d; medium pale, 1s 5d; small pale, 1s to 1s 1d; splits and pickings, 11d to 1s; decorticated seed, 1s 2d to 1s 3d per lb. Good bold Malabar, 1s 10d per lb.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, MARCH 7, 1903.

[No. 10.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 13th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Coorg.

*POLLI BETTA, 4th March.—Weather*—It is still keeping very fine and there is a little East wind at times and it is very hot during the day. *Crop.*—The present crop is dragging its slow course along. Owing to rain, during picking, a lot of gleanings are coming in. Coffee is coming very well out of the pruning and prospects for next season are very fair. Pruning is being pushed on with. *Labour*—Plentiful. *General health*—Fair.

#### CARDAMOMS AND ORANGES IN COORG.

IN THE Report on the Administration of Coorg during the year 1901-02 there are many references to the cultivation of Cardamoms and Oranges. These references are of a "scrappy" or disjointed order, but they are far from uninteresting. For instance, it is stated that cardamoms and oranges have taken the place of coffee over an area estimated at some 12,000 acres. Yet in the year under reference the cultivation of cardamoms enjoyed no more favourable conditions than coffee. The outturn was normal, but prices continued at the low figure which has for years past practically ruined the industry, "nor were the numerous reductions and remissions of assessment continued from previous years efficacious in reviving the prosperity of the cardamom-growers, whose operations extend over an aggregate area of upwards of sixty thousand acres, of which, however, only a portion is actually cultivated." To a considerable section of the population, the cultivation of cardamoms was formerly second in importance only to that of rice. During the last twenty years, however, the price of cardamoms has fallen to such an extent that it now scarcely pays to collect the berries, and many well-to-do families, who depended chiefly upon their cardamom matès

for the purchase of articles required to supplement the produce of their rice fields, have been greatly impoverished. In these circumstances it is not easy to understand the recent extension of cardamom cultivation; and it would be interesting to know to what extent, if at all, European planters have helped in the carrying out of a policy of over-production. It is obvious from the remarks of the Commissioner that cardamom cultivation in Coorg is largely in native hands. Seeing how the same product is being pushed in other places, such, for instance, as Mysore and Ceylon, there is not much prospect of a rise in the price of a commodity, the consumption of which is strictly limited.

In Coorg, cardamoms are cultivated in the matès, as the forest hills on and below the Ghâts are termed. Small clearings are made in the evergreen forest, in which the trees are felled, but no plot is allowed to be longer than one-sixth of an acre. Cardamom matès are taken upon a lease for periods varying from three to twenty-one years, but owing to the low prices of the produce, the industry has fallen into decay. We do not profess to reconcile the contradictory statements in the report under notice—such as those about extensions of cardamom cultivation and its falling into decay. We pass on to a statement that the principal exports from the province are coffee, cardamoms, rice, oranges, timber, sandalwood, and hides. It is distinctly stated that the statistics of export, which are for the most part compiled from the information supplied by keepers of toll-gates, cannot be regarded as trustworthy. Nevertheless, after the above allusion to the "principal exports" it is interesting to turn to the figures, specially noting the order in which certain products are mentioned above, and that in which they stand when the value of exports are compared. The figures are:

Coffee ...	...	...	Rs.12,00,000
Grain and pulse ...	...	...	3,00,000
Sandalwood ...	...	...	90,500
Cardamoms and spices ...	...	...	50,000
Wood ...	...	...	50,000
Hides and horns ...	...	...	25,000
Fruits ...	...	...	10,000

It is scarcely necessary to comment, beyond pointing out that pepper, the cultivation of which has increased, doubtless helps to swell the figures relating to "cardamoms and spices."

We have, however, yet to deal with Oranges. The increased attention devoted to orange-growing is referred to as among the

agricultural features of the year that call for notice. Oranges are also referred to as among the "principal exports." It is remarked that the Coorg oranges are celebrated, and in South Coorg are as abundant as the plantain. Yet the total exports are put at Rs.10,000! A couple of years or so ago, it scarcely paid, in many places in Coorg, to pick oranges: they were allowed to fall and to rot! We should be glad if some of our planting readers in the province would inform us if it is true that increased attention has lately been devoted to orange-growing, and what the results have been. That "Rs.10,000" is an incredibly small figure. Coorg oranges are well known in markets as far off as Madras; and if business is properly pushed there must be great scope for increased trade. Perhaps the reference to oranges as one of the principal exports is merely prophetic. We are inclined to believe that there really is a great future before this industry, but only if it is taken up in an enterprising way; and we should be glad to know what, if anything, is being done towards its development. Is there any "cultivation" or is Nature left to herself; what is the average value of crop; what are the facilities for sale; what are the transport facilities, packing arrangements, and so on? It is well known that Coorg oranges are conveyed in railway-truck-loads, and in cart-loads, no attention being paid to packing; but are there any exceptions to this, which appears to be the general rule? No matter what the present position of the industry may be, its future must depend largely upon the manner in which growers lay themselves out to develop markets; and there cannot be a doubt that there is a demand that would readily account for exports of a much higher value than that which is referred to above.

### THE TEA DUTY AND THE BUDGET.

The following correspondence has passed between the Chancellor of the Exchequer and Mr. Lough, M.P.:—

"71, EASTCHEAP, E.C., *January 30, 1903.*—DEAR SIR,—The somewhat exaggerated feeling (as I think) that considerable reduction of taxation will be possible in your coming Budget, and that the tea duty may be lowered to the former figure of 4d., is leading buyers of tea all over the country to reduce their stocks to an inconveniently low point, and producing great stagnation of business. The extent to which this reluctance to operate has proceeded may be gathered from the fact that in the first twenty-six days of January, 1902, 23,520,776 lbs. were removed from bond, against 16,527,556 lbs. this year, showing a diminution of 6,993,220 lbs. I believe that it is in accordance with precedent, and in the interests of the Exchequer, that, if any reduction should take place, some time should elapse after the Budget before the new duty comes into force. But, as the recent imposition of the higher duty was made suddenly, and was accompanied by some changes connected with the bonded warehouses, there is a feeling of uncertainty as to whether this course will be followed by you. May I ask, therefore, whether you can see your way to state that, in the event of a reduction of the tea duty, reasonable notice will be given? I believe that if you can give such a promise it will have a reassuring effect on business.—Believe me, etc., THOS. LOUGH; The Right Hon. C. T. RITCHIE, M.P."

"TREASURY CHAMBERS, WHITEHALL, S.W., *February 3, 1903.*—DEAR SIR,—I am desired by the Chancellor of the Exchequer, in further reply to your letter of the 30th ultimo, to say that he has no hesitation in giving the assurance which you desire, that, in the event of any reduction of the tea duty, reasonable notice would be given, so as to prevent as far as possible any inconvenience to the trade. It will, of course, be understood that this assurance must not be interpreted as any indication of the intentions of the Government as regards the Budget.—I am, etc., J. A. LONGLEY. THOMAS LOUGH, Esq., M.P."

### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

### THE MADRAS LEGISLATIVE COUNCIL.

#### First Day.

A Meeting of the Madras Legislative Council was held on the 27th ultimo, in the Council Chamber, Fort St. George, with H. E. Lord Amthill, President, in the chair.

His Excellency the PRESIDENT said:—

HONOURABLE GENTLEMEN,—You will, I am sure, be anxious to know the probable course of business in the Council and I therefore take this opportunity of making such a forecast as is possible in the present circumstances. I hope that the Council will pass the Planters' Labour Bill either to-day or to-morrow. The list of amendments is a long one, but many of them are identical, and as regards the more important ones the Government hope speedily to arrive at a satisfactory compromise.

#### THE MADRAS PLANTERS' LABOUR BILL.

The Hon'ble Mr. G. STOKES presented the Report of the Select Committee on the Madras Planters' Labour Bill, 1902, and moved that the Bill and Report be taken into consideration at once.

In doing so, the Hon'ble Mr. Stokes pointed out that he desired to explain some of the recommendations which the Select Committee had made. The Bill did not at all profess or desire to regulate the relations between the planter and the labourer in every possible respect. The object of the Bill was mainly to put a stop to fraudulent breaches of contract which it was impossible to reach under the existing law. Opportunity had been taken to bring home to the cooly his obligations towards his employer, and also to impress upon the planter his obligations towards his labourer. While the Bill largely dealt with fraudulent breaches of contract, it was proposed to take certain general powers which might be used to compel the planters to treat their labourers properly in certain matters. The Select Committee had not in any way extended the scope of the Bill, but they confined themselves to merely amending some of its provisions, and even those amendments were not numerous, though they were in some respects important. The old Bill contained the words that Act XIII of 1859 should be repealed from and after the date upon which that Bill came into operation. What was really intended was that the two Acts should not have concurrent application; but it was never intended that it should never apply to contracts entered into before the coming into force of the present Bill. If Act XIII of 1859 did not apply to contracts made before the issue of the notification extending the present Bill to certain local areas, then no Act would apply to them, and the planter would be entirely deprived of any means of recovering large sums of money advanced by him on the faith of Act XIII. The next amendment that was made by the Select Committee was in regard to the Section 7, which related to local labour. The principle of the Bill was that the contracts entered into by the cooly should be explained to him, so that he might not be misled by misrepresentation, or deceived in any way as to the conditions under which he would have to work, and it was absolutely necessary that he should understand the exact terms of the contract, and it was therefore laid down that the terms should be explained to him by certain officers specified. But the Select Committee desired to exempt from the necessity of having that explanation made in regard to contracts which extended only for two months. There could be no doubt whatever that if every local labourer entering to a short contract should be taken before a Magistrate so that the terms of the contract might be explained to him, it would cause a great deal of trouble and much waste of time. So the Bill, as amended by the Select Committee, proposed to exempt local labour from the necessity of having the terms of the contract explained. Section 26 of the Bill, as it was referred to the Select Committee, had been taken verbatim from Act I of 1882. In the new Assam Act the corresponding section had been considerably modified. Section 26 as amended by the Select Committee, met their wants much better than the

more modern section in the Assam Act, which had been probably framed to suit the conditions of labour in Assam. One of the main principles of the present Bill was not to punish the cooly but to get him to do the work which he had contracted to do. If a cooly chose to sit at home he must pay As. 4 a day, and there was no use imprisoning him. Therefore, the proviso that he should forfeit As. 4 a day which had been included in that section seemed entirely suited to their conditions of labour. The next section which had been amended was Section 35. The Committee had made an attempt to add an explanation to that section to make it more clear. Their intention would be better carried out by adopting verbatim the section of the Assam Act which related to that matter. From the Agenda paper Honourable Members would see that he proposed to take the section verbatim from the Assam Act. That was a more satisfactory solution of the problem. Another important amendment was in regard to Section 44, which authorized the Government to appoint certain officers to make enquiries under the Act; and power had been taken to make rules for their guidance.

#### SIR GEORGE ARBUTHNOT'S SPEECH.

The Hon'ble Sir GEORGE ARBUTHNOT said :—

YOUR EXCELLENCY,—I beg to second the motion of the Hon'ble Mr. Stokes, and would ask for permission to state very briefly any reasons for doing so before we proceed to the consideration of the various amendments of which notice has been given. It has been suggested to me that I may not be technically quite in order in doing this, but I venture to hope that Your Excellency will not so rule, for it seems to me only reasonable that when an important Bill is returned to this Council after lengthy consideration and material modification by a Select Committee, it is only reasonable that opportunity should be given to those members desirous of doing so of stating their reasons for approving of its being finally passed into Law, which, frankly, as it was originally presented to us I could hardly have done. What I wish is not to discuss the general principles of the Bill but to say a few words with regard to the nature and effect of the amendments introduced by the Select Committee, which are now, for the first time, before us in Council. Both on behalf of the Mercantile community whom I have the honour to represent, and as being myself largely interested in the growing of coffee, tea and other such products, I feel bound to express my appreciation of the very keen desire evinced by the representatives of Government in Committee so to mould this Bill as to make it just and even-handed, and one calculated to promote and safeguard the interests alike of employers and employed. And I must earnestly deprecate the idea, which I cannot help feeling still prevails in certain quarters, that the Bill, as amended, is in any sense a piece of class or race legislation. That it has penal clauses of course goes without saying, but those affected by it only become subject to those penal clauses when they are guilty of such wrong-doing as no fair-minded man can justify, and as unquestionably deserves punishment, and apart from such wrong-doing I am convinced that the Bill affords no ground for fear that the labourer will be liable to, and likely to receive, harsh treatment at the hands either of the law or of his employer,—and I would again repeat, what has already been urged, that, even if actuated by no higher motive—which, as a general rule, I do not for a moment admit or believe to be the case—self-interest alone makes it absolutely necessary for the planter to study the health and the comfort of his labourers, and that to connect such words as “habitual ill-treatment” and “slavery” with the relations between the planter of Southern India and his labourers is, to say the least, to present a lurid picture, so overdrawn and fanciful as to be grotesque, and fit only to be relegated to the Chamber of Horrors, which, I have been told, exists in certain Art Exhibitions. Looking at the Bill from the planter's point of view, I cannot pretend to say that—in some districts especially—they look upon it, even as amended in Committee, as the best of all possible Bills, or that they are altogether satisfied with it, but I am sure that the good intentions of Government, and its desire to meet their objections as far as possible, subject to a complete safe-guarding of the interests of the labourer, have been fully appreciated. The conditions, however, of estate cultivation and management, and labour arrangements, vary most widely in different districts of this Presidency, for instance Mysore, Travancore, and Cochin, and, whilst in some I believe the Bill will work very well and advantageously, there are others where there is good ground for supposing that it may prove highly prejudicial. In Committee I pressed

my Honourable friend Mr. Stokes to recommend to Government the addition of a clause which would practically have the effect of securing what is called at home “local option” for each district. As to the practicability of this I found him unbending and immovable, but must confess to being myself somewhat in the position of the proverbial man “convinced against his will” namely “of the same opinion still.” However, the Committee agreed to put on record their opinion that the Government should always give due notice, and await the receipt of, and consider, local representations, before bringing the Act into force in any local area. This recommendation I understand that Government has accepted, and all those interested may, I may sure, be perfectly satisfied that it will be fully and faithfully carried out, and it is with this conviction that as one having a very large financial interest in the Planting Industries of Southern India I feel justified in supporting the Bill, feeling sure that if carried out, as I am certain it will be, carefully and wisely, and only made applicable to those districts where there is ample proof that it will be advantageous, it will work to the benefit, and promote the welfare alike, of employers and employed.

His Excellency put the proposition to the vote, and it was carried unanimously.

His Excellency the President then proposed and the Hon'ble Mr. G. S. Forbes seconded that the consideration of the preamble and the title to the Bill be postponed pending the consideration of the amendments.

#### AMENDMENTS ADOPTED.

The Hon'ble Mr. STOKES :—

“Estate” means land not less than 10 acres in extent whether held by one person or by more persons than one jointly and whether in one or more blocks and for the first twenty-six words of the definition of “Estate” and to substitute in Section 2 that “Labour Contract means a contract penally enforceable under this Act to labour for hire on an estate otherwise than as a domestic servant.”

#### Section 5.

The Hon'ble Mr. K. Perrazu moved a verbal amendment to the section, which was accepted by the Government, and the section as amended was adopted.

#### Section 6.

Consideration deferred.

The Hon'ble the ADVOCATE-GENERAL—for the proviso in sub-Section 1 substitute :—

“Provided that a contract for a period not exceeding two months may be signed in the presence of two witnesses if the labourer's home is not more than 15 miles from the estate, or he is not accommodated in the cooly lines permanently maintained on the estate.” This amendment was exactly similar to the amendment already moved but it was drafted in a different manner.

The amendment of Mr. SANKARA NAIR to insert the following as sub-Section 3 was accepted by the Government and carried :—

“Where the Magistrate or such other person as is expressly authorised as above considers that the labourer is not in a fit state of health to undertake the journey to the estate or that he is incapacitated by reason of any obvious bodily defect or infirmity for labour in the labour district, he shall not permit the contract to be signed in his presence.”

The Council was adjourned at 7-15 P.M. to reassemble on Saturday at 11 A.M.

#### Second Day.

An adjourned Meeting of the Madras Legislative Council was held on February 28 at 11-30 A.M.

#### AMENDMENTS ADOPTED.

The Hon'ble the ADVOCATE-GENERAL—to substitute the following proviso to Section 6 :—

“Provided that no labour contract made by a woman shall be enforceable under this Act if her husband or guardian, if any, objects to its enforcement.” The difficulty with regard to the proviso as

drafted in the Bill was that it did not appear to take sufficient account of the wishes particularly of the husband.

#### Section 8.

The Hon'ble Mr. G. STOKES—to substitute the following for Section 8 of the Bill :—

"Either party to a labour contract may determine it on giving at least three months' notice in writing of his intention to the other party and showing to the satisfaction of the Magistrate, if objection is taken to the notice, that he has reasonable grounds for determining it, and repaying any sum found by the Magistrate to be due to the other party in respect of such contract." He said that Hon'ble Members would notice that in the amendment now moved the words "reasonable grounds" had been substituted for "sufficient cause." Some Hon'ble Members had taken objection to the amendment on the ground that it was contrary to the general principles of the Law of Contract. But the amendment was entirely in accordance with one branch of the law of contract namely, the law of master and servant, which was analogous to the case of a planter and labourer on an estate. The three months' notice provided by the amendment was necessary to enable the planter to protect his crops by getting coolies in the place of those that desired to leave.

#### Section 9.

The Hon'ble Mr. G. STOKES—

The substitution of the following for Section 9 of the Bill :—

"9. (I) A labourer may determine his labour contract at any time without notice on showing to the satisfaction of a Magistrate that he has reasonable grounds for determining it, and on repaying any sum found by the Magistrate to be due by him to his employer together with a further sum of three annas for every working day of the unexpired period of his contract or of a period of three months, whichever may be less."

#### Section 10.

The Hon'ble Mr. STOKES—

Substituted for sub-Section 1 of this section :—

"If a labourer is alleged by his employer or claims to be disabled for completing his labour-contract by reason of accident or illness, and is unable to agree with his employer as to the terms on which the contracts should be determined, the employer may, and if the labourer so desire, shall, send the labourer, if he is able to travel, and if not, send notice to the nearest Magistrate, who, if on enquiry he finds the labourer to be permanently disabled from completing the contract, shall declare the contract to be determined and such order shall be final."

Add the following as sub-Section 3 :—

"(III) In any case in which the Magistrate shall find that the accident by which the labourer was disabled was due to the negligence of the employer, he may order any sum not exceeding three months' wages to be paid by the employer to the labourer as compensation."

Of the several amendments proposed by the non-official members the following additional section proposed by the Hon'ble Mr. K. Perrazu was accepted by the Government.

10-B. (V) When the labour-contract of the labourer is or has been determined or cancelled under the provisions of this Act, the Magistrate may, in his discretion and on the application of the labourer concerned, cancel the labour-contract of any labourer, being the wife, husband, father, mother, son or daughter of the labourer whose labour-contract is or has been determined or cancelled who may have entered into a labourer-contract to work on the same estate.

Sir HENRY WINTERBOTHAM.—An amendment to this new section to limit its operation to the provisions of Section 10 instead of the provisions of this Act.

#### Section 14.

The Hon'ble Mr. P. RATNASABHAPATI PILLAI—

To insert the following in this section which dealt with the power of certain officers to inspect Estates :—

"Enter and inspect all lands and houses wholly or partially used by or for labourers, and require that all such labourers, or any particular class or classes, or individual or individuals of them, shall be brought before them, and that a copy of the labour-contract of any labourer shall be produced, and may make any enquiries

which he thinks proper touching the condition or treatment of such labourers and the employer shall be bound to comply with every requisition and to answer every enquiry so made to the best of his ability."

#### Section 17.

The Hon'ble Mr. P. RATNASABHAPATI PILLAI :—

Add the following proviso to Section 17 :—"Provided that the Magistrate shall not take any action regarding the payment of compensation to the accused under the Code of Criminal Procedure, 1898, or other law for the time being in force."

#### Section 21.

The Hon'ble Mr. STOKES :—

"That in line 9 of Section 21 after the words "shall repay to the planter" the words "within a reasonable time to be fixed by the Magistrate in the order" be inserted.

#### Section 23.

The Hon'ble Mr. P. RATNASABHAPATI PILLAI :—

That in Section 23, after the word "Act" insert the words "or omits to comply with any requisition made under Section 14."

#### Section 25.

The Hon'ble Mr. P. RATNASABHAPATI PILLAI :—

To add also the following sub-section: "(2). If the planter wilfully omits to comply with the order within the time so fixed, he shall be punishable with fine which may extend to twenty rupees for each day during which the omission continues."

#### Sections 30, 31, 32, and 33.

#### Sections 30 to 33.

The following are sections 30, 32, and 33 as adopted by the Council :—

30. When any labourer is convicted under Section 26 or 28 the Magistrate so convicting or sentencing him shall on application of the employer endorse on the labour-contract the period during which such labourer is convicted under the sections aforesaid of being absent from his work, or the term for which he is sentenced to imprisonment, or both, as the case may be, and the period so endorsed shall be added to the term for which the labourer contracted to serve, and such labourer shall not be deemed to have completed his labour-contract till he has served for the terms specified therein in addition to the periods so endorsed.

Provided that the additional period so endorsed shall not exceed the unexpired period of his labour-contract on the date of the offence.

Provided also that no such endorsement shall be made if more than 12 months have elapsed since the date on which the original labour-contract would otherwise have determined.

31. When any maistry has been sentenced to imprisonment for an offence under Section 22 or when any labourer has been sentenced to imprisonment for any offence under this Act, the planter with whom such maistry has entered into a contract or the employer of such labourer or any person authorised to act in this behalf for the planter or employer may apply to the Magistrate at any time previous to the expiry of such sentence that such maistry or labourer be forthwith made over to him with an order to complete his contract or his labour-contract as the case may be.

(2) On such application being made the Magistrate may, if the maistry or labourer consents cancel the remainder of such sentence and may direct the maistry or the labourer to be made over or forwarded to the applicant together with the order applied for.

32. Same as Section 31 of the Bill.

33. On the expiry of any sentence of imprisonment on a maistry or labourer for any offence under this Act, the maistry or labourer shall if the planter or employer requests, be produced before the Magistrate who shall direct such maistry or labourer to complete the performance of his contract on pain of further prosecution and punishment in case of his refusal to do so, and no conviction under this Act or imprisonment under such conviction shall have the effect of relieving any maistry or labourer from the terms of his contract or labour-contract as the case may be.

Provided that no such direction shall be given, in the case of a labourer, if more than 12 months have elapsed since the date on which his original labour-contract would otherwise have determined.

Section 35.

The Hon'ble Mr. STOKES—

Substitute for Section 35 of the Bill :—

"35. (1) Whoever, knowing that a labourer is bound by his labour-contract to labour for any employer, voluntary entices or attempts to entice the labourer to leave his employer, or harbours or employs any labourer who has, in contravention of the terms of his labour-contract, left his employer, shall be punishable with imprisonment for a term which may extend to one month, or with fine which may extend to two hundred rupees, or with both.

(2) The convicting Magistrate may award to the employer with whom the labourer has contracted the whole or any part of any fine levied under sub-Section (1)."

Section 41.

The Hon'ble Mr. STOKES—

Add to this section :—

(2) In making any rule under this Act the Local Government may direct that every breach thereof shall be punishable with fine not exceeding in any case five hundred rupees.

(3) All rules made by the Local Government under this Act shall be published in the local official *Gazette* and, on such publication, shall have effect as if enacted by this Act.

Section 42.

The discussion on the sections was then concluded.

His Excellency the President said that he felt certain that the Hon'ble Members would not wish to pass the Bill at that Meeting nor did he think that the Bill which had been so considerably amended should be passed on one and the same day. He therefore proposed to adjourn the Meeting to Tuesday when amendments might be moved only with the permission of the President. He proposed on that occasion to take into consideration of the question whether the Government should take power to annul or rescind any notification made under that Act. It was a somewhat difficult question and the Government would give it its most serious consideration.

The Meeting was adjourned to Tuesday, at 11 A.M.

Third Day.

The adjourned Meeting of the Madras Legislative Council was held on Tuesday at 11-45 A.M. in the Council Chamber, Fort Saint George. After certain amendments had been passed, the chief of which have been referred to in our telegraphic news, the Hon'ble Mr. STOKES moved that the Bill be passed into Law, and said that the Bill as amended had very fairly secured the remedying of the grievances of the planters and substantial benefits to the coolies.

The Hon'ble Mr. ACWORTH, in supporting the proposition, said that the planters of Southern India had been the greatest benefactors of coolies. Referring to the speeches of the non-official members, the Hon'ble Mr. PERRAZU PANTULU and the Hon'ble Mr. RATNASABHAPATI PILLAI, one would imagine that the planters of Southern India were a set of brutal slave dealers. He did not deny that there had been now and then instances of high-handedness on the part of planters, but these instances were exceedingly rare. But when these did occur the planters concerned had been condemned by the planting community at large. There were black sheep in every fold, and for the sake of one it was not charitable to condemn the whole lot. The Hon'ble speaker then recapitulated the circumstances that had in 1895, during the *regime* of Lord Elgin as Viceroy and Governor-General, contributed to the appointment of a Committee to inquire into the planters' grievances. It was then decided that Government should take upon itself the duty of finding a remedy in the shape of a penal law. The Hon'ble native gentlemen were for the most part labouring under a mistake of fact, and commenced an attack upon the planting community. The wages at Travancore were at present five annas a day, and the coolie was infinitely better off on the hills than on the plains. At the end of a year a coolie generally returned with Rs.50 in his

pocket, a sum generally sufficient to keep him in complete idleness for a year. The Hon'ble Mr. PERRAZU had spoken in ignorance of the actual state of affairs when he said that coolies should be better housed, better clothed, and better fed. As a rule, the coolies were better housed and generally better cared for on the hills than on the plains, while some of them had their own gardens, and the whole lot obtained gratuitous medical advice. In some estates there were schools provided for the children of the coolies, and on his own estate the honourable speaker had some schools. That the coolies, themselves seemed contented was obvious from the fact that a number of coolies had year after year renewed their contracts. The Bill as proposed was a vast improvement on the existing state of affairs. On behalf of himself and the planting community in general, he thanked His Excellency and his two Hon'ble Councillors for expediting the passing of the Bill. He thanked the Hon'ble Mr. Stokes, who had kept all through an open mind in the matter, and in conclusion he said that he gave his hearty support to the passing of the Bill into Law.

The Hon'ble Mr. K. PERRAZU PANTULU said that some of the observations he had made at the time of the introduction of the Bill had so incensed the Hon'ble Mr. Acworth that he had now and then made some uncharitable observations during the discussion of the amendments proposed by him. The Hon'ble Mr. Acworth was very much mistaken if he had thought that he (the speaker) meant any insinuations against any particular gentleman. He was of opinion that penal legislation was not needed in the present state of circumstances, and expressed his inability to give his vote to the Bill.

The Hon'ble Sir HENRY WINTERBOTHAM, in supporting that the Bill be passed into Law, spoke at length on the attitude assumed by certain native papers apparently under misapprehension of facts, and said that these and the speeches of the Hon'ble non-official members appeared to him to indicate that they were of opinion that the Government was legislating a measure to benefit the European planters. He defended the action of Government in having initiated that measure, which was needed in the interests of planters and coolies.

The Hon'ble Sir GEORGE ARBUTHNOT also supported the Bill.

The Hon'ble Mr. L. GOVINDARAGHAVA AIYER, in declining to give the Bill his support, said that the question for consideration was whether they would not by passing the Bill be arming the planters with powers which, if they chose, they could use to the detriment of the coolies. He did not wish it to be understood that he was not in sympathy with the planters and that he did not appreciate the action and desire of Government to strengthen the planting industry. He was of opinion that after the Bill had passed the Select Committee, the Bill had assumed an entirely one-sided aspect, and that was in the interests of the planter. The Hon'ble Mr. Acworth gave only one side of the picture, and there was another side of the same which had also to be considered.

His Excellency the President then put the proposition to vote. Votes were carried and the Bill was passed into law by a majority, the Hon'ble Messrs. PERRAZU and Govindaraghava Aiyer being the two dissenting members and the Hon'ble Nawab Sayyid Mahomed Sahib Bahadur remaining neutral.

The Council then dissolved at 1-10 P.M.

COFFEE NOTES.

Coffee prices should decline before they advance much beyond present levels. There is too much coffee in sight —*Merchants' Review*.

\* \* \*

Coffee was sold at low prices in 1830, about 8c. per lb. at place of importation, but the *per capita* consumption then was 2.98 lbs. In 1870 the price was 10.3c. per lb. and the *per capita* consumption was 6 lbs. Last year the import price was 6.4c. and the consumption was 13.37 lbs. per head, yet despite that enormous gain some folk at Washington and in New York newspaper sanctums think the grocer is overcharging the public.—*Merchants' Review*.

**Coffee in Queensland.**—In a letter from Queensland dated February 2nd, the continued drought in that colony is spoken of as very serious. "We have only had one half crop now in four years," says the writer, "and last year was a total failure. This year promises to follow suit."

A Brazilian journal states that there actually exists down there the belief that "a rise in coffee prices is possible in April, or even sooner, and especially should last season's manœuvres be repeated in New York." It should not be flattering to New York coffee men that such an opinion of them prevails abroad but we suppose they have earned it, and are bearing with resignation the gnawing void in their purses and will with equal fortitude the loss of their reputation in Brazil. Since, however, a "manœuvre" is so soon expected of them, and since the coffee men are anxious for a natural price in coffee it might be wisdom for the market to issue a bulletin to the effect that it is far from the plans of its mice and men to indulge in another flyer at the cost of two cents to the pound, no matter how fascinating the tales of frost or drought sent out to beguile. But, all in all, it speaks ill for the intelligence or mental balance of the Brazilians that they should think New York will so soon be "willing to do it again."—*Tea, Coffee and Sugar.*

**The U. S. Coffee Market.**—The coffee market, actual and speculative, is featureless, says *Tea, Coffee and Sugar* of February 4, except for the dullness which pervades the entire business. What trading of a brisk nature there was a fortnight ago has subsided and it would appear that the interior traders have supplied their immediate wants and are now resting. There is a good demand for good roasting Santos from numbers 5 to 9, but these grades seem to be out of the market and hence are not easily obtainable. Prices in them are therefore firm and inquiry general. The spot market for invoices closed quiet and steady with quotations at 5¼c. for Rio No. 7, 6½c. for Rio No. 4, and 6¼ to 6½c. for Santos No. 4. Distribution has been slow in jobbing and roasting and this has had its corresponding effect on the importing houses.

Speculatively the market has been very quiet. January and February options touched the low record mark of 4.10 but there were no sales at this bid. Rio and Santos receipts hover around the 20,000 bag mark, and thus the statistical situation remains discouraging for any advance in coffee. This alone would stimulate buying. The foreign markets remain as featureless as the New York market. At Rio prices are firm and sales are reported on a basis of 5½, c. and f., for Santos No. 5.

In Milds the interest centers on the settlement of the Venezuelan question. When this occurs considerable coffee will be released from there and this will ease the firm market here. The basis of good Cucuta is 8¼c. East India growths are quiet.

The deliveries of Java coffee in Holland, as per Dutch Trading Company's return for the month of January, were extremely scanty, consisting of only 3,230 bags, as compared with 4,780 bags in the same period last year, 3,350 bags in 1901, and 8,810 bags in 1900.

Mr. George W. Werlin, of Werlin & Willits, coffee brokers, San Francisco, sums up the present coffee situation as

follows: "The coffee market in San Francisco continues quiet and very little interest is shown in the article. The trading in this market at present is mostly Hawaiian and Salvador coffees. The former is bringing a considerably better price than last year; the latter is selling, for good unwashed, on about a basis of No. 4 Santos, *plus* freight. New Guatemala coffees from the volcanic district are arriving in an uncertain and unsatisfactory condition to a great extent, the coffee being somewhat off in color and showing a dull roast beside other defects. To date the receipts of Central American coffees at this port are about the same as last year; the total receipts last year of these coffees in this port were larger than the average, but not as large as the previous year."

Coffee is a good barometer, the bean becoming so damp and tough on the eve of a rainstorm that it is difficult to grind it. If a lump of sugar be dropped into a cup of coffee without stirring, and the air bubbles which soon rise collect in the middle, the day will be fine. If they adhere to the side of the cup there will soon be rain.

## TEA NOTES.

**American Tea.**—The domestic tea industry, so tiny and hopeless, serves nevertheless as a perennial topic for the press and for the bulletins of over-sanguine Secretaries of the Department of Agriculture, but it has, says the *Merchants' Review*, about as much prospect of usefulness as a coffee plantation in Georgia would have. The tea cannot be sold below 80c. to \$1.00 a pound and the flavour is not equal to the 25-cent tea of the grocer. The flavour is too "herby," suggesting the rawness of home-grown and home-cured tobacco in New York State. From a desire to be amiable, a judge of tea might well praise the domestic leaf to the planter's face, but it would be a rash expert who would condemn himself to drinking the stuff regularly.

Mandarin tea is sometimes heard of, but never seen in the West, its use being restricted to the nobility in China. If it ever comes here it is brought by Chinese nobles for their own use. It is probably too delicately fine to be appreciated by gross Western palates.—*Merchants' Review.*

**The U. S. Tea Market.**—The tea market remains firm and the tendency in the movement of prices is still upward, says *Tea, Coffee and Sugar* of February 4. This condition is surprising but of course gratifying to everybody except that luckless trader who has waited and is still waiting with impatience for the market to break. Even some of the optimistic looked for some sagging last week, especially in Formosas, but that much-sought-for tea was still more coy and actually increased its selling price one cent in the higher grades. Seemingly the tea is scarcer than ever, and if there is any large block of it still in first hands the fact is being carefully concealed.

The China greens, such as Pingsuey and the Country greens, are very rare, but the demand does not seem to slacken, despite the fancy prices the teas are bringing, and the market in them advanced a cent last week. There was some trading in them. As for Japans, they are out of sight and traders are beginning to look with no small favour on the Ceylon greens to take their place for matches. The better

grades of Indias and Ceylon blacks are scarce too and in demand, so that the market in them is harder.

\* \* \*

The official report of the tea transactions at the port of New York during December last, specially furnished to *Tea, Coffee and Sugar*, provides somewhat unexpected information. The amount of tea remaining in warehouse January 1 does not reach by much the total that was inferred from the way the warehouse totals had piled up in the preceding months and the known imports warranted, the warehouse totals only footing up just short of 57,000,000 pounds against 64,000,000 pounds expected. However, the deficiency is explained by the heavy withdrawal for transporation of 5,448,624 pounds, which is unusual but very natural in view of the cessation on January 1 of the tea duty. But, all in all, there was less tea in New York than supposed. The withdrawals for consumption reached the small quantity of 722,842 pounds, against, for example, withdrawals last May of 6,000,000 pounds. The fact bespeaks the extent to which the reserve of tea held by retailers and others was permitted to fall and explains the present strength and firmness of the market, dealers still buying to make good the shortage they were compelled to tolerate by the belated repeal of the tea duty. In view of the reported extensive exports of green teas to England the actual export of only 41,000 pounds is a surprise.

\* \* \*

Our faithful and unbiased statements of facts bearing on the quantity of tea in the United States seems, says *Tea, Coffee and Sugar*, to be interpreted in certain circles abroad as having in them intentional malice, to discourage the Ceylon and India tea men from continuing their shipments of tea to this side of the Atlantic. . . . But bless the dear hearts of the India and Ceylon tea men! Far be it from us to stand in the least a barrier to their ambitions and enterprise to acquire the American market as their special asset. We are no more a special pleader for China, Japan, and even American, tea than we are for India or Ceylon. In a word, we are impartial, and are partisan only to state the whole truth, no matter whom it flatters or stings. We will do even more, and say that we believe that the British grown teas, have a splendid future before them in America, and China and Japan teas may well fear the outlook unless there is a sudden, but improbable, expansion in the tea-drinking habits of Americans. . . . It is true that among us there are drinkers who say that they cannot abide the puckering quality of the British teas, and would as soon drink vinegar, but there are also drinkers who are surprised at the passion of others for Japan tea which they loath, and so on. . . . Patience and smartness in operations will change any taste, and so, why may not India and Ceylons have their day in court on the American continent? Their agents have, it is true, spent no little money in pushing the commodity, and results have not been up to expectations, so that a belief is abroad that some special prejudice exists against the British-grown tea. . . . The British tea men are dealing with a continent, and scattered sowing brings only scattered harvests. But patience and persistence will conquer even a continent sometimes, and so it is up to whether the "sometimes" is worth while.

\* \* \*

**Canada Exporting Tea.**—A Montreal broker states, says the *Canadian Grocer*, that there has been some exporting of green tea from Canada to England, in spite of the light stocks

and high prices here, as prices are even higher in England. A fairly large demand is also experienced in the United States from the same source, and if it should continue as heavy as at present, dealers will be puzzled to know what to do for stocks.

Another importer gives it as his opinion that we will be exporters of tea to the United States before the season is over.

Although this view is not endorsed by others in the trade, it is yet admitted that the condition of the United States tea market is such that before the next crop arrives they are likely to be drawing their supplies from all possible sources. Canada, should she have any tea whatever to export, would naturally be turned to among the first, and, as the Americans can offer very tempting prices, this market would not take long to exhaust.

Buyers of tea who are holding off in expectation of lower prices should take these facts into account and make their position secure while they may.

\* \* \*

**Why Japan Teas are Higher; A Theory.**—The higher prices for Japan teas are explained by some on the ground that the Jap, who, in former years, had no high ideals of dress and finery, and would put in a good, faithful day's work for very small pay, is now, since the advent of civilization and American styles, quite an up-to-date person, and needs, and demands and gets from 75 to 150 per cent. more wages. —*Tea, Coffee and Sugar*.

\* \* \*

The import price of tea in 1830 was 22·3c. per pound, and the *per capita* consumption was then ·53 lb. In 1870 the price was 29·4c. and the *per capita* consumption was 1·10 lb. Last year the price was 12·4c. and the *per capita* ·94 lb. —*Merchants' Review*.

\* \* \*

Tea blends are more commonly sold abroad than here, but they are coming more and more into use here every year. Blending is not mixing. To blend tea is to so mix it with the aid of machinery that the fragrance and flavour of the different teas in the mixture will so blend together as to form a distinct and original fragrance and flavour.—*Merchants' Review*.

\* \* \*

The warehouse supply of tea in New York on the first instant was only 56,800,000 lbs., a less quantity than was supposed be in store. But holders are not complaining. The smaller the general supply the better they are pleased.—*Merchants' Review*, January 30.

\* \* \*

Tea that is not improved by blending is sure to be injured by the process.

\* \* \*

The landings of Tea of all kinds in London during January were restricted to 26,486,150 lbs., as contrasted with 36,011,950 lbs. in 1902. Owing to considerable anticipatory duty-paid clearances prior to the delivery of the Budget last year the single month's deliveries then were swollen to 32,591,600 lbs., whereas the clearances this year have been only 24,865,800 lbs., so that the stock in bond on the 31st ultimo presented a comparative deficit of 9,631,700 lbs.

\* \* \*

**A Tea Crop Contract.**—Pinehill crop bought for 1903 at 40 cents. The 1903 crop of the Pinehill Estate Company has been sold on

contract to Messrs. C. M. Wright & Company. The price paid is 40 cents per lb. Messrs. C. M. Wright & Co., also recently bought up the Naseby estate crop for the year at the rate of 63 cents per lb. At the last Meeting of the Pinehill Company, held in August last year the Report for the year ended the 30th June, showed that a crop of 143,487 lbs. of tea had been secured, and a dividend of  $4\frac{1}{2}$  per cent. was declared. The net price realised for the tea was 35.58 cents. The estimated crop for the current year was given at 145,000 lbs., and it is manifest that the transaction—disposing of the whole crop at an advance of 4.42 cents per lb. on last year's prices is a profitable stroke of business for the shareholders and will mean a handsome increase of dividend.—*Times of Ceylon*.

**China Tea for the European Capitals.**—In the course of an article in a Straits paper regarding the alarm which the Russian Government is beginning to display that Chinese labour will displace Russian labour in the southern provinces of Siberia it is stated:—“A St. Petersburg report announces that a few days ago eight Chinese merchants arrived in Warsaw; six continued their journey into Western Europe, and two remained in Warsaw to sell tea, porcelain, and other Chinese products. This is said to be but the first step in an important undertaking and it is being made by these agents of a Shanghai company with a view to establish depôts of Chinese products in various European capitals and large towns, so that the Chinese may be able to carry on their trade with Europe on their own account, and without the aid of agents. These Chinese agents can speak English, French, and German, and one of them has a fair knowledge of Russian. They will open a store in Warsaw, and this will be made the transit branch for all Chinese goods that reach Europe by the Siberian Railway.”

## NOTES.

### Tea and Coffee.

Tea is an infusion. Coffee is a decoction. Tea should be brewed. Coffee should be boiled or distilled.

### French Import Tariff.

February 27.—A Convention has been signed securing the benefits of French minimum Tariff to coffee, pepper, tea, cardamoms, and certain other products of India.

### German Quinine, etc.

During the eleven months ending November the exports of “quinine, quinine-preparations, etc.,” from Germany were:—

	1900.	1901.	1902.
Kilos. ...	170,600	183,000	202,210

### Calcutta Tea Sales.

At the tea sale on 24th ultimo 3,000 packages were sold, mostly second-hand teas and clearing lots. Prices were firm. There was a good selection of Calcutta-finished greens, which sold at prices running from 6 to 7 annas. It is unlikely that any more sales will be held.

### The Ceylon Tea Cess.

A London cablegram, dated 23rd ultimo, to the *Times of Ceylon* says:—The Tea and Produce Committee met to-day, and an animated discussion took place on Mr. Kingsford's communication. A majority agreed to recommend an increased cess for eight months; and home producers are to be circularised accordingly.

### Indian Green Teas.

The *I. P. G.* pays a tribute to Mr. Drummond Deane, “who by his original simple and easy process for producing uncoloured green tea in bulk, which he is now developing to the production of the most varied styles of the true green teas of the

East, in conjunction with our local expert, has practically saved the situation for British-grown tea.”

### Italy.

Imports of Coffee into Italy from Great Britain were as follows:—

Average 1897-1900 ...	£96,920
1900 ...	69,920
1901 ...	56,240

during 1901 Italy exported, mainly to Turkey in Europe and Roumania coffee to the value of £154,748. The total imports of coffee amounted to £854,339, Brazil accounting for £637,929. Tea is not separately mentioned in the official returns.

### Ceylon Tea in Europe.

It is stated that in Switzerland Mr. Valentine Webster has upwards of 1,300 shops selling his tea, and all of these are doing a legitimate trade with tea they have bought, and are not merely “depôts”—a dépôt being a place where they undertake to expose the tea for sale, but may never sell, or pay for, a pound of it. He has also made a beginning with several shops in Austria and Italy. His latest tour, now in progress, is to include France, Italy, Aden, and South Africa. Mr. Webster states that there can be no doubt that the taste for Ceylon tea is growing in France.

### Ninety Years ago.

An interesting light upon the cost of living ninety years ago is afforded by the following extract from a day-book for 1816-17, formerly belonging to Messrs. Mason, Brigg, Lincolnshire, and now in the possession of Messrs. Symonds and Symonds, Brigg. The undernoted prices are from a bill paid by Lord Yarborough:—1 lb. of tea 7s. 4d.;  $\frac{1}{4}$  lb. green tea, 12s.; 2 stones soap, 10s. 6d.;  $3\frac{1}{2}$  stones treacle, 4s. 8d.; 1 lb. mustard, 5s. 4d.; 7 lbs. mottled soap, 11s. 8d.; 2 lbs. lump sugar, 1s. 2d.; and 4 lbs. currants, 1s. Soap, of all kinds, appears to have been very dear, 9s. 9d. being charged for 2 stones of common yellow soap.

### The Balata Industry in Dutch-Guinea.

The industry is restricted as to place and tapping by strict official orders. In spite of the unfavourable condition of trade during the first five months of 1901, the number of firms enjoying concessions has increased and, as prices remain satisfactory, everything seems to point to a renewed future of balata. The yield of 1901 has been about the same as in 1900, the Nickerie district alone giving 145,000 kilos. The greatest danger to the industry lies in the killing of the trees through irrational tapping by the workmen. In order to gain the greatest possible quantity of balata, the tree is often not tapped on one side only, as officially wished, but on both sides, which causes it to die off; very often the trees are even felled.

### London Tea Market.

Weekly special telegram dated 26th ultimo from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for medium liquoring Pekoes and Broken Pekoes is also steady, while the market for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is  $6\frac{1}{2}$ d. (same as last week) and the average  $7\frac{3}{4}$ d. (also same as last week). The average for the same period last year was  $7\frac{1}{2}$ d. Reuter reports that there is a generally good demand for Ceylon tea at fully previous rates and common

¼d. to ½d. higher. Fair Pekoe Souchongs are quoted at 6½d. (½d up) but the average for the week is 7¾d. (same as last week). 21,000 packages of Ceylon tea were offered for sale and 20,000 disposed of; while of the 35,000 packages of Indian tea offered, 32,000 were sold at an average of 8½d. (same as last week).

**Cacao in Uganda.** In his report on Exotic Plants of Economic Interest in the Botanic Gardens at Entebbe, Uganda, Mr. J. Mahon says :—“The two cases of cacao (*Theobroma Cacao*) sent out here by Kew in August, 1901, have thriven exceptionally well. They arrived during the drought already referred to, and as there could be no thought of planting them out I had them all put in pots, and, to shade them, had recourse to converting my tent into a greenhouse, and it suited the purpose admirably, whilst there they were attacked by rats, which apparently, in pure mischief, gnawed the stems of many quite close to the soil. Trapping several frightened them away eventually. It was not possible to plant out the cacao till December, 1901. Their progress in nine months permanently planted out has been and continues to be most satisfactory. I am not aware of any country where cacao is grown commercially at 4,000 feet altitude. If we prove it can be done here the experiment will be valuable.

**A Good Yield of Rubber.** Mr. Francis Pears, writing from Muar, gives the following information :—“In case you have not received previous information, I append particulars of the yield of two cultivated Pará trees at Gapis Estate, in Perak, reputed to be 25 years old. The tapping was conducted by Mr. Baxendale, and extended over two months, and was done evidently with the intention of procuring a maximum yield.

	Tree No. 1.	Tree No. 2.
Girth at one yard from the ground	89 in.	56 in.
	lb. oz.	lb. oz.
Yield of clean rubber, dry	15 12	11 2
Yield of scrap rubber, dry	2 4	1 8
Total	18 0	12 10

Tree No. 1 had never been previously tapped, and was worked from three channels, whereas Tree No. 2 was worked from two channels only, and was tapped during 1901 and yielded 3 lbs.”

**The Crockery Did It!** Some little time ago the London correspondent of the *Times of Ceylon* wrote :—“The largest tea-rooms in the South of France are owned by a M. — who hitherto has always used China tea. Despite all Mr. Webster’s endeavours, this gentleman was faithful to his old love and steadfastly refused to give Ceylon tea a trial. On the occasion of Mr. Webster’s last visit, however, he took him samples of his “Quaker” crockery, which he supplies free to all those who sell his teas, and the owner of the restaurant was so much taken with these that he agreed to take ten kilos. of a high-grown Ceylon Pekoe for use one afternoon, and to report results. When Mr. Webster went in the evening almost expecting to hear that the experiment had been a failure, the kitchen register was produced and it was found that out of several hundred cups served only five had been complained of, which was just the average when the best China tea was used. A contract was at once signed for the exclusive use of Ceylon in future ; and by French law the possession of the Quaker cups and cutlery

lays the signatory open to a heavy penalty if he does not adhere strictly to the terms of the agreement.

**Cooly Recruiting for Ceylon.** Major E. Gordon Reeves, of Madulkele, was to start on the 2nd or 3rd instant and proceed to the Coast with funds and two or three Kanganies from different districts. He expects to be able to land coolies in Tataparai for Rs.10 or Rs.12 per head, so that on the estate they will not cost more than Rs.15 each. If, however, he has to go further afield, say to Vellai or Arcot, it will increase the cost per head. Major Reeves believes that available labour, is plentiful : but that Kanganies, for reasons not far to seek, will not introduce it. He writes :—“In the coffee days *thousands* of independent stragglers singly and in small parties could be met almost any day coming down with their small bundles and chatty (no boxes in those days). It stands to reason that such as these (with at the most, Rs.2 at their disposal) cannot afford to emigrate *viâ* Tuticorin. By the Strait they came across for 50 cents, and that 50 cents with the rice they carried represented the cost of their journey. The blocking of the North road was doubtless a necessary and wise measure ; but it has resulted in the blocking out not only of plague and cholera, but probably 10,000 head of Tamil labour per annum.

GENERAL ARTICLES.

THE VALUE OF MANURING.

ENCOURAGING PROGRESS.

An Australian paper remarks :—It is not too much to say that the widespread application of artificial manures to the wheatfields of Australia has opened up a new era to the cultivator. No movement, not even the introduction of scientific dairying by the invention of the separator, is so hopeful in its prospects as the advent of the seed drill, with its cunning device for spreading so economically and so effectively the artificial fertilisers which science has told us contain the plant food growing crops are in need of. Mr. Pearson, the late Government chemist, and his successor, Dr. Howell, have, by their intelligent and well-sustained experimental work, rendered a service to the State that is not yet fully appreciated. It is not only that the cereal growers have been shown the way to increase the low average yield of their fields, but the fruit-growers also, quick to recognise the value of manures to the wheatfields, are applying them with gratifying success to the orchards, and so this healthy movement grows, and the return of normal seasons will witness far more of true land development and less of land speculation than has existed in the past. There are millions of acres in the State held for grazing, which have become sheep sick by continuous grazing, that, now widespread knowledge exists of the requirements of plant life, and how really to apply them by manuring, ought to pass in the natural order of things to cultivation, and there are large areas of second and third class land still in the hands of the Crown which, by good management, could be rendered available for the same purpose. Because it must be understood that we are only on the fringe yet of soil improvement. The experiments so far have gone in the direction of restoring to the soil the phosphoric acid (in the shape of bonedust and superphosphate) which analysis has shown is deficient in most of our soils, and particularly those of the North, even in their virgin state. And it is because this has been so clearly demonstrated by the experiments begun by Mr. Pearson that the widespread use of phosphoric fertilisers has set in. It is, however, clearly the work of the demonstrator to widen the field of his experiments, to take heart from the fine response which has been made to his teaching, and never halt until we have materially raised the position of Australia from being at the bottom of the list of all the grain-growing countries in the world in regard to average production per acre. Great Britain stands at the head of the list, and this position has been attained, in spite of a rigorous climate, by the thoroughness with which her fields are manured. The wonderful experiments begun at Rothamsted, in Hertfordshire, in 1843, by

Sir J. B. Lawes and Sir Henry Gilbert, and continued ever since, conclusively show that wheat grown continuously on unmanured land dropped during the first eight years to an average of 17 bushels per acre, and averaged for forty years only 13 bushels; manured every year throughout the 40-year period with superphosphates and potash manures only, the average was raised just two bushels per acre. With the addition of nitrogen to these the yield averaged  $30\frac{1}{2}$  bushels per acre for the 40-year period, and with farm-yard manure only, at the rate of 14 tons per acre annually,  $31\frac{7}{8}$  bushels were obtained over the same long period of time. Then, again, their experiments showed that their first attempts to add nitrogen, by applying nitrate of soda or sulphate of ammonia at the time of sowing the crop, were comparative failures. It was washed out of the soil by the Winter rains in large quantities, and it was only by top dressing the growing crop in the Spring that satisfactory results were at last obtained. Professor Wrightson, an able scientist and a practical farmer, states in a recent work that there is scarcely an acre of wheat grown in England to-day that is not top dressed with nitrate of soda in the Spring, although heavily manured in the Autumn with farm-yard manure and superphosphates.

One phase of manuring on which brilliant scientific research during recent years, especially in Germany, has thrown a flood of light is the value of leguminous crops, peas, lupins, vetches, clovers, and lucerne, either for turning down as green manure or for crop rotation. By the action of bacteria in the soil little nodules are formed on the rootlets of these leguminous crops, which gather not only all the nitrogen they require for their own growth from the atmosphere, but sufficient also to enrich the soil with this coveted plant food after they have been removed. Green manuring, crop rotation, the top dressing of the cereal fields in Spring time are all practices which should find a place in good farming, wherever they can be profitably applied.

## BACTERIA IN PLANTS.

### SOME CURIOUS FACTS.

Mr. G. Clarke-Nuttall, writing in *Longman's Magazine*, deals in an interesting manner with the results of the experiments made in seed and soil inoculation during the years 1897-8-9, at the State Experimental Farm at Ottawa. The net result, he says, with all the crops was that those to which the bacteria had been introduced were far superior to those to which they had not been brought. The reports of the various stages give much important matter for thought. With reference to the clover, it was noticed at the end of the first year that the weight of the crop from the soil inoculated, and also that from the seed-inoculated plants, exceeded the weight of the crop grown without nitrogen, and that this increase was chiefly due to the greater development of the roots. There was also considerably more nitrogenous matter in the treated crop than in the untreated, though this was not due to any part of the plant containing more nitrogenous matter than usual in its tissues, but because the plants were more flourishing, and therefore produced more root, stem, and leaves. The trials further showed that the best results of all came from seed inoculation rather than from soil sprinkling. The second year, therefore, only two sets of clover plants were grown, one of which had not had any of the bacteria introduced to it in any form whatever, while the other had had its seed inoculated before being sown.

The results confirmed the previous year's observation in a very gratifying way, for the plants from the inoculated seed were much more luxuriant than those from the untreated seed. The third year was even more interesting: the plants of the second year had been left growing and had survived the Winter, so there was no further treatment of the soil, and, of course, no further sowing of seed. During the Spring "both series made excellent growth, but the plants from the inoculated seed were very much larger." This is probably due to the fact that the treated plants were by this time much the more largely endowed with bacteria nodules both as to size and number. So striking, indeed, was the result that a photograph, taken of the plants as they grew, testifies unmistakably to the superiority of the one over the other. As with clover, so with peas. Direct seed inoculation proved more efficacious than soil sprinkling, probably because the bacteria were more "on the spot." The plants to which the bacteria had been introduced through the medium of the nitrogen were invariably

finer than those left untouched, while the little nodules on their roots were present in far greater numbers.

Yet, notwithstanding its value, it is by no means certain that nitrogen, in its present form, will ever be commonly used as an improver of crops. For the bacteria composing it are very susceptible to external influences, and if these are not exactly what they require they quickly die, and the preparation becomes valueless. From Hellriegel's discovery we obtain a new and startling view of possibilities which may be lying all unsuspected beneath the common well-worn facts of plant life. We learn that bacteria may play a definite part in the course of plant development. From the later experiments we further learn that we can manipulate these bacteria; that we can introduce them to certain plants; and that we can, by inoculating a seed, affect the after-development of that seed and stimulate it in various directions, just as by inoculating an animal we can produce certain definite and distinct results. But it must be remembered that the whole question of seed inoculation is still in its varietal infancy, and we cannot yet even indicate the length to which it may be carried.

## COFFEE IN LONDON.

For the first time for many months the world's visible supply showed a decrease on the 1st instant compared with a month ago, says the *Produce Markets' Review* of February 7, 1903. Some slight reduction was expected, but it proved larger than was anticipated, being 15,440 tons, and, in consequence, there has been more activity shown in the terminal market and quotations have advanced about 9d. per cwt., though yesterday, with slightly heavier receipts, the tendency was not quite so strong, and with the excessive stock in the world it will require several months of decreases to have any real lasting effect. At the auctions the demand has been fairly brisk, though it is felt that the crops are only just commencing and heavier supplies will inevitably be offering shortly, so that dearer rates ought not to be looked for. The new crop East India shows little improvement, but prices are decidedly low, and as a result, there has been more competition, and rates have a tendency to harden.

## TEA IN LONDON.

INDIAN TEA.—A steadier tone has prevailed in this market, says the *Produce Market's Review* of 7th ultimo, and at the public auctions on Monday a larger proportion of the offering changed hands than has been the case during the past few weeks. Since the publication of the figures, a stronger tone has been manifest, and unless the later imports are heavier than recently reported from Calcutta, the market will probably assume a stronger tendency in the near future. The total imports from the 1st June to the end of last month are smaller by 7,000,000 lbs. than for the same period in the preceding season, while the deliveries are larger by 2,000,000 lbs.; but this does not indicate the exact position, inasmuch as the removals from bond during the past month have been normal, while for January, 1902, upwards of 6,000,000 lbs. more than actual requirements were released from the Customs. The stock, contrary to expectation, is smaller by 3,600,000 lbs. than was the case a year ago, and coupled with Ceylon, the deficiency amounts to 5,400,000 lbs., while the total stock of all growths shows a diminution of 9,600,000 lbs. It is apparent, therefore, provided

that the figures fairly represent the position, and the increase in the consumption continues, the available supply, later on, will be much smaller than for several seasons past. The movements of Indian tea during January compared with the same month last year were: Imports, 16,220,000 lbs. and 21,101,000 lbs. respectively; Deliveries, 14,269,000 lbs. compared with 20,349,000 lbs.; and the Stock, 70,163,000 lbs. against 73,770,000 lbs. During the week 30,307 packages were submitted to public auction, and as a better tone prevailed, the tendency was in favour of sellers.

**CEYLON TEAS.**—The better tone noticed last week in this market has been maintained, and the sales on Tuesday were well supported, firm prices being paid for all descriptions. The lower grades of Whole Leaf were in better request, and were well taken by the trade at late rates, a smaller quantity being withdrawn, but no alteration in values can be quoted. Medium Pekoes were in somewhat less demand, and prices were slightly irregular, occasionally favouring buyers. In Broken Pekoes no change was manifest,  $7\frac{1}{4}$ d. still being practically the lowest quotation for garden teas. The supply of Dusts has been very limited, and nothing was obtainable in these kinds under  $5\frac{1}{4}$ d. The following are the figures for the past month compared with January last year. The imports were 7,988,000 lbs. against 11,109,000 lbs., the deliveries being 8,073,000 lbs. and 9,182,000 lbs. respectively, while the stock stands at 19,796,000 lbs. as compared with 21,638,000 lbs.

**CONGOU TEA.**—At the public auctions held on Wednesday a fair quantity was offered including some good teas, although the quality generally was poor. Prices were firm for all descriptions, and holders refused to sell except at full rates, in which they are fully justified, as the statistical position is exceptionally strong. From the official figures recently published it will be seen that the stock of China tea has fallen from 18,326,000 lbs. on the 31st January, 1902, to 14,314,000 lbs. on the 31st January, 1903, while the deliveries for the five months ended 31st January of this year show an increase of 2,882,000 lbs. over those of the corresponding period last year. At the same time it will be noted that the imports

during the same time reveal a falling-off of some 4,271,000 lbs. From these facts it seems highly improbable that low-priced sweet teas, which are now obtainable at most reasonable prices, are likely to remain long where they are.

**OTHER CHINA TEAS.**—More activity is reported in the Green market, and a better tone prevails than was the case last week. The decline in medium Gunpowders was only of short duration and higher prices are again anticipated, the quantity coming forward, according to reports lately received, being very limited. There is very little of interest to report in Fancy teas and prices remain unchanged. The following are the public sale figures for the week:—934 packages of Green tea were offered, of which about 40 were withdrawn, and 128 packages of Fancy tea, 95 failing to find buyers.

The arrivals for the week are as follows:—

“Orontes,” from Colombo; “Clan McIntosh,” from Tuticorin, calling at Cochin and Calicut; “Magician,” from Calcutta and Colombo.

#### THE INTERNATIONAL COFFEE COMMISSION.

##### FINAL REPORT.

The following is the final text of the recommendations, declarations, and Resolutions adopted by the International American Coffee Commission:—

##### PRODUCTION.

1. *Resolved*: To recommend that all Governments and Municipalities should procure good coffee seeds to acclimate and distribute, in order to obtain better prices and increase the demand for coffee; that agricultural institutions and botanical experimental stations be established in countries where they do not exist, in order to acclimate and propagate new species of coffees; that practical demonstrations be made to farmers regarding the most modern developments accomplished in regard to coffee; that prices be offered in order to stimulate cultivations other than coffee; that special laws be enacted for the protection of owners' coffee plantations.

##### DISTRIBUTION.

2. To recommend that the abuse of changing the original packages or marks, showing whence the coffees are imported, be severely punished; that effective propaganda be established to extend the use of coffee in new markets; that local duties on coffee be abolished; that coffee, when desirable, be sold at auction; that facilities of transportation be developed; that regulations be adopted so that coffee shall be packed in such condition as not to suffer alteration; that each package of coffee be marked with the name of the country whence it is imported.

##### CONSUMPTION.

3. To recommend that all Governments make the use of coffee a regulation in their armies and navies; that the Governments in countries which produce coffee establish, as soon as possible, in countries where coffee is not now consumed, places for the demonstration of pure coffee; that coffee-producing and consuming countries prohibit the sale of adulterated coffee and all substitutes bearing the name of coffee, and in case this prohibition cannot be enforced, that a heavy duty be imposed on said substitutes.

##### PRESENT CRISIS.

The following three declarations and five recommendations were adopted:—

1. That although it is desirable that many improvements be introduced in the production and trade in coffee, the present crisis

## BASEL MISSION WEAVING ESTABLISHMENT, CALICUT, MALABAR.

## MANUFACTORY OF COTTON GOODS.

VARIOUS PATTERNS IN  
TROUSERINGS AND COATINGS, GINGHAMS  
AND LADIES' DRESS MATERIALS.

BASEL MISSION WEAVING ESTABLISHMENT

in that industry consists only in the lack of profit and in ruinous prices paid for the commodity to the producer.

2. That the principal cause of the low price which brings about the present crisis is the excess of the supply over the natural or normal demand.

3. That speculation may, to a certain extent, be responsible for the crisis, but such speculation would not produce such an effect if said excess of the supply over the natural or normal demand did not exist.

RECOMMENDATIONS:—*First*.—To prohibit, by the most efficient means, the exportation of *triage* as coffee; the most diligent action on the part of the consuming countries, to prevent the importation and use of said *triage* and of whatever adulterations or substitutes which are offered in the name of coffee, or are intended for adulterations.

*Second*.—The adoption of the most advisable and effective measures in order to obtain from the consuming countries the suppression of or at least a reasonable reduction in the Customs duties and other taxes affecting the importation, distribution, and consumption of coffee.

*Third*.—The organisation of an International Union composed of the greatest possible number of persons interested intended to guard perpetually the interests of the coffee industry, maintaining a constant propaganda, spoken or written, and, by means of the diffusion of knowledge to increase, to its utmost, the use of coffee in the world.

*Fourth*.—As the only measure which may modify favourably and quickly the price at which producers sell their coffee, the elimination from sale or exportation of such a quality of the total production as may reduce the supply to the reasonable limits of consumption, a surplus stock of not more than 3,000,000 bags of 60 kilograms, or 132 pounds, each, being allowed as a reserve, the use of which shall be discretionary for the time being, and dependent upon the bulk of the visible stock.

*Fifth*.—To call together as early as possible, a Conference of fully empowered delegates, thoroughly competent in this branch of economics, for the purpose of concluding a convention or treaty concerning the measures of an international character which this conference has recommended, or of others which may be suggested later on.

#### FUTURE CONFERENCES.

The following Resolutions were adopted:—

The International Conference for the Protection of the Coffee Industry,

*Resolves*: (1) To invite the Government of Brazil to convene, as soon as possible, and in the place and date it may designate, a second International Conference of Experts on Coffee for the purpose of concluding the conventions or treaties of international character, which may be derived from the measures recommended by this Conference, or which may be hereafter suggested for the protection of the coffee industry.

The delegates to such Conference must be provided with full authority to conclude and sign conventions or treaties.

(2) To invite, also, the Brazilian Government to open and continue all necessary or convenient negotiations with the Governments of the other producing countries, in order to carry out the Resolutions, recommendations, and desires of this Conference.

#### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange, 17th January, 1903.**—Ninety days' Bank rate on London opened on Monday at 11 $\frac{3}{4}$ d. rose to 11 $\frac{1}{2}$ d. on Tuesday and closed this evening unsteady at 11 $\frac{3}{4}$ d.

It is clear, now that the factors are recognizable, that the oscillations of the last two or three weeks were mostly, if not wholly, of a speculative origin.

The sentiment of the market is still, decidedly pessimist, but it is overbought and as soon as the "bears" try to act on their convictions bills flow in from every side and a re-action ensues. In a similar manner attempts to put rates up have been shortlived, because, as we have pointed out before, the real state of the market is that of unstable equilibrium and the trade supply and demand for bills being about balanced and sentiment alone determines oscillation to one side or the other.

Rubber bills are said to be coming in freely and may be counted on to supply 2 $\frac{1}{2}$  to 3 million £ up to the end of March.

Coffee is giving about £350,000 per week and if shipments continue at the same rate will yield £4,000,000 more. Other exports may be counted on for another million making the total up to 7 $\frac{1}{2}$  or 8 millions for the first quarter of the current year.

Against this has to be put the value of imports, which if continued at the present rate, which seems scarcely likely will exceed £6,000,000, and with Government requirements, for which some £1,200,000 are requisite, make in all £7,000,000, and leave only a half to one million over for private remittances.

Last year exports during the first quarter yielded over £9,000,000 whilst Imports did not exceed 4 $\frac{1}{2}$  millions.

The surplus of bills left over after satisfying all the requirements of importers and Government in 1901 was, likewise, very much larger than last year, probably to the extent of some 9 or 10 millions sterling, and cannot now be counted on to supplement supply to any extent.

For this reason we conclude that if during the next three months the supply of bills does not fall absolutely below demand, it cannot very much exceed it unless supplemented by some extraordinary resources such as the proceeds of sale of the Sorocabana Railway or negotiation of a loan. Should such an operation come off soon there is no doubt that in the state of semi-equilibrium there would be an immediate and perhaps violent rise. But, otherwise, it seems likely we shall witness continuous oscillations of the rate for the next month or so, with, perhaps, a decided downward tendency in April or May unless coffee shippers should take to selling ahead, or some Government negotiation supply funds abroad to draw against.

At present the tightness of money prevents any serious speculation for the fall, but should the tendency prove to be as we anticipate, frankly downward, plenty of money will be quickly forthcoming.

It is true that last year the value of Imports and Government requirements alone, during the second quarter were very little more than that of Exports, but never actually fell below it, and so, with the assistance of the Bank and a little speculative selling in May and June rates were steadily maintained.

Whether under completely different circumstances, with the trade and Government demand positively in excess of the supply of bills, history will this year repeat itself seems to depend almost exclusively on the course the Bank may determine to adopt.

During the week ended January 16th the value of coffee shipments (*embarques*) was £396,000 against £311,000 the previous week and £305,000 last year.

Declared sales were 225,000 being 44,000 bags more than the previous week's and 115,000 bags over last year's.

**Coffee.**—Entries at Rio and Santos during the week ended 16th January were 30,075 bags larger than the previous week's and only 11,668 under those of the corresponding week last year of which they represent 94.3 per cent. Up to the 16th instant crop entries amounted to 8,623,792 as against 11,072,322 bags of which they represent 77.8 per cent.

Entries at Rio and Santos up to the Friday of the second week in January during the last 5 crops were as follows:—

YEARS.	Entries million bags.	Crop.	% entries to crop.
1897-98 ... ..	7.626	10.4	73.3
1898-99 ... ..	6.097	8.8	69.2
1899-00 ... ..	7.079	9.6	78.6
1900-01 ... ..	7.470	10.9	68.5
1901-02 ... ..	11.072	15.5	70.0
	39.344	54.6	72.8

On the basis of 72.8 per cent. the percentage of entries to the crop during the last 5 seasons, the total entries at Rio and Santos for the current crop on June 30 should be 11,845,000 bags.

Coffee this year has been no doubt hurried down in an unprecedented manner and making allowance for this the probabilities are that entries will barely exceed 11,000,000 bags.

Shipments (*embarques*) during the week ended December 16 were larger again being 53,256 bags more than the previous week's and 113,342 more than the corresponding week's last year.

Declared sales were also large, 44,000 bags over the previous week's and 115,000 more than the same week's last year. In spite of all, however, stocks on the 15th instant showed an increase of 92,605 bags compared with the previous Friday's, and were then 142,000 bags heavier than on the corresponding date last year.

The value of the coffee actually shipped up to 16th instant is £4,260,407 less than in 1902.

Prices improved a little during the week the average for n. 7 at Rio being 4\$357 as against 4\$344 the previous week and 5\$192 last year; for good average the average at Santos was 3\$983 as against 3\$060 or 5\$100 respectively, and at New York 5'25cts. as compared with 5'21 the previous week, and 6'58 last year.

SANTOS, January 16th, 1903.—Our market showed a better tendency throughout the week, Commissarios being sometimes able to obtain up to Rs.4\$200. The market closed to-day somewhat weaker at Rs.4\$100 Commissarios basis. The sales were large for the time of the season, declared sales for the week being 172,000. The better tone was caused partly by shorts covering and partly owing to somewhat better orders from the other side. In consequence of the law now published by the *Viario Official* taxing planters, who increase coffee plantations at the rate of 2 contos de réis (about £100) for every *alqueire* of new coffee planted as also of the rumour of a new bill being still voted providing that 20 per cent. of the next crop shall be burned, Europe market seems to have been influenced and during the last days orders were received at 27/9 to 28/3 for superiors, 26/3 to 26/9 for good average. The States also were in the market principally for specialities.

The qualities mostly wanted are Superiors and Goods. Primes were paid for from 4\$600 to 4\$700, Superiors 200 to 300 réis below, Goods 300 below Superiors. Regulars remained practically unchanged. Low coffees are difficult to sell and only Ordinary could be sold relatively at average prices, say at about 3\$000. Fine washed showed a bit better demand, lower qualities of washed being nearly unsaleable. Peaberry still continues on a low basis, their prices being only slightly above those for flat bean Coffee. For really fine Peaberry up to Rs.2\$200 could be obtained. Fine Bourbons fetched up to Rs.4\$900. There is proportionally fair amount of old coffees "goods," "superiors" in the market but they really do not obtain much of a premium.

Entries and *passagens* during the week continued on the level of those of last week.

Shipments were very fair and are about 22,000 more than last week, our stocks (1,196,098) showing a decrease of about 60,000 against last Friday. Stock in first hands is calculated between 600,000 to 700,000.

Exchange kept steady between 11 $\frac{25}{32}$  and 11 $\frac{7}{8}$  not influencing the coffee markets.

On the whole, with the present entries, no appreciable rise in prices is expected, but general opinion is that our market will sustain present prices more or less for the time being. For certain qualities higher prices may be obtained soon, as Exporters find it already more difficult to buy all their requirements in the running lots.

Quality of receipts is falling off and a large quantity of our existing stock consists of very low qualities, undesirable for consumption in the present form. We presume that the situation—specially in New York but also in Hamburg—is very analogous, very likely worse, to ours and that the assortment in both markets is poor.

The N. Carolina State Board of Agriculture has been analyzing green and roasted coffees and found the former to be positively freer of adulteration than either roasted or ground. Arbuckle's brands were found to contain from 1'35 per cent. to 1'61 per cent. of glazing matter, from *nil* to 7'7 per cent. of broken and damaged coffee and from *nil* to 4'4 per cent. of immature coffee. Woolson's Spice Company on the other hand showed samples as high as 2'10 per cent. glazing matter, 16'8 per cent. immature coffee and were the worst of all except one "B. M." Davenport and Morris with 48'4 per cent. of broken coffee and 10'8 per cent. of immature coffee.

From *O'Café* we translate the following summary of a report on the effects of the late frost on plantations in the district of S. João da Boa Vista:

"There are in this prosperous district 374 different plantations all of them of coffee except 10.

The remaining 364 counted before the frost 10,001,200 coffee trees giving an average of 27,480 trees per estate showing how

property has been subdivided in the district. Before the frost the percentage of trees under 4 years to the total was 25'8, a rate that can be shown in few other districts.

The number of trees killed by the frost is 971,700 or 9'77 per cent. The number of trees over 4 years killed and damaged whose bearing 1903-1904 will be affected is 3,191,000 or 43 per cent. of the total. The reporting Committee calculate the damage done to the coming crop at 40 per cent.

This is one of the districts that suffered most. These conclusions are based on the following figures:

Number of trees in existence before the frost:

Over 4 years	...	7,420,400
Under 4 "	...	2,580,500
		10,000,900

Trees injured:		
Over 4 years	...	2,764,500
Under 4 "	...	1,228,300
		3,992,800

Trees killed:		
Over 4 years	...	426,500
Under 4 "	...	542,200
		971,700

Trees remaining in good bearing condition ...	...	4,964,500
		5,036,004

The damage is estimated as follows:

Probable yield before the frost	...	660,000 arr.
Total loss by 971,700 trees killed	...	64,132
Loss 75 % of yield of 3,992,800 trees	...	199,868
		264,000
Probable yield, 1903-1904	...	396,000

## THE PARTHENOGENESIS OF THE APHIDES.

The writer of a "Communicated" article in the *Times of Ceylon* says:—

I believe that up to the present day the male of the Tea-Aphis (*Ceylonia Theaecola*) one of the most common of the numerous tea-blighters, has not been discovered in Ceylon, and I fancy this is true of India also. Hence there seems to be an idea that the Aphis as found in the East is continuously parthenogenetic. This appears to me more than unlikely, for the following reasons:—

In England and in countries where there is a pronounced Winter, the Aphides which have been breeding parthenogenetically (*i.e.* without males), also viviparously, in countless hosts all the Summer, when food is abundant and the weather warm; on the approach of Winter (when the conditions of life become harder), produce both males and females. These unite in the ordinary way, but instead of viviparous offspring, eggs are produced. These live on through the Winter in some secure spot, and at the approach of Spring develop into females, which again produce parthenogenetically and viviparously.

Now in Ceylon there is no Winter and therefore this fact, backed up by the fact that no males have been discovered, has rather inclined to the idea that no males are produced.

However experiments have been tried with the artificial heat of greenhouses to keep up the parthenogenetic succession of Aphides and this was successful for two or three years, but then males were produced. Why? Was it simply because the artificial warmth failed, or was it because the germ-cells had become weak and needed the stimulus of a male to regenerate them.

In the lowest forms of life, to which we must always turn, if we would know the Why and the Wherefore, some of the protozoa seem to all intents and purposes to be immortal, increasing constantly by division, without having recourse to conjugation; but in the ciliated infusorians, which belong also to the protozoa, Professor Manpas proved that after a great number of generations produced by division, the family of infusorians which were kept apart by themselves, became as Professor Geddes says "Not exactly old, but were being born old" and parthenogenetic division came to a stand-still; however, should an individual from this family be removed before the generations had exhausted them-

selves, and be placed among foreign infusorians, this individual would at once conjugate with an unrelated form and then the series of successive parthenogenetic generations would once more begin over again. However, after this new series had reached the 130th generation, the family again grew old and the removal of the later members was no longer of any use, as the power of conjugating was lost.

Much of this information is taken from Professors P. Geddes and J. A. Thomson "Evolution of sex" and it is there stated that "Without the normal sexual union the family becomes senile. Power of nutrition, division and conjugation with unrelated forms come to a stand-still, etc." Now if senility occurs through continued parthenogenecy so low down in life as the ciliated infusorian, much more surely would it occur, in the comparatively highly formed Aphidae!

Hence it seems that although continued vegetation and warmth would warrant the belief of continued parthenogenecy among the Aphidae, yet there are other factors; as illustrated by the lower forms of life, which demand that at certain periods, males must be reintroduced, so as to replenish the gradually weakening race.

Perhaps by this time the male Aphis has been discovered in the East and I am labouring under a delusion that it has not been found and is not supposed to exist, but if this is not so, the above reason seems to me clearly to prove that at certain seasons the male Aphis must be reintroduced for the safety of species.

## COFFEE, CARDAMOMS, AND RUBBER.

### A COMPARISON BETWEEN SOUTH INDIA AND CEYLON.

Mr. E. G. Windle, of Kotagiri, Nilgiri District, is now on a visit to Ceylon, having arrived yesterday with his daughters, who left for Home by the B. L. *Warwickshire*. Mr. Windle, who owns estate property in the Annamalai and the Shevroy Hills, started

#### CARDAMOM CULTIVATION

on the Annamalai property about five years ago; while coffee is grown on his Shevaroy plantation. As regards cardamoms, he mentioned that the general opinion among South India cardamom growers was that the product was better cured in Ceylon than in India. It was only a matter of opinion, and he could not tell for a certainty that it was so because he had not had the opportunity of studying the process of curing in Ceylon. The fact remained, however, that South India cardamoms fetched better prices, and the natural conclusion therefore was that the Indian product was of better quality. Mr. Windle thought Mr. Westland's cardamom cess scheme an excellent one, and there was no doubt that the sale of the product would be increased as a result. With regard to new products he did not care to venture an opinion as to whether the experiment in

#### RUBBER

cultivation would prove a success. Castilloa and Pará rubber were planted largely in the Nilgiris and the Shevaroy Hills, and most of the trees, which were about four years old, showed excellent growth. These trees had not yet been tapped, but he hardly thought rubber in South India would be successful, seeing that it was grown at an elevation of about four thousand feet. Anyway, it remained to be seen whether it would turn out successful or not. A good deal of the rubber was planted among coffee, more or less with the idea of using it for shade. With regard to

#### COFFEE,

Mr. Windle did not think that coffee was cured better in Colombo than in South India, nor that a good deal of coffee was now being sent over for that purpose to Colombo, but he understood that the idea was expressed by people in Colombo who wished to buy coffee in South India that they preferred to cure it in Colombo than to have it cured in India. The Ceylon coffee no doubt fetched a better price than South India coffee, but whether that was owing to the ancient good reputation of Ceylon plantation coffee or not, he could not say.

#### VANILLA

cultivation, which the South India planters had tried and given up, some time back, was not likely to be revived.

Mr. Windle goes up-country by the mail train to-night to visit some friends, and will return to Colombo on his way to South India in a few days' time.—*Times of Ceylon*.

## TEA IN RUSSIA.

The new overland route may revolutionise the conditions of the tea trade in Russia. As an article of widespread consumption among Russians of all classes, and in view of the increasing import of Ceylon tea of late years some more detailed information may be of interest. While Russia is, undoubtedly, the largest consumer in Europe so far as the quantity of the liquid tea drunk is concerned, the amount of tea consumed, owing to the different method of mixing, is but 0.93 lb. per head per annum, whereas in the United Kingdom it is over 6 lbs. (taking the data of 1900). It is far more expensive than in the United Kingdom, 4s. per lb. of 14½ ozs. being the price for average tea, but owing to the weaker infusion habitually prepared it is made to go much further.

The supply from China has diminished by 36,207,322 lbs. since 1899, partly accounted for by the import of Ceylon teas, which, according to a report of the Russian Vice-Consul at Colombo, rose from 3,000,000 lbs. in 1895 to 23,000,000 lbs. in 1901. Ceylon tea is used in Russia mainly for blending purposes, Russian taste not yet appreciating its particular flavour as a drink by itself. About 50 per cent. now comes through Russian firms established in the island. Its special qualities and comparative cheapness have now established a firm hold on the Russian market.

Chinese teas hitherto reached Russia either direct by sea, mostly in the Volunteer Fleet steamers from Hankow to Odessa, or overland *via* Siberia. The Siberian routes were:—

1. By water to Tientsin, thence overland *via* Kalgan and Kiakta to Irkutsk. This, the ancient caravan route, will probably succumb to the altered transport conditions.

2. By sea to Vladivostok, and thence—

(a) By the Ussurian Railway to Khabarovsk, thence up the Amour and Shilka to Sretensk, and so on to Irkutsk.

(b) To the station of Iman, on the Ussuri line, thence by the River Ussuri to the Amour and Shilka.

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,

*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

[w. 21-2-03.] **ESPLANADE, MADRAS.**

3. By sea to Nikolaievsk, on the Amour, and thence by the Amour and Shilka.

The incidence of duties has hitherto played an important part in the distribution of tea within the Empire. An increase of 3 roubles per pound of the duty on tea conveyed *via* Siberia has been decreed with a view to equalising the cost of delivery by sea and by land. It seems to be expected that the Ussuri and Amour routes will now lose their tea cargoes, as indeed the main part of their traffic. The chronic detentions caused by the shallowness of the Amour were a perpetual hindrance to regularity of delivery. The Manchurian railway authorities and the Government are evidently doing their best to attract this valuable freight to the direct land way. The Consul says it seems possible that the indirect trade in tea to Russia *via* the United Kingdom will be considerably curtailed by the operation of the Siberian railway.

## TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, January 29, 1903.

This week we report a better business in all kinds of teas locally. Prices are unchanged, but jobbers generally are beginning to sort up and are picking up teas that show good value. This is especially the case with regard to Ceylon greens, which are at present showing excellent value.

MONTREAL, January 29, 1903.

The demand for teas on the local market is not active for any but small lots; in that way a fair trade is doing. Teas are very firm here and their position in the United States is also strong. People in the United States are reported to be holding off in expectation of a break, which is not considered even a possibility by tea-men. They look for higher prices. In addition to the fact that certain teas, like Japans and greens are scarce and must continue so until the next crop arrives, there is also the feature that an export trade to England of no mean proportion is being done from the Republic, which may easily result in creating very fancy prices. It is estimated that of the 85,000,000 lbs. of tea in the United States, about four-fifths has been sold already, leaving one-fifth to do business for the next six months. On the London market China teas have been quiet, although some inquiry for export was received for the better monings, and a small business in low-price teas was done with blenders. Holders of lower grades are firm, and any export demand would soon send up prices. Indian teas are firm and lower grades are inclined to harden.

## THE SHOT-HOLE BORER.

SOME CORRESPONDENCE.

(Copy.)

SECRETARY, Planters' Association of Ceylon, Kandy.

SIR,—I am directed to forward to you the enclosed copy of a letter received from the Director, Royal Botanic Gardens, together with a copy of the letter from the Government Entomologist therein referred to, regarding the continuous spread of the "shot-hole borer" pest in tea, and I am to state that His Excellency the Governor will be glad to be favoured with an expression of the opinion of your Association on the subject.

I am, Sir,

Your obedient servant,

Colonial Secretary's Office, (Signed) A. G. CLAYTON,  
COLOMBO, January 23rd, 1903. for Colonial Secretary.

(Enclosure.)

The Hon'ble the COLONIAL SECRETARY, Colombo.

SIR,—I have the honour to forward the enclosed letter from the Government Entomologist and to point out that, under Ordinance No. 5 of 1901, His Excellency the Governor has power to make such regulations as suggested for the prevention of the spread of insect pest.

2. I am in full agreement with the Government Entomologist as to the advisability of some such action being taken and have reason to believe that this preliminary step will be welcomed by tea-planters. Should this dangerous pest increase to a large extent, such measures will prepare the way for any preventive steps

which the Government may think necessary in the future for the safety of the tea industry.

I am, etc.,

Royal Botanic Gardens, (Signed) J. B. CARRUTHERS,  
PERADENIYA, November 21st, 1902. Acting Director, R. B. G.

PROTECTIVE MEASURES AGAINST SPREAD OF "SHOT-HOLE BORER" IN TEA.

The DIRECTOR, R. B. Gardens, Peradeniya.

SIR,—I have the honour to bring to your notice the fact that reports are being repeatedly received of the continuous spread of the above tea-pest, and of the sudden appearance in districts hitherto free from attack.

I am of opinion that some simple legislation is advisable, and that the following suggested measures, if honestly carried out, would very largely reduce the further distribution of the pest.

I would advise:—

(1) The compulsory registration of all estates upon which the pest occurs. That reports of occurrences should be made to and register kept by the Government Entomologist.

(2) The absolute prohibition of the distribution of tea plants or any parts of tea plants, from affected estates, until such estates shall have been certified by the Government Entomologist as free from the disease.

(Tea seed need not be included in the prohibition.)

I am, etc.,

Royal Botanic Gardens, (Signed) E. ERNEST GREEN,  
PERADENIYA, February 11th, 1903. Government Entomologist.

## THE TEA MARKET.

Mr. W. Forbes Laurie writes to the *Home and Colonial Mail*:—

As a grower of tea I have read Mr. Herbert S. Parker's letters in your journal with great interest, especially the last, for, as he truly says, schemes for improvement are far easier pulled to pieces than constructed. The worst feature of all is the inability, so far, of all interested to meet the difficulties by any practical measure. Sooner or later something will have to be done, or, notwithstanding short periods of fair prices, the trade will always be liable to a recurrence of its present position.

The situation of Ceylon, in the centre of the world, on the line of steamers for all parts, would naturally in a few years outdo London, if it would only remove the objectionable import duty. Blended teas have come to stay, and no attempt at keeping back the component parts of these blends—whether common or high class—can succeed in the future, either in Ceylon or London. Ceylon would then be able to secure nearly  $\frac{1}{2}$ d. per lb. more for its teas all round, by making Colombo the world's market, where blending could be done cheaper than in London, Australia, or America, and from which market every class of blended tea would flow not only to London, but to all countries. The saving to Ceylon would be enormous.

From a grower's point of view it matters not whether he sells in London or elsewhere, provided he secures the highest possible price. Large buyers have for some years entered the market who seem, by concerted action, to prevent full competition in buying, but retain it in reselling. The effect of this, with their continued effort to sell the cheapest canister, has been to bring down prices injuriously to every one, including themselves. They have fallen below the average cost of production, consequently extensions have ceased and a reaction is inevitable. Consumption is now increasing, but production is at a standstill. Under the present system of buying and selling a scarcity must disorganise the buyers far more than an over-supply can the growers; for the latter have tangible value in their gardens, which the dealers do not so visibly possess, nor will their customers like rising markets.

Both grower and dealer have what are established industries, and if they wish to make them permanently prosperous they should mutually arrange how best to prevent these slight over and under-supplies affecting the mutual profits of their trading, and this can surely be done by some system of selling suitable to both. This is worthy of consideration.

It is absolutely impossible by natural means to produce tea from India and Ceylon in sufficiently approximate quantities to keep supply and demand upon the equipoise. For twenty years the market has been on the downward grade, so a rebound must come.

Being a producer, I am prepared to face this, yet I still believe the best plan would be to add another factor to Mr. Parker's concerted action of the great powers, or, failing this, for the growers to form a concert of their own. I do not say the time has quite arrived for this, but it is not far off. Whether the opportunity will be seized is another matter.

In the meantime the nations of the world will blend and drink whatever manner of tea they choose, irrespective of Ceylon's 6d. import duty. When the growers in that island fully grasp the value of their geographical position and cheap labour it will become the chief tea mart of the world.

I cannot do better than conclude in Mr. Herbert S. Parker's words: "To try to construct a workable plan that will place the London market in a healthier and sounder condition (1) by lessening misunderstandings, (2) by lessening the estrangement that keeps buyers and sellers apart, (3) by drawing the outline of an alternative method of business, to the end that growers may obtain a fuller reward for their labours."

## DISTRICT ASSOCIATIONS.

### COORG.

Proceedings of a Quarterly General Meeting of the Coorg Planters' Association held at the Bamboo Club-house, on Saturday, 14th February, 1903. PRESENT:—Messrs. Boponna, H. Cockerton, H. G. Grant, A. H. Jackson, J. Logan, F. Macrae, H. G. Parsons, H. T. Shaw, (Bidunda Ganapathy, M. I. Mandanna, new members,) and A. Lambert, *Honorary Secretary*.

The President, Mr. Sprott, having written expressing regret at his inability to be present, Mr. Logan took the chair.

The Honorary Secretary previous to reading extracts from the Minutes of the last Meeting, intimated his intention of definitely resigning office at the end of the current season.

**Proposed Voluntary Coffee Cess.**—On the Honorary Secretary informing the Meeting of the paucity of supporters thereto, especially amongst European planters, it was resolved to defer further discussion thereon for the present.

Mr. Davy's letter *re* the remission of taxes on wet lands (uncultivated) and *the remission or reduction of taxes on uncultivated Paisari land*—resolved, that the sub-Committee appointed to meet the Commissioner in November last to discuss this question be asked their reasons for not submitting any report thereon. Proposed by Mr. Jackson, seconded by Mr. Grant. As this matter is to be brought before the Chief Commissioner during his forthcoming visit to Coorg, it was decided to leave further discussion thereon to the sub-Committee to be appointed to meet the Chief.

**Non-receipt of Notices of Sales of land for arrears of Assessment.**—The Honorary Secretary informed the Meeting that he had failed to find any information or correspondence on this question in the Association books.

**Alteration of Clauses 252-253 of the Coorg Revenue Manual (the Borer question).**—As this subject is also to be laid before the Chief Commissioner during his tour in Coorg, there was little or no discussion thereon, and it was decided to leave it to the sub-Committee appointed to meet the Chief.

**Funds.**—The Honorary Secretary briefly explained the financial position of the Association, and after some discussion thereon, it was unanimously resolved to call Committee Meetings, North and South, prior to the Annual General Meeting, in May next, to decide on what action it will be necessary to take to place the Association on a sound financial basis for the future.

**Fishing Association.**—Proposed by Mr. Jackson, seconded by Mr. Lambert, that Government be asked if it would not be possible to exempt rod-fishing from the close reason (*vide* Rule II of the notification *re* Fishing rules, dated 24th January, 1903). It having been brought to the notice of the Association that the close time (as laid down in Rule II) March 1st, June 1st is the only period during which many planters can get away for fishing, and therefore the said rule appears to inflict an unnecessary hardship upon those thus situated. Moreover it is said many natives practice rod-fishing, so the hardship falls upon all alike.

The following gentlemen were appointed to the sub-Committee to meet the Chief Commissioner in Mercara: Messrs. Boponna, Lambert, Logan, and Parsons. It was considered desirable that North Coorg should appoint their own representatives, and that the President be advised to that effect.

**Railway.**—The new suggestion as to raising funds by means of a small special Railway Cess to be levied with a view to at first guaranteeing the interest on the capital expended during construction of the line through Coorg territory, and afterwards in case of the Railway failing to pay the required rate of interest, say 4%, was favourably received and a hope was expressed that this matter would be discussed with the Chief Commissioner in Mercara and that we should be favoured by an expression of his views thereon. Pending which, we can now only wait and see what our neighbours, both in Malabar and Mysore, think of the scheme.

**General Labour Act.**—There was a strong feeling throughout the members present that Government should give a properly-recorded promise that the new Madras Labour Act would not be compulsorily proclaimed in any district not desiring it, and that such districts be permitted to remain under Act XIII, 1859, as hitherto.

**New Members.**—Messrs. Bidunda Ganapathy and M. I. Mandanna. Proposed by Mr. Boponna, seconded by Mr. Jackson.—*Unanimously elected.*

The usual U. P. A. correspondence and District reports from Wynaad, Shevaroy, and Nelliampathy Associations were laid on the table.

A vote of thanks to the chair terminated the Meeting.

POLLI BETTA,  
February 14th, 1903.

(Signed) A. LAMBERT,  
*Honorary Secretary, C. P. A.*

## JUDGE SLOWLY.

It is not always an easy matter to judge correctly of the quality of things. Less than one in a thousand of us is capable of accurately estimating the worth of a picture; not more than one in a hundred the quality of a horse. In general, judgments rapidly made are of small value. "Did you ever notice," recently inquired a visitor to an English University town of his companion, as they sat together on a verandah, "that queer-looking old fellow with the idiotic face, turned-up coat collar, and boots seven sizes too large, who passes here every morning at eleven?" "Many a time," replied the other, "He is Professor of Comparative Grammar to the University of ———, and speaks fourteen modern languages, to say nothing of his mastery of Greek, Latin, and Hebrew." The incident will serve to show the futility of superficial judgment. Many judgments which pass unchallenged are none the less deplorably wrong, more especially in matters which require a practical test. Who can say positively whether a certain medicine has the power to cure some particular malady or not without giving it a trial?

When the friend of Mr. Michael Fitzpatrick, of 66, Forbes Street, Woolloomooloo, Sydney, N.S.W., advised him to take Mother Seigel's Curative Syrup for the cure of indigestion, he backed his advice with some excellent reasons—excellent because his judgment of that remedy was based upon actual experience of its merit. Says Mr. Fitzpatrick in a letter written on the 20th June, 1902: "For many years I suffered terribly from indigestion and biliousness, and spent pounds and pounds on doctors' medicines and so-called cures; but without avail. In those days I had no appetite, and the little food I ate turned sour on my stomach, causing severe attacks of heartburn. I was also troubled with pains in the chest, violent headaches, and habitual constipation. In fact, at one time or other I suffered from most of the symptoms which characterise a sluggish liver and impaired digestion. My worst affliction, however, was a total inability to obtain sufficient sleep. I would go to bed feeling worn-out and sleepy, but as soon as my head touched the pillow my brain would become unnaturally active, and I would think of every kind of subject, and roll and toss about between the sheets, listening to the Fish Market Clock as it chimed hour after hour, until all my nerves were in a quiver. Then I would rise and walk the floor, backwards and forwards, the greater portion of the night. For years I had been in this wretched state when one day a friend fortunately called to see me. I was trying the hot-water cure at the time, and was just in the act of drinking a cupful of steaming liquid. He asked me what I was taking it for. I described my troubles to him,

and in reply to a further question informed him that I had not, so far, gained any relief from the hot-water treatment. He advised me to abandon it and try Mother Seigel's Curative Syrup instead. He gave me such excellent reasons for doing so that I accepted his advice—advice which, I am thankful to say, has had the very best results. After taking only one small bottle I felt very much better. As I continued to take the Syrup, so did I continue to improve in health, and in less than two months my cure was accomplished. That was three years ago, and I have remained in good health ever since, which proves conclusively that it is not mere passing relief that Mother Seigel's Curative Syrup affords to sufferers from indigestion, but permanent cure. Now I am careful never to be without a bottle of the Syrup on hand, as I take a dose occasionally to counteract the ill effects of my sedentary occupation—for I am a bootmaker by trade—and for this purpose I find it acts like a charm."

MARKET REPORT.

[Per Mail advices of February 13th, 1903.]

COFFEE.

The London Commercial Record says:—Supplies at auction during the week have been more extensive than of late, and with a steady demand both for home trade and export, previous prices have generally been maintained, high rates having been paid for really fine qualities. Recent arrivals of East India to a fair amount have been catalogued and nearly all sold; recent rates were realised for low middling to middling qualities, whilst the limited supply of really colory descriptions met a strong demand at very full prices; there is a decided improvement noticeable in the quality of some of the recent arrivals. Jamaica full up. Fine Costa Rica continues to command high prices, and a fair demand has prevailed for other descriptions, with an occasional advance obtained at the close. Santos well competed for at fully valuations. The market for "futures" has shown more firmness, and closing quotations are rather dearer for the week, chiefly owing to considerable buying by New York; yesterday Santos for March delivery sold at 27s 1½d to 27s 3d, May at 27s 9d to 27s 10½d, September at 29s and December at 29s 9d. We quote:

London	...	Santos	...	March delivery	...	27s 3d.
New York	...	No. 7 Rio	...	"	...	4.60 cents.
Hamburg	...	Santos	...	"	...	28 pf.
Havre	...	Santos	...	"	...	33½ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

STOCK.		IMPORTS.	
	1903.	1902.	
Tons	28,168	14,095	1903.
HOME CONSUMPTION.			1902.
	1903.	1902.	
Tons	1,803	2,054	2,048
EXPORT.			813
The preceding figures exhibit—			Tons.
In the Imports an increase this year of			2,955
Home Consumption a decrease of			251
Export an increase of			1,235
Stock an increase of			14,073

Auctions this week have gone off as under:—  
EAST INDIA.—4,662 bags mostly sold as follows:—Mysore, smalls 40s 6d to 45s, low middling 47s to 52s 6d, common to fair bold 52s to 66s 6d, peaberry 50s 6d to 69s 6d; Coorg, smalls 34s to 45s, low middling 43s 6d to 48s 6d, middling 49s 6d to 55s 6d, common bold 50s to 52s, fair bold 58s to 65s, good bold 72s 6d to 75s, peaberry 50s to 77s 6d; Neilgherry, smalls 42s to 48s 6d, low middling to middling 44s 6d to 52s 6d, good middling 63s 6d, fair to good bold 57s to 68s, fine blue bold 88s, peaberry 50s 6d to 82s 6d; Nelliampathy, smalls 42s, low middling 45s to 47s, middling 49s to 51s 6d, bold 54s, peaberry 50s to 55s. Wynad, smalls 38s 6d to 41s, low middling 45s to 47s, bold 53s to 55s, peaberry 50s to 52s.

MOCHA.—351 packages withdrawn.  
JAMAICA.—68 bags 93 barrels sold—smalls 32s 6d, good to fine fine ordinary 33s to 43s, low middling 44s.  
COSTA RICA.—5,462 bags nearly all sold, smalls 37s to 47s 6d, low middling to middling 47s to 58s, good middling blue 60s to 69s

6d, fine middling 70s to 79s 6d, fair bold 58s to 65s 6d, good to fine bold 67s to 82s, very fine bold 85s to 91s 6d, peaberry 51s to 98s.

SALVADOR.—223 bags sold—smalls 40s 6d, low middling 46s 6d to 47s, bold 53s 6d, peaberry 55s.

GUATEMALA.—667 bags partly sold, smalls 33s to 40s 6d, fine ordinary 41s, low middling to middling 43s 6d to 50s 6d, good middling 56s to 56s 6d, fair to good bold 56s 6d to 64s, fine blue bold 70s, peaberry 43s to 57s 6d.

NICARAGUA.—26 bags sold, ordinary at 28s to 29s.

MEXICAN.—83 bags mostly sold—sea damaged, bulked, medium 43s 6d to 44s, bold 53s.

COLOMBIAN.—915 bags sold, smalls 28s 6d to 31s 6d, ordinary to good ordinary 28s 6d to 33s, low middling to middling 40s to 46s 6d, bold 46s 6d to 58s 6d, peaberry 41s to 44s.

BRAZIL.—1,092 bags Washed Dumont Santos nearly all sold, smalls 31s 6d to 33s 6d, medium 37s to 42s, bold 41s 6d to 52s 6d, peaberry 32s to 52s; of 1,576 bags unwashed, on quay terms, 980 bags sold, smalls 26s to 27s, medium 29s to 3's, bold 33s to 40s, peaberry 35s.

To-day's auction supplies consisted of 181 bags East India, 260 bags Nyassaland, 230 bags 36 barrels Jamaica, 20 bags Nicaragua, 19 bags New Granada, 784 bags Ecuador, 807 bags Costa Rica, 352 bags Salvador, 107 bags Guatemala, 75 bags Colombian, and 123 bags Mexican. A good demand at the auctions and full prices paid.

A decidedly improved tendency is noticeable in Brazil futures, with more general buying than for some time past.

Transactions include—March 27s 6d to 27s 9d, May 28s 1½d to 29s 6d, December 30s to 30s 3d.

Closing quotations:—		Sellers.	Buyers.
March	...	28/	27/9
May	...	28/6	28/3
July	...	29/3	28/9
September	...	29/6 paid	...
December	...	30/4½	30/1½

Brazil reeeipts 25,000 bags, against 29,000 and 23,000 the two previous seasons, and Exchange ½ higher at 11¾.

Hamburg ½ higher, and Havre ½ higher. New York opened 10 higher.

Receipts in Rio and Santos.				
	1902-3.	1901-2.	1900-01.	1899-00.

Rio Exchange 11¾d, previous day 11¼d.

HAVRE, February 12.—Good average Santos February opened quiet at 33½f. and closed quiet at 33½f., March opened at 33½f. and closed at 33½f., May opened at 34f. and closed at 34f., September opened at 35f. and closed at 35f., December opened at 35½f. and closed at 35½f.

HAMBURG, February 12.—Good average Santos February opened steady at 27¾pf. and closed steady at 27¾pf., March opened at 28pf. and closed at 28pf., May opened at 28½pf. and closed at 28½pf., September opened at 29½pf. and closed at 29½pf., December opened at 30pf. and closed at 30pf.

NEW YORK, February 11.—Closing prices of No. 7 Rio were as follow:—

	Feb.	Mar.	Apl.	May.	June.
Feb. 11	4.60	4.60	4.65	4.75	4.80
Feb. 10	4.45	4.55	4.60	4.70	4.75

TEA.

INDIAN.—Public sales were again moderate, aggregating only 28,900 packages, contrasting with 30,100 at the date of our last report, and 42,300 at this period of 1902.

The tendency of the market has been more favourable, and with increased inquiry both in the auction room and privately, values have been fully firm to an advance. Tea for price closes fractionally dearer, while the more useful lower grades from 5¼d upwards often improved ¼d, semi-broken leaf doing best. Some very attractive Assams with Autumn character were included in the catalogues, and such sold freely at full values, the Assam Frontier Tea Company showing a particularly nice lot, while a complete

invoice from Budla Beta estate, with brownish appearance, brought an average of 1s 3½d. Tippy kinds are getting scarcer, and realise more money, especially Broken Pekoes from 8d to 10d. Fine Darjeelings are in very limited supply and are wanted, a small invoice from Jungpunnah averaging 1s 8½d.

South Indians continue mostly of a desirable description, and those drawing rich colory liquors have been in distinct request and realised higher figures.

Although the total for home consumption for January is comparatively small, the daily deliveries of all tea are now good, being on about a par with last year, when at this time the duty scare temporarily abated.

For 23,500 packages on estate account 7½d per lb. was obtained, against 7d for 39,000 and 6½d for 50,000 in the two foregoing seasons.

The inquiry has latterly further developed and a strong undertone is apparent.

CEYLON.—The reduced quantity of 17,600 packages was submitted, comparing with 22,500 on the 3rd instant and 25,000 a year ago.

More spirit was manifested in the bidding, and buyers are evidently beginning to recognise the strength of the position. Pekoe Souchongs and Pekoes, especially those just above common, ruled firm to ¼d per lb. dearer. Medium to fine kinds did not show much change in value; they were, however, in less request, and some lots were withdrawn, notably so in the case of broken between 7d and 9d, which showed considerable irregularity. The best lines of Broken Pekoe and Broken Orange Pekoe met with strong competition at full to enhanced rates. At the close a brisker tone was evinced, and many ex sale parcels were placed at an advance on offers made in "the room."

The average is 7½d. On the 5th instant it was 7¾d, and 7d twelve months since.

JAVA.—Rather over 800 packages passed the hammer and commanded attention, moving in sympathy with other growths.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From February 1 to 10, 1903	...	6,264,580 lbs.
Do. do. 1902	...	6,466,063 „

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	23,384	5,554	28,938
Ceylon	14,695	2,900	17,595
Java	802	26	828

Total ... 38,881 8,480 47,361

Also 347 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated February 13th, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

29,204 pkgs. INDIAN } Total 47,863 packages were offered in public auction  
17,831 " CEYLON } this week.  
828 " JAVA }

Foreign and Colonial markets continue to take increasing quantities of Indian and Ceylon tea. The increase last year was nearly 11 million pounds over 1901, which in turn was 12 millions over 1900; in fact ever since 1890 when only 14 millions were used, the quantity has steadily increased every year.

	1902.	1901.	1900.	1899.	1898.
INDIAN	41,496,070	36,080,151	33,442,970	29,570,173	25,960,405

Total lbs.	64,146,967	58,797,549	49,259,693	38,438,509

INDIAN.—The continued offering of tea in only moderate quantities appears at last to be having an appreciable effect on the market. Demand this week was of a distinctly more general character, and led to a hardening of rates in which all descriptions participated to a slight extent, and in many instances a fractional advance was shown. The following averages are worthy of note:—"Budla Beta T. Co. B. B.," 1/3¼; "Selimbong," 1/3; "Ass. Fron. T. Co. Khobong," 1/2¾.

Week's av. of tea sold on Garden Account 1903, 24,892 pkgs., av. 7·88d. 1902, 38,827 pkgs., av. 6·94d.

Tea sold on Garden Account 1st June to date 1902-3, 824,491 pkgs., av. 7·32d. 1901-2, 920,781 pkgs., av. 7·84d.

Comparative prices of Indian tea in London.

		1903.	1902.	1901.	1900.
Dust.	(Fair ordinary, dark liquor)	4¾d.	4½d.	2¾d.	5½d.
Fannings.	(Red to brown, strong rough liquor)	5d.	5d.	2½d.	5½d.
Broken Tea.	(Brownish to Blackish, strong liquor)	6½d.	6d.	4½d.	6½d.
Pek. Soug.	(Blackish greyish, useful liquor)	6d.	6d.	4½d.	6½d.
Pekoe.	(Greyish to Blackish, some tip, useful liquor)	6½d.	6½d.	5½d.	7½d.
Pek. Soug.	(Blackish greyish, inferior liquor)	5½d.	5½d.	3d.	6d.
Pekoe.	(Blackish, greyish, some tip, inferior liquor)	5½d.	5½d.	3½d.	6½d.

CEYLON.—The tone of the market was decidedly strong with hardening prices generally, while here and there a distinct advance was noticeable, especially in teas below about 7d per lb.

Average for week 7·58d, against 6·94d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 120,173 pkgs., av. 7·52d. 1902, 152,083 pkgs., av. 7·26d.

Comparative prices of Ceylon tea in London.

		1903.	1902.	1901.	1900.

JAVA.—The small auction passed with good competition all kinds selling at steady prices, while the lower grades were fully a farthing dearer.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1 4½. Colombo 1 4½.

## COCOA.

With the exception of fine Ceylon, which again advanced at the auctions on Tuesday last, prices show a further movement in buyers' favour. Of a total of 8,819 bags brought to the hammer about 5,900 bags sold. Trinidad was represented by 842 bags, of which 220 bags sold at about valuations—good to fine red 61s to 67s, ordinary to middling 58s to 60s.

The large supply of Granada, 4,264 bags, experienced a very good demand at again rather easier rates, fully 4,000 bags finding buyers at 55s 6d to 57s for good to fine red, 53s to 55s for common to fair and 50s to 52s 6d for low to common. Of 202 bags Jamaica 75 bags sold at 50s to 53s for ordinary to good. Of 331 bags Dominica about 200 bags were placed at 54s for good fermented

and 50s to 51s for common. 7 bags St. Vincent brought 63s 6d for fine bright red, and 50s for pale reddish, while 19 bags St. Lucia realised 53s 6d to 54s. 58 bags fine Demerara were quitted at 60s to 61s. 2 bags Montserrat were withdrawn. Of 349 bags Guayaquil 50 bags pickings sold at 49s. 21 bags Esmeralda sold at 60s to 60s 6d. 80 bags African passed the hammer unsold. Tip-top qualities of Ceylon were much wanted, and fully 3s per cwt. advance was obtained for them, but the bulk of the offerings tended decidedly in buyers' favour; 2,634 bags were catalogued and 1,270 bags sold—very fine bold red realised 80s to 86s, good to fine bold and medium 65s 6d to 74s, middling to fair medium and small 61s to 64s, ordinary ditto 54s to 59s, fair to good small 48s 6d to 56s, pickings 33s 6d to 34s 6d, and collected 50s to 52s 6d per cwt.

### PEPPER.

**BLACK.**—The market is dull, and sales of Singapore January-March and March-May shipment have been made down to 5½d and further sellers. In all about 100 tons sold. On the spot there are sellers of fair Singapore at 5½d, with buyers at 5½d.

At public sale on the 11th instant 355 bags Singapore were offered, and 123 bags fair, August 1901 import, sold "without reserve" at 5½d per lb. landing weights.

**WHITE.**—It also cheaper. 20 tons Singapore December shipment (s) have been sold at 8½d. On the spot sales of fair Singapore have been made at 9½d, and fair Penang at 9½d.

At auction on Wednesday of 257 bags Singapore 31 bags fully fair sold "without reserve" at 9½d to 9½d; of 56 bags Penang 18 bags sold, also "without reserve" at 9d for fair. 25 bags Siam withdrawn, and 175 bags dark Lampong kind were bought in at 9½d per lb.

### GINGER.

**COCHIN.**—remains very quiet. 25 cases 555 bags were catalogued but only 9 bags sold—bold, medium and small bright Calicut rough, new crop, at 40s; bold cut and scraped, limed, retired at 90s, and medium and small Native cut at 55s per cwt.

**JAMAICA.**—full up. 172 barrels offered and 95 barrels sold—ordinary dark and lean 36s 6d to 38s, mouldy ditto 36 per cwt.

### CINCHONA.

The Nederlandsche Veem received a cable reply on Monday that the correct shipments from Java during January were 593,000 Amsterdam lbs., not 828,000 Amsterdam lbs., as reported in our issue last week.

At auction on Tuesday the small suply of 735 packages was offered, and practically everything was sold at or after the sale at an average unit of fully 1½d per lb., against 1½d, and for some lots a unit of 1½d was paid. The bark contained altogether about 80,000 oz. quinine sulphate.

The following table shows the quantity of cinchona offered and sold:—

	Packages Offered.	Packages Sold.
East Indian cinchona .. ..	306	273
South American cinchona .. ..	222	214
Java cinchona .. ..	171	171
Ceylon cinchona .. ..	36	36
	735	694

The following were the approximate quantities of bark purchased by the principal buyers:—

	lbs.
Messrs. Howards & Sons .. ..	49,488
American factories .. ..	27,400
Frankfort and Stuttgart factories .. ..	23,560
Brunswick factory .. ..	10,353
Mannheim and Amsterdam factories .. ..	6,430
Imperial quinine factory .. ..	5,197
Druggists, etc. .. ..	17,234
Total quantity sold .. ..	139,662
Bought in or withdrawn .. ..	8,880
Total quantity offered .. ..	148,542

The prices obtained were as under:—

**SOUTH AMERICAN.**—Bolivian cultivated Calisaya (222 bales), fair quill, 5½d to 6½d per lb.; broken quill and chips, 5½d; 8 bales of cultivated flat, which is scarce, had not arrived in time.

# ST JACOB'S OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

**CURES**  
**RHEUMATISM, NEURALGIA, GOUT,**  
**SPRAINS, SORENESS, SCIATICA,**  
**LUMBAGO, HEADACHE, BACKACHE,**  
 And all Aches and Pains usually treated by outward application.  
**IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.**

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/1½ & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being pre-scribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

CEYLON.—Ledgeriana, natural stem chips 7½d, renewed ditto 5½d, and branch 4½d; ordinary stem shavings, 3½d, and Succirubra shavings, 2½d.

JAVA.—Ledgeriana and hybrid stem chips, 6½d to 9¾d; hybrid branch, 3½d to 6½d. Succirubra, branch 3½d, root 6½d, and stem chips 5¾d.

EAST INDIAN.—Officinalis, ground stem chips, 2¾d to 2¾d; renewed, 4d to 4½d; and branch, 1¾d to 3d. Succirubra, stem chips and shavings, 2½d to 2¾d; renewed ditto, 2¾d; and siftings, 1¾d per lb.

The auction to be held at Amsterdam on February 26 will consist of 4,871 bales and 412 cases, weighing 480,940 kilos., of Java bark.

QUININE.

The demand has improved this week, and prices are firmer, probably owing to the advance in the unit at the London cinchona-auctions. A fair spot business has been done in second hands at from 1s 0¾d to 1s 0½d, and 1s 0¾d for May delivery. To-day the market is firm, with further small sales at 1s 0½d, spot.

INDIA-RUBBER.

The market has been rather disorganised this week, owing to a certain Liverpool house being in difficulties. There is little change in prices. Hard cure fine distant delivery sold at 3s 7½d to 3s 7½d, ditto nearer 3s 7d to 3s 6¾d, spot at 3s 6½d, soft cure fine sales of near and spot at 3s 6d to 3s 5½d; Peruvian, sales of fine at 3s 6¾d, scrappies spot 2s 10d to 2s 10½d, fair ball at 2s 9½d to 2s 9¾d; Cametas, small sales of forward at 2s 3d.

At auction to-day moderate supplies were brought forward and a good part sold at steady to slightly easier prices.

PARA AND PERUVIAN.—129 packages offered and 12 sold, Cameta and Caviana negrohead at 2s 3d, coarse entrefine and virgin part weak 3s 2½d to 3s 3d, fair ball at 2s 9¾d, Obidos ball at 2s 7½d.

ORINOCO.—39 packages sold, fine part rather weak 3s 5d, entrefine 3s 3d, negroheads 2s 10d per lb.

MATTOGROSSO.—91 packages offered, and 82 sold, virgin 3s 2d to 3s 2½d; negroheads 2s 9d to 2s 9½d; Mangabeira, thick slab at 2s 4d.

CENTRAL AMERICAN, ETC.—78 packages offered and 56 sold—weak scrap 2s to 2s 2¾d, slab, strip and sheet part dirty 1s 7d to 1s 10d.

COLUMBIAN.—64 packages offered and 4 sold, rather barky and mixed scrap 2s 7½d.

MADAGASCAR.—10 packages offered and 8 sold—mixed pinky and Majunga 2s 8d to 2s 9½d, Majunga and dark coated 2s 4d.

MOZAMBIQUE.—361 bags offered and 100 sold—good stickless sausage 3s 2½d, fair red ball 3s 1d. Beira ball part loose 3s to 3s 1d, ditto and sausage softish 2s 10d, rather mixed loose ball 2s 8d to 2s 9d, Lamu ball 2s 8d.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, MARCH 14, 1903.

[No. 11.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 20th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Coorg.

POLLI BETTA, 11th March.—*Weather*—Fine and hot during days. Not unpleasant at nights. Very little wind stirring. Clouds are beginning to work up. *Crop*—Gleaning still going on. Pruning is making satisfactory progress. Some estates have finished. *General health*—Fair. *Interesting item*—Fancy Dress Ball at Mercara on 18th instant.

### THE PLANTERS' LABOUR BILL.

IN OUR last issue we endeavoured to give the amendments adopted in the draft of the Madras Planters' Labour Bill presented to the Legislative Council of Fort St. George with the report of the Select Committee. The amendments that were not carried we ignored. It is just possible that we do the movers injustice in attaching no weight to these; but our opinion is that the subject had not been properly studied, the amendments were not the outcome of conscientious opinions that the Bill was unfair, and the movers were merely attempting to oppose something that they thought must be good for employers, as planters were understood to approve of the Bill. The fact is that planters, generally speaking, did *not* approve of it. The Hon'ble the Planting Member wisely selected a middle course. He tried to get concessions that would make the measure less unacceptable to the planting community than it was in its original form. Probably he realised that as planters had asked for a Bill on similar general lines it would be unwise to attack it too severely. Doubtless, too, he was well informed as to the modifications that Government were likely to agree to and those that they would certainly oppose. The Native Press has arrived at the conclusion that in the shaping of the Bill the Government have been entirely partial to the planters; but that is not the opinion of the latter. But one word more as regards the opposition of the Native

Press. Having stigmatized the Bill as one favouring a system of slavery on the part of the cooly, the *Hindu* attacks the measure as a specimen of class legislation and argues thus:—“The Indian cooly is not made to slave for one class alone. This will be the natural contention of those who now having to employ large numbers of labourers are left without any protection if the labourers in a body desert them in order to go away to the British Colonies or to the Hill plantations. The planter works in India for profit. The landholder works for his existence. Without a sufficient supply of labourers, it is impossible to carry on agricultural operations; and the limit of land assessment is so high that the payment of abnormal wages is an impossibility. A law like the Planters' Labour Act will be of immense benefit to the numerous agricultural classes; and it is as unjust to deny it to them as it is unrighteous to hand over the cooly to the mercy of the planter on the Hills without any of those safeguards which the Honorable Non-Official Indian Members of the Council advocated in vain.” That is to say, having failed to prevent the introduction of this so-called “slavery,” the *Hindu* cries out for its extension! The planter must not have a monopoly of slave-driving, the Indian agriculturist must be allowed to share the odious privilege!

As to the Bill itself the most important amendment passed is that which relates to the continued application of Act XIII of 1859 in districts wherein the new Act is not applied, and the revived application of the former to any district from which, after application, the latter may be eventually withdrawn. From the drafting of the Bill as originally submitted to Council it appeared as if it would repeal Act XIII of 1859, and leave contracts that formerly had the protection of that law without any protection whatever. That this was not the intention of the Government has now been made clear. Here the Government have not seen their way to meet the planters' wishes in regard to the subject of “local option,” and they have acted rightly. What the planters wanted, in effect, was the right to choose whether they should work under the old Act or the new; they were to be consulted before the new Act was made applicable to a particular district. It is evident, especially in view of the native opposition to the Bill, that it would never do to establish a precedent of this kind. Unless the same privilege was accorded to particular native communities in respect to various forms of legislation, the cry of “class legislation” would

be justified. There must be local option for all or for none; and it is not surprising that the Government should decline to grant it at all. What they propose is perfectly fair, and if any district can show that the conditions of labour on estates therein make it expedient that the old Act shall be retained, there is little doubt that the new one will not be enforced there.

It is just at this point, in fact, that we touch upon the chief difficulty that the framers of the Bill had to face. The conditions of labour are very far from identical in the planting districts of Nilgiris, Wynaad, Shevaroy's, Cochin, Mysore, and Travancore. It was practically impossible to frame a Bill that would equally meet the necessities of planters in all these districts. The great desideratum was to lay down general principles. Within certain limits it is still possible for the Native States of Cochin, Travancore, and Mysore to introduce modifications before legislating on the lines of the new Madras Bill. It is still possible for particular districts in the Madras Presidency to try to show reason why the new Act should not be extended to them. For our part, we think that the wiser course will be to accept the new Act as it stands and let it have a fair trial; then, after practical experience of its working has been gained, either amendments can be asked for or the entire withdrawal of the Act and the re-application of Act XIII in 1859 in any district in which the new law may be found to work unsatisfactorily.

### BOARD OF TRADE RETURNS.

JANUARY, 1903.

### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

### THE INDIAN TEA CESS BILL.

The original draft of this Bill was published in *Planting Opinion* of the 21st ultimo. The Bill as revised by the Select Committee is as follows:—

#### THE TEA CESS BILL.

A Bill to provide for the levy of customs duty on Indian tea exported from British India, and to amend section 5 of the Indian Tariff Act, 1894.

Whereas it is expedient to provide for the creation of a fund to be expended for the promotion of the interests of the tea industry in India by a Committee specially constituted in this behalf;

and whereas for this purpose it is expedient to levy customs duty on all tea provided in India exported from British India, and to amend section 5 of the Indian Tariff Act, 1894;

It is hereby enacted as follows:—

*Short title and extent.*—1. (1) This Act may be called the Indian Tea Cess Act, 1903; and

(2) It extends to the whole of British India except Aden.

*Definitions.*—2. In this Act,—(a) "Collector" means, in reference to tea exported by sea, a Customs-collector as defined in clause (c) of section 3 of the Sea Customs Act, 1878, and, in reference to tea passing out of British India by land, the Collector of the district;

(b) "tea cess" means the customs duty imposed by section 3 of this Act and by section 5 of this Act and by section 5 of the Indian Tariff Act, 1894, as amended by this Act; and

(c) "Tea Cess Committee" means the Committee constituted under section 4.

*Imposition of duty on exports of Indian tea.*—3. On and from the first day of April, 1903, a customs duty shall be levied and collected on all tea produced in India and exported from any customs-port to any port beyond the limits of British India or to Aden at the rate of one quarter of a pie per pound, or at such lower rate as the Governor-General in Council may, on the recommendation of the Tea Cess Committee, prescribe by notification in the *Gazette of India*.

*Constitution of Tea Cess Committee.*—4. (1) The Governor-General in Council shall constitute a Committee to receive and expend the proceeds of the tea cess.

(2) The Committee shall in the first instance consist of twenty members, who shall be appointed by the Governor-General in Council on the recommendation of the following bodies and authorities, namely:—

(a) three on the recommendation of the Bengal Chamber of Commerce; one on the recommendation of the Madras Chamber of Commerce;

(b) seven on the recommendation of the Indian Tea Association, Calcutta; and

(c) nine on the recommendation of such respective bodies or authorities interested in the production of tea in India, and established in British India, as the Governor-General in Council may appoint in this behalf:

Provided that if, within the period prescribed in this behalf by rules made under this Act, any of the said bodies or authorities fails to make any recommendation, or to make the full number of recommendations which it is entitled to make, the Governor-General in Council may appoint the required number of members of the Committee of his own motion without such recommendation.

(3) Whenever any member appointed either on the recommendation of any body or authority referred to in sub-section (2), or in default of such recommendation, dies, resigns, ceases to reside in India or becomes incapable of acting as a member of the Committee, the Governor-General in Council may, in his discretion, on the recommendation of such body or authority, or in default of such recommendation, appoint another person to be a member in his stead.

(4) No act done by the Tea Cess Committee shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of the Committee.

*Application of proceeds of tea cess.*—(1) At the close of each month, or as soon thereafter as may be convenient, the Collector

shall pay the proceeds of the tea cess, after deducting the expenses of collection (if any), to the Tea Cess Committee.

(2) The said proceeds and any other monies received by the Committee towards meeting the applied by the Committee towards meeting the cost of such measures as the Committee may consider advisable to take for promoting the sale and increasing the consumption in India and elsewhere of teas produced in India.

6. *Keeping and auditing accounts.*—(1) The Tea Cess Committee shall keep accounts of all money received and expended under section 5.

(2) Such accounts shall be examined and auditors appointed in this behalf by the Governor-General in Council; and such auditors may disallow any item which has, in their opinion, been expended out of the proceeds of the tea cess or out of any monies received under section 5 otherwise than as directed by or under this Act. Should any items be disallowed by such auditors an appeal shall lie from their order to the Governor-General in Council whose decision shall be final.

7. *Power to make rules.*—(1) The Governor-General in Council may, after previous publication, make rules to carry out the purposes of this Act in so far as affects the levy and payment of the cess to the Committee; the keeping of accounts by the Committee and the mode of selecting and reporting the election of the said Committee.

(2) All such rules shall be published in the *Gazette of India*. *Amendment of Act VIII of 1894, section 5.*—8. In section 5 of the Indian Tariff Act, 1894, for the words "shall be levied at the rates respectively prescribed in the second, third and fourth schedules on goods passing by land out of, and in the fifth schedule on goods passing by land into" the words "at such rates as may be prescribed by or under any law for the time being in force relating to customs duties on imports and exports, respectively, into and from ports, shall be levied on goods passing by land out of or into shall be substituted.

*Time during which sections 2 to 7 are to remain in force.*—9. Sections 2 to 7 shall remain in force only until the thirty-first day of March, 1898:

Provided that the Governor-General in Council may, on the recommendation of the Tea Cess Committee, declare, by notification in the *Gazette of India*, that the said sections shall continue in force for any further period specified in such notification.

*Disposal of surplus proceeds of tea cess.*—10. If any proceeds of the tea cess or any monies so received aforesaid remain unexpended when sections 2 to 7 cease to be in force, they shall vest in His Majesty.

The most important change is in section 2, which now gives a nomination to the Madras Chamber of Commerce. It is not clear if this is intended to bring about a reduction of U. P. A. S. I. nominations from *two* (as previously proposed) to *one*.

\*

\*

\*

## CEYLON'S EXPORTS.

The following are extracts from the report of the Committee of the Ceylon Chamber of Commerce:—

*PROSECUTIONS OF MELBOURNE TEA IMPORTERS.*—In the month of September last the attention of your Committee was drawn to the prosecutions of several large firms of tea merchants by the Minister of Customs at Melbourne for importing "teas unfit for human use." Not only was the Melbourne Chamber of Commerce addressed on the subject, but the aid of the local Government invoked, with the result that His Excellency, with his usual courtesy, made representations, on behalf of the Chamber, to the Commonwealth Government of Australia.

The Melbourne Chamber replied sympathetically, promising to do all in its power to protect Australian and Ceylon merchants from a too arbitrary interpretation of the Customs Ordinance by an over-zealous Minister. Subsequently, a despatch was received by the Ceylon Government, containing full copies of reports of the prosecutions referred to. These were placed at the disposal of the Chamber, and for the moment the controversy is in abeyance, but your Committee will not fail to keep the matter in view, meanwhile expressing their indebtedness to the Ceylon Government for its assistance.

## TRADE DURING 1902.

*TEA EXPORTS.*—The total output of tea for the year 1902 was 148,991,241 lbs. compared with 146,209,018 lbs. in 1901—an increase of 2,692,223 lbs. Of this 103,543,932 lbs. were shipped to the United Kingdom, showing a decrease of 2,190,638 lbs. on the previous year.

Australia shows a falling off to the extent of 1,921,290 lbs., due primarily to the fact that shipments were hurried forward in 1901 in anticipation of duty; and secondly, to the dulness of trade in the Colonies caused by the prolonged drought in that country during the past year.

Direct shipments to other foreign markets show an increase of 6,804,151 lbs., Russia, America, and China being chiefly responsible for this.

*Quality.*—This has been well maintained, and there has been a marked absence of low grades of Red Leaf and coarse Souchongs, due to the careful system of plucking generally adopted throughout the island.

*COLOMBO TEA SALES.*—The qualities offered and sold were—

	Offered.		Sold.
1902	55,835,478 lbs.	1902	42,874,399 lbs.
1901	51,044,000 "	1901	39,160,923 "

*Prices.*—The average price for 1902 at the Colombo Sales was 33.07 cents against 33.55 cents for 1901.

Common teas kept their prices well until the latter part of September, when a fall took place, lasting about four weeks. They recovered again late in October and remained firm for the remainder of the year.

Fine teas have held their own all through the year and have been in continual demand, but medium sorts (better than common but without particular character) suffered in price from time to time and sold constantly in buyer's favour.

Dusts have realized good prices throughout the year.

GREEN TEAS have been an important factor in the market, and prices improved considerably during the latter part of the year. The demand has improved steadily, and shipments continue to increase in the face of advancing prices.

The general manufacture has been considerably improved, and the facing or finishing of the leaf has been of material assistance in increasing the consumption by opening fresh markets.

*Cocoa.*—Exports have again considerably increased.

1902	60,455 cwts.
1901	49,459 "

and prices have been ruling with a downward tendency.

*CARDAMOMS.*—Under the pressure of the ever-increasing exports,

1902	615,922 lbs.
1901	559,704 "
1900	537,455 "

prices have fallen about 25 per cent., and those interested in the cultivation of this spice have under the influence of this drop in value begun to seriously consider the question of finding fresh markets for their produce. It has been proposed to work this problem on similar lines to those adopted to cope with the over-production of tea. With the exception of the United Kingdom, India, and Germany, the rest of the world takes directly only very small quantities, and it appears there is good prospect for an agitation to foster direct trade with such countries as now supply themselves indirectly *via* Europe at a considerably enhanced cost of the article to the consumer.

The undermentioned comparative statement of shipments will be found of interest:—

	1902.	1901.	1900.
Coffee .. .. cwts.	11,436	9,722	10,777
Black tea .. .. lbs.	146,194,397	145,188,244	148,431,639

## COFFEE NOTES.

**The U. S. Coffee Market.**—The coffee market shows an improvement, says *Tea, Coffee and Sugar* of 11th ultimo, and has advanced fractionally owing to the trade awakening last week to the realization that the world's visible supply had shrunk nearly one-half million bags during January. So large a decrease had not been expected. The contributing causes were the increasing shortages in the shipment of mild coffee from blockaded Venezuela and the silent heavy buying in the actual market, which was tempted by the low prices prevailing if not actually compelled to buy on account of depleted stocks. Certainly the deliveries were heavy, not only in the United States but also in Europe. A surprising feature was that the trade did not discover the heavy deliveries until the Exchange announced the news. Such consumption should certainly have in itself advanced the price of coffee one-half cent, but that it did not is explained by reference to the still excessively large visible supply of coffee. The statistical position was too much of a weight to permit the market to respond in a buoyant manner of its own accord. As soon as the facts obtaining were ascertained the small jump upward occurred, and the highest was taken by package coffee, which advanced one-half cent. The margin of profit there has thus widened to the roasters.

\* \* \*

The official report of the proceedings of the late Coffee Congress have been printed as Senate Document No. 35 and may be had by application to the International Bureau of American Republics, Washington, D.C. The proceedings are contained in one volume of 312 pages and are in the English, Spanish, and Portuguese languages. Thus everybody interested in coffee-growing, except the Dutch, have at their disposal the reports, and the transactions following them, of this first convention exclusively called in behalf of the welfare of the coffee bean.

It may be said that enough has been heard of the Congress, but we are not inclined to concede this view, and we ourselves shall from time to time review what was said in that congress, for on cursory inspection we find much that invites criticism. It will be recalled, that while the congress was in session in this city, it transacted its business with official secrecy, and now only is on view all that took place in the sessions. A first comment is that the delegates were quite pleased with themselves, for they make the suggestion that all meet again. While it is true that some of the delegates were eminently qualified to sit in the congress, it is also to be said that not a few did not know their business in the least, and if the results of the congress fall short of even the smallest culmination, the cause can easily be found in the membership, the credentials in which were in the main founded on diplomatic experience rather than on practical coffee knowledge. We rest happy, however, in the belief that the representation of the United States was all that it could have been in intellect, knowledge and especially common sense, which was important, very important, as it prevented the United States from subscribing itself as commending and approving the conclusions of the congress. Truly, strange mental temperament were disclosed and from the character of the discussions it is not to be wondered that the recommendations in the main are Quixotic and unattainable. The wonder is that the Castilian-Latin race has accomplished what it has and especially

in coffee, even to the over-production where our Spanish-American friends have succeeded so lamentably, and from the seeming "crisis" of which they can conceive no other rescue save that which may come from legislation and treaties. We see the Spanish and Portuguese mind is utterly unable to grasp that the salvation they seek lies in their own bosom, and will come only from their initiative. They expect to be aided internationally, and will wait, indefinitely we fear, if strenuous reliance is being placed on the next coffee congress, which Brazil is to call that the delegates of the late congress may contemplate the extent to which the world has accepted its recommendations. So far the world has adopted none of them. In one way the distressed growers might show activity. The congress was called upon to show among other things the cost of coffee production but all the congress was able to do was to report that such statistics were not available and so there was nothing to say. The growers might collate them and so demonstrate that there really is a "crisis." Many say there is none.—*Tea, Coffee and Sugar*.

\* \* \*

**Coffee in the U. S.**—The *American Grocer* remarks:—The United States is now a billion-pound annual consumer of coffee, the bean which delights the palate, aids digestion, and makes the user feel as if he were at peace with all mankind and thankful for life and the pleasures of the table.

During 1902 the imports were 955,283,919 pounds, against 1,072,009,182 pounds in 1901; grand total for two years, 2,027,293,101, or an annual average import of 1,013,646,550 pounds.

Since 1894 the imports have more than doubled and the *per capita* consumption increased four pounds. This is a notable gain and is larger than that made by any other article used as a beverage. It is a mild and agreeable stimulant, less harmful than beer or other alcoholic beverage; more pleasing to the palate of most folk than tea, and obtainable at surprisingly low cost. It sells at retail from 10 to 40 cents per pound; a highly meritorious roasted article being obtainable from 20 to 25 cents per pound.

It is, or ought to be, a profit-making article for the retailer. If he cannot get a 25 to 40 per cent. profit out of coffee, he lacks proper knowledge of his calling. Coffee will bring up the average profit better than any other article the grocer handles, because it is a ready and constant seller and, if good, makes trade and cements the relation between the dealer and his customer.

It pays to make the coffee department very prominent. Talk coffee, serve coffee, advertise coffee, drink coffee.

Many will be interested to know from whence this billion pounds of coffee comes, and to gratify such we present the record, as follows:

	lbs.	Per cent. of total.
Brazil .. .. .	764,658,963	80.1
Central America .. ..	45,512,114	4.8
Mexico .. .. .	30,719,800	3.2
Other countries, South America ..	63,824,056	6.7
East Indies .. .. .	20,814,403	2.2
West Indies .. .. .	20,429,314	2.1
Other Asia and Oceanica .. ..	5,003,563	
United Kingdom .. ..	1,778,461	
Netherlands .. .. .	1,828,935	0.9
All other countries .. ..	714,310	
Total .. .. .	955,283,919	100.00

Think of it! A trifle over eight-tenths of all the coffee consumed comes from the Republic of Brazil and only 2.2

per cent. from the East Indies, and yet Java coffee is universally sold.

South America, Central America, and Mexico combined furnish 14·7 per cent. of the total. The Western Continent grows nearly 95 per cent. of the coffee consumed in the United States.

Brazil has more than quadrupled its production since 1880. Plantations are still being extended in spite of low prices, so that cheap coffee is certain for several years ahead unless some great disaster strikes the industry.

### TEA NOTES.

**The Tea Tray.**—The following half-page advertisement appears in the *World* :—

THE TEA TRAY.

16b Grafton Street, Bond Street, W.

There was a young woman, and she  
Said, "Really, I must have some tea ;

Oh, where in the West

Are the tea and things best ? "

They said, "Grafton Street, dear—16b."

In addition to the prettiest and cosiest Tea Rooms in London, The Tea Tray includes Manicure and Electrical Beauty Treatment Rooms, equipped with the latest modern electrical appliances.

THE TEA TRAY.

16b Grafton Street, Bond Street, W.

In the same issue of the *World* the following appears from "Crepe-de-Chine" :—

In these restless times an original idea soon creates a sensation and becomes extremely popular. Such has happened to "The Tea Tray," the newest five-o'clock-tea resort, lately opened by Mrs. Palmer at 16b Grafton Street, Bond Street. Besides the dainty teas which may be obtained in those quaintly decorated, softly-lighted salons, which make so central and pleasant a resting-place, more serious restoratives to the good looks and well-being of the visitors may be found in snug little salons downstairs. Here, by a clever specialist, electric treatment for the hair can be undergone, as electricity properly applied is said to stimulate the growth of the hair, and not only stops its falling, but restores faded hair to its proper colour. Electricity is also said to have a beneficial effect upon the skin, making it soft, firm, and white, and in time it will doubtless take the place of more dangerous *cosmétiques* and lotions. This treatment has already delighted many of Mrs. Palmer's clients, while the method of manicure obtainable at "The Tea Tray" is the American.

\* \* \*

**Sir Michael Hicks-Beach and the Tea Duty.**—Sir Michael Hicks-Beach, in conversation with a representative of a Ceylon paper, expressed the opinion that a reduction in the duty could hardly be expected, at any rate at present. "I do not think it is possible," he said, "for I have no doubt that the Income-tax must come first." The ex-Chancellor, although he could not speak with certainty said it could not be a for some time, and he very much doubted that there would be a reduction. "Why, you get much better prices now," he remarked. "You see," he continued, "the tea duty produces nearly £2,000,000 for every 2d. in the pound, and it is a very serious matter to lose as much as that in taxation."

\* \* \*

**The Tea Clearing House.**—Several further Meetings are said to have been held, and some good work has been done. The composition of the Council has been modified, and, the

London correspondent of our contemporary says, is now proposed to be as follows :—4 producers ; 4 buyers ; 4 wharfingers ; 1 broker. It is thought that several economies can be effected which will bring about a considerable saving over present methods. One of these, which has been suggested, deals with Warrants. At present, teas are lotted in quantities of six chests, and each warrant has to bear a threepenny stamp. It is proposed to raise this 6-chest limit to 9 chests or 12 half-chests, and it is obvious that this change alone would save a good deal of money. Care, however, will have to be taken that small buyers are not put to any disadvantage. It is very much to the interests of growers that the small buyers should be encouraged.

\* \* \*

**Tea in Australia.**—Sydney advices dated 14th ultimo say—100 chests of Ceylon Pekoes and Broken Pekoes sold at 8½d. to 1s. 0½d., and 70 chests ditto at up to 10½d. From Colombo cables have been received confirmatory of those published earlier in the week. One states :—"Have ceased buying for Australia. The market is too high. Prices have gone up all round. Small supplies are coming to hand." Another message states :—"Market is decidedly higher for all kinds." Teas that are selling at present at 6¾d. cost on the basis of last week's market in Colombo 7d. to 7½d. to lay down.

Messrs. H. W. Carey & Co. report :—"We offered at our sale-room to-day, under instructions from Messrs. Scott, Henderson & Co., an attractive catalogue of 251 packages Ceylon and 336 packages Indian tea, and cleared five-sixths of the quantity to good competition at prices indicating a steady and gradually improving market. Ceylon Pekoe Souchongs realised 7d., medium to good Broken Pekoes 7½d. to 10d., Dooars Fannings 7d., Assam Broken Pekoe Souchongs 6d. to 7½d., Assam Broken Pekoe 8d., Assam Pekoes and Orange Pekoes 7d. to 8¾d., Darjeeling Orange Pekoe 10½d. per lb."

\* \* \*

**The U. S. Tea Market.**—The tendency in the prices of tea is still upward. A fair activity prevailed last week, but the trading was mostly in small lots and at firm rates. There is no large stock of tea in first hands to permit extensive sales, excepting, of course, Congous and Foochow.

For the greens of whatsoever kind inquiry continues unabated. The market is practically barren of them and may be that such stocks of them as were exported to England in the last two months will be reimported. The London market is slow while that here keeps on advancing and so will prove an irresistible magnet, especially if Japans and Pingsueys advance another cent, which they did last week. This advance has stimulated all the more the interest in Ceylon greens, by which it is hoped to satiate in part the hunger for the orthodox greens. The query now is how large has been the import of the Ceylon greens? On the extent of it, naturally, much depends in relation to the future price of all greens. The Ceylon greens have now a handsome opportunity to establish themselves in the American market. If in quality they shall prove as good as the Japans or Chinas and sell for a little less, their future is assured. But a criticism has been that their quality leaves much to be desired.

All Formosas, except about 30,000 packages, are now out of first hands. They are still much wanted and so much so

that another advance of two cents is predicted of them.—*Tea, Coffee and Sugar*, February 11.

\* \* \*

**Japan Tea Market.**—M. J. Brandenstein & Co., in their market letter dated January 3, say of Japan tea :

"Supply at present is exhausted. Settlements about same as last year. Prices have shown a gradual advance, particularly towards the end of the season. Quality, as a whole, inferior to last season. Total settlements since opening of season at Yokohama and Kobe, 290,229 piculs, against 289,948 piculs same time last year and 302,079 piculs for the entire season. Total exports to United States and Canada to date, 37,802,605 lbs. ; same period 1901-2, 34,353,754 lbs. ; same period 1900-1, 36,205,214 lbs. Total exports to United States and Canada for the season of 1901-2 were 35,886,262 lbs. ; season 1900-1, 37,935,920 lbs."

\* \* \*

**Tea Farm in Texas Procured.**—What are considered suitable lands for tea farms have been procured on the Colorado River in Texas by Prof. Galloway of the Department of Agriculture under instructions of Secretary Wilson says a Charleston, S. C., dispatch. The experiments will be in charge of John H. Kinsler, who has been an assistant of C. U. Shepard of the Pinehurst tea farms at Summerville, South Carolina.

\* \* \*

**U. S. Tea Imports for 1902.**—Tea imports into the United States during 1902 were as follows according to the Bureau of Statistics of the United States Treasury Department, included being a comparison with the imports for the years 1901 and 1900 :

	1900. lbs.	1901. lbs.	1902. lbs.
Imported from			
United Kingdom...	2,163,660	3,425,157	5,264,757
British North American ...	1,116,383	1,399,374	1,824,295
Chinese Empire ...	54,111,195	30,352,239	60,837,270
East Indies ...	3,185,845	2,394,796	5,761,676
Japan...	33,261,387	30,385,675	34,578,325
Other Asia and Oceania ...	2,513,070	205,942	475,194
Other countries ...	33,156	57,479	8,947

Total ... 96,384,696    68,220,653    108,750,464

The value of the tea imported was \$14,570,285 in 1902, \$8,744,190 in 1901, and \$11,783,317 in 1900. The exports of tea during 1902 amounted to 924,544 pounds, making the net imports 107,822,920 pounds. The Chinese imports were 56 per cent. of the total and Japanese 32.1 per cent.

The imports for December, 1902, were 16,479,579 pounds, against 7,565,451 pounds for December, 1901.

Tea remaining in warehouse January 1, 1903, at the principal custom houses was—

	1901. lbs.	1902. lbs.
Boston and Charlestown, Mass. ...	488,149	3,955,446
New York, N. Y. ...	26,129,739	56,899,940
Philadelphia, Pa. ...	46,912	813,696
Puget Sound, Wash. ...	42,643	200,930
San Francisco, Cal. ...	4,205,445	6,025,646
Willamette, Oreg. ...	162,873	302,826
Chicago, Ill. ...	7,465,422	12,278,625
Cuyahoga, Ohio. ...	323,824	1,098,930
Detroit, Mich. ...	444,769	723,912
Minnesota, Minn. ...	762,962	1,208,766
Kansas City, Mo. ...	102,302	516,571
All other ...	1,486,935	6,945,922
Total ...	41,661,965	90,971,210

—*Tea, Coffee and Sugar.*

## NOTES.

### St. Louis Exhibition.

Louis Exposition in 1904.

It is stated that Mr. David Barrie is to represent Ceylon tea at the St.

### Java Quinine-exports.

The exports of quinine from Java during December, 1902, amounted to 576 cases (206,800 oz.), about 470 of which were shipped to the United States, the remainder being divided between Japan, Hong-Kong, and Singapore. From January 1 to December 31 the shipments have been :—

	1902.	1901.	1900.	1899.	1898.
Cases ...	1,986	2,255	1,921	1,600	1,172

### Adulterated Coffee.

Our contemporary, the *Merchants' Review*, referring to some recent remarks of ours, remarks :—"It is necessary to say, positively and distinctly, that the sale of spurious and adulterated coffee has not increased amazingly in this part of the world. Coffee is too cheap for adulteration to flourish as in former years." Chicory is still cheaper, however ; and in Europe, at least, the sale of adulterated coffee continues and increases. We are under the impression that it does so in the United States also, where coffee is "prepared" for sale after various fashions.

### A Portuguese Cocoa Trust.

A despatch dated 25th January last has been received at the Foreign Office from H.M. Minister at Lisbon, reporting that a Meeting of the St. Thomé and Principe planters was recently held there, to discuss the formation of a cocoa trust for placing the island proprietors in direct communication with the wholesale trade. Hitherto the cocoa crop has been in the hands of a few Lisbon merchants who buy up the cocoa and ship it abroad at prices very advantageous to themselves. The proposed trust would monopolise the sale of all cocoa produced in the Portuguese Dominions. H.M. Minister adds that the United Kingdom heads the list of countries importing Portuguese cocoa.

### London Tea Market.

Weekly special telegram dated 5th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for medium liquoring Pekoes and Broken Pekoes is also steady, while the market for Pekoes for price is easier. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 7½d. (½d. up). The average for the same period last year was 7½d. Reuter reports that the tone of Ceylon tea is generally steady and that Broken Pekoes are irregular. Fair Pekoe Souchongs are quoted at 6½d. (same as last week), but the average for the week is 7½d. (½d. up). 22,000 packages of Ceylon tea were offered for sale and 19,000 disposed of ; while of the 35,000 packages of Indian tea offered, 25,000 were sold at an average of 8½d. (½d. up).

### Cocoa in the United States.

During 1902 the imports of cocoa (unprepared) passed all former records, reaching a total of 56,744,545 pounds, against 50,433,562 pounds in 1901, 45,305,016 pounds in 1900, an average annual increase of 10 per cent., or over 5,000,000 pounds. In addition there were imports of prepared cocoa valued at \$1,045,403, against \$908,285 in 1901, \$995,401 in 1900. These figures show practically no

gain in the trade in foreign-made cocoa and its various preparations, while they demonstrate a pronounced increase in the consumption of cocoa and chocolate of domestic manufacture. This is a very gratifying condition, as it demonstrates the benefit to an American industry of free raw material and a high tariff on the manufactured article. The high nutritive value of cocoa is being appreciated more and more, and at the present rate of increased consumption the United States ought to double its imports in five or six years.

### Rubber in Matale.

**Rubber in Matale.** Mr. W. E. Gildea writes to the Colombo papers :—The following information *re* the growth of *Castilloa* rubber on the Ambanganga estate in the Matale district may be of interest and merit inclusion in your next issue of the *Tropical Agriculturist* :—

No.	1	19 ft.	3 in.	23 in.	No.	8	16 ft. 6 in.	23 in.
"	2	21 "	11 "	25 "	"	9	16 " 8 "	24 "
"	3	18 "	7 "	26½ "	"	10	12 " 9 "	24 "
"	4	23 "	0 "	24 "	"	11	14 " 0 "	23¼ "
"	5	21 "	4 "	26 "	"	12	15 " 3 "	22 "
"	6	18 "	7 "	25 "	"	13	18 " 3 "	25 "
"	7	18 "	6 "	23¼ "				

All the above are in a clearing planted in November-December, 1900, and so  $2\frac{1}{4}$  years old only. Can the Straits beat this? It is interesting to compare these measurements with those of the same clearing published by you some six months ago, where the average girth was 16 inches only and average height  $12\frac{1}{2}$  feet only.

## GENERAL ARTICLES.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange, Saturday, 24th January, 1903.**—Ninety days' Bank rate on London opened on Monday at  $12\frac{23}{32}$ d. and closed this evening at  $11\frac{22}{32}$  or perhaps  $11\frac{20}{32}$ d.

The tussle between the "bears" and "bulls" this week was sharp and decisive. A regular set was made against the Bank where £100,000 of ready bills were taken by speculation in one day, which will be deliverable early this week; in the depauperised state of the coffers of the foreign Banks, it is hard to see where so much money is at present to come from.

It is reported for the fiftieth time that the Sorocabana has been or is about to be sold, which, if true, would be a most welcome windfall for the market and justify the Bank in its policy of bolstering up the rates.

During the month of December in the different branches of the five foreign Banks there was a further aggregate falling off of 9,460 contos in the cash, whilst the credit with Home Offices had risen from 436 contos on 30th November to 12,455 contos. Meanwhile sight deposits also decreased 3,073 contos, but those of term increased 1,213 contos, so that the percentage of cash to sight deposits fell from 87·6 to 80·7 per cent. and to deposits of all from 75 per cent. to 68·1 per cent.

The shrinkage of cash was largest as would be expected at Pará, 4,554 contos, Rio coming next with a shrinkage of 4,509 contos, then Pernambuco with 2,567 contos and Santos with 1,976 contos less than on 30th November.

The relatively small percentage of cash held by the German Bank is probably explained by the fact that this Bank has no branch of its own at Pará or Manaus, and that whatever cash it may hold there in the hands of agents does not, we presume, figure in the balance-sheets.

From the foregoing it is clear that the Banks have remitted heavily during the month of December and strengthened their home position at the cost of the local position, where the percent-

age of cash to deposits, it seems will not stand much further reduction.

**Coffee.**—*Embarques* during the week ended December 23rd were 60,924 bags less than the previous week but 73,235 more than the corresponding week last year, whilst declared sales were 14,000 larger than the previous weeks and 86,000 more than for the corresponding week last year.

Stocks fell off slightly, in consequence being 34,527 bags less previous Friday.

Prices were somewhat weaker, the average for the week for No. 7 being 4\$337 as against 4\$357 per 10 kilos. for the previous week and 5\$021 last year and for good average 4\$100 as against 3\$983 and 4\$800 respectively. The average New York spot quotation for the past week was unaltered at 5\$250.

(From the *Boletim da Agricultura*.)

**Planting Conditions in December.** *1st district* (Tanbaté).—December was drier, but a few heavy storms caused a little damage.

*2nd district (Campinas).—*The weather during the month has been very favourable, coffee trees are in good condition and less fruit has fallen.

3rd district (Ribeirão Preto).—Continuous and abundant rain has been very beneficial.

Before the frost in August there existed in this district 119,793 *alqueires* (S. Paulo acres) of land with 250,250,377,370 coffee trees of which 52,823,740 in formation, the average annual yield being 15,145,000 *arrobas*. The frost killed 7 per cent. thus reducing the number of trees to 232,850,955, and damaged 30,270,021, which, according to treatment they receive, will take 2, 3, 4 or more years to recover. The damage done to flowering can be calculated at 40 per cent. and a further 10 per cent. caused by wind, hail, etc., as also 15 per cent. by the fall of fruit, thus making a total 65 per cent., which will therefore reduce the yield from over 15 million *arrobas* to about 6,000,000.

4th district (S. Carlos do Pinhal).—The trees are presenting a fine appearance with green berries of more than one month's growth, but resulting from November flowering are rather too small and will likely give no yield.

The coming crop will be small and will pan out much under the current one ending on 30th June next, not only because it was swollen by the balance remaining over from the previous (1901-2) crop, but also because in 1903-4 crop is going to be the early particularly and part of it will come down during the current season.

The trees affected by the frost are, by reason of favourable weather, gradually reviving

5th district (Botucatú).—Though the trees have clothed themselves with leaves yet their appearance is not quite as verdant looking as during the same period last year; they are in good condition, however, and show fine fruit.

The fine weather has been taken advantage of for weeding and clearing, and now it is easier to calculate the full extent of the damage caused by the frost, which has been added to by the fall of a large quantity of the fruit, brought on by the heavy winds experienced up till now.

## COFFEE IN THE UNITED STATES.

Although not equal to the time of year, says the *Producer Markets' Review* of February 14, there has been a much better supply offered at the auctions, and as with it the demand has shown a decided improvement, there has been no difficulty in clearing the catalogues from day to day, and prices have generally improved. Costa Rica, particularly fine qualities, has been in most request and rates have advanced from 1s. to 2s. the demand coming not only from the home trade but also from the Continent; there is of course still the bulk of the crop to come, but with a decided shortage from Guatemala, a larger quantity of Costa Rica will doubtless be taken for export. The East India offered showed a marked improvement in some of the lots, and correspondingly high prices were obtained; the medium and lower grades are still relatively cheap and have attracted attention on the Continent. In the terminal market smaller receipts and a firmer market in Santos have had a hardening effect upon quotations, and the advance is about 1s. per cwt. compared with last week, while a larger business has been done than for some time,

## U. S. 1902 COFFEE IMPORTS LESS.

Coffee imports into the United States during 1902, with comparisons with the two previous years, according to Treasury figures, were as follows:

Imported from	Twelve months ending December.		1901.	
	Pounds.	Values.	Pounds.	Values.
United Kingdom ...	2,128,942	\$ 263,289	4,750,251	\$ 526,946
France ...	2,159,374	222,257	150,001	17,549
Germany ...	4,415,834	331,131	1,750,912	173,017
Netherlands ...	1,967,483	251,728	1,934,059	224,057
Other Europe ...	1,721,330	176,420	78,045	5,372
Central America ...	43,961,550	4,246,571	65,684,172	6,748,306
Mexico ...	30,010,567	2,859,690	22,897,373	2,200,143
West Indies ...	9,148,580	739,700	7,971,330	628,989

Other Asia and Oceania ...	5,003,563	625,126	5,003,563	625,126
Africa ...	9,650	994	9,650	994
Other countries ...	138,848	18,614	138,848	18,614
Total ...	955,283,919	64,157,664	955,283,919	64,157,664

The average of the imports for the last two years is 1,013,646,550 pounds. The export of coffee from the United States was 26,001,555 pounds, against 12,534,048 pounds in 1901 and 259,841 pounds in 1900. Roasted coffee exported during 1902 was 525,140 pounds, against 216,205 pounds in 1901.

Brazil furnished 80.1 per cent. of the imports for 1902, Central America 4.8 per cent., Mexico 6.7 per cent., West Indies 2.1 per cent., and the East Indies 2.2 per cent.

## TEA IN LONDON.

INDIAN TEA.—The moderate quantity brought forward met with a good demand, says the *Produce Markets' Review* of February 14, and consequently holders experienced less difficulty in disposing of their teas than for some time past. For the lower qualities there was an active inquiry at hardening rates, and a considerable business has been transacted by private contract in teas previously offered and withdrawn from public auction. Although there is no important movement in prices, there is a smaller quantity to be bought under 5½d., and the market closes very firm with an advancing tendency. For the medium grades prices remain steady with a fairly good demand, most of the teas from the different districts showing excellent value compared with the lower sorts; and, as the stocks held by the trade are comparatively small, a much improved business in these kinds may be expected. The finer descriptions continue to be actively bid for, more particularly some of the Assam growths, which have brought very firm to advanced rates; and, with a reduction in the supply which usually takes place at this period of the year, there is every prospect of a strong and improving market. At the public sales 29,108 packages were submitted and 23,300 changed hands, while a considerable portion of the balance has since been sold.

CEYLON TEAS.—Only small supplies were brought forward at the sales on Tuesday, and more animation was displayed, the tone generally being considerably stronger. Teas for "price" were in most demand, and Whole Leaf kinds under 6d. were ¼d. per lb. dearer, only a few parcels selling under 5½d. which was practically the lowest quotation. Medium Pekoes met with a ready sale at slightly hardening rates, and competition was brisk for all the finer descriptions. Broken Pekoes from 7½d. to 10d. were somewhat irregular, and very little was obtainable under the former price. At the public sales 17,830 packages were brought forward, of which about 2,800 were withdrawn. The official estimate of the exports from Colombo for the current month is 7,500,000 lbs. to 8,000,000 lbs., so the supplies here will be small for some little time to come.

CONGOU TEAS.—This market is firm in sympathy with Indians and Ceylons, and teas for price in particular show a distinct advance. Good sweet Monings are still to be bought at prices which, as compared with other growths, are extremely low. These teas are now being taken more freely by the trade, and with Indian and Ceylons at their present values there seems to be every prospect of a further advance in all grades of "price" Congous.

## WORLD'S VISIBLE COFFEE SUPPLY.

The visible supply of coffee of the world on February 1st, 1903, as compiled from figures received from the Coffee Exchange correspondents, is as follows:

	Stocks.	Bags.
England:		
London ...	462,723	
Liverpool ...	5,950	
Southampton ...	4,760	
		473,433
Hamburg ...		1,538,000
Antwerp ...		335,400
Havre ...		3,356,000
Bordeaux ...		60,800
Marseilles ...		99,600
Trieste ...		357,640
Netherlands ...		1,126,000
Total, Europe (all kinds) ...		7,346,873
Rio ...		527,000
Santos ...		1,222,000
Bahia ...		25,000
United States:		
Brazil ...	2,287,688	
Other kinds ...	212,553	
		2,500,241
		11,621,114

AFLOATS.	
Afloat for U. S.:	
From Brazil ...	410,300
" Europe ...	Nil.
" Java and East ...	19,000
Afloat for Europe:	
From Java and East ...	16,000
" Brazil ...	609,000
" United States ...	31,000
	EMBARQUES.*
Rio ...	10,000
Santos ...	53,000
	Total ... 12,769,414
Against January 1 ...	13,212,775
Against February 1, 1902 ...	10,894,093

The visible supply decreased during the month 443,361 bags, which proves a surprise, as a decrease of not more than 250,000 bags was expected. The markets were prompt to respond by an increase in quotations. The excessively heavy diminution is ascribed to the shutting off of supplies from Venezuela by the blockade in force there, only 185,000 bags being sent forth, of which 74,000 bags came to the United States.

The deliveries both in the United States and Europe during January were heavy. Evidently traders found it necessary to refill

\* Representing coffee deducted from stocks for shipment and not yet cleared.

their stocks and the prices were inviting for large orders. The deliveries amounted to 1,407,123 bags.

The shrinkage during the month in the visible supply was distributed as follows: Antwerp, 335,400 bags from 339,400 bags January 1; Bordeaux, 60,800 bags from 61,600 bags; Trieste, 357,640 bags from 582,000 bags; Santos, 1,222,000 bags from 1,361,000 bags; Bahia, 25,000 bags from 31,000 bags; United States, 2,500,241 bags from 2,600,426 bags; afloats, Brazil, 609,000 bags from 922,000 bags; embarques, Rio, 10,000 bags from 43,000 bags; Santos, 53,000 bags from 57,000 bags.

It is worth while noting that while the visible supply decreased in the United States it increased in Europe, the total for Europe (all kinds) on February 1, being 7,46,873 bags against 7,168,149 bags January 1, 1903.

Arrivals of coffee in January in New York were 393,378 bags, of which 45,086 bags were non-Brazilian, against in December of 393,378 and 83,384 bags respectively; total of all kinds in the United States of 524,593 bags (450,551 Brazilian), against 471,226 bags (364,605 Brazilian) in December; total for seven months, 1902-03, 3,976 bags (3,457,618 Brazilian) against 5,094,838 bags (4,531,557 Brazilian) during the same period 1901-02; total for the chief ports of Europe during January, 961,069 bags, and total for the last seven months of 6,410,573 bags against 7,025,937 bags during the same period in 1901-02.

The deliveries of coffee during January in New York were 418,151 bags of Brazil and 84,973 bags other kinds; in New Orleans the deliveries were 79,202 bags, Brazil, against 9,648 bags in December; total for the United States 624,778 bags (521,252 Brazilian) against 493,649 bags (398,288 Brazilian) in December and a total of 3,914,740 bags (3,296,731 Brazilian) during the last seven months, against 4,106,816 bags (3,410,606 Brazilian) during the same period in 1901-02. In Europe 782,345 bags against 689,649 bags in December; total for Europe and the United States 1,402,123 bags against 1,183,298 bags in December. The grand total deliveries were 9,287,257 bags during the last seven months against 9,517,309 bags during the same period in 1901-02.

Receipts at Santos and Rio during January were 782,000 bags, against 922,000 bags in January, 1902; total for last seven months were 9,008,000 bags, against 11,468,000 bags in 1901-02.—*Tea, Coffee and Sugar.*

## COFFEE IN DISTANT LANDS.

**Mexico.**—In the December issue of the International Bureau of American Republics, we find an account of coffee cultivation in Mexico, as follows:—

Mexico is the most northerly of American countries to engage profitably in the growing of the coffee plant. The initial efforts in this culture were made in 1818 at Cordova, in the State of Vera Cruz, and large *cafetals*, or coffee plantations, may still be seen in that region, though tobacco growing has become the leading industry of the district. Certain parts of the Republic are admirably adapted for coffee cultivation, and yield a quality which is equal to the best varieties of Arabia.

The plant may be grown at any altitude between sea-level and 5,000 feet, its success at the various heights being governed by local climatic conditions. On the Isthmus of Tehuantepec, where the elevation of some of the plantations is not more than 500 feet, a favouring temperature is produced by the air currents which sweep across the neck of land from ocean to ocean, reducing what would otherwise be too tropical heat. Equally good results are obtained from among the mountains and foothills of the States of Oaxaca, Michoacan, Puebla, Vera Cruz, and Chiapas. These States are the principal coffee-producing sections of the Republic, as the northern part has too sterile a soil and too temperate a climate for such vegetation, and much of the southern part is a tableland over 5,000 feet above sea-level.

The variety chiefly cultivated is *Coffea arabica*, allied to the Mocha. The myrtle species, similar to the Java, is second in quality, and it is thought that on the lowlands near the coast Liberian coffee would do well, as it is grown near the sea in its native habitat. The best coffee in Mexico is grown in the State of Michoacan, near the city of Uruapan. The berry is small and dwarfed and

contains but one seed. This is of so delicious a flavour that it is supposed to have its own portion and that of the missing seed as well.

One of the largest plantations in Mexico is owned by United States citizens, and is situated in the Sierra Madre Mountains in the State of Oaxaca, a day's journey on horseback from the Mexican Southern Railway, over seven ranges of mountains. It is a model form, comprising 6,000 acres, and fitted up with modern machinery of United States origin. In the Department of Palenque, State of Chiapas, a number of planters from the United States are successfully engaged in raising coffee, and several companies have secured land that they are selling in small tracts and colonizing. On the Isthmus of Tehuantepec an Ohio company has bought 900 acres of coffee lands in the foothills of a mountain range, and adjoining this property is an estate owned by a Kansas City company on which one of the most complete coffee-cleaning plants is in operation. Many other planters in the vicinity have reached the period when returns on their outlay are being realized. Another exceptionally favourable location for coffee growing is on the Tehuantepec Railway, 85 miles south of the Gulf port of Coatzacoalcos, and bordered by rivers on each side. This estate is known as "La Puerta," and contains 40,000 acres. The State of Vera Cruz also contains large plantations devoted to this culture, which is being carried on with good results.

Mr. J. Hirst writes:—

I have been very much interested in noting the effects of different soils, situations, and methods of cultivation of coffee in Mexico, and more especially the effect of shade, for that, more than anything else, is the key to coffee-growing there. The growers have experimented and gone from one extreme to the other, and are only now finding the right medium. What I saw confirmed my first opinion, which would be the opinion I think of any man who knew anything about coffee, barring Ceylon men, who somehow seem unable to adapt themselves to circumstances. The Mexican elevation being low, and a good deal of the land having a clay sub-soil, a heavy shade is required, but at the same time you must admit the sun some time during the day, preferably in the morning and evening, for the mid-day sun is very hot. It is a very difficult question, owing to the long, dry, hot season, followed by the long, very wet season, which makes it difficult to suit the shade to both; in fact, you can't do it, you can only strike a mean.

The prevailing south wind, which is very injurious, being hot and dry, makes it almost impossible to grow coffee on a southern or southwestern exposure, but very few will recognize this. I noted no disease, excepting the white fly, which is worse than in Jamaica, and seems to occur most on southern exposures, probably due to the debilitated condition of the trees making them more liable to attack. I found one tree attacked by borer, and I believe if I had investigated more closely, I should have found more. Canker I have not noticed, but think it very likely is here. Foot-rot I noticed a good deal of, but it did appear to come from the usual causes, a great number of cases appearing on fairly good, well drained soil. I attribute it to bad plants, badly planted, the attacks of some animal, probably a mole, and also of ants, probably attracted to the trees by machete wounds inflicted in weeding, which wounds I noted on most of the dead trees, and a large number of the healthy trees show the same wounds.

### MORE CAREFUL WEEDING NEEDED.

If coffee culture is to be carried on in Mexico, more careful and more frequent weeding will have to be done and the machete will have to be discarded in favour of the hoe or the tarpalox, not alone on account of the damage done by the machete, but because a loosening of the surface earth and the mulch caused by it is absolutely essential on these soils and in this climate. The practice also prevails of continually weeding away from the tree, and piling in windrows between. If during the dry weather this were spread over the ground, around the tree, very great good would result, not only by the mulch protecting the ground from the rays of the sun and retaining moisture, but by recovering the roots exposed by this system of weeding and rendering available this very necessary plant food, which when placed in rows is out of the reach of young plants owing to the very wide distance at which hitherto it has been customary to plant here. Some of the soil is good coffee soil, especially the light-colored chocolate

loam mixed with gravel, which I found on the Solo-suekil river. A brown sandy loam also appears to be a good soil, and coffee seems to thrive on it. Some other soils, and also some of the clays, will grow coffee, but will require considerable skill and care, and the lasting qualities of the plant can only be determined on by experiment.

#### COFFEE SHORT-LIVED.

So far, I do not believe coffee will be long-lived, perhaps from ten to twenty-five years, but with careful management, good crops can be obtained on good soil and in good situations, but the quality of the berry I can say nothing about until I see a crop, but believe it will be fairly good. But without better and more abundant labour, I do not believe coffee can be successfully cultivated at a profit in Mexico. Every state shows very plainly the want of labour. Competition has not only raised the price, but made it necessary to advance anything up to \$2.00 per man, before he even comes to you. Under these conditions, every plantation has about half the force it requires, and the only solution of the difficulty seems to be imported labour. Coffee requires an abundance of cheap labour and the ability to get rid of it at will. Driers are in common use, and seem to be necessary, owing to climate and lack of labour. Sun-curing is impossible because the necessary labour cannot be obtained.

### ESTIMATE OF COST AND REVENUES OF A CACAO PLANTATION.

[Estimates of expenses in establishing a cacao farm in the Visayas, Phillippines, and profits after the fifth year.]

The size selected is 16 hectares, the amount of land prescribed by Congress of a single public land entry. The cost of producing such a tract of land is as yet undetermined and cannot be reckoned in the following tables. The prices of the crop are estimated at 48 cents per kilo., which is the current price for the best grades of cacao in the world's markets. The yield per tree is given as 2 catties, or 1.25 kilos., a fair and conservative estimate for a good tree, with little or no cultivation. The prices for unskilled labour are 25 per cent. in advance of the farm hand in the Visayan islands. No provision is made for management or supervision, as the owner will, it is assumed, act as manager.

Charges to capital account are given for the second, third and fourth year, but no current expenses are given, for other crops are to defray operating expenses until the cacao trees begin to bear. No estimate of residence is given. All accounts are in United States currency.

#### EXPENDABLE THE FIRST YEAR.

##### Capital account:—

Clearing of <i>average</i> brush and timber land at \$15 per hectare	..	\$340.00
Four carabaos, plows, harrows, cultivators, carts, etc.	..	550.00
Breaking and preparing land, at \$5 per hectare	..	80.00
Opening main drainage canals, at \$6 per hectare	..	96.00
Tool house and storeroom	..	200.00
Purchase and planting 10,000 abaca stools, at 2 cents each	..	200.00
Seed purchase, rearing and planting 12,000 cacao, at 3 cents each	..	360.00
Contingent and incidental	..	174.00

Total .. 2,000.00

#### SECOND YEAR.

Interest on investment	..	200.00
Depreciation on tools, buildings and animals (20 per cent. of cost)	..	150.00
		350.00

#### THIRD YEAR.

Interest on investment	..	200.00
Depreciation as above	..	150.00
		350.00

#### FOURTH YEAR.

Interest on investment	..	200.00
Depreciation as above	..	150.00
Building of drying house and sweat boxes, capacity 20,000 kilos.	..	450.00
		800.00

Total capital investment .. 3,500.00

#### FIFTH YEAR.

##### Income account:—

From 11,680 cacao trees, 300 grams cacao each, equals 3,500 kilos., at 48 cents	..	1,680.00
---	----	----------

##### Expense account:—

Fixed interest and depreciation charges on investment of \$3,500	..	350.00
Taxes $1\frac{1}{2}$ per cent on a one-third valuation basis of \$250 per hectare	..	60.00
Cultivating, pruning, etc., at \$5.50 per hectare	..	88.00
Fertilising at, \$8 per hectare	..	96.00
Harvesting, curing, packing 3,500 kilos. cacao, at 10 cents per kilo.	..	350.00
Contingent	..	86.00
		1,030.00
Credit balance	..	650.00

#### SIXTH YEAR.

##### Income account:—

From 11,680 cacao trees, at 500 grams cacao each, equals 5,840 kilos., at 48 cents	..	2,803.20
--	----	----------

##### Expense account:—

Fixed interest and depreciation charges as above	..	350.00
Taxes as above	..	60.00
Cultivating, etc., as above	..	88.00
Fertilising, at \$8 per hectare	..	128.00
Harvesting, etc., 5,840 kilos. cacao, at 10 cents per kilo.	..	584.00
Contingent	..	93.20
		1,303.20
Credit balance	..	1,500.00

#### SEVENTH YEAR.

##### Income account:—

From 11,680 cacao trees, at 750 grams cacao each, equals 8,760 kilos., at 48 cents	..	4,204.80
--	----	----------

##### Expense account:—

Fixed interest charges as above	..	350.00
Taxes as above	..	60.00
Cultivating, etc., as above	..	88.00
Fertilising, at \$10 per hectare	..	160.00
Harvest, etc., of 8,760 kilos. of cacao, at 10 cents per kilo.	..	876.00
Contingent	..	170.80
		1,704.80
Credit balance	..	2,500.00

#### EIGHTH YEAR.

##### Income account:—

From 11,680 cacao trees, at 1 kilo. cacao each, equals 11,680 kilos., at 48 cents	..	5,606.40
---	----	----------

##### Expense account:—

Fixed interest charges as above	..	350.00
Taxes as above	..	60.00
Cultivating, etc., as above	..	88.00
Fertilising, at \$12.50 per hectare	..	200.00
Harvest, etc., 11,680 kilos. of cacao, at 10 cents per kilo.	..	1,168.00
Contingent	..	240.40
		2,106.40
Credit balance	..	3,500.00

#### NINTH YEAR.

##### Income account:—

From 11,680 trees, at 2 'catties' or 1.25 kilos. cacao each, equals 14,600 kilos. at 48 cents	..	7,008.00
---	----	----------

##### Expense account:—

Fixed interest charges as above	..	350.00
Taxes at $1\frac{1}{2}$ per cent. on one-third valuation of \$500 per hectare.	..	120.00
Cultivating, etc., as above	..	88.00
Fertilising, at \$15 per hectare	..	240.00
Harvesting, etc., of 14,600 kilos. of cacao at 10 cents per kilo.	..	1,460.00
Contingent	..	250.00
		2,508.00
Credit balance	..	4,500.00

In the tenth year there should be no increase in taxes or fertilisers, and a slight increase in yield, sufficient to bring the net profits of the estate to the approximate amount of \$5,000. This would amount to a dividend of rather more than \$312 per hectare, or its equivalent of about \$126 per acre.

These tables further show original capitalisation cost of nearly \$90 per acre, and from the ninth year annual operating expenses of rather more than \$60 per acre.

It should be stated, however, that the operating expenses are based upon a systematic and scientific management of the estate; while the returns or income are based upon revenue from trees that are at the disadvantage of being without culture of any kind, and, while I am of the opinion that the original cost per acre of the plantation, nor its current operating expenses may be much reduced below the figures given, I feel that there is a reasonable certainty that the crop product may be materially increased beyond the limit of two 'catties.'

In Cameroons, Dr. Preuss, a close and well-trained observer, gives the mean annual yield of trees of full-bearing age at 4½ pounds.

Mr. Rousselot places the yield on the French Congou at the same figure. In the Caroline Islands it reaches 5 pounds and in Surinam, according to M. Nichols, the average at maturity is 6½ pounds. In Mindanao, I have been told, but do not vouch for the report, of more than ten 'catties' taken in one year from a single tree; and, as there are well-authenticated instances of record, of single trees having yielded as much as 30 pounds, I am not prepared to altogether discredit the Mindanao story.

The difference, however, between good returns and enormous profits arising from cacao growing in the Philippines will be determined by the amount of knowledge, experience, and energy that the planter is capable of bringing to bear upon the culture in question.—*Philippine Bureau of Agriculture, Farmers' Bulletin, No. 2, 1902.*

## CINCHONA AND QUININE.

In their annual review of cinchona and quinine during 1902 (dated February 6), Messrs. C. M. & C. Woodhouse give some interesting statistics regarding the position of these products. It is unnecessary to trace the course of the markets last year, as they were fully dealt with in the market movements in our issue of December 27. The prominent facts in regard to the series of tables given in the circular, are: (1) that the world's supply of bark is increasing; (2) that the consumption and distribution of quinine are also increasing; (3) that the percentage of quinine in the manufacturing bark is higher than hitherto; (4) that the output of Java quinine is less. We quote the more important of the figures, which represent English lbs.:—

—	1898.	1899.	1900.	1901.	1902.
Ceylon, exports ..	976,000	619,000	510,000	601,000	407,000
E. I., exports ..	3,060,000	2,407,000	3,421,000	1,818,000	2,020,000
Java, exports ..	16,339,000	15,616,000	15,827,000	16,542,000	17,153,000
U. K., imports ..	5,143,000	3,742,000	4,604,000	4,765,000	4,447,000
U. K., exports ..	3,269,000	3,520,000	4,965,000	2,886,000	2,700,000
Holland, imports ..	11,657,000	12,579,000	11,166,000	13,455,000	14,644,000
Holland, exports ..	11,891,000	12,308,000	11,278,000	12,385,000	12,853,000
Germany, imports ..	7,805,000	8,658,000	8,019,000	9,341,000	8,768,000
France, imports ..	2,304,000	2,522,000	2,618,000	2,712,000	2,816,000
Italy, imports ..	340,000	202,000	124,000	128,000	168,000
U. S. A., imports ..	3,512,000	3,480,000	4,438,000	4,481,000	3,510,000

The French and Italian imports for 1902 represent eleven months only. The figures regarding South American (chiefly Calisaya) and African barks are stated in bales, and are therefore excluded. The chief point about the above figures is that, as already stated, the world's supply of bark is steadily increasing, the estimated output of Java, British India, and Ceylon being 17,153,000 English lbs. in 1902 against 16,542,000 in 1901. Taking the German imports of cinchona, it is interesting to compare with it the following exports of quinine from Germany—*viz.*, in 1898, 7,094,000 oz.; in 1899, 7,447,000 oz.; in 1900, 6,523,000 oz.; in 1901, 6,899,000 oz.; and in 1902, 8,201,000 oz. Our imports from Germany show a continual shrinkage since 1898, the figures last year being 996,000 oz.; while those to the United States totalled 2,046,000 oz., against 1,921,000 oz. in 1901. The exports of quinine from France are remarkable, being officially declared at 2,490,000 oz. during 1902, against 1,222,000 oz. in 1901. This would show that French makers had more than their usual share of the demand last year. Italy exported 66,000 oz., or 6,000 oz. less than in 1901; while the exports from Java fell to 700,000 oz., against 1,033,000 in the previous year. The United Kingdom exported 1,142,000 oz. last year; and as these figures are declared for the first time no comparison can be made. Our imports last year were 1,443,000 oz. for the eleven months, of which Germany sent practically 1,000,000 oz.

## "SPIKE DISEASE" IN SANDAL.

About the middle of last year, Mr. Barber, Government Botanist, Madras, investigated what is known as the "spike disease" among Sandal-wood trees in Coorg. He traced the disease to the roots of the trees and said:—"As regards the exact cause I have not had the means of judging. It seems to me that this is a suitable piece of work for the Cryptogamic Botanist to the Government of India." According to the *Madras Mail* of the 3rd instant, "the consequence is that the only result of Mr. Barber's investigation and report is to show the lines upon which 'some interesting experiments might be conducted.' Meanwhile, the disease continues unchecked." This scarcely gives a fair statement of facts. Our contemporary does not appear to be aware that Dr. E. J. Butler, M.B., F.L.S., Cryptogamic Botanist to the Government of India, visited the infected district of Coorg last July, shortly after Mr. Barber had been there, for the purpose of studying the disease under reference. Dr. Butler has reported upon the matter. He remained in ignorance of Mr. Barber's work until his own was completed; but his conclusions are similar to those arrived at by Mr. Barber. What he says is that the disease affects a portion of the Sandal area of Coorg and a smaller portion of Mysore. It appears to be of recent origin, "since it is hard to believe that so remarkable a disease could have escaped attention." The first detailed reference to it appears in a memorandum by Mr. McCarthy, Deputy Conservator of Forests in Coorg, on the future supply and culture of Sandal in Coorg, in December 1899. Dr. Butler states that the external characteristics of the disease are well described in the reports of Mr. McCarthy and Mr. Barber. All we need say on this point is that in the case of affected trees "the new shoots present the appearance of fine spikes bearing four rows of fine bristles." Hence the name that has been given to the disease.

According to Dr. Butler, the presence of the spike can point to nothing else but to a profound disturbance in the nutrition of the tree. Other evidence points to increased nutrition. The two salient and constant external features of the disease are an increased vegetative activity, and a failure to form

## RUSSIAN QUESTION IN ASIA, In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,  
*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

flowers; both evidences of a forced and possibly abnormal nutrition. The roots are perfectly healthy with the exception, noted by Mr. Barber, of the root-ends and 'haustoria.' The chief internal evidences of the disease are, an excessive production of starch, together with certain structural alterations in the tissues. Dr. Butler alludes to a certain train of modifications in the structure of a plant that has been shown to occur when the plant is forced to take in excessive quantities of carbon-dioxide by exposure to an atmosphere unduly charged with this gas. He states that this group of modifications strikingly resembles the modifications that characterise spike disease in sandal, and deduces that it is evidently possible that the whole of the alterations observed in spike disease are directly due to intensified carbon-assimilation, or are the result of overloading the plant with starch. As to the cause of the intensified carbon-assimilation in spiked sandal there is no guide. As Dr. Butler observes, it would be absurd to suppose it due to unusual quantities of carbon-dioxide in the atmosphere; the effects of such a condition would have been rapidly visible in the human population of the country affected. The cause must therefore be sought in the plant itself. "For some reason or other the tree, or some isolated branches of it, suddenly proceeds to manufacture starch out of all proportion to the demand for this food by the tissues. As a result of this, growth is forced, the tree gets no rest, and dies of exhaustion, the result of starch-poisoning." Yet the starch-forming cells are apparently healthy. The fact that in addition to the free rootlets the organs of attachment to other roots, or 'haustoria,' through which a portion of the food of the Sandal tree is absorbed, are also dead in spiked trees, tells against a local disease of the rootlets alone. The existence of a poison circulating in the sap seems therefore to be the most probable explanation of the suddenly intensified starch manufacture.

Another interesting point noticed is that Dr. Butler has failed to find any spiked sandal isolated from Lantana. Further investigations are likely to be made into this, and time will help, for spike disease is progressive, and the area covered by Lantana is restricted, "If," says Dr. Butler, "the disease continues to spread into Mysore, as it appears to be doing, and extends beyond the Lantana country, then it obviously cannot be traced to this source" (the Lantana invasion). "If on the other hand, spike disease remains confined to the Lantana country, and its originally rapid spread is checked, then there is grave reason to suspect the Lantana and a definite, though not very hopeful objective to which to direct our preventive measures." Dr. Butler considers that the condition is a definite disease and communicable. He considers it probable that death follows the first appearance of the disease much more rapidly than was at first suspected. No case of recovery has as yet been reported. Excision of diseased branches in early stages does not seem to have any effect in checking the extension to other parts of the tree. Further work must, says Dr. Butler, be guided entirely by the results of experiments that he hopes to be able to commence with Mr. McCarthy's aid immediately, and these experiments must extend over several seasons before any trustworthy results are arrived at. For the present, treatment must be chiefly directed to confining the disease to its present limits.—*Daily Post*, Bangalore.

### THE PRINCIPLES OF TEA PRUNING.

There has just been issued as one of the series of the Agricultural Ledger an exposition of the "Principles of Tea Pruning" by Sir George Watt and Mr. Harold H. Mann. The subject, of course, is highly technical, but the very fact of its being so technical makes it more important that experts should lay down general rules and principles. At present a hundred theories, some correct and others vastly incorrect are afloat. The average planter, harassed by the advice of his friends and others on the question which is of so much importance, is inclined finally to cry a plague on the contrary opinions showered on him and to evolve rule of thumb theories and methods of his own. They may or may not succeed, but in any case in a few years he becomes a convert to his own views and in turn helps to puzzle the new-comer. Such being the case all planters with open minds will hail with delight the small volume referred to above, in which the whole question of tea pruning is treated from a strictly scientific point of view, though the authors acknowledge their indebtedness to men like Mr. Showers of Cinnamara, Mr. W. N. Edwards of Majulighur, Mr. Temples of Moabund

(Assam), and Mr. Rose of Doloo, and Mr. Lennox of Luskerpore (Surma Valley). The authors lay it down that one of the first things a planter should bear in mind is that the operation of pruning is the most important in the tea garden during the whole season. It cannot be done in any haphazard way without forethought and skill. It demands careful, and constant supervision. The authors confess that there are contrary ideas on the subject, but the absence of supervision, they insist is one of the chief causes of the deterioration of tea gardens. People who have studied the physiology of plant life recognise that the cutting away of the unnecessary portion is essential to any perfected system for the cultivation of a perennial plant. In the case of fruit the object is to induce continuous production, of seed or of fruit. The principle which governs the pruning of the tea-plant is somewhat different. As Sir George Watt and Mr. Mann say: "Pruning is an operation carried on in order to induce the plant to assume a particular shape so as to facilitate cultivation and the plucking of the leaf, to increase the average yield of each plant, and to retain or improve the quality of tea produced." A badly pruned bush ought to be regarded as a failure.

The art of pruning, of course, consists of many operations extended over a long period of time. Details must be looked for in the publication we are considering, but to indicate the careful and exhaustive nature of the treatise we may refer to the paragraphs relating to what appears at first sight to be the simple matter of the position and angle of the section. We learn that if the knife be inserted below the base of the bud and a long slanting section be made, the bud will be starved and thus produce a sickly shoot. "If the section be made at a point, say from half-an-inch to two inches above the bud, the protruding portion will be starved and die accordingly." This is the condition known to gardeners as the "snag." A picture from a photograph of a badly pruned bush is given showing several snags and their effect. The effect, even in a picture, is horrible. What is worse is that the authors inform us that this is no imaginary picture, but is found everywhere, worse, no doubt, in some places than in others, but present in all. A graphic description is given of the baneful effects of snags. We read that when in Spring the sap ascends to the shoots an accumulation takes place at a point near the topmost bud. "This swells in consequence, the bud bursts into foliage, the leaves commence the process of assimilation, and had the section been properly made, the elaborated sap would have, in a comparatively short space of time, caused the bark to heal over the section and extend into the new shoot until the existence of a wound had practically disappeared." This result is necessary to the well-being of a plant, for dead wood, and even fully matured wood, obstructs the circulation of the sap and retards growth. Where a snag has been left, the effort the sap makes to heal the wound only causes a larger and larger swelling round the base of the "projecting, useless, and dead" apex of the old twig. Further the snag when it dies is attacked by white ants and other vermin. It then begins to decompose and, finally, instead of an united bark covering the wound made in pruning, "a hole is formed that fills with water and sets up decay that extends far below the point of origin of the new shoot." Upon that new shoot the year's, or it may be several years' flushing depends. The thorough way in which the authors have dealt with the question of snags is an example of the general completeness of the treatise.

### PRODUCE AND PLANTING.

At the quarterly Meeting held in London last week of the Federation of Grocers' Associations of the United Kingdom, a Resolution was submitted from the Leeds Association: "That the General Purposes Committee take into consideration the advisability of memorialising the Chancellor of the Exchequer with the view of securing the imposition of a license upon all dealers in tea." The mover of the Resolution said what with the Salvation Army and insurance agents, the canvassing by foremen in workshops and factories, and pension teas galore, he did not know where they would get to. They in Leeds, therefore, thought perhaps a good remedy would be to license every dealer in tea which would perhaps stop this wholesale hawking of tea from door to door. One speaker sagely said that if they applied these licenses to tea, why not to cocoa or coffee or to any other article? After the proposal had been referred to as one of the "most remarkable propositions ever heard," the Resolution was withdrawn.

Mr. P. C. Larkin is quoted in Boston as saying that the Imports of India and Ceylon teas into the United States will amount to 25,000,000 lbs. during the current year.

Hard times in the tea trade, which we earnestly hope are giving place to better days and a brighter outlook, have not prevented the Mazawattee Tea Company from distributing 9 per cent. again to the shareholders, as in the three previous years. The present distribution is of 4 per cent. for the half-year (a similar amount having been paid for the previous half-year) and a bonus of 1 per cent. The Directors state, no doubt with satisfaction, in their report that the issue of debentures last July was very considerably over-subscribed.

It is an age of cheap processes, and one of the latest achievements of chemistry is the discovery of a cheap process of making a certain compound that exists in tea, and which has a medicinal value. The substance was formerly known as theophylline, but is now called theocine. When it is derived from the tea-plant the price is nearly £20 an ounce. Produced by synthetic chemistry it is said to cost only about 10s. Cocaine and a few other vegetable products that doctors have a use for can be manufactured by the same system, but the series of operations necessary to that result makes those articles more costly than when they are obtained by other means. Indeed, several chemists had previously found a way to make theocine by synthesis, but their processes were much too expensive to have a commercial value. The new method, according to an American journal, was discovered in the laboratories of a great German house, the Farbenfabriken of Elberfeld.

Burnt turnip seems inadequate as a substitute for coffee, but it evidently passes as the real thing occasionally. An East-end grocer was recently fined for selling this stuff. It was found on the premises in barrels and in packets. Defendant explained, "This comes from Germany. It is turnip flour or burnt turnip, and is used with boiling water as a drink. The substitutes for coffee are not only numerous, but most of them are nasty."—*H. & C. Mail*.

### THE TEA MARKET.

Mr. W. Forbes Laurie writes to the *Home and Colonial Mail* :—

I have read with interest the letter of "One Dependent on the Ceylon Tea Industry" in your last issue.

In my previous letter I pronounced myself a producer, and, as such, my aim was not so much to make Ceylon the tea market of the world as to point out that it was worth while for our London friends to "wake up," and to bear in mind that there are other Richmonds in the field.

Mr. H. S. Parker tells us of the difficulty experienced in obtaining large lines for America, and we all know that the expense of landing and blending or bulking in London is prohibitive—at least for export. Transactions in every commodity, from locomotives to tea, are all sought in large orders, and can consequently only be supplied from the maker direct. It need not affect the London market if sellers and brokers will recognise that it is so, and that it entails some change in methods. "Greens" are already suffering from the same want of organisation. If some firms in Calcutta and Colombo would bulk all suitable kinds, and so produce an even flow of what are wanted, there would be fewer complaints and a stronger demand.

"One Dependent" evidently has not studied the labour market. Colombo always has a full supply, even when the tea estates are short, just as in London, where the unemployed are parading the streets and the home counties are simultaneously crying out for daily labourers.

The fall in the price of tea has been steady for the past fifteen years—rather less, if anything, since the draft dispute than before—more noticeable, perhaps, at that period, owing to its beginning to touch the vitals of the industry. The three most personally interested in the tea market are (1) producer, (2) dealer, (3) retailer. The dealers have been able by concerted action to keep off the market when it answered their purpose. The producers, acting individually and with no similar organisation, have let their teas go without resistance, although, being first in possession, they held the stronger position. This is quite enough in a fully though not necessarily over-supplied market to account for the steady fall.

I in no way agree with "One Dependent" on the inadequate result of the Ceylon cess. India was in the American market

before Ceylon, yet withal has not sold so much tea, although the cess has advertised both kinds. Had Ceylon men from the beginning adopted American methods, as recommended by Sir John Grinlinton, their first Commissioner, instead of fighting the large operators, their success would have been greater.

"One Dependent" and I are quite one when he speaks of the sorry state of the present market proving in the long run injurious to dealer as well as producer, and, indeed, to all concerned. I am only agreed in concerted action among growers sufficient to paralyse that against which it is opposed, and which could be accomplished if firmly attempted with spirit—indeed, any measure which would result in a more even market—and which I believe to be the only way of meeting successfully in the London market the inevitable results of fewer and large operators on either side. Established large industries have been found to require some system of mutual consideration much like what has been going on between the Colonial Secretary and the Boers; for everything cuts both ways in the long run, and I am very much mistaken if the dealers are now going to have as good a time as they have had. Although the prospects of "a boom" are pleasant in contemplation to the grower, yet he must not forget that if uncontrolled it will bring many new tea-producing countries into competition with him—a greater evil still. Both the grower and dealer have an opportunity now of doing each other a good service by adopting a line likely to keep out the evils which on both sides beset the tea industry.

### TEA IN CANADA.

The *Canadian Grocer* reports :—

TORONTO, February 5, 1903.

Speaking generally, the tea market shows an improvement over last week. There is more demand for all kinds of teas, and we note a resumption of buying of China greens. For some time back the high prices ruling on the market have been holding buyers back. Now they are finding that they have to sort up and must enter the market. Ceylon greens are strong with a rather firmer tone. From New York there is a report that rather more interest is being shown in Congous, which are holding steady.

MONTREAL, February 5, 1903.

The market keeps firm all around. An attempt has been made from some quarters to "bear" the market, but with no effect. The American market shows no change. One Montreal importer has received several inquiries for teas for United States account, and he has placed a number of samples on the Chicago market. Some dealers are still firmly convinced that the price of Japans will come down before long. Said one: "We have sold a great quantity of Ceylon greens, and people seem to like them. They have bought some Ceylons that could never before be sold here, on account of the high price of Japan teas, and until Japans come lower, they will continue to buy them." Advice from Japan, under date of January 3, state that the supply is exhausted. The quality was inferior to that of last year, but prices showed a gradual advance, particularly towards the close of the season. Settlements since the opening of the season were only 281 piculs greater than last year. The local market, though firm, is quiet, a few orders being received from country points.

### RETAIL TEA PRICES IN THE U. S.

Several weeks ago it was pointed out in the *Review* that the removal of the duty of ten cents a pound would not mean a sharp general reduction in retail prices of tea, but that the public would nevertheless receive the full benefit of the repeal, owing to a more or less general improvement of the quality of the standard grades.

Some people may argue, as against this view, that "whatever goes up must come down," to which we agree. If, however, there has been no advance there ought to be no expectation of a decline, and it is no secret that numbers of grocers bore part of the tea tax themselves, the growers bearing the remainder; hence, as there was no advance of prices in those stores when the duty took effect, there should be no decline when it is taken off.

How some of the leading grocers regard the question may be learned from a glance at the following announcement in *Acker's Weekly* of January 26-31:

## BETTER TEA VALUES.

Several years ago a war duty of ten cents a pound was placed on tea.

But we never changed our standards of quality because the growers reduced the price on many teas about five cents a pound and we bore the loss of the other five.

On January first the duty was taken off, but, in the meantime, many growers advanced their prices about five cents in anticipation of this removal of duty.

But this will enable us to give even better value for the respective prices than heretofore—which tea users will fully appreciate.

Our 50c. and 60c. teas please nearly all tastes.

But we'll continue to offer the very finest teas grown for those who appreciate the very finest.

FINLEY ACKER CO.

Considering how low the average price of tea has fallen, and how much the consumption of the leaf has suffered from neglect of proper considerations as to quality; we fervently trust that the great majority of the retail grocers will, if they have not already done so, take the occasion of the removal of the duty to raise quality instead of lowering prices.—*Merchants' Review*.

## DISTRICT ASSOCIATIONS.

## SHEVAROY.

Proceedings of the Quarterly Meeting of the S. P. A. held in the Victoria Rooms, Yercaud, at 1 p. m. on Monday, the 9th March, 1903. PRESENT :—Messrs. W. I. Lechler, W. Rahm, J. C. Cobbe, J. C. Large, C. G. Lechler, E. Dickins, J. E. Limouzin, E. Travers Drapes. Mr. R. Gompertz, *Honorary Secretary*.

1. The notice calling the Meeting was taken as read.

2. The accounts for the quarter ending 28th February were examined and passed, showing a balance in hand on that date, of Rs.526-11-3.

3. The Proceedings of the Committee Meetings held on the 12th January and the 9th February were duly confirmed.

4. Read letter from Mr. Large proposing a hearty vote of thanks to Government on the completion of the new Ghaut Road, with a hope that feeder roads will be made at once, in order to connect it with outlying estates.

*Resolved*, that the Collector be requested to convey the hearty thanks of the Association to Government, on the completion of the cart road from Salem to Yercaud, with the hope that to enable the boon to be fully utilized, feeder roads may be constructed as soon as possible.

5. Read letter No.  $\frac{85}{\text{Eng.}}$  of 28th February, 1902, from the President, Taluk Board, enquiring whether the owners of the land through which the road from the Firs to Thulasholay would pass would give the necessary land for quarries, required for the upkeep of the road, free of cost.

The road in question passes through land belonging to Messrs. Robinson, W. Rahm, and Travers Drapes. The two latter, being present at the Meeting, say they are willing to give the quarries required by the President of the Taluk Board; and the Honorary Secretary is requested to ascertain whether Mr. Robinson will do so, and to reply to the President accordingly.

6. Read Secretary's Circular No. 20/03, of the 4th instant, forwarding copy of a letter from the Secretary to Government, offering a maximum subscription of Rs.5,000, towards sending a gentleman to investigate the conditions of the coffee industry in Brazil, under certain conditions, and provided that the planters would themselves subscribe.

*Resolved* (unanimously), that in the opinion of this Meeting the best thanks of the coffee-planters in Southern India should be conveyed to the Government of India, through the Chairman of the U. P. A. S. I., and that all coffee-planters should be asked to subscribe, as well as curers and shippers, and firms interested in the industry.

Further that this Association is prepared to subscribe Rs.100 from the funds of the S. P. A. if the other Associations will subscribe in proportion: and that every member present at this Meeting will subscribe a minimum of (Rs.5) five rupees, and will endeavour to induce all his planting friends to do the same.

Also that a copy of these Resolutions be forwarded to the Chairman, U. P. A. S. I., through the Secretary, for favour of circulation to all Associations, firms, etc., interested in coffee.

7. Read letter and telegram from Mr. de Chazal. Ex. Engineer, saying that the Chief Engineer, Mr. de Winton, would come on Saturday next the 14th instant, and investigate the question of feeder roads.

*Resolved*, that Messrs. C. Lechler, J. C. Large, and the Honorary Secretary be requested to form a deputation to see the Chief Engineer, if he be willing to receive them, on Saturday, to discuss the question of feeder roads.

A very lengthy correspondence about the new Labour Bill comprising Secretary's Circulars Nos. 9, 12, 13, 15, 16, 17, 18, 19, 21, and 22, of 1903 was read; but as the Act has now been passed and as this Association has recorded its opinions very fully in the above correspondence it was not considered desirable to re-open the subject.

The following letters were read and recorded :—

1. Secretary's Circular No. 10/03, dated 12th February, 1903, forwarding letter from Sir H. Vincent in favour of preferential duties.

2. Letter No.  $\frac{1695}{\text{For.}}$  of 1903, dated 10th February, from the Collector declining to reconsider his decision about Bamboo passes, and suggesting an appeal to the Board.

3. Secretary's Circular No. 11/03, dated 14th February, 1903, inviting criticism on the draft of the Tea Cess Bill from those interested in tea.

4. Letter from Mr. A. G. Nicholson, dated 14th February, saying that he wishes his name removed from the books.

5. Letter from Secretary stating that the Tea Cess Bill will be published in *Planting Opinion* of the 21st instant.

6. Letter from Mr. A. G. Nicholson, saying that Glendower may remain on the books of the Association and that he will rejoin if the subscription be collected annually in advance.

7. Secretary's Circular No. 14/03, dated 20th February, 1903, giving Chairman's opinions on Sir Howard Vincent's letter (Secretary's Circular No. 10/03).

8. Letter from Mr. S. M. Pritchard enquiring when forms of crop statistics may be expected.

9. Letter No.  $\frac{151}{\text{M.D.}}$  of 1903 from Collector, stating that printed forms of crop statistics have been sent to the Tahsildar for distribution.

A number of books and papers received during the month were laid on the table.

ROBT GOMPERTZ,  
*Honorary Secretary, S. P. A.*

## WYNAAD.

General Meeting held at Meppadi Club, March 4, 1903. PRESENT :—Messrs. Abbott, Behr, Day, Mackinlay, J. R. Malcolm, Nicolls, Romilly, Taylor, Trollope, Waddington. Mr B Malcolm, *Honorary Secretary*.

Mr. Abbott in the Chair.

1. **Proceedings of last Meeting**—Taken as read.

2. **Finance**.—The Meeting considered the financial position of the Association and with reference to the annual subscription to the U. P. A. S. I. *resolved*, that in the event of the vote of Councillors in Committee remaining at one the Association will be willing to subscribe the minimum rate only, for the year after the next U. P. A. S. I. Meeting.

Otherwise the Association will subscribe according to its means. The amount of subscription to be decided at the same Meeting.

3. **Pepper Vine-disease**.—Read letter of 10th February to Mr. Barber, Government Botanist, also his reply of 14th and letter of 28th.—*Recorded*.

4. **Money Orders and Postal**.—Read correspondence between Mr. Day and Meppadi Postmaster.—*Recorded*.

5. **Poodapady Hotel**.—*Resolved*, that Rs.50 be paid to Shungaren on hearing he had completed the re-thatching of the hotel.

A scale of charges was drawn up permitting Shungaren to charge members of the Association enhanced rates. Persons who

are not members of the Association using the hotel, to be charged 50 per cent. on these rates.

6. **U. P. A. S. I.**—(a) *Labour Law*. Read circulars and also correspondence between Chairman of Special Committee—the Hon'ble Mr. Acworth.

All the members present, excepting Messrs. Day and B. Malcolm, pledged themselves not to apply for the new Labour Law for six months.

(b) *Tea Cess*.—With reference to the previous Resolution on the matter; and on further consideration, it was *resolved*—

That, as this Association understands that the Madras Chamber of Commerce has applied for the nomination of one of its members on the Tea Cess Administration Committee, *ex-officio*; it is of opinion, should this be granted, that planters be nominated; but failing the success of the Madras Chamber to obtain this nomination, that one planter and one member of the Madras Chamber of Commerce be nominated.—Carried by 5 to 3.

7. **Plague**.—With reference to the outbreak of plague at Endalur, the Honorary Secretary was instructed to draw members' attention to the importance of strictly observing the plague regulations with reference to Coolies' passports.

A vote of thanks to the Chair terminated the Proceedings.

(Signed) C. E. ABBOTT,  
Chairman.  
( „ ) BERNARD MALCOLM,  
Honorary Secretary.

**Honorary Secretary's Notice**.—Members are reminded that unless specially called, there will be no Meeting of this Association until Wednesday, June 3rd.

## INDIAN TEA ASSOCIATION.

### THE NEW CHAIRMAN.

At a Meeting of the General Committee of the Indian Tea Association, on February 27 there were present:—Messrs. H. C. Begg, R. H. A. Gresson, A. C. Lawrie, Thos. McMorran, Lockhart Smith, R. R. Toynbee, T. Traill, and W. Warrington.

### ELECTION OF CHAIRMAN AND VICE-CHAIRMAN.

Mr. H. C. Begg was unanimously elected Chairman, and Mr. Thos. McMorran, Vice-Chairman, for the year.

A hearty vote of thanks was accorded to the retiring Chairman, Mr. Lockhart Smith, who was unable, through pressure of other business, to continue in office.

### CORRESPONDENCE WITH INDIAN TEA ASSOCIATION (LONDON).

Letters dated 23rd and 30th January, and 6th February, from Mr. Ernest Tye, Secretary, Indian Tea Association, London, were brought up for final consideration and disposal after previous circulation.

### INDIAN TEA IN PERSIA—IMPORT DUTIES.

The Committee had before them a letter No. 258 of 20th February from the Secretary to the Bengal Chamber of Commerce with regard to the duties levied, under the new Russo-Persian tariff, upon tea imported into Persia. With the letter was forwarded a copy of a telegram from Mr. E. Bradford Ouseley of Nushki, in which it was stated that after the 20th March the duty would be raised to 25 per cent. It was suggested in the letter from the Chamber that the point upon which further information was needed was as to whether the new duty would differentiate against Indian tea. If it were to be levied alike on all teas, whatever their country of origin, the Government of India would not be likely to take action. For they had (in consultation with the Home Government) recently decided that no steps should be taken in the matter of the Russian import duties so long as these were uniformly levied upon all teas. To determine the point in regard to the new Persian duty the Chamber had made a telegraphic enquiry from the Government authorities at Quetta.

In these circumstances the General Committee decided to await the reply to this enquiry before deciding as to what action, if any, should be taken.

### PROPOSED TRANSFER OF THE JOREHAUT STATE RAILWAY.

In the Annual Report of the Committee for the year 1902 a reference is made to the proposed transfer of this line to the Assam-Bengal Railway system. The paragraph concludes with the statement that "they (the Committee) believe, however, that the transfer has since been effected."

A letter dated 12th February from the Inland Steamer Companies respecting this statement was before the Committee. The Companies said they understood that the transfer had not been effected; and they added that it was still not too late for the Committee to renew their protest against it.

From informal enquiries which had been made, the Committee believed that the transfer was to take effect from 1904. They thought, however, that the attention of the Government of India might again be drawn to the disadvantages which would most likely result to the tea industry from the transfer; unless some guarantee was given that the line would be maintained, and that the rates on tea carried over it would not be enhanced.

## MARKET REPORT.

[Per Mail advices of February 20th, 1903.]

### COFFEE.

The *London Commercial Record* says:—The market has exhibited much irregularity, owing in a great measure to the disappointing outturn in quality of the latest arrivals of East India which has made progress very difficult, and in many cases a decline of 2s to 3s per cwt. has been accepted, and even at that reduction it has not been possible to clear the catalogues; exception, however, must be made with regard to Naidubatum, for which high prices were paid for the most desirable quality. Low-grown Plantation Ceylon brought moderate rates. Jamaica is without material alteration. A generally steady demand prevailed for Costa Rica, and prices have been maintained, and in the case of fine colory high values were obtained. Santos about unaltered. The market for "futures" has fluctuated considerably, and closes with some decline from recent high prices; yesterday Santos for March delivery sold at 27s 6d to 26s 9d, May at 28s 0d to 27s 6d, September at 29s 3d to 28s 7½d, and December at 29s 7½d to 29s 6d per cwt., closing however above the lowest. We quote:—

London ...	Santos ...	May delivery ...	27s 9d.
New York ...	No. 7 Rio...	„ ...	4.65 cents.
Hamburg...	Santos ...	„ ...	28 pf.
Havre ...	Santos ...	„ ...	34 francs.

Auctions to-day presented 21 barrels 263 bags Jamaica, 4 barrels Ceylon, 1,298 bags East India, 238 bags Nyassaland, 210 bags Nicaragua, 23 bags Peruvian, 40 bags Columbian, 145 bags Venezuelan, 1,235 bags Costa Rica, 73 bags Mexican, and 165 bags Guatemala. No alteration in prices; demand fair.

Brazil futures opened at 3d to 6d decline, and has continued on the easy side throughout the day. Transactions have been numerous, chiefly March at 26s 7½d, May at 27s 3d, September at 28s 7½d to 28s 3d, December at 29s 3d to 29s.

Closing quotations:—		Sellers.	Buyers.
March ..	...	26/10½	26/7½
May ...	...	27/3	27/3
July ...	...	28/1½	27/9
September ..	...	28/7½	28/4½
December ...	...	29/4½	29/1½

Brazil receipts 50,000 bags for two days, against 40,000, 24,000 the two previous seasons, and Exchange 11½.

Hamburg ½ to ¾ down. Havre ¼ lower. New York opened unchanged to ½ lower.

Imports, Deliveries and Stock of Coffee in London are as follows:—

STOCK.		IMPORTS.	
	1903.	1902.	
Tons ...	28,814	15,098	9,291
HOME CONSUMPTION.		EXPORT.	
	1903.	1902.	
Tons ...	2,116	2,427	2,774
The preceding figures exhibit—			
In the Imports an increase this year of			Tons. 3,116
Home Consumption a decrease of			311
Export an increase of			1,782
Stock an increase of			6,284

The following are the details of the auctions this week:—

CEYLON.—Plantation—1 cask 1 tierce 3 barrels sold—small 35s, low middling 56s to 59s, peaberry 46s.

**EAST INDIA.**—4,864 bags partly sold as follows: *Naidoobatum*, smalls 45s 6d to 49s, low middling 59s, good middling 70s to 75s 6d, good bold 79s 6d to 80s, fine bold 95s to 103s, peaberry 65s to 106s 6d; *Mysore*, smalls 40s to 44s 6d, low middling grayish 42s 6d to 48s 6d, middling to good middling 55s to 60s 6d, common bold 60s, good to fine bold 69s to 80s 6d, peaberry 57s to 85s; *Coorg*, smalls 36s to 42s 6d, low middling to middling 46s to 52s, common to fair bold 57s to 61s 6d, good bold 66s, peaberry 50s to 67s; *Neilgherry*, smalls 37s 6d to 45s 6d, low middling to middling 45s 6d to 55s, common to fair bold 52s to 58s, good blue bold 73s, peaberry 50s to 64s; *Nelliampathy*, smalls 40s 6d to 42s, low middling 44s 6d to 47s 6d, bold 51s to 55s 6d, peaberry 47s to 54s 6d; *Travancore*, smalls 36s, low middling 43s to 46s 6d, common bold 50s to 54s, peaberry 44s. *Wynaad*, smalls 42s 6d, middling 47s 6d, peaberry 54s.

**MOCHA.**—100 half-bales withdrawn.

**JAMAICA.**—100 barrels 77 bags mostly sold—good ordinary palish 34s, middling colory 49s to 50s, peaberry 52s.

**JAVA.**—127 bags Liberian bought in.

**COSTA RICA.**—Of 5,765 bags offered 5,100 bags sold—smalls 33s to 48s 6d, low middling 47s to 51s 6d, middling 52s to 59s 6d, good middling blue 60s 6d to 72s, fine middling 74s to 74s 6d, common bold 57s to 63s, fair to good bold 66s to 78s 6d, fine to very fine blue bold 81s to 93s 6d, peaberry 50s to 106s.

**GUATEMALA.**—Of 81 bags offered 60 bags sold—pickings 28s, smalls 32s.

**NICARAGUA.**—100 bags half sold—pickings 28s, ordinary bold 32s, peaberry 27s 6d.

**MEXICAN.**—86 bags sold—good middling blue 58s, fine bold 80s 6d, peaberry 79s.

**COLOMBIAN.**—329 bags mostly sold—low middling 42s 6d, middling grayish 49s to 50s, fair bold 50s, fine bold 66s, peaberry 43s to 55s.

**EUCADOR.**—113 bags bought in.

**NEW HEBRIDES.**—Of 126 bags offered only 7 bags peaberry sold at 54s.

**BRAZIL.**—1,570 bags Washed Dumont Santos sold—smalls 26s 6d to 30s, medium 33s to 40s, bold rough dull grayish 36s 6d to 44s, peaberry 33s to 34s. 1,636 bags Upwashed, quay terms, sold—smalls 26s to 30s 6d, medium 29s to 35s 6d, bold 32s 6d to 40s, peaberry 29s to 35s 6d.

Feb. 18 ...	4.55	4.60	4.65	4.75	4.85

#### TEA.

**INDIAN.**—A similar quantity to last week was catalogued, viz., 29,000 packages, against 28,900, comparing with 40,700 at this time in 1902.

The strong statistical position, to which we have been constantly drawing attention, supported by a policy on the part of sellers which showed faith in the figures, has at length touched the market. Since last Thursday an active demand has revealed itself, resulting in an advance of  $\frac{1}{4}$ d to  $\frac{1}{2}$ d per lb. under 7d, medium about participating to a like extent. Autumn Assams have continued a feature owing to the exceptionally attractive quality

shown. The following averages are among the best: Itakhoolie 1s 5 $\frac{1}{4}$ d, Hilika 1s 4 $\frac{1}{4}$ d, Khobong 1s 4d, Kharjan 1s 3 $\frac{1}{2}$ d, Khanjikoah 1s 3 $\frac{1}{4}$ d, Tara 1s 1 $\frac{1}{2}$ d, Seconee 1s 0 $\frac{3}{4}$ d, Mokabari and Sookerating 1s 0 $\frac{1}{2}$ d, and Lattakoojan 1s per lb.

For 25,000 packages on estate account 8 $\frac{1}{2}$ d per lb. was realised opposed to 7 $\frac{1}{4}$ d for 37,100, and 6 $\frac{1}{4}$ d for 22,600 in the two foregoing seasons.

**CEYLON.**—Although slightly larger than on the Tuesday before, the amount submitted was moderate, being 19,700 packages compared with 17,600 then and 22,800 a year ago.

Similar factors have been at work as in the case of the Indian market, and the upward tendency noted last week has further developed. The sale passed with spirit, and prices marked an advance of  $\frac{1}{4}$ d to  $\frac{1}{2}$ d on common to medium grades. Over 7d there was not much change, but any movement favoured sellers, a good demand from Russia and other foreign markets often putting up the values of the better Pekoes and Orange Pekoes, while the finest lines of Broken Orange Pekoes were also taken at dearer rates.

The average is 7 $\frac{3}{4}$ d per lb. On the 12th instant it stood at 7 $\frac{5}{8}$ d, while twelve months since it was 6 $\frac{3}{4}$ d per lb.

**British-grown Greens and Oolongs.**—These are becoming gradually of more importance in the London market, and meet with a ready sale, provided the breaks are sufficiently large to attract buyers for home and export. As they will appreciably influence the imports into this country of Black tea (particularly Ceylons) it becomes a matter for consideration whether they should not be kept separate in the monthly figures.

**JAVA.**—About 1,100 packages were offered and freely dealt in at a further advance on previous quotations.

**Deliveries.**—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From 1st to 17th February 1903	...	10,244,826 lbs.
Do. do. 1902	...	10,713,931 "

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated February 20th, 1903, says:—*

#### QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903	1,123,690	819,165	54,614
1901-1902	1,234,982	855,821	56,419
29,224 pkgs. INDIAN	Total 50,991 packages were offered in public auction this week.		
20,669 " CEYLON			
1,098 " JAVA			

During 1902 the Continent of North America imported nearly 9 million pounds more Indian and Ceylon tea than the previous year. Doubtless a considerable quantity of this was owing to the abolition of the duty which took place on the 1st January last, but the quantity is sufficiently large to exercise considerable influence on the Home market.

	1902.	1901.	1900.	1899.
Lbs....	26,360,206	17,475,742	15,455,316	16,680,602
	1898.	1897.	1896.	
Lbs....	13,608,696	11,361,840	9,623,283	

There is little doubt that as regards Black tea, a firm hold of the American market has at length been obtained. As regards Green tea, some two million pounds or more of Ceylon tea were taken during 1902, against probably under a million in 1901, and there is reason to believe that there will before long be a considerable development in this trade.

Direct exports from Colombo	1,880,944	<i>nil.</i>	<i>nil.</i>	
Total lbs ...	7,636,995	5,698,596	4,364,510	

In considering the present position of the market, it is important to remember not only that the bonded stock of all tea in London is some 11 million pounds less than a year ago, but that at this time last year very heavy stocks of duty-paid tea were held, while at the present time, in view of a possible reduction in the duty these will doubtless have been reduced to a minimum, which may mean a difference of several million pounds; hence the supplies to be drawn upon are considerably less in proportion than would at first sight appear, owing to the shortness not only of the visible but also of the invisible stock.

INDIAN.—Towards the end of last week there was a decided rally in tea under 6d, which improved  $\frac{1}{4}$ d to  $\frac{1}{2}$ d per lb. This was reflected in last Monday's auction, since which date the tone has become even stronger, all teas up to 7 $\frac{1}{2}$ d per lb. being now readily

\*The Exports from Colombo include 1,968,456 lbs. of Green tea for 1902, and 797,796 lbs. for 1901.

saleable at  $\frac{1}{2}$ d to  $\frac{3}{4}$ d per lb. better rates than those ruling last week. The lowest price for clean Pekoe Souchong is 6d, while very little of any kind can be obtained under this figure. For good liquoring teas prices continue very firm. Exports to U. K. first half of February 3,666,000 lbs., against 3,920,000 lbs. in 1902; making total, 1st April to 15th February 143,566,000 lbs., against 150,711,800 lbs.

CEYLON.—The improvement noted above was reflected in the Ceylon market, where prices for all grades up to about 8d per lb. showed an advance of nearly  $\frac{1}{2}$ d per lb. over last week's rates. Other grades sold steadily, the general tone in the room being distinctly more healthy with buyers showing eagerness to purchase. Since the auction the market has somewhat further hardened.

Exports to U. K. first half of February 3,500,000 lbs., against 4,000,000 lbs. last year.

Average for week 7.78d, against 6.81d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 138,526 pkgs., av. 7.55d. 1902, 173,501 pkgs., av. 7.20d.

JAVAS—all sold at prices showing an advance of  $\frac{1}{4}$ d to  $\frac{1}{2}$ d per lb. on last week's rates.

An invoice of 216 packages from "Goalpara" estate averaged 9 $\frac{1}{2}$ d per lb.

## COCOA.

Generally speaking prices showed a turn in favour of holders at auction on Tuesday, when 3,528 bags were brought to the hammer and 1,250 bags sold. Of 861 bags Trinidad offered 640 bags found buyers at rather higher prices—good to fine red 61s to 63s 6d, middling 59s to 60s. Of 191 bags Jamaica only a few bags sold at 52s for fair. 40 bags Dominica brought 51s to 52s. 30 bags fair Costa Rica realised 54s, and 22 bags Esmeralda 61s. Of 28 bags Columbian catalogued, 18 bags grey sold at 47s to 50s 6d. 20 bags Caraquez Guayaquil sold, out of 76 bags offered, at 67s for good red. 20 bags broken Java brought 29s 6d. Good and fine Ceylon

**CONQUERS PAIN**

realised valuations, but demand for other grades was very slow and prices hard to maintain; 2,138 bags were offered and 450 bags sold—fine bold red 76s 6d to 80s 6d, good bold and medium 65s to 68s 6d, middling to fair medium and small 60s to 63s, ordinary 54s 6d to 58s 6d, and fair to fine small 47s 6d to 56s per cwt. Private sales include—200 bags Trinidad at 64s 6d for fine and 62s 6d for good, 50 bags Bahia at 56s 6d for fine, and 350 bags Guayaquil, at 64s to 69s 6d for greyish to fine red Caraquez, and 61s per cwt. for Esmeralda.

### PEPPER.

**BLACK.**—The market has presented a much firmer appearance this week, and sales have been made at an advance of  $\frac{1}{16}$ d per lb. On the spot business has been done in fair Singapore at  $5\frac{1}{2}$ d to  $5\frac{1}{4}$ d, and for arrival at  $5\frac{3}{4}$ d for January-March shipment, at  $5\frac{7}{8}$ d to  $5\frac{3}{4}$ d for February-April, and at  $5\frac{1}{2}$ d to  $5\frac{1}{4}$ d for March-May and April-June.

At auction on Wednesday 49 bags Singapore mostly sold "without reserve" at  $5\frac{1}{2}$ d for fair; 462 bags Lampong bought in at 6d, while of 69 bags Wynaad 20 bags good heavy clean brown sold at  $6\frac{1}{4}$ d per lb.

The shipments of Black Pepper for the first half of February compare as follows:—

		1903.	1902.
U. K.—Singapore	...	180 } 180	150 } 150
" Penang	...	nil }	nil }
Continent	...	220	80
U. S.	...	30	340
Total tons ...		430	570

**WHITE.**—Is slow of sale but the tone is steadier at the close. On the spot sales of fair Singapore have been made at  $9\frac{1}{2}$ d down to  $9\frac{3}{4}$ d, and of fair Penang at 9d down to  $8\frac{1}{4}$ d. For arrival no business reported.

At public sale on the 18th instant, of 278 bags Singapore offered 70 bags sold at  $9\frac{1}{2}$ d for fair. Of 177 bags Penang 144 bags sold—fair limed  $8\frac{1}{4}$ d, brown at  $8\frac{3}{4}$ d per lb.

The shipments of White Pepper for the first half of February compare as follows:—

		1903.	1902.
U. K.—Singapore	...	40 } 80	20 } 120
" Penang	...	40 }	100 }
Continent	...	20	nil
U. S.	...	nil	nil
Total tons ...		100	120

### GINGER.

**COCHIN.**—inanimate. 200 bags 95 cases offered but only 8 cases small and ends roughly cut and scraped sold at 40s per cwt.

**JAMAICA.**—firm. 112 barrels offered and 50 barrels sold at 38s 6d to 42s 6d per cwt. for good ordinary to middling washed.

### CINCHONA.

The auction to be held at Amsterdam on February 26 will consist of 4,823 bales and 412 cases Java cinchona, weighing 479,221 kilos., and containing 25,887 kilos. (900,000 oz.) of quinine sulphate. The manufacturing-bark contains an average of 5.86 per cent. quinine, against 5.45 per cent. for the January auction, and an average of 5.51 per cent. for the ten auctions held at Amsterdam in 1902. In addition 48 bales South American bark, weighing 1,719 kilos. and containing 35 kilos. q.s., will be offered. The shipments from Java during the first half of February amounted to 341,000 Amsterdam lbs. (or 375,000 English lbs.), against 320,000 Amsterdam lbs. in 1902 and 525,000 Amsterdam lbs. in 1901. In the drug-auctions a parcel of 32 serons of Loxa quill sold at  $11\frac{1}{2}$ d, with one lot at  $9\frac{1}{2}$ d per lb.

### QUININE.

The moderate bark shipments for the first half of February imparted a firmer tone to the market early in the week, and small quantities of German sulphate in bulk have changed hands at 1s.  $0\frac{5}{8}$ d per oz., but later 1s  $0\frac{1}{2}$ d was accepted.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, MARCH 21, 1903.

[No. 12.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 27th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

**Munzerabad.** *March 11th.—Weather—*East wind daily, cool nights. No likelihood of rain as yet. *Works—*Still gleaning; pruning; manuring. *Crop prospects—*Good for an average crop. *Prices—*ruling at Saklaspur 145 rupees per khandy. *Health—*Good. *Labour—*Abundant. *Interesting item—*Another batch of planters leave this week for South Africa.

**Munzerabad.** *March 16th.—Weather—*Getting decidedly warmer; a strong West wind has set in, so we may expect rain soon. *Crop prospects—*Decidedly fair. *Works—*Gleaning; pruning; weeding. *Plant diseases—*Coffee remarkably healthy. Leaf-disease noticeable by its absence. *Health.—*Good. *Labour—*Abundant.

**Coorg.** *POLLI BETTA, 18th March.—Weather—*Fine with passing clouds. Has been very cloudy on one or two days. Crop is dragging its slow course along; but everything will be away by the end of month. Pruning is nearing completion; and a good number of places will have paid off by the 1st proximo. Rain is not wanted till end of month at least. *Interesting item—*Volunteer Camp at Mercara commencing 22nd instant, ending 28th. Inspection on latter date.

**Kotagiri.** *18th March.—Weather—*Getting very warm, both day and night. *Rain—*A light, general shower of 15 cents on 12th. *Work—*Most estates have finished getting in all crop. Pruning in full swing. Manuring starting. Spike is pushing forward, and we will be ready for good rain soon. *Health—*Fair. *Labour—*Plentiful.

### THE PRINCIPLES OF TEA-PRUNING.

THE first number of the 1903 issue of the *Agricultural Ledger* deals with the Principles of Tea Planting. Sir GEORGE WATT and Mr. HAROLD H. MANN, the authors, have unquestionably added a very valuable contribution to the somewhat meagre literature relating to planting in this country. They have discussed the principles of tea-pruning at some length, and have thrown not a little light on some important points of practice. Yet all that they say must be read in the knowledge that generalisations are seldom safe. We cannot even say that what has been found to work well on one estate, or several, in Assam would certainly work well throughout the Assam district; much less can we with safety apply to another district, such as Travancore or the Nilgiris, lessons learnt from the experience of a few planters in a locality where the soil and climatic conditions are very different. The main principle upon which the pruning of plants should be conducted is admirably laid down in these few words:—"In almost all agricultural industries which depend for their success on the continued production of a crop, whether of fruit or leaf, from a perennial plant, the cutting away of the unnecessary part of the previous growth is an important part of the system of culture." In most cases the object of this is to induce the continuous production of seed or fruit; but in the case of tea this is not so. The authors hold that in regard to tea pruning is the most important operation in the garden during the whole season. It demands the most skilled, careful, and constant supervision; and they say that this is not usually given or considered to be necessary. They then proceed to say that pruning is an operation carried on in order to induce the plant to assume a particular shape so as to facilitate cultivation and plucking, to increase the average yield of each plant, and to retain or improve the quality of the tea produced.

In spite of the radical importance of the subject, differences in practice are very great. Doubtless this largely arises from the fact that many planters in the early days, and some later, failed to study scientific principles, and for the most part contented themselves with practical experiments. It will be readily understood that differences in practice must exist, but, as is said in the *Ledger* before us, the principles underlying every system are the same. These principles should

be studied and understood, and the practical hints given may at least serve as a basis for individual experiments in various districts. It is impossible to summarise the authors' suggestions here; our object is simply to call special attention to them so that planters may obtain for themselves copies of the *Agricultural Ledger*, 1 of 1903, and study what is stated therein. They will find the treatment of the young plant discussed. Of these it is said, not only should the first pruning be as low as possible, it should also be as early as possible. "In our opinion, it should, under no circumstances, except perhaps in filling in vacancies, be deferred beyond two years from the date of germination. It would even be better if made at an earlier date so as to ensure that the stunted stem thereby produced may contain in, say, 9 inches, all the buds (possible originators of branches) of a much greater abrogation of the three years' seedling." The second pruning is the most difficult point in the pruning of a young tea bush. Alternative schemes are referred to, and it is observed that local conditions will have a great deal to do in deciding the exact point at which this critical second pruning should be made.

As regards the pruning of mature bushes, a good deal is said about bad pruning, as a warning to avoid obviously undesirable methods. In a summary, it is said that the annual pruning should remove all dead branches, gnarled twigs, and crows-foot clumps of imperfectly formed shoots, snags which are seen to have little chance of healing over, 'trailing' branches at the outside of the bush; the last year's horizontal shoots at the outside of the bushes should be headed back to induce them to throw out vertical shoots; all small twiggy shoots throughout the bush which will never give strong, healthy yielding material for the next year should be removed, being cut right back to the stem from which they arise, or pulled out. In addition, it is remarked, the amount of new wood should be as little as possible consistent with this containing one bud—dormant or otherwise—and, if possible, the same length should be left on each pruned shoot throughout the bush. Heavy pruning and collar pruning are also discussed; and the authors conclude as they began by dwelling on the importance of pruning. They even suggest that it would be true economy to spend more money on pruning than is usually spent at present. There is a great deal of pith in the remark that "the unit of consideration should be the bush and not the plot, and each bush should be pruned according to its own wants as nearly as can be done under the peculiar conditions of the tea industry." Prune systematically, scientifically, and symmetrically. Take care of the plants and the plots will take care of themselves. These are some of the chief lessons impressed upon tea-planters in the publication under notice.

#### COFFEE NOTES.

**A Rumour about a Coffee Corner.**—A report from Rome that a group of English, Italian, and Brazilian capitalists are busily engaged in forming a trust to corner Brazilian coffee is ridiculed in *Mincing Lane*.

"But for how long?" was the question put by several leading firms of brokers and merchants to the representative of an evening contemporary who went to *Mincing Lane* for the purpose of learning how far a "corner" was practicable, or even possible.

"I will tell you," said a member of a leading firm, "that the whole thing is impossible, it could never be done. Coffee

is a luxury, not a necessary, and if prices were raised the holders of stock would be hard hit, and would have to sell out at a great loss."

"You might as well try to 'corner' sugar. In both cases the only result would be that people would not buy; they would do without it or use less, and then where would these speculators be?"

Another gentleman in the trade, with a large Continental house in addition to his London business, ridiculed the idea as impracticable.

"In the first place," he said, "the Italians and the Brazilians have not the money to do it, and I am sure no Englishman would be foolish enough to go into it."

"What of American capital behind the scenes?"

"No, no," laughingly. "If the American is in it he would want that fact heralded forth to the world. But you may rest assured it is not possible; the whole thing is out of the question. It should be clear to anyone that if the price of coffee is raised people would go without, and the market is at once dead."

\* \* \*

**Coffee Over-production.**—At the basis of all the trouble in the coffee market is, says the *Canadian Grocer*, the question of over-production. Until some means can be found to limit the supply, it seems as if the difficulty would be one of constant recurrence. The current crop is believed to be about 12,000,000 bags, and the next is estimated at from 14,000,000 to 15,000,000 bags. In the face of such huge production it seems improbable that any permanent advance can be made for some time.

At present the visible supply of the world shows a larger decrease than was anticipated. Political troubles in the principal countries of supply have been responsible for the holding back of a large quantity of mild coffees there. Some reports put this quantity at over 1,000,000 bags, while more conservative estimates name 600,000 to 800,000 bags.

During January the stocks of all kinds of coffee in European ports were increased by 180,000 bags, bringing the total up to 7,350,000 bags.

Having in mind the noticeable decrease in the estimated supply for February 1, it is not surprising that there has been a little upward movement. The rise, however, has been sensational in its nature, and should be regarded with caution. Best advices are not at all sanguine of any improvement in the situation.

\* \* \*

**Coffee in Venezuela.**—Coffee has been cultivated in Venezuela only since 1879, and yet it is now that much-talked-of country's chief commercial product. About 200,000 acres are under cultivation. Agriculture is the leading industry of the country, at least one-fifth of the population being engaged in it.

\* \* \*

The United States government statistics on the importation of coffee differ not a little, says *Tea, Coffee and Sugar*, from those gathered and published by the Coffee Exchange of New York, which have such great value. Reducing the importations for the calendar year 1902 to bags of 132 pounds each we find the importations to have been 7,240,000 bags, approximately, while the arrivals of coffee into the United States as reported by the Exchange were 6,850,000 bags, a difference of 390,000 bags, not a small sum. In the same way we find a difference for the year 1901 of 360,000

bags and for 1900 of 330,000 bags, a rather steady factor. The Coffee Exchange, of course stands by its statistics and the explanation is that the national government includes in its importations all coffees in transit for export to Europe, which are in ignored by the Exchange in so far as they bear on coffee in relation to the United States.

\* \* \*

When coffee first came into general use in England, Sydney Smith said: "If you want to improve your understanding, drink coffee. Sir James Mackintosh said later: "The difference in men's intellects is due to the different quantities of coffee they drink."

\* \* \*

**January Coffee Movement in the United States.**—Last week, says the *American Grocer*, attention was called to the fact that the total imports of coffee into the United States for the calendar years 1901 and 1902 reached 2,027,293,101 pounds, or an annual average import of 1,013,646,550 pounds, thus making the United States a billion-pound coffee-consuming country.

The year 1903 opened upon deliveries much larger than for the same time in previous years. In Europe and the United States they reached a total of 1,407,123 bags, against 1,165,291 bags in January, 1902—an increase of 241,832 bags.

The world's visible supply, February 1, shows a decrease during January of 443,361 bags.

The receipts at Rio for the first seven months of the trade year 1902-03 were 2,794,000 bags; at Santos, 6,214,000 bags; at both ports, 9,008,000 bags, against 11,468,000 bags in 1901-02; 7,728,000 bags in 1900-01. During three previous semi-annual crop years the receipts for this period averaged 75 per cent. of the total crop. On this basis the total receipts for the year should be about 12,000,000 bags.

The following statement shows the January movement in detail:

Stocks, January 1, 1903—	Bags.	Bags.
United States ...	2,600,426	
Europe ...	7,168,149—	9,768,575
Receipts during January—		
United States ...	524,593	
Europe ...	961,069—	1,485,662
Total supply, February 1, 1903 ...		11,254,237
Less stocks, February 1, 1903—		
United States ...	2,500,241	
Europe ...	7,346,873—	9,847,114
Deliveries, January, 1903—		
United States ...	624,778	
Europe ...	782,345—	1,407,123
Deliveries, January, 1902 ...		1,165,291
Increase as compared with January, 1902 ...		241,832
Deliveries, July, 1902 ...		1,211,088
Deliveries, August, 1902 ...		1,302,949
Deliveries, September, 1902 ...		1,396,975
Deliveries, October, 1902 ...		1,545,611
Deliveries, November, 1902 ...		1,240,213
Deliveries, December, 1902 ...		1,183,298
Deliveries, January, 1903 ...		1,407,123
Total deliveries, seven months, 1902-03 ...		9,287,257
Total deliveries, seven months, 1902 ...		9,517,309
Total deliveries, seven months, 1901 ...		8,248,615
Total deliveries, year ending June 30, 1902 ...		15,516,663
Total deliveries, year ending June 30, 1901 ...		14,329,925
Average deliveries monthly year, 1902-03 ...		1,293,055
Average deliveries, seven months, 1902-03 ...		1,326,751

The January sales of options were 532,500 bags. The lowest price for No. 7 Rio was 4.15 cents for February; the highest, 5.25 cents for December.

Of the total deliveries in the United States, 521,252 bags were Brazil and 103,526 bags of all other sorts. About 83.4 per cent. of the total deliveries were of Brazil sorts and 16.6 per cent. of all other kinds.

\* \* \*

Arbuckle Bros. advanced their prices  $\frac{1}{2}$ @9 cents per pound net on their roast package coffee, "Ariosa" brand. The Woolson Spice Co. also made a similar advance, bringing its price to 8 $\frac{1}{2}$  cents per pound net for "Lion" brand.

\* \* \*

Opinions differ regarding the outturn of the present Brazil crop. Some in the trade express their views that the crop will not exceed 11,500,000 bags, while others figure on a 12,000,000-bag crop. The next crop is estimated at 14,000,000 to 15,000,000 bags.

\* \* \*

The political disturbances in Venezuela and Colombia are responsible for holding back about 800,000 bags at different shipping points. This coffee is ready to be transported when navigation is opened again.

\* \* \*

Notwithstanding the advance on roasted Brazil package coffee, says the *American Grocer*, prices for mild sorts remained unchanged, but the tone was firmer. The trade still claim that the market for the latter grades is too high compared with that for Santos sorts, thus business was still held in check. Jobbing lots of good Maracaibo were offered at 8 $\frac{3}{4}$ @9 cents per pound, and Bogota at 11 cents up per pound, resulting in few sales, prices being still above the needs of buyers.

\* \* \*

The decrease in the visible supply of the world of fully 250,000 bags was due wholly to the shutting off of supplies of coffee from Venezuela.

\* \* \*

Coffee on the present basis of prices looks like a good purchase. The belief appears to be gaining ground, says the *American Grocer*, that the bottom of the market has been touched. Taking the actual position of the market, same is practically unchanged, and opinions of the leading merchants in the trade are that no healthy nor permanent rise in the market can come about until the knotty question of over-production is for once and ever settled, which looks a far way off.

\* \* \*

The coffee known as the Highland coffee of Sierra Leone, was introduced to the West Indies about six years ago, through the instrumentality of the Royal Gardens, Kew. It is quite distinct from either Arabian or Liberian coffee, and is admirably suited for cultivation from a sea-level up to an elevation of about 800 feet. The botanical name (*Coffea stenophylla*), that is "narrow-leaved coffee," is a good name, as by this character and its small, dark purple berries, it is readily distinguished from all other coffee. *Stenophylla* coffee has nowhere been more successful than under Mr. Hart's care at the Royal Botanic Gardens at Trinidad. It has grown there into tall, handsome bushes, 10 to 12 feet high, loaded with berries. It is singular that it has shown a marked tendency to be cross fertilised by Liberian coffee, so that in the second or third generation its original characters have almost entirely disappeared. If this coffee is desired to be kept distinct, it must therefore be cultivated away from other coffee plants.—*Barbados Agricultural News*.

## TEA NOTES.

**January Tea Transactions in New York.**—The tea transactions during January at the Custom House of the port of New York are reported to *Tea, Coffee and Sugar* by Auditor J. S. Knapp to have been as follows:—

	lbs.
Imported .....	6,523,630
Withdrawals for transportation ..	468,7713
Withdrawals for export .....	153,354
Withdrawals for consumption ..	54,147,091
Remaining in Warehouse at close of month ..	2,190,939

With the exception of 500 pounds all the imports for the month were entered for immediate consumption.

It is interesting to note in connection with the above table that while the imports were six and one-half million, the amount of tea passed by the tea examiner of the port during January was 12,110,882 pounds. Heretofore imports and the report of tea passed have been very nearly co-extensive, so that the report of the amount of tea passed indicated the amount of tea imported during the month. The amount of tea exported during January is surprisingly small in view of the reports of large export of tea to England, especially green tea.

**Withering and Fermentation.**—Mr. Mann, Scientific Officer of the Indian Tea Association, has issued the second part of his pamphlet on the ferment of the tea leaf, dealing chiefly with withering and fermentation.

For the present we can only say of this that, while acknowledging that his pamphlet is so far fragmentary, owing to the short time devoted to this work, the conclusion Mr. Mann has arrived at is—that the time required for making leaf chemically ready, for rolling is nearly independent of the time required to render it soft enough for that purpose. At a temperature of from 76 to 86 degrees Fahrenheit the time varies from 18 to 24 hours. The object should be to wither the leaf in that time. If it is withered too quickly artificially, the leaf is soft enough for rolling before being chemically ready; if too slowly, as on wet days, and when saturated with moisture, the leaf is chemically ready long before it is soft enough for rolling.

Mr. Mann lays stress on correct withering as an essential to a high quality of tea; and insists on the absolute cleanliness of everything during manufacture, especially during fermentation, suggesting the addition of a small quantity of salicylic acid to the fermenting leaf, to eliminate the effect of outside microbes, the salicylic being entirely driven off during firing, resulting in a corresponding improvement in the tea.

India and Ceylon teas are becoming more in favour with grocers, says the *American Grocer*, as the latter find these grades suitable for mixing purposes.

The stock of tea at New York on January 1, 1903, was about 60,000,000 pounds, and since the removal of the war tax it is said that fully 35,000,000 pounds have been delivered.

Owing to the high prices of low grades of India and Ceylon sorts, compared with China grades, and a steady demand for export from England for English Breakfast kinds, the stock of the latter will show a further large reduction.

This will shortly be felt here, and an advance in price will follow.

Owing to the satisfactory results obtained by mixing Formosa, Congou, and Foochow sorts, which blend, the grocer is marketing readily at a profitable price, these grades are much in demand, says the *American Grocer*. Jobbers are offering small lots at 19@19½ cents for Formosa, 8½ cents for Congou, and 13@13½ cents per pound for Foochow.

It is stated that the China qualities sell best in the East, and the Japan in the West, Formosa included in the China teas. The demand for India and Ceylon qualities is increasing, and is chiefly for the cheaper grades. In the New York market the proportion of green tea sold compared to black is 1 to 5.—*American Grocer*.

**Japan Tea in America.**—In a Commercial Review for the week ended January 29, the *San Francisco Weekly Commercial News* has the following:—

Concerning the tea market an importer says: "This season Japan tea has been very active and all offerings have been bought readily at the advance. The latest information from Japan states that any they have there is of very poor quality and very high in price, and consists of very small parcels. In their opinion the prices will be continued to next season; also, the natives predict that the first crop will be even higher than last year. This opinion seems to be founded on good ground. There is some satisfaction in the statement that, as this season has been profitable to the growers, they have been able to renew their plantation, which has been neglected some years, owing to lack of profits, and weather conditions being good there will be better quality of teas for next season."

During the month of January New York alone sent out 600,000 packages of tea into the country for distribution and the figures are significant testimony of the very ample business the tea men were called upon to execute and how well they have dispatched it. And the activity is still on, and no man can say with any positiveness when it will end. So for the prophecies have ended only in disappointment, as so many waiting traders have learned to their cost. But the future is a puzzle. On January 1, Government statistics tell us there were in warehouse 91,000,000 pounds of tea in the United States. Since then there have been added at least about 15,000,000 pounds by export, and subtracting from the sum total the monthly consumption of 6,000,000 pounds, leaves a total of 100,000,000 pounds on February 1. Although the imports have ceased to be as heavy as they were in January, they are still on a sufficiently heavy basis to warrant the belief that they will equal the consumption for the month, and so the quantity of tea on hand March 1 will be the same, 100,000,000 pounds. Four months from that date, minus the consumption during the time, the quantity of tea in the country will be 80,000,000 pounds, and that will be the surplus July 1, when the thoughts of the tea men will be on the new crop then being marketed.—*Tea, Coffee and Sugar*.

**Points of Importance in Advertising Tea.**—Always harp upon the cheapness of tea per cup when advertising, and show that it is so low in price, comparatively, that the temptation to use the beverage more freely ought to be ever present to Americans. The range in gallons of the usual infusion is from five to ten per pound. There are 16 cups of half-pint

capacity in a gallon, or 24 cups of one-third pint capacity. The average tea cup holds one-third of a pint or even less. Using one-third pint as the unit we find that the pound of strong full-flavoured tea yields 240 cups, while the mildest kind of tea yields 120 cups to the pound. As infused in the household it is highly probable that no kind of tea ever yields as small a quantity of infusion as 120 cups, and it is quite likely that the stronger kinds sometimes yield more than 240 cups, that is, ten gallons, to the pound.—*Merchants' Review*.

\* \* \*

We are pleased to hear, says *Tea, Coffee and Sugar*, that the proposed National Association of tea men is about to be born and that in about a month, and perhaps sooner, the birth will be proclaimed with all the details, officers, purposes, scope and the rest. The matter has been a long time springing from the brain of Jove (Minerva like) but if the foundation and expanse of the Association shall stand all the more thorough and comprehensive on that account the delay will have been worth while. It is after all not a small task to bring the tea men of so large a nation as is ours together, and then not a few wanted to know just what they were doing in consenting to father the Association. We have it that some 160 leading tea firms in the United States are the charter members and nothing stronger and more imposing could have been wished. That certainly should be a guarantee of permanency, and we have seen the list of officers as proposed and offered for confirmation to the members. It is such that no one can doubt the efficiency of the management and that the special purposes of the Association, the support of the present tea laws and their improvement together with needed reforms in freight rates and other general matters, will be attended to with a force that will mean results. In due time it will all be known and meantime let everybody get ready to say "Hail!"

### NOTES.

#### Java Quinine.

The result of the tender held on February 27 at Batavia is as follows: Of 2,145 kilos. Ed. II., 1,660 kilos. were sold at an average of 18fl. per kilo. (about equal to 6¾c. Amsterdam unit), against 17.30fl. per kilo at the previous auction.

#### Java Cinchona.

The exports from Java during February were 655,000 Amsterdam lbs., against 455,000 Amsterdam lbs. last year, and 727,000 Amsterdam lbs. in 1901. Total for the two months is 1,242,000, against 1,430,000, and 1,727,000 Amsterdam lbs. in 1902 and 1901 respectively.

#### China's Tea Exports.

Messrs. Siemssen & Co.'s Market Report dated Honkong, February 27, states:—

	1902-1903.	1901-1902.
	lbs.	lbs.
To England ...	16,486,885	19,124,479
„ The Continent ...	6,842,611	6,584,664
„ Russia ...	25,638,813	30,061,051
„ America ...	57,460,418	36,097,449
„ Australia ...	1,138,697	2,036,969
„ South Africa ...	1,016,423	1,741,639
Total lbs ...	108,583,047	95,646,251

#### London Tea Market.

Weekly special telegram dated 13th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for medium liquoring Pekoes and Broken Pekoes as well as for common Pekoes and Broken Pekoes is also steady, while the market for Pekoes for price is easier. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 7½d. (¼d. down). The average for the same period last year was 7d. Reuter reports that the tone of Ceylon tea is quieter, and that Broken Pekoes are rather irregular, while Pekoe Souchongs are steady. Fair Pekoe Souchongs are quoted at 6½d. (same as last week), and the average for the week is 7½d. the same as last week). 22,000 packages of Ceylon tea were offered for sale and 19,000 disposed of; while of the 35,000 packages of Indian tea offered, 25,000 were sold at an average of 8¼d. (the same as last week).

#### Rhea Cultivation.

Mr. H. D. Christian writes from Monghyr to the *Englishman*:— In your dāk edition of the 9th instant your Behar correspondent refers to a writer in a contemporary who mentions a simple hand machine for decorticating rhea. I should like to be placed in communication with the writer, as I quite agree with him that the present system of decortication is wasteful and extravagant. I should like to mention here the outturn of rhea obtained by me. Out of about 20 acres of plant I set apart an acre-and-a-half; the plant being in its third year, and the soil and plant of an average quality. The plant stripped of its leaves (which were left in the field) weighed out per acre as follows:—

	Mds. per Acre.
1st Cutting February, 1902	35
2nd „ May, 1902 ...	30
3rd „ July, 1902 ...	69
4th „ August, 1902	106
5th „ October, 1902	105
Total ...	345

The outturn of dry fibre with the experimental Faure decorticator was 9 maunds, or at the rate of 2½ per cent. This gives one ton of dry fibre to three acres. The outturn will increase as the plant thickens, and the machine can be improved; but under fair average conditions, and taking good and bad years, together, I do not think that we should calculate on more than half-a-ton of dry fibre to the acre.

#### Java Government Cinchona.

The report of the Java Government cinchona-plantations, for the third quarter of 1902, states that the period under review was characterised by extreme drought, such as had not been known since 1891. In most districts the rainfall was less than 2 inches, as compared with an average of about 11 inches during the corresponding quarter of the last five years. Although the drought has a very favourable effect on the plantations which have already reached the productive stage, the reverse was the case with the young plantations, where a large proportion of plants died in consequence of the drought. Contrary to the experience of the last few quarters, labour was very abundant during the period under review, a fact which is attributed to the effect of the great drought on agricultural labour generally. The consignments of bark from the plantations have been exceptionally large; at the end of the September quarter they

amounted to over 1,000 tons for the three months, against about 400 tons for the preceding six months, and a further quantity of about 250 tons was ready on September 30 to be forwarded to the Bandong quinine-works. Of the above-mentioned 1,000 tons, 239 tons were consigned to the Bandong factory, as the Government suspended shipments to Europe when, in the course of the Summer, the quotations declined more and more, in consequence of over-production by the private planters.

## GENERAL ARTICLES.

### PRODUCE AND PLANTING.

Although, as our readers are aware, even amongst producers themselves there has been a diversity of opinion about the advantages to the tea industry of the Tea Cess Bill just introduced to the Indian Legislative Council, it must be admitted that the supporters of the Bill can produce a strong array of facts in its favour. The example of Ceylon is the most striking. In 1896 foreign markets took  $12\frac{1}{2}$  per cent. of the Indian crop, as compared with  $21\frac{1}{2}$  per cent. of the Ceylon crop; in 1900 17 per cent. of the former, as against 33 per cent. of the latter; and in 1901 18 per cent. of the India crop, as against 40 per cent. of the Ceylon crop. Apart from percentages, which may be misleading, the exports of Indian tea in 1902 to markets outside the United Kingdom, according to statistics published the other day, amounted to  $41\frac{1}{2}$  million pounds, in round figures, as against about  $64\frac{1}{2}$  millions of Ceylon tea. The extraordinary increase in the demand for Ceylon teas in markets other than the United Kingdom is attributed mainly to the money spent out of the Ceylon tea cess in introducing the tea to foreign markets. The necessity for the imitation of Ceylon methods in promoting an overseas demand for Indian tea arises, according to Sir Montague Turner, from the circumstance that the production of tea in India has outrun the demand for the time being, though the industry "is a sound one." Fresh markets, it is urged, must be found; and the best way of securing them is "to force Indian tea on the notice of foreign consumers." At every exhibition abroad Indian tea must be much in evidence; and there must be a multiplication of agencies in countries where the demand promises to be good. When once a footing has been gained in any market special efforts must be made to stimulate local consumption and to place the tea within easy reach of the new customers. In the United States, for example, a regular campaign should be undertaken, and the forthcoming St. Louis Exhibition should receive extraordinary attention. The export duty, or cess, will provide an assured annual income for this purpose, the tax being collected by the Indian Government for the use of the Tea Cess Committee. The operation of the Bill is at present limited to five years, but—it is remarked by an Indian authority—"it will be very surprising if the results obtained do not justify its continuance at the end of that period."

The Chairman of the Mazawattee Tea Company, like some other sanguine people interested in tea, is hopeful that the Chancellor of the Exchequer will be in a position to take off the extra duty on tea imposed in 1900, when he introduces his next Budget. Tea is certainly much more entitled to relief than some of the other commodities whose vendors are clamouring for reduced taxation; but justice does not necessarily govern these matters.

According to the Bureau of Statistics of the United States Treasury Department, the value of the tea imported into the United States was 14,570,285dols. in 1902, 8,744,190dols. in 1901, and 11,783,317dols. in 1900. The exports of tea during 1902 amounted to 924,544 lbs., making the net imports 107,822,920 lbs. The Chinese imports were 50 per cent. of the total, and Japanese 32.1 per cent. The imports for December, 1902 were 16,479,579 lbs., against 7,565,451 lbs. for December, 1901.

They know how to push coffee in America, where the consumption of the berry seems to be regarded as a public duty. An American journal recently issued the following statement on

the subject:—"The United States 1902 coffee imports were 955,283,919 lbs., against 1,072,009,182 lbs. in 1901; grand total for two years, 2,027,293,101 lbs., or an average import of 1,013,646,550 lbs. Since 1894 the imports have more than doubled, and the *per capita* consumption increased 4 lbs. This is a notable gain, and is larger than that made by any other article used as a beverage. It is a mild and agreeable stimulant, less harmful than beer or other alcoholic beverage; more pleasing to the palate of most folk than tea, and obtainable at surprisingly low cost. It sells at retail from 10 to 40 cents per lb.; a highly meritorious roasted article being obtainable from 20 to 25 cents per lb. It is, or ought to be, a profit-making article for the retailer. If he cannot get a 25 to 40 per cent. profit out of coffee, he lacks proper knowledge of his calling. Coffee will bring up the average profit better than any other article the grocer handles, because it is a ready and constant seller, and, if good, makes trade and cements the relation between the dealer and his customer. It pays to make the coffee department very prominent. Talk coffee, serve coffee, advertise coffee, drink coffee." After quoting statistics the writer goes on to say:—"Think of it. A trifle over eight-tenths of all coffee consumed comes from the Republic of Brazil, and only 2.2 per cent. from the East Indies, and yet Java coffee is universally sold. South America, Central America, and Mexico combined furnish 14.7 per cent. of the total. The Western Continent grows nearly 95 per cent. of the coffee consumed in the United States. Brazil has more than quadrupled its production since 1880. Plantations are still being extended in spite of low prices, so that cheap coffee is certain for several years ahead unless some great disaster strikes the industry."

The *Daily News*, quoting the current issue of *India* calls attention to the Planters' Labour Bill, now being considered by the Madras Legislative Council. *India* declares that this measure "might more truly be called the Madras Slavery Regulation Bill," and that it will be a public scandal if it is allowed to become law; and the *Daily News* thinks that while the question of forced labour in South Africa is under discussion the Madras Bill should be given a share of attention.

### A TALK ON TEA.

It is a pleasant thing, says the *Grocer*, to see a grocer's window smartly dressed with samples and showbowls of tea, and in anyone connected with the trade such a sight generally arouses a feeling of admiration. But how rarely are such efforts to win back the tea trade shown by the one-shop and two-shop tradesmen of to-day! Yet it is not easy to blame them; there are excuses for this want of interest. The truth is that the retail tea trade has been so exploited, and in such a variety of ways, that numerous grocers have grown indifferent about the cultivation of a tea trade. It is too large an order. They find it better business to push groceries and even brushes and hardware. If a customer wants tea they are content to sell a packet of an advertised proprietary article for a very small profit. The result often is that such tradesmen, though competent in every other branch of the business, have little or no knowledge about tea. As an instance showing how ill-informed some grocers are on the subject, a grocer said, in all seriousness, last September, "I suppose now is the time for Autumnal teas"—imagining that the Autumn of the tea gardens was the same as the Autumn of the English harvest field.

Nevertheless, we are well aware that there is in this country a multitude of one-shop and two-shop grocers for whom the tea trade has a fascination, and for whom it provides profit as well as pleasure. Most of this esteemed multitude are lately aware that tea is dearer, but that it is mostly in the kinds used for blends retailed from 1s. 2d., 1s. 4d., and 1s. 6d. that the advance is so marked. From the lowest point about three months ago there has been a gradual and well-maintained improvement in prices, until at last the position has become one that calls for careful watchfulness on the part of those shopkeepers who have a jealous regard for this branch of their business. There is no need to discuss the causes of the rise, or to trouble about the probabilities of the future; such matters may be best left to the speculators and statisticians. But the fact is that teas bought at the beginning of November are difficult to match at from 1d. to  $1\frac{1}{2}$ d. per lb. more money. We say difficult advisedly, because there are now more faulty teas about, hence the need for care

on the retailer's part. He must see that his blends are kept up to the mark, for it is there that the real danger lies. Obviously the wholesaler cannot keep on supplying the same quality at the same price, with a  $1\frac{1}{2}$ d. per lb. rise, unless he be in the fortunate position of having laid in a huge stock when prices were easy, and is generous enough to give his customers the benefit of his capital judgment and foresight. The wise wholesaler knows quite well that his and the retailers' interests are pretty much the same, and that loss of retail customers is bad for both; and there are plenty of successful grocers who have placed the supply of their tea in the hands of reputable firms with results eminently satisfactory to both. Nevertheless, it is essential that the shopkeeper should know exactly how things are going on, and if an advance or a fall takes place it is best that the differences in price should be arranged rather than the quality should be let down.

To some it may seem superfluous to point this out, but a case in point may explain. A young grocer who had two shops had a nice tea trade, but no technical knowledge of tea. Having tremendous faith in a firm that had for a time supplied him, he never troubled about rises or falls in the market, and the *Grocer* market report was unknown to him. Although he did at times test the blends he was receiving, he did not do so with the regularity that is necessary. He felt it well-nigh impossible that the firm could break faith with him, and simply kept on repeating his orders at the same price. Before very long there came a big rise—one of those excited times when telephone and telegraph are in constant request by the wholesale tea trade, and when travellers get big orders that cannot be executed. It was just in one of those times of inflated prices when this particular grocer—and he was probably not alone—found that his customers were bringing back his tea. They could not drink it; their complaints were loud and very uncomplimentary; there were comparisons with “hedge-pickings” and “poison.” And, in simple truth, the tea was rubbish. This happened some years ago, but we know of recent cases very similar. In most of them the grocers had not chosen firms of the best repute. In the particular case we have mentioned the grocer thoroughly realised the seriousness of the matter, and he recovered most of his tea trade, but it was only by tremendous effort and monetary loss. The lesson, though costly, was not without good results. “Sweet are the uses of adversity,” but better still if we can understand the “uses” without having the “adversity.”

### TEA AND SUGAR DUTIES.

The reassembling of Parliament this week very sensibly awakens an interest in commercial men, and in the City of London it is, says the *Grocer* of 21st ultimo, pregnant with meaning and significance, for on what Parliament may or may not do in framing the financial estimates for the year 1903, largely depend the prospects and condition of two of the largest trades in the United Kingdom, viz., tea and sugar. Both, as duty-paying articles, are liable, in case of necessity, to further imposts at the hands of the Chancellor of the Exchequer. But it is taken for granted that measures of this sort are not at present in contemplation, and therefore no uneasiness need be felt on that point. It is more in reference to what portion of the duties on either one or both of these commodities is likely to be reduced or removed that leaders in the tea and sugar trades are chiefly concerned; and on whatever grounds their expectations may be based, whether there is a warranty for the supposition or not, it is none the less true that certain sections of the tea and sugar centres are so modifying their business arrangements, in view of the approaching time for the delivery of the annual Budget, that the several markets already begin to wear a rather anxious appearance.

Operators in the tea trade naturally think that they ought to be relieved of part at least of the Customs' duty before anybody else, and have been inclined to abstain from clearing stocks out of bond faster than was necessary, so as to be in a better position to enjoy the full advantage of a reduction in the impost, should such a proposal be made and carried through. The actual state of the market for tea at the moment is so peculiar as to be almost beyond influences of a fiscal nature, and the change that has come over it within the last fortnight has created quite a surprise. Attributable in the first instance to the shortening of the supplies immediately on offer, by importers restricting the number of invoices to be catalogued for public sale every week for a long while past, the dealers and others have not been overburdened with unmanageable

duty-paid stocks as they were at this period last year. The consequence has been a great strengthening of the market, as time and opportunity have been given for all surplus quantities in the hands of the trade to be worked off; and as the principal blenders have again entered the market to renew their purchases and replenish stocks, a fresh and stronger stimulus has been imparted to the upward move of late, which has become so marked this week that prices for the common qualities have advanced fully  $\frac{1}{2}$ d. per lb.—a rally in no way connected with the question of the lowering or raising of the duty on tea.

As to sugar the conclusion is much the same though arrived at by a different course. In the first place nobody has the remotest idea of there being an increase in the duties; whilst with respect to a removal of the imposts on sugar that is equally improbable, because it has been hinted more than once that the duties have “come to stay.” In considering whether any remission of duty might be granted without injuring the revenue, the trade have only to be reminded that such a step would be scarcely politic directly the stipulations agreed to at the Brussels Conference have been ratified, and few or none are sanguine enough to believe that there is a possibility of the whole scale of duties being re-adjusted to adapt them to the needs of individual interests. That being so, the sugar trade, as if the question of duties did not enter into their calculations for the future, are content to sit idle, so to speak, having no expressed desire to act otherwise after the sharp lesson they received a year ago. A majority of the refiners and grocers, who had been confidently anticipating some addition to the sugar tariff, then acted by storing up in every available space heavy stocks of the raw as well as of the refined article, and when it became known that the duties were passed over and renewed for another year, demoralisation seized the trade throughout, and it was not until about six months afterwards, when old duty-paid stocks were nearly all absorbed, that the market began to show symptoms of recovery. Then quotations were forced down to a point so abnormally low that a rebound seemed inevitable, and when it followed and had spent itself another calm returned similar to that existing now. In every particular the outlook for both sugar and tea is healthier than it was early in 1902, and so far from benefiting the trades at large, the smallest alterations in or tampering of the duties on these articles of daily use would, for a season, involve them in perplexity and doubt without affording adequate compensation or evoking universal thanks.

### HEVEA IN MALAYSIA.

REPORT ON SAMPLES OF RUBBER EXTRACTED FROM HEVEA BRASILIENSIS IN THE FEDERATED MALAY STATES.

STRAITS SETTLEMENTS, NATIVE STATES.—No. 432.

Downing Street, December 31st, 1902.

SIR,—I have the honour to transmit to you for your information and for communication to Mr. Stanley Arden, Superintendent of Experimental Plantations, the papers noted in the subjoined schedule.—I have, etc.,

(Signed) ONSLOW,  
for Secretary of State.

(Copy.)

Royal Botanic Gardens, Kew, December 24th, 1902.

SIR,—I have the honour to inform you that I have received from Mr. Stanley Arden, Superintendent of Experimental Plantations in the Federated Malay States, series of samples of Pará rubber coagulated by various methods, with a request that I would obtain a commercial report upon the results. A copy of the brokers' report is enclosed. Without entering into unnecessary details it is sufficient to notice that Nos. 1 and 6 were naturally coagulated; No. 2 was coagulated by the addition of acetic acid; No. 7 was “scrap rubber” collected off the tree; the remaining samples were coagulated by various mineral acids. It is quite clear from the brokers' report that natural coagulation affords the best results and that the only admissible artificial coagulating agent is acetic acid. The point, however, which it is important to notice, is that Pará rubber can be produced in the Straits Settlements from ten years old trees, which is worth eightpence a pound more than the best

equivalent Brazilian product. I may be permitted to feel some satisfaction at this result seeing that the trees which have furnished the rubber now reported on are the descendants of those transmitted from Kew to the Straits Settlements in 1877; these were part of the first consignment of Pará rubber trees to the tropics of the Old World. I have no doubt that the Straits Settlements is now in possession of a new and important cultural industry. The facts stated above are therefore of sufficient importance to bring under the notice of the Secretary of State and to be placed on permanent record. Mr. Chamberlain will no doubt cause them to be communicated to Mr. Stanley Arden, in official course.—I am, etc.,

(Signed) W. T. THISELTON-DYER.

MESSRS. HECHT, LEVIS AND KAHN TO ROYAL BOTANIC GARDENS, KEW.  
36, Fenchurch Street, London, E.C. December 19th, 1902.

DEAR SIR,—We have examined the samples of Pará rubber from Selangor which you submitted to us. We are of course not chemists, and can only judge the rubber from its elasticity, strength and freedom from dirt. With ordinary Hard Cure Fine Pará worth to-day 3s. 8d. per lb., we should estimate the value of your samples as follows:

No. 1 about 4s. 4d. per lb. Nos. 2 and 6 about 4s. 3d. per lb. No. 5 about 4s. 2d. per lb. No. 4 about 4s. 1d. per lb. No. 3 about 4s. per lb. No. 7 about 3s. 4d. per lb.

Numbers 3 and 4 are decidedly weaker than the others, and on the whole we think the less acid used in coagulation the better. Sample No. 1, coagulated without acid at all, is certainly the best of the lot.—We remain, etc.,

HECHT, LEVIS AND KAHN.

### COFFEE IN LONDON.

Although business has not been quite as brisk this week, says the *Produce Markets' Review* of 21st ultimo, there has been a fairly good demand. The auctions, which have contained little beyond Costa Rica and East India, have shown an increasing widening of prices according to quality; the lower grades, following the terminal market, have lost the advance which took place at the end of last week, while the few parcels of really choice quality attracted considerable competition and are decidedly dearer. These latter have realised rates quite equal to, and in some cases higher, than those obtained last year. Such prices can only be warranted upon the assumption that the quantity of fine will be below the average, a question which it is as yet too early to decide, for there are still most of the best marks of Costa Rica and East India to arrive, and as many of those already received have shown an improvement upon last year, it may be expected that there is yet much fine coffee to come. In the terminal market the heavy receipts have had a depressing effect, which even the repeated rumour of a destruction of 20 per cent. of the Santos crop could not overcome, and quotations after being 1s. dearer close about 9d. under last week.

### TEA IN LONDON.

INDIAN TEA.—A large business has been transacted at a general rise in values, says the *Produce Markets' Review* of 21st ultimo, and the closing auctions point to a further upward movement. Teas from 7d. downwards have been the kinds most keenly competed for, and show a rise of a  $\frac{1}{4}$ d. on last week's rates, while only a very limited quantity is available under 6 $\frac{1}{2}$ d. With a continuance of the moderate offerings at the public sales, it is by no means probable that the highest point has been reached, although a comparison of the prices of the lower grades now and in November show an advance of fully 1 $\frac{1}{2}$ d. The buying has been more general, clearly indicating that the stocks held by the trade are comparatively moderate; and, although purchases may, on account of the increased values, be more or less of a hand-to-mouth character, the statistical position is favourable, at any rate to a steady strong market, for some time to come. As the Calcutta market is practically closed, it will be possible shortly to arrive at the actual output of the past season's crop. At present the shipments to Great Britain are about 7,000,000 lbs. short of the previous year; therefore, if the future imports should not exceed those for the same

period in 1902, this, coupled with the shortage in other growths, places tea on an exceptionally sound basis. At the public sales only 29,224 packages were offered, and the small proportion of 2,500 withdrawn.

CEYLON TEAS.—The quantity brought forward at the auctions on Tuesday was only moderate, and, with very strong competition, a marked rise took place in all descriptions. The lower grades of Whole Leaf were eagerly sought after, and Pekoe Souchongs and Pekoes up to 7d. showed an advance of  $\frac{1}{2}$ d. to  $\frac{3}{4}$ d. per lb. on last week's quotations, while only a few lots of very ordinary quality sold under 6 $\frac{1}{4}$ d. The medium and finer kinds were also in good request, and sold at firm to higher rates. Broken Pekoes likewise attracted strong bidding, and it was difficult to follow recent purchases, most of the teas meeting with a ready sale at  $\frac{1}{2}$ d. per lb. advance. At the public sales 20,670 packages were brought forward, of which about 2,400 were withdrawn.

CONGOU TEA.—The market is distinctly firmer for all kinds, more especially the lower qualities of Moning, which have advanced considerably. In some instances common Black Leaf teas are 1 $\frac{1}{4}$ d. to 1 $\frac{1}{2}$ d. higher than at the lowest point. Now that Indian and Ceylon teas for "price" have advanced so much, the trade generally are buying these Monings freely, the deliveries for last month being 1,000,000 lbs. in advance of the imports. As the whole stock of China tea in the country is now far smaller than for many years past, there seems to be every prospect of still higher prices in the near future.

OTHER CHINA TEAS.—There is much more activity in the Caper market, and a better business is reported, especially among the lower grades. The stocks held are now getting into very small compass, and with only a limited quantity coming forward a firmer market is anticipated. The position of Green tea is unchanged, and the market remains very firm. At the public sales 852 packages of Green tea were offered, of which 160 were withdrawn; and 1,212 packages of Fancy tea were brought forward, 727 failing to pass the hammer.

### CEYLON TEA IN RUSSIA.

A CHAT WITH A RUSSIAN TEA MERCHANT.

Mr. A. N. Isgarischeff, of the well-known firm of Russian tea merchants, Popoff Brothers of Moscow, is now on a visit to Ceylon, and will spend a short time here before going over to China to visit the firm's business centres there. During a conversation with a representative of this paper on the subject of Ceylon tea in Russia, Mr. Isgarischeff said that he regretted to see that the quality of the Ceylon tea now offered in Russia was not good at all. Looking back to the time when the Ceylon product had just been introduced into the Russian market, and even up to a few years back, it was regrettable to note that the stuff now offered was altogether of inferior quality. In the first place the appearance of the leaf was not in its favour; there was plenty of broken leaf and dust forming more or less a mess, and when one looked into the infusion the extent to which the tea was mixed became apparent. The tea itself when brewed, he thought, did not answer requirements. It was not strong. What was wanted by the Russian people was a beverage of some strength which could be made lighter, if necessary, to suit the taste as required. If there was a good strong Ceylon tea put on the market it would do very well he thought. The fault at present lay, he believed, in the fermentation, when manufacturing the leaf here, but he could not go into details over it. There was no doubt that the consumption of tea in Russia was increasing to a great extent, but the price at present prevailing for teas was too high, while the exorbitant duty on tea of about 1s. 8d. per lb., of course, went a great way to keep up prices. He did not think there was any possibility of the duty being reduced. The grades that were most in demand were Orange Pekoes and Pekoes, but here again, in the case of Ceylon tea, the quality was not so good as one expected to get. Mr. Isgarischeff was sorry he had no figures to give our representative. He was just now busy grading and sampling teas at Messrs. Scherbachoff, Tchokoff & Co.'s and would be leaving for China after the Easter holidays. The China tea season would begin in May, and he would be visiting Hankow, Shanghai, and other places looking through the firm's business, and on his return to Russia would pass through Colombo again.—*Times of Ceylon*, March 14.

# TRAVANCORE TEA ESTATES COMPANY, LIMITED.

The ordinary General Meeting of the Travancore Tea Estates Company, Limited, was held at the offices of the Company, 20, Eastcheap, E.C., on Wednesday, the 18th ultimo.

The Chair was occupied by Mr. W. Mackenzie, Chairman of the Company.

The Secretary read the notice convening the Meeting and the auditors' certificate.

The Chairman, in moving the adoption of the report and accounts, said :—

GENTLEMEN,—I presume, as has been our usual custom, you agree to accept the report and accounts as read. I need scarcely say it is exceedingly disappointing for my colleagues and myself to have to present you with such a depressing account of our affairs as is recorded in the report and balance-sheet which is in your hands. We had hoped at this time last year that the price of tea was likely to move upwards, but this did not take place, for Indian tea in 1902 fell one-sixth of a penny, while Ceylon tea remained stationary. The crops from both of these countries fell short of estimate, which was indeed fortunate, for had it been a favourable season for yielding there is but little doubt the market price of tea would have fallen still further. I scarcely think it needs any words from me to tell you what a very serious struggle the industry has been going through, but when I state the fact that in 1901 (the figures for 1902 are not yet published) the forty-five Indian Tea Companies registered in London, with a share capital of 9 millions sterling, paid no dividend whatever on 5½ millions of that capital and only 6 per cent. on the remaining 3½ millions, you will readily see how seriously affected the industry has been. With a lower price and less crop for 1902, the statement I have just made is perhaps sufficient to prove the correctness of the paragraph in our report when we state that the past year was the worst ever experienced by the tea industry.

To deal, however, with the more immediate affairs of this Company, you will note that we have still a large area, some 1,200 acres of young tea, yielding but little leaf (probably 150 lbs. per acre), which brings down our average yield over the 3,122 acres to 246 lbs. per acre. Under these conditions the cost of production is not so low as it will eventually be. Last year the cost laid down in London was 5½d. per lb., as against 5¼d. the previous year, and this year it is estimated at 5d., but when the estates are in full bearing we see no reason why this should not be brought down to 4¾d. per lb. or even lower. Such a low cost of production, and the natural increase in yield, as the bushes mature, would in themselves do a great deal for the Company, and we must look to a rise in prices to bring this Company to the dividend-paying stage.

Now, if you refer to the statement annexed to the report you will find that in 1898-9 our average price was 7.18d per lb., and previous to that considerably higher. Well, we have worked out as carefully as we possibly can an estimate of cost and yield for the next few years, beginning with the current year at a price for our teas of 6½d., and rising in three more years to 7d. per lb., surely a most moderate forecast, and we find that at the end of the current year, under these conditions, the debtor balance would be reduced to about £1,700, and next year, 1903-4, we will be able to pay arrears of pre-preference dividends. In 1904-5 we should be able to pay two-and-a-half years' arrears of Preference dividends. In 1905-6 three years' Preference arrears, and in 1906-7 the final arrears of Preference dividends with a surplus of £2,000.

I put this information before you to show you what we confidently believe will be the results if the price of tea gets back to the level it was before the years of over-production.

There can be no question I think that the bogey of over-production has at last been laid, and with no plantings of tea having been made for practically the last four years, taking into consideration the increased consumption of British-grown teas all over the world, it is difficult to see how the tea market can longer remain in the state it has for the last few years. But it is also on this question of the probable results of the near future that the carrying on of the Company by the shareholders depends. As you are aware, advances have been made to the Company for the development of the estates, amounting in the aggregate to £46,000, during the past few years, and these advances were secured to the lenders by the issue of debenture bonds to a like amount. By the terms of the loan re-payment falls to be made on September 30 next, and unless

this can be provided for in full, the estates can be taken over by the lenders to meet the Company's debt. The debentures, however, do not mature until September 30, 1910. Now we have to consider how this sum can be raised.

In the first place, when we have received from our manager his further estimates for expenditure and crops for future years, the cost of additional machinery required and other details, we will submit these to the shareholders worked out on the basis I have sketched out to you of our teas gradually rising to a price of 7d. per lb., and we will ask you with these figures before you to apply for these £46,000 debentures. I may here mention that the balance of the debentures is held by your manager in India and myself. We are perfectly satisfied the investment is a good one, as the amount of the debentures represents only £16 per acre, and with tea at 7d. per lb. the interest would be covered four-and-a-half times over. This is all I need say at present, but I sincerely trust you will see it is to your interest to aid the directors all you can in carrying on the Company by redeeming this loan.

With regard to the current year, I may say the estimate of the manager is for an output of 1,045,000 lbs., costing 5d. in London. Up to date we have sold 167,000 lbs. at an average price of 6½d. per lb., and the undoubted feeling throughout the whole of the tea trade is, that prices are likely to be a good deal firmer than they have been for some years.

I shall be very pleased to answer any questions that shareholders may desire to put, and I now beg to move that "the report and accounts for the year ending September 30, 1902, be, and hereby are, received and adopted."

Mr. H. K. Rutherford, in seconding the Resolution, remarked that as the Chairman had gone into the affairs of the Company very fully there was no need to add anything to what had been said. He fully endorsed everything the Chairman had said, and

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,

*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan

Demy 8vo, cloth gilt, Rs. 7-14-0.

ESPLANADE, MADRAS.

believed they could carry out the estimates that had been framed if the tea realised 7d. per lb.

In reply to questions from Mr. Anstruther, the Chairman stated that the Company's teas fetched the average price of Travancore teas; their lowest elevation was 2,500 feet, and tea grown at an elevation of 6,000 feet. only fetched slightly better prices. The Company now had five factories and ample motor power, but would, as crops increased, require more rollers and driers.

The Resolution for the adoption of the report and accounts was then unanimously agreed to.

On the proposal of Mr. H. K. Rutherford, seconded by Mr. D. Reid, Mr. G. A. Talbot was re-elected a director of the Company.

Mr. Dangerfield proposed, and Mr. Haslam seconded, the reappointment of auditors.

The Resolution was agreed to.

The proceedings closed with a vote of thanks to the Chairman and Directors.

### A MEXICAN RUBBER-GROWER SPEAKS REGARDING PROFITS.

£15,000 A YEAR IN THE 7TH YEAR FROM 100,000 TREES.

Having planted and watched the growth of several hundred thousand trees for the past four years-and-a-half and having devoted much attention to the preparation of rubber in a series of experiments extending over the last three years, some marketable results I have obtained may be of interest to those who have taken up the rubber industry in Mexico. I may be permitted to state that my property is not in the market and that I can have no interest in deceiving myself. Two years ago, I sent a sample shipment of Mexican rubber prepared by myself from trees growing on the estate to the leading firm of rubber brokers in London, Messrs. Lewis & Peat. The rubber was valued at three shillings and nine pence, the best Pará being then four shillings and two pence per pound. The quality was reported as excellent. This—I was informed—was the first sample of good marketable rubber ever sent from Mexico to London. Last year, when in London, I had sent me from the plantation a sample of rubber from three-year-old trees. The trees were only very lightly tapped, but sufficient rubber was obtained to enable me to present a sample on which a quotation could be made. It was valued by the same firm of brokers at two shillings and eight pence, and pronounced thoroughly marketable. I do not present this as a precedent to be followed, but it is interesting as showing that even at the early stage of the tree's growth, clean and careful preparation will produce a rubber which commands a price considerably over that yielded by mature trees when ignorantly and slovenly handled. I am now sending off a large sample shipment of rubber to London, prepared by an improved method (my own) which I, perhaps conceitedly, believe to be the finest rubber ever sent out of Mexico, and which will, I have no doubt, fetch the highest price next to best Pará.

It is regrettable that statements should be irresponsibly made, disparaging an industry which will certainly become a source of wealth to those who give thought, care and patience to its development, by any one who has not studied its methods and is manifestly unacquainted with the principles which make for success. For my own part, I am more than satisfied with the growth and prospects of my own enterprise. Let us take the case of a man possessing a hundred thousand trees, and put the yield at the seventh year at one pound only—I believe this to be below what the result will actually be. Let us put the price of good, clean, sound rubber at three shillings per pound, which my brokers inform me it is quite safe to assume will be its value. The result would be £15,000 sterling—fifteen thousands pounds—for the first year, which would be doubled certainly by the ninth year, an income for which I, for one, am quite content to work and wait.

PUEBLA, MEXICO, January 4th.

GEORGE CULLEN PEARSON.

#### PROSPECTS.

Again:—The following is taken from the letter of a gentleman residing in Mexico who has no interest in rubber lands, and may be considered an impartial statement:—

I am in receipt of your favour of the 15th instant in which you ask me to give you the location of the various districts of sub-

tropical Mexico where conditions are favourable to the cultivation of rubber, and stating that you contemplate establishing a plantation if available land can be found where rubber would likely prove a profitable crop. The rubber tree is found growing wild in the forests which cover a strip of country ranging from ten to one hundred miles in width, and extending from the port of Tuxpan on the north to the western boundary of the State of Campeche, a distance of probably five hundred miles. There are probably more rubber trees to a given acreage of forest in the vicinity of Frontera, in the State of Tabasco, than elsewhere in the rubber-producing country of the Gulf Coast. Near Belize, on the east coast of Yucatan, rubber trees are abundant. Around Soconusco, on the west coast of Chiapas, and in the vicinity of Pochutla, State of Oaxaca, rubber plantations have been started. As rubber grows only on the moist low lands of the coast, the width of the rubber belt varies greatly. In places it follows the river valleys for a considerable distance inland, but, where the mountains approach the sea, it is narrowed to a few miles of country lying along the coast. Nearly all the rubber produced in this Republic is collected by the Indians from the wild trees growing in the forests.

The rubber tree matures at the age of six years. They should yield from 6 to 48 pounds of milk annually. In the coagulation of the milk there is a shrinkage of about 50 per cent., leaving from  $2\frac{1}{2}$  to  $3\frac{1}{2}$  pounds of crude rubber, which is worth 50 to 80 cents per pound gold. The process of coagulating the milk is simple and inexpensive. The annual profit of a bearing plantation of 100 acres should not be less than \$8,000 Mexican money. However, up to the present time, the actual profitability of cultivated rubber is, in a measure, a matter of conjecture, as no one, to my knowledge, is yet making money from a bearing plantation in this Republic.

In the southern portion of the Republic, particularly in the rubber-producing districts of Chiapas and Tabasco, a large number of rubber trees are annually being killed by too frequent tapping by the Indians. This is causing a great decrease in the rubber production of the country.

Capitalists seeking profitable investment in Mexico are fully warranted in going into this subject scientifically. Something is already being done in an experimental way, and a few years should do a great deal toward demonstrating what results are obtainable from the systematic cultivation of the rubber tree in Mexico. There has been a constant increase in the consumption during the past few years. The annual exportation of Brazil has reached \$100,000,000. The Central American countries are also largely exporting this commodity. The price of rubber is also advancing. The United States alone consumes \$30,000,000 worth of rubber in the manufacture of bicycle tyres. It is my belief that the price of rubber will not materially decline. The increased use of electrical apparatus, the probable general adoption of rubber-tyred vehicles, the extended utilisation of rubber in the manufacture of belting, clothing, etc., will prevent any notable depreciation in the value of this commodity. A decline in price will be quickly followed by an increase in consumption.—*Modern Mexico* for February 1903.

### WHAT IS CHEAP TEA?

In the *Retail Grocers' Advocate* L. J. Callanan discusses cheap tea as follows:—

"What is cheap tea? It is the poorest leaf of the tea-plant, rarely, if ever, exported from China or the country where it is grown except by unscrupulous exporters, who purchase it at very low prices and ship it on speculation; it is rarely imported by reputable merchants, and its importation was the cause of the enactment of a law appointing a board of tea examiners, who select samples of teas for a standard, below which all teas arriving in this country are not permitted to be landed. This is good as far as it goes; keeping out teas which are so poor that they are only fit for bedding for hogs. I have had samples of teas submitted to me before the tea examiners were appointed that were not fit to be used even for that purpose; they stunk, yet they were imported into and distributed throughout this country, and presumably consumed in it. The standard fixed by the examiners is too low; it barely passes the mark. No tea costing less than fifteen cents per pound in the primary market should be allowed into this country, and if

I had my way I would make it higher. Let us see where the benefit comes to the consumer. A pound of good full-bodied, choice flavoured tea costing at retail fifty cents per pound, will make 225 to 250 cups of good tea, fit to drink, pleasing to the palate, and giving comfort and pleasure to the person using it. One pound of tea at thirty cents will make less than 175 to 200 cups—flavour weedy, body thin and watery—pleasing neither the party using it nor the party selling it. I cannot understand why people want to buy cheap tea when a cup of really good, healthy tea, which is a pleasure to drink, costs only one-fifth of a cent per cup; the tea bought at thirty cents costing about as much, and pleasing no one. All teas costing less than fifteen cents in the primary market should be prohibited in this country."

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, February 12, 1903.

All grades are at present more or less neglected locally, with the exception of Ceylon blacks, in which a fair trade has been doing. There is a little stronger tone to be noted in the Ceylon market. Jobbers report quite a little movement in green Ceylons. These seem to be taking the place of Japans, being similar in flavour and draw and selling at reasonable prices. Indications are that the prices of Indian teas, will be considerably higher before the opening of next season. At present there is a fight in progress between the holders and big buyers. The demand for Japans has improved within the past month, and the few teas in importers' hands would be quite insufficient to meet the demands until the arrival of the next crop, if the present rate of demand is maintained.

MONTREAL, February 12, 1903.

There have been few changes on the local market. The general tone is steady to firm. Low-grade Ceylons and Indians are a little higher. Green Ceylons are in fair request from 16c. up to 23c. for finest. Business in Japans has also brightened up a bit, and jobbers report a moderate inquiry for teas at 25c. per lb. There has been no change in the price of Japan teas, which are still very firm. A small distributing trade is reported in Ceylon blacks.

### SEEDS AND THEIR CULTIVATION.

#### PROCESS OF GERMINATION.

There is an interesting article in the current *Windsor Magazine* on "Seed testing," in which the writer points out that in the proving of seeds the great thing is to find out whether the seed has any life in it. There are all kinds of curiosities. Mangel seed will show 160 to 170 per cent. of growth, and sometimes as much as 200 per cent. That is to say, almost every seed will give two growths! Then, again, sample lots of pea and bean seeds, if soaked in water previously, will show germination or otherwise reveal themselves in about 48 hours; while, if not soaked, they will take at least four days. Celery, parsley, parsnip, and onion absolutely refuse to grow in a heated "germinator" such as coaxes the peas and beans into life, and therefore, they have to be tested apart in a cool glass case in the testing-house or "examination hall." Lettuce, mustard-and-cress, will germinate with extraordinary rapidity if soaked in water; but perhaps the most curious behaviour of all is that of the flower-seed known as portulaca, which is almost explosive in its energy, as germs of life will be visible in "candidates" in about two hours; oddly enough, the seed looks exactly like gunpowder! On the other hand, parsley seed is a slow and dull candidate at examinations, and 20 days at least must elapse before it shows any signs of life, and is allowed to "pass." Seeds of the rose, auricula, and violet, are also slow and very erratic in germination.

#### CARE IN TESTING.

In every case the seeds to be tested are counted, and a careful entry made of the date of the sowing. Then, as the germs appear their number is recorded. To prevent error, the trials are duplicated, and in the event of conflicting results, entirely repeated. The methods of testing are, of course, varied according to the characteristics of the seed; temperature and moisture are essentials,

and must be uniform night and day. With most seeds it is pretty easy to find the percentage of germination by artificial means; but then you must remember that the seed grower has to get this most valuable information during the waning days of Autumn, and in the low temperature of Winter, when natural forces are practically inactive. It is impossible to fix a hard-and-fast rule in connection with seed testing. Such a hardy subject as furze, for example, seldom or never yields so high a percentage of growth under glass as in the open ground. As to the trials, in many cases a pinch of seed is sprinkled on to a small sheet of soaking wet blotting-paper, and then put into the germinator. In a few hours, or in a day or two, a peep into the "ovens" will show that the seed in bulk is all right, for its representative has "passed its exam." A few days later quite a little garden has sprung up on the scrap of blotting-paper, the plants being two or three inches high, and with strong clinging roots thrown out all over the surface. The rigidity and vitality of the little plants is quite extraordinary as also is the grip they have of the blotting-paper. The writer has amused himself with quite a little blotting-paper garden of beet-root, turnips, and many other plants, tested and forced in the germinator, and these may be kept in a room in a saucer of water for many days after they come out. Not all seeds, however, go into the germinator, for many other varieties are tested in earth, and yet others in the open air where desirable and possible. During the various tests of seed, "inspectors" go round, precisely as they would in a big school of children, to see how the candidates are progressing, and to keep an eye on them generally. The candidates are—so to speak—awarded marks, and their behaviour praised or condemned according to their performance. Unremitting care and attention are lavished upon them, and finally they may be transplanted into the open air, where they pass their final "exam." with what may be truly termed "flying colours."

#### ABOUT THEIR VALUE.

You would think the burglar a dull creature who broke into a great seed-growing establishment and made off with sacks of flower seeds, but these may be worth many times their weight in gold. Many of the choicer strains are far too expensive to be treated in the ordinary way, and calceolaria seed is so minute that the actual cost of producing the finest strain exceeds ten times the weight of the seed in pure gold! The outlay in growing double begonia seed is so great that a liberal allowance for a five-shilling packet is measured in a tiny spoon with an outside diameter of three-sixteenths of an inch. And yet in that tiny spoonful there would be enough seed to produce more than one hundred stately begonia plants! Naturally such very minute and precious seed has to be handled with extreme care, and as a sudden draught from an open door would scatter perhaps £100 worth, the counters where these seeds are being packeted are closed to traffic, and so arranged that not a puff of wind can ever enter. The curiosities of flower seeds are almost incredible. Of aster seed alone there are no fewer than 185 varieties, including the different colours, and stocks are almost as numerous. Of sweet pea seeds you can have 100 varieties.

### DISTRICT ASSOCIATIONS.

#### TRAVANCORE.

The Annual General Meeting was held at Santhampara, Cardamom Hills, on 12th February, 1903. PRESENT:—Messrs. J. S. Sealy (Cardamom Hills Superintendent), Geo. E. Bewley, S. L. Robertson, K. E. Nicoll, H. M. Knight, *Chairman*, and J. J. Murphy, *Honorary Secretary*.

The notice calling the Meeting was read and the Minutes of the last Meeting were taken as read and confirmed.

The Chairman, in addressing the Meeting, said:—

"GENTLEMEN,—We are now entering upon our fourth year. During the past we have justified our existence and I trust we shall continue to do so. I regret the prospects for the new year are not brighter, the price now ruling for cardamoms is the lowest on record and the crop from these Hills on the current season 653,000 lbs. probably the highest.

"It is now a year since Dewan Bahadur K. Kristnaswamy Rao, C.I.E., visited these Hills and gladdened our hearts with promises of new roads, bridges, police, medical and anchal requirements and a staff of surveyors so badly needed but, although I feel certain that Government have not overlooked us, still so far nothing has been actually done.

"The cultivation of cardamoms has largely extended in S. India and I imagine that not less than 4,000 acres have been opened in the last four years by Europeans alone. In Ceylon, I gather from the report of the Rangalla Planters' Association of 28th January, 1903, that the cultivation has increased by 50 % during the last seven years and that the estimated output for this year is 650,000 lbs. off 8,621 acres. I don't think much reliance can be placed upon the statement made at that Meeting with regard to Travancore, viz. 'that there must be a good deal of bluff going on there regarding the cultivation of cardamoms as it is a poor country as regards yield at the best of times and very uncertain and will never give a high yield per acre.' I am told by a planter, who knows the cultivation of cardamoms both in Ceylon and Travancore, that our yields per acre are likely to far exceed those obtained in Ceylon.

"A scheme for exploiting the continent of Europe with cardamoms is on foot in Ceylon which I think we should support. I am glad the honour of G.C.I.E. has been conferred upon H. H. the Maharajah and our congratulations are heartily tendered.

"The Madras Labour Act has passed before a select Committee and will be brought before the Madras Council before the end of this month. I trust in its amended form it will be found to be of much use in Travancore. I welcome Mr. Sealy, the Superintendent of the Cardamom Hills, on his return from Home. We are all glad to see him again.

"I now place my resignation in your hands."

### Honorary Secretary's Annual Report.

**Membership.**—5 estates are on the roll of the Association. I regret that owing to delay in surveys it is impossible to say how many acres are represented.

**Finance.**—At the last Annual Meeting it was found necessary to ask for a donation of Rs.25 from each estate to wipe off the debt from previous year's working and I am pleased to say we start the new year with a credit balance of Rs.18-5-5 and there is some prospect of recovering a sum of Rs.75 previously written off as a bad debt.

**Roads and Bridges.**—After considerable delay we have at length been entrusted with the upkeep of the roads in the Santhampara division, but the money required for necessary deviations and revetments has not yet been granted. The Superintendent of the Cardamom Hills, Mr. Sealy, has asked Government to sanction four new outlet bridle paths into British Territory and it is hoped that work may soon be commenced on them. So far nothing has been done towards bridging the Kalaar and Santhampara rivers both of which are unfordable during monsoon weather.

**Medical.**—No dispensary has yet been established but the Cardamom Hills Superintendent, Mr. Sealy, in a recent letter wrote "I am glad you have called my attention to the dispensary . . . am strongly in favour of a dispensary at Udumonshola as it is more central than any other place and moreover the police station is there." The district is undoubtedly most unhealthy at certain seasons and medical aid is an urgent requirement.

**Post Office.**—During the year under review the deficiency in income of Thavarem Post Office over expenditure amounted to Rs. 49-4-0 and this, in accordance with the arrangement agreed on at last Meeting, has been paid by Satharangapara and Gudumpara estates through the Association.

**Surveys.**—A resident surveyor was appointed to the district about a year ago but is not able to get through all the work by himself and should be given an assistant. It also takes an unreasonably long time to obtain plans from the Head Office in Trevandrum after the district surveyor has sent in his field books. I now tender my resignation.

(Signed) J. J. MURPHY.

Mr. Robertson moved that report be passed.

Seconded by Mr. Bewley and carried.

**Roads and Bridges.**—Proposed by Mr. Murphy, seconded by Mr. Nicoll, "that Government be asked to allow an upkeep grant for the road from Pambadampara to Ramakal.—Carried.

It was proposed by the Chairman and carried *nem. con.*, "that Rs.150 be asked from Government for putting revetments in order from Paniyar Bridge to Nundar."

**Outlet Roads.**—Mr. Sealy said that the sum asked for tracing and cutting four new outlet bridle paths would probably be granted. Mr. Murphy called attention to the necessity of a road from Perambukutti or Kutheri Panjan and Mr. Sealy said he saw no objection to the trace being made from there instead of from Thavarem Mettu.

**Post Office.**—It was resolved, that the present arrangement with regard to Thavarem Post Office be continued and that the Postmaster-General be asked to establish a Post Office near the Paniyar Bridge.

**Shooting on the Cardamom Hills.**—This subject having been fully discussed in Committee, the Chairman proposed "that the Honorary Secretary be instructed to write to Mr. Sealy, Superintendent, Cardamom Hills." This was agreed to and Mr. Sealy said that he would give the subject (fully explained to him) his best consideration.

**Exploitation Scheme.**—It was proposed by Mr. Nicoll and seconded by Mr. Murphy, "that owing to the decrease in price and probable large increase in production of cardamoms co-operation with Ceylon for the purpose of finding new markets is advisable." To discuss this, the Meeting went into Committee and it was decided to let the matter stand over till our next Meeting.

**Subscriptions.**—Proposed by Mr. Murphy, seconded by Mr. Bewley, "that estates subscribing to this Association shall pay on all cultivated land belonging to them within the Cardamom Reserve and that subscriptions for the current year be fixed at Rs.5 per 100 acres, over 50 acres to count as 100."—Carried *nem. con.*

Election of officers resulted as follows:—

Chairman ... Mr. H. M. Knight.

Honorary Secretary ... Mr. J. J. Murphy.

Committee ... Messrs. S. L. Robertson, Geo. E. Bewley, and A. B. Milne

A vote of thanks to the Chairman closed the proceedings.

H. M. KNIGHT,

Chairman.

J. J. MURPHY,

Honorary Secretary.

### UNCLAIMED TREASURES.

There is no lack of treasures in the world; the trouble is that they are all claimed: or if indeed there be any unclaimed (and surely there must be some such), they are so difficult to find that for the rank and file of mankind they might as well be among the claimed treasures, or not exist at all. That was a delightful compliment which Charles Reade paid to old maids when he called them unclaimed treasures. Because a thing is unclaimed or rejected by no means implies its worthlessness. A goodly proportion of the masterpieces of literature have been rejected by publishers, Thackeray's incomparable *Vainety Fair* among the number. The only positive proof of anything being a treasure is its having stood the time test. For thousands of years gold has everywhere been regarded as valuable, and people never seemed less inclined to go back on that opinion than they do to-day. For thirty-four years Mother Seigel's Curative Syrup has been the most popular medicine. Not a year passes without a large extension of its sales, nor a day without voluntary testimony as to its power for good. It is a treasure, but by no means an unclaimed one. On the contrary, it is claimed as the family medicine in six hundred thousand (600,000) British homes. There is no matter for wonder in these figures, great as they are when the benefit which it confers is more often than not fully as great as that described in the following legally sworn declaration:—

"I, John Boddy Mintoft, of Nunnington, in the county of Yorkshire, do solemnly and sincerely declare as follows:—

"That in spite of skilled medical aid I was for many years a martyr to indigestion and a strangely disordered stomach, and that had it not been for Mother Seigel's Curative Syrup I doubt whether I should be alive to-day. For a year or two before I broke down, I never knew what it was to have a day's good health. I was always ailing. The least exertion tired me, and I felt drowsy, despondent, and miserable. Ordinarily, I had a very good appetite, but just then my food began to disagree with me, and I felt uncomfortable after it. There was a fulness and distention of the stomach that seemed to affect the heart. My breath was very

short. Finally, a pain settled in the chest and under the left shoulder. I ought to have attended to it at once; but unfortunately neglected to do so, consequently the disease developed. I had always an unpleasant taste in the mouth and my tongue was dry and parched. My appetite, hitherto good, was now very poor, and after forcing myself to eat I often had violent pains in the stomach, and used to break out into a cold perspiration, feeling so chilled that I shivered from head to foot. My condition becoming so serious, I consulted a doctor; but in spite of all he did for me I grew worse, and at the end of six weeks was advised to go into a hospital at York. There I was treated with great kindness, but I think my case must have puzzled the doctors for, after detaining me eleven weeks, they sent me away uncured. Then began the most painful period of my illness. When I got home my mother was shocked at my appearance. She has since said that she believed I had come home to die. I was troubled with obstinate constipation, my sleep was broken, and when I lay awake it seemed as if the bed were sinking under me. Night sweats robbed me of the little strength I had left, and I was soon so weak that I could scarcely walk across the room. To go upstairs, I had to crawl on my hands and knees, and it was only with the greatest difficulty that I got down to the sofa again next day. Thus I was for three years a confirmed invalid. Meanwhile, I had seen a specialist whose treatment seemed to do me good at first; but in the end I found myself as bad as ever. Almost in despair, and as a last resource, I tried Mother Seigel's Curative Syrup. Ah, if only I had tried it before! I began to mend as soon as I had taken half of the first bottle. My appetite improved, slightly it is true, but what I ate agreed with me. The night sweats ceased, and gradually strength returned, so that by the aid of a walking stick I could get about. My convalescence was a long one, but by persevering with the Syrup, all the bad symptoms left me, and I was able to resume my work again. My present employment is a very arduous one, compelling me to expose myself to all kinds of weather; still, I feel none the worse for it. Believing that it may benefit some other sufferer, I regard it as my duty to make these facts known. And I make this solemn declaration conscientiously believing the same to be true. By virtue of the Statutory Declaration Act of 1835 (William IV. c. 62). Declared at Malton, in the county of Yorkshire, the 6th of May, 1902, by John Boddy Mintoft, before Arthur L. C. Russell, a Commissioner for Oaths."

## MARKET REPORT.

[Per Mail advices of February 27th, 1903.]

### COFFEE.

The London Commercial Record says:—Fairly liberal supplies have been brought to the hammer during the past week, and although the market is without activity, the bulk was disposed of. The quality of the greater proportion of the East India continues unattractive, and it has been difficult to effect sales even at a further decline of 1s per cwt., but the few fine parcels sold with good competition at full prices. Ordinary to good ordinary Jamaica is rather easier, but fine ordinary is steady. Colory Costa Rica continues to command very firm rates, but the less desirable grades are 1s per cwt. cheaper. Other Central American descriptions have been in limited supply, and are barely steady. Santos somewhat irregular. The market for Brazil "futures" has been irregular and generally lower, the depressing factor being large receipts; at the close a recovery took place, and we finish without change for the week, but other countries are rather easier; yesterday Santos for March delivery sold at 26s 6d to 26s 10½d, May at 27s 4½d to 27s 7½d, July at 28s, September at 28s 6d to 28s 10½d, and December at 29s 4½d to 29s 6d per cwt.

London	...	Santos	...	May delivery	...	27s 9d.
New York	...	No. 7 Rio	...	"	...	4'60 cents.
Hamburg	...	Santos	...	"	...	27¾ pf.
Havre	...	Santos	...	"	...	33½ francs.

The auctions to-day went off with fair demand at steady prices for all qualities. Catalogues for auction to-day comprised:—83 bags East India, 190 bags 54 barrels Jamaica, 20 bags Peruvian, 75 bags Java, 42 bags Vera Paz, 2,672 bags Costa Rica, 221 bags Colombian, 202 bags Mexican, and 126 bags New Granada.

Brazil futures opened firmer and gradually advanced 6d on good buying and a scarcity of sellers. Transactions include May at

27s 9d to 28s, July at 28s 3d to 28s 6d, September 28s 9d to 29s 1½d, and December at 29s 6d to 30s.

Closing quotations:—

	Sellers.	Buyers.
March	26/6	27/3
May	28/	27/10½
July	28/7½	28/6
September	29/3	29/
December	30/	29/9

Brazil receipts 25,000 bags and Exchange ½ higher at 11½.

Hamburg ¼ up. Havre ¼ up. New York opens 5 to 10 higher.

Imports, Deliveries and Stock of Coffee in London are as follows:—

Feb. 25	... 4.35	4.35	4.45	4.55	4.65

### TEA.

INDIAN.—Public sales were rather larger, and included 35,000 packages (of which 240 were Greens), compared with 29,000 in the week before, and 40,700 for the corresponding period of 1902.

The improvement noted last week has been accentuated and the sales have passed with a further upward tendency. Common were about ¼d dearer, with little leaf to be had under 6d, while useful medium kinds between 6½d and 8½d showed ¼d to ½d advance. "Stand out" invoices continued to sell freely at full values.

The average for the month just closing, as shown below, is 7½d, which, although higher than last year, when the position was very much less favourable, and there were few or no fine "autumns", is less than for February, 1899, when the conditions were more analogous and the average stood at 9¼d.

For 28,600 packages on estate account 8½d per lb. was realised, contrasted with 7½d per lb. for 35,800 and also for 28,800 in the two foregoing seasons.

February offerings were: 1903, 123,000 packages; 1902, 175,500 packages; 1901, 167,400; making 1,034,000 packages of the present crop printed to date in comparison with 1,185,000 to the end of February 1902. This difference of 151,000 packages is no doubt already largely accounted for by the increased volume of business done privately and the now assured heavy shortage in the 1902 crop.

CEYLON.—Catalogues totalled 20,500 packages (of which 600 were Greens), opposed to 19,700 on the 17th instant and 25,600 a year ago.

All descriptions met with spirited competition, and a further hardening in values can be reported. Common to fair leaf kinds

were perhaps most wanted, and fetched ¼d to ½d per lb. over rates current on the foregoing Tuesday. Medium Pekoes and Orange Pekoes received substantial support from both home and foreign buyers, selling in favour of importers. Broken Pekoes were also in demand at improved prices, most noticeable in the case of parcels over ½d per lb. Where quality was maintained fine and finest lines ruled firm.

The Green teas were well taken up "finished" sorts bringing out the best bidding as they are the more suitable to the requirements of this market.

Owing to the small proportion of fine tea the average is only slightly over 7½d per lb. On the 19th it was 7½d per lb., and 7½d per lb. in 1902.

Amount brought forward during the month:—

1903.	1902.	1901.
80,310 pkgs.	101,600 pkgs.	107,700 pkgs.
(Avge. 7½d per lb.)	(Avge. 7d per lb.)	(Avge. 6½d per lb.)

JAVA.—Rather over 2,500 packages were submitted, and passed steadily at previous rates.

Auctions from 1st to 27th instant aggregate:—

1903.	1902.	1901.
7,600 pkgs.	9,900 pkgs.	7,200 pkgs.
(Avge. 6½d per lb.)	(Avge. 6d per lb.)	(Avge. 5½d per lb.)

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, viz.:—

From 1st to 24th February 1903	...	14,402,474 lbs.
Do. do. 1902	...	14,801,693 "

During the week the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	30,994	3,950	34,944
Ceylon	17,407	3,047	20,454
Java	2,412	162	2,574
Total	50,813	7,159	57,972

Also 538 packages from second hands.

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN  
RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/1½ & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated February 27th, 1903, says :—

35,190 pkgs. INDIAN 20,912 " CEYLON 2,574 " JAVA				
Total 58,676 packages were offered in public auction this week.				

The strength of the statistical position is apparently becoming gradually more recognised, with the result that a greater degree of confidence is being evinced by purchasers. Buying has recently become more general, and although a good deal of tea is doubtless for immediate requirements, this tends rather to emphasise the strength of the position than otherwise.

Exports of Indian tea from Calcutta and Chittagong, as shown by figures of the Indian Tea Association.

Duty payments are progressing very satisfactorily, being about equal to those of February last year, which were well up to the normal rate.

CEYLON GREEN TEA for North America.—This trade has increased rapidly. Between October 1898, and the end of December 1902, the grant was paid on 6,149,862 lbs., viz.:—  
1898, 13,302 lbs.; 1899, 86,327 lbs.; 1900, 472,294 lbs.; 1901, 1,590,000 lbs.; 1902, 3,987,939 lbs.

INDIAN.—The auction passed with strong bidding, prices generally being ¼d to ½d above those ruling at the commencement of last week, and hardly anything can now be obtained in clean whole leaf

tea under 6½d, while a satisfactory feature is that medium and better teas are now participating in the advance which has taken place. Closing invoices are now beginning to appear in the catalogues. The following averages are worthy of note:—"Ass. Fron. T Co. Ledo," "Jokai T Co. Hattiali" and "Kamroo T Ass.," 1/1¼; "Sealkotee," 1/1½; "Turzum," 1/1¼.

TRAVANCORE.—A gradually increasing quantity comes from this district, and meets with good attention from the Trade. An invoice from "Munaar" estate averaged 8¼d. per lb.

Revised Customs Imports of Indian and Ceylon tea from 1st June to end of December.

Bengal Presidency (including Calcutta and Chittagong) ...	111,086,349	} 1902. lbs. 114,855,104	} 111,731,096  2,082,134 640,070	} 1901. lbs. 114,453,300

Week's av. of tea sold on Garden Account 1903, 29,220 pkgs., av. 8:05d. 1902, 36,353 pkgs., av. 7:11d.

Tea sold on Garden Account 1st June to date 1902-3, 878,884 pkgs., av. 7:37d. 1901-2, 994,935 pkgs., av. 7:79d

CEYLON.—With a strong general demand prices showed an advance of fully ¼d on last Tuesday's rates, common and better teas both selling at improved prices; there is hardly any whole leaf tea under 6d per lb. Quality shows some falling off as frequently happens about this time of year. Average for week 7:81d, against 7:11d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 155,429 pkgs., av. 7:57d. 1902, 197,383 pkgs., av. 7:19d.

JAVA.—Javas passed with a firm tone, nearly everything being sold in the room at prices fully up to rates current towards the end of last week.

COCOA.

There was little alteration noticeable in the prices paid at Tuesday's auctions, when 6,703 bags were catalogued and about 3,050 bags sold. Trinidad was represented by 3,713 bags, which experienced a fair demand at about valuations, 1,660 bags selling at 66s to 67s 6d for very fine, 61s to 64s for good to fine, and 59s to 60s for middling. Only 34 bags Granada were offered and 27 bags sold at 53s to 55s 6d for fair to good. 227 bags Dominica found buyers at full rates—good to fine 53s to 55s, common to fair 50s to 52s. Of 423 bags Jamaica offered 250 bags sold at about last auctions' rates—viz., 53s to 55s 6d for good to fine, and 50s 6d to 51s for common to fair. 78 bags St. Lucia brought valuations at 54s to 56s for good to fine, and 52s for fair. Of 157 bags Colombian only one lot sold at 85s for fine. 3 bags Seychelles brought 53s. Ceylon rather quiet, but of 1,890 bags offered 850 bags sold at about recent prices; fine bold and medium red realised 75s 6d to

77s, fair to good 64s 6d to 70s, ordinary to middling medium and small 53s to 60s, fair to fine small 47s to 57s, and fair collected 50s per. cwt. Bought-in growths consisted of 28 bags Demerara, 60 bags Carupano, 11 bags Caracas, 27 bags Guayaquil, and 48 bags African. Private transactions embrace 300 bags Trinidad and 200 bags Ceylon at auctions' rates, and 50 bags Guayaquil at 63s to 70s per cwt. for greyish to fine Caraquez.

### PEPPER.

**BLACK.**—A dull tone is manifest and value is lower. About 200 tons Singapore have been sold at  $5\frac{1}{8}$ d down to  $5\frac{7}{8}$ d on the spot, at  $5\frac{7}{8}$ d for January-March shipment, and April-June and May-July at  $5\frac{1}{8}$ d, and at  $5\frac{1}{8}$ d for June-August.

At auction on the 25th instant 78 bags greyish Singapore retired unsold at 6d, also 200 bags Penang, weighing 4 lbs.  $2\frac{3}{4}$ ozs., dust 4.06 per cent. per gallon measure, at  $5\frac{3}{4}$ d per lb.

**WHITE.**—is quiet. On the spot sales of fair Singapore have been made at  $9\frac{1}{2}$ d to  $9\frac{5}{8}$ d, and fair Penang at  $8\frac{1}{8}$ d. For arrival 50 tons Singapore January-March and February-April shipment have changed hands at  $9\frac{1}{8}$ d to  $9\frac{3}{4}$ d per lb.

At public sale on Wednesday, 24 bags fair to good Singapore were bought in at  $9\frac{3}{4}$ d to  $10\frac{1}{4}$ d per lb.

### GINGER.

**COCHIN.**—Washed rough is cheaper, but cut kinds are well held. 59 cases 637 bags were brought to the hammer, of which 124 bags (mostly "without reserve") sold—good medium and small washed rough, plump, at 37s, hard and dark part coated ditto 35s, and inferior ditto 33s. A bid of 60s was refused for good medium, with some small plump cut, limed, 70s being the buying-in price, while medium and small cut retired at 57s 6d, and 32s per cwt. was bid for small and medium brown rough.

**JAPAN.**—81 bags withdrawn in the absence of offers.

**JAMAICA.**—10 barrels sold—common washed, part lean and dark, 36s 6d to 37s, and mouldy 35s to 36s per cwt.

To-day quiet. Of Black Singapore 40 tons June-August shipment sold at  $5\frac{1}{8}$ d.

Business has been done in Tellicherry to arrive at 53s per cwt. c.i.f., delivered weights Hamburg, per February (s.).

### CINCHONA BARK.

At the Amsterdam auctions held yesterday, only 5,200 packages of Java bark were offered, compared with the heavy total of 10,990 packages catalogued in January. A very firm tone ruled, and practically everything sold at an advance of 27 per cent., the unit averaging 8.20 cents, against 6.45 cents obtained in January, and 7.95 cents in February last year.

The shipments of Bark from Java compare as follows:—

	1903.	1902.	1901.	1900.
January	593,000	975,000	1,000,000	603,000
February	655,000	520,000	748,000	641,000
Amsterdam lbs.	1,248,000	1,495,000	1,748,000	1,244,000

### QUININE.

Sulphate quinine is firmly held, and at the close the price has improved  $\frac{1}{2}$ d per oz. on the advance in the value of Bark at the Dutch sale. Sales about 60,000 ozs. B&S or HB on the spot at 1s  $0\frac{3}{4}$ d up to 1s  $1\frac{1}{4}$ d; for delivery August has been done at 1s 1d up to 1s  $1\frac{1}{4}$ d.

A firm tone with few sellers has characterised this market, the disposition being to wait the result of the Amsterdam bark-sale, when a 10-per-cent to 15-per-cent. advance in the unit is expected. The announcement of the moderate shipments from Java for February gave a firmer feeling to the market on Wednesday, small sales of German sulphate in bulk being made at 1s  $0\frac{3}{4}$ d per oz. The advance of 25 per cent. in the Amsterdam bark unit to-day caused surprise on this market, not more than 10-per-cent. to 15-per-cent. advance being anticipated. The result was known early in the afternoon, and quinine in second hands immediately rose  $\frac{1}{4}$ d, business being done at 1s 1d for spot, and 1s  $1\frac{1}{4}$ d quoted. It is quite thought makers will advance their prices, which have remained unchanged at 1s  $1\frac{1}{4}$ d since October. It is said 2d advance would be warranted, but the makers have no desire to influence the speculative-market by making so substantial an advance.

#### COFFEE-PLANTING IN BRAZIL.

THERE has been abundant evidence of late that Brazilian coffee-planters are not so happy as they were a few years ago. Yet supplies continue to be poured on to the markets of the world, and the public are led to infer that coffee is still being raised at a profit in Brazil. Quite recently the Brazilian planters held a Congress. Certain particulars as to the results, with the comments of a Brazilian contemporary, are given in our present issue. From these we are inclined to believe that the Congress has done no good. It finally recommended that various measures be taken for the relief of coffee-planters. First among these is a loan at 8 % to be raised by the State to the extent of 50,000:000\$ (£7,500,000) and lent to planters on mortgage of produce at 9 % per annum for a year. From this it would appear that Brazilian coffee-planters, like many of their brethren in India, are feeling the pinch of tight money and depreciated credit. It is extremely unlikely, however, that the Government will fall in with the above suggestion. The next recommendation is summarised rather curiously: "Reduction of 30 % in railway tariffs, and in case of refusal an equivalent tax on their nett profits." Does this refer to the coffee tariff alone, and are railway profits to be taxed in behalf of coffee alone? If the answer be "yes" in both cases, the recommendation is admirable only in its colossal impudence! The third resolution is much more business-like, viz. "To promote in every possible measure (? way) trade with other States and

suppression of the inter-state duties." That is fair enough. Too much cannot be done in the way of fair development of demand, and if the coffee industry in Brazil be really in a parlous state all duties on the article might well be abolished. The fourth suggestion is equally good: to aid in the founding of co-operative societies for propaganda abroad. That is a reasonable line along which to approach the Government, for the coffee industry is the mainstay of the State and deserves to be guarded and encouraged by it.

Then there is a divergence on to absurd lines again. The fifth recommendation is to suppress 20 % of exports by means of a special tax on low-grade coffees, to be paid in kind by the exporters. Of the low-grade coffees thus received, Government shall destroy two-thirds and reserve the remaining third to be roasted and exported by agricultural syndicates, free of duty, as a means of propaganda. The recommendation is contradictory. Ostensibly it aims simultaneously at checking exports of low-grade coffee and at stimulating a propaganda on their behalf! Brazil should do one thing or the other: either she should give *quality* the preference, with a view to working average prices up; or she should push her coffees regardless of quality, relying on *low price* to bring her out all right in the long run by stimulating consumption. The idea that a man should destroy a portion of his crops in order to raise the value of the remainder is opposed alike to the principles of economics and common sense. If men grow coffee simply to destroy it, they are obviously incurring needless expenditure; and to judge from the wording of the recommendation, the coffee to be destroyed would actually be sent to one of the ports, thus involving heavy outlay in transport from the estate! It is unnecessary to criticise such a proposition in detail.

To take measures to increase a regular current of immigration is the next recommendation, a sound one. Planters need a regular labour supply, and the larger it is the cheaper it is likely to be. The seventh recommendation is to suspend the execution of the law prohibiting new plantations

## THE BRAZILIAN PLANTERS' CONGRESS.

## FOREWORDS.

In a day or two, says the *Brazilian Review* of the 3rd ultimo, a Congress of planters will meet at S. Paulo to consider the situation and take steps for its improvement. Planters are the most powerful and influential class of the whole community and, if they can be induced to act together, can no doubt impose their will on the S. Paulo Government and thus, indirectly, on the Union Government also. Up to the present, although there have been several attempts to organize the planting interest politically, they have all failed and Government has done pretty well what, it liked without any particular attention to planters' interests other than an occasional sop in the shape of extending the favours and privileges of mortgage banks already on their last legs.

Now the situation has changed and Government has to deal with desperate men fighting for sheer existence with whom no consideration but survival will have any weight. The time for palliatives and tergiversation has gone by and, unless they bely themselves, Congress will not dissolve without having obtained from the Government of the State of S. Paulo a distinct promise of support in one way or another. That the matter is regarded seriously at S. Paulo itself is shown by the fact that the *Commissao Central* (Central Committee) of the ruling party, the most powerful organization in the country, has gone to the trouble of issuing invitations to their friends to attend the Congress and support Government proposals.

It is said that planters will demand an issue of 150,000:000\$ (£7,500,000) of paper money to be loaned to them by the State on easy terms. This, we know, it is the intention of the Central Committee to resist, but unless they can propose some equally plausible counter scheme we doubt if desperate men on the brink of absolute ruin will be satisfied with mere platitudes or promises. No doubt they will argue paper money is bad, but annihilation is worse; and such are the alternatives that have to be faced. What will be clamoured for is money in some form or other with which to pay off pressing creditors, send exchange down and currency prices up and give the planter, now on his last legs, another chance.

The Banco de Credito Real of São Paulo is utterly exhausted and may at any moment be obliged to close its doors because no one pays into rest any longer on their mortgages and foreclosure is useless because no buyers can be found and to work the plantations means more loss still. This Bank which issued mortgage bonds to planters had a paid up capital of 5,000:000\$ and an issue of 230,000:000\$ per cent. in 6 and mortgage bonds which are now unsaleable at only 30 per cent. of their nominal value, the Bank is said to already have 80 different plantations on its hands and would have half S. Paulo were all its overdue mortgages foreclosed.

Government is urged to promote another bank and, indeed, has been authorized to do so by the State Congress on very favourable terms. But even if borrowers are still to be found on the ruinous terms that current quotations of this kind of security implies, no one will supply the capital for a business foredoomed to loss and failure. There is no market for the bonds and no capital for such banks and they are worse than useless.

Whence is the money planters clamour for, *coûte que coûte*, to come from? The State and Federal Governments are both threatened with deficits and cannot spare a *vintem*. Private capital will have nothing to do with planters or plantations and there seems nothing for it, if planters are to get their way as they certainly will if they are united and resolute, but to issue paper money once again.

It is true that it is no remedy. After a little burst of quasi prosperity which the wise will take advantage of to transfer their liabilities to the State, so long as the conditions of production and consumption are unaltered, no matter what exchange may be, local price will be forced down again and within a few months things be as they were before, with the only difference that one lot of creditors will be substituted by another less exacting, whilst the increased cost of production, that must follow a fall of exchange, will still further reduce the narrow margin of profit or augment the loss as the case may be. It is certain that, so long as the supply of coffee so immensely

exceeds demand, prices are in the hands of consumers and not of producers and that the pressure to sell will keep prices down as close as possible to the cost of production. If by re-issue of paper money exchange should decline to 8d. it is certain that local price of coffee would gain little or no advantage, and instead of rising to 9\$000 or 10\$000 would be kept at about 6\$000 *per arroba*, the price at which coffee still comes to market and will continue to come, never mind what exchange may be.

On the other hand, the fall of exchange raises the cost of all imports and of the labour indispensable for production. Alluring as the prospect of immediate relief by issuing paper money may seem, it is after all but an illusion that would soon pass away and leave the planter and the country worse off than ever. Besides, it is unnecessary. Planters have in their own hands the only possible remedy for low prices—to limit production; and unless they do it they must reconcile themselves to the continuation of existing conditions for years, until, indeed, consumption catch up and exceed production. With a surplus of millions of bags per annum in the world's supply, when that comes about the present generation will be in their graves and their troubles over and forgotten.

But things will not be so and if planters want a "living price" they have only to cut down 25 per cent. of their trees to the root and reduce production proportionately to at once bring production and consumption into line. Properly carried out the effect of the temporary sterilisation of 250,000,000 bearing trees would be electric and prices would rise immediately, whilst the trees would not be lost or capital be destroyed but merely lie dormant, and in the course of three or four years, if it were found that consumption could stand it, these trees or part of them might be allowed to come into bearing again.

Against this it will be urged that such a measure could not be made compulsory. Doubtless that would be too violent an interference with the rights of property, but by granting certain favours, such as rebates on freight and export duties to coffee from plantations where this measure had been adopted, it is likely that the majority would comply.

It is the interest and duty of every single planter at this moment to leave personal profit aside and act in the general interest as it is that of the Government to support him as far as is lawful and right. But without some sacrifice on both sides immediate improvement is impossible. With certain ruin creeping on them day by day and paralyzing all their energies is it not better to lop off a member than to sacrifice the whole body? Let planters remember that even Government is not all powerful and that only by their own labour can money or capital be created, and then make up their minds to the indispensable sacrifice of part to save the rest of their patrimony and within a year they will be as steadfast opponents to ruinous re-issues of paper money as we ourselves.

## AFTER THE MEETING.

Writing on 10th ultimo the same paper says:—The coffee planters have met, abused the Government and passed a number of Resolutions that, even they must know to be impracticable, and there for the present the matter rests. The report of the Committee, which was adopted, recommended that the following measures should be taken for the relief of coffee-planters: (1) A loan for 50,000:000\$ bearing interest at 8 per cent. per annum to be raised by the State and the product loaned to planters on mortgage of produce at 9 per cent. per annum and at 12 months date. (2) Reduction of 30 per cent. in railway tariffs, and in case of refusal an equivalent tax on their nett profits. (3) To promote in every possible measure trade with other States and suppression of the inter-state duties. (4) To aid in the founding of co-operative societies for propaganda abroad. (5) To suppress 20 per cent. of exports by means of a special tax on low-grade coffees to be paid in kind by the exporters. Of the low-grade coffees thus received Government shall destroy two-thirds and reserve the remaining third to be roasted and exported by agricultural syndicates, free of duty, as a means of propaganda. (6) To take measures to insure a regular current of immigration. (7) To suspend the execution of the law prohibiting new plantation until the other coffee states likewise agree to it.

The Union Government is also asked to contribute by (a) issuing 150,000:000\$ of paper money to be employed in compensating the different States for the coffee destroyed by each and establishment

of mortgage banks and co-operative societies. (b) Reform of the mortgage law making the estate, whether mortgaged or no, alone responsible for wages and salaries. (c) To promote the consumption of coffee abroad by commercial treaties.

The document is signed by Ignacio Mendonça Uchoa, Antonio S. Cardim, Rodrigo Lobato, M. Machado, J. Pinto Cezar, Leopoldino M. Vieira de Andrade, Theodoro Leite de Camargo, M. A. de Alvarenga, A. Augusto de Amaral, José de Souza Queiroz, and Higino Costa.

### INDIAN COFFEE FOR THE STATES.

Referring to some of our recent remarks about pushing sales of Indian coffee in the United States, and utilising the St. Louis Exposition of 1904 as a means to this end, *Tea, Coffee and Sugar* (New York) remarks:—

The thought in India that Indian coffee should have a large market in the United States and the suggestion that a demand be fostered is interesting. The Indian coffee or Ceylon, is regarded in the United States as a very fine coffee, but so peculiar in flavor that a taste for it has to be cultivated. This then is an obstacle in the proposed agitation in favor of the coffee, but one not necessarily insurmountable. But the coffee will have to be exceptionally good to make any headway against the many good American coffees which find a market and popularity here largely on account of the cheapness at which they can be brought into the country. If the Indian coffee cannot be put down as cheaply, or nearly so, in the United States, its hopes for popularity here are vain. But the idea of making a good show at the St. Louis Exposition is to be commended. It might start a fad for the coffee among the fashionables, and if nursed after the manner of Indian and Ceylon tea, be an enterprise very worth while.

The reference made to the "peculiar flavor" of Indian coffee strengthens our belief that Americans do not know what that article is. What they call East Indian coffee is, we fancy, mostly the produce of the Dutch Indies, and a very different article from that of Southern India.

### COFFEE NOTES.

**The U. S. Coffee Market.**—The movement in the coffee market is not so brisk as it was, says *Tea, Coffee and Sugar* of February 25, and prices have had a check in their upward movement and even tend to sag. In the trade demand has fallen to only moderate proportions, dealers evidently having satisfied their wants for the present, and the prospect is that the February deliveries will not show such an aggressive inroad into the totals of the world's visible supply as expected. The market will, then, have no occasion for an elation in tone that will beget a confidence booming things. The movement in Brazil coffees too has been rather heavy, the total on Wednesday and Thursday of the week amounting to 50,000 bags, which at this season is excessive in amount. It was a good note for the bears to pipe on, and the circumstance, together with the decrease in the buying demand in actual coffee, tended to lower prices, especially in options, which have declined 10 points for the week but which on the average are 30 points above the lowest prices quoted in January. Interest in speculative buying is rather flat but sales have been fairly large. The more distant months are the favourite ones sought. The European markets have lent the local one no special courage to advance the market.

In actual coffee, Brazil coffee, which has been offered on a basis of 5½c. and f. for Rio No. 7, was unattractive. For invoices in spot the market closed dull and jobbers and roasters reported quiet times. The market closed 5½c. for

Rio No. 7, 6<sup>7</sup>/<sub>16</sub>c. for Rio No. 4, and 6¼ to 6<sup>7</sup>/<sub>8</sub>c. for Santos No. 4.

The Mild market is in an indifferent state. Buyers expect an easier market as soon as the coffee now free to be shipped from Venezuelan ports shall arrive here, and holders of such coffee as is here are indisposed to sell except at quoted prices. Neither side being willing to make concessions, few sales are reported. East India coffee is quiet and unchanged.

\* \* \*

Total stock in United States February 1, 2,500,241 bags against 2,184,200 bags February 1, 1902. Brazil stock in the United States February 21, in store and afloat, 2,723,134 bags against 2,386,667 bags at the same time last year. Other than Brazilian, 210,724 bags, against 258,127 bags last year.

Brazil coffee in New York February 21, 2,113,124. Stock in New York in other coffees February 16, 166,521, in San Francisco, 39,439 bags, and in New Orleans, 4,764 bags. Visible supply in the world of all coffees, February 1, 12,769,414 bags.

\* \* \*

According to cable advices the Provincial Congress of Brazil meets March 5 next, says *Tea, Coffee and Sugar* of February 25, to consider the proposition to destroy 20 per cent. of the coffee crop in the low grades as one means of assisting the so-called coffee crisis to bow itself out. If such a congress is really to meet to deliberate upon such a proposal, its conclusions will have some interest and especially inviting will be the sight of Brazilians destroying their coffee. We cannot imagine the diversion, and so will not revel in anticipations of joy or regret. It is not improbable, however, that the Brazilians will talk somewhat on the matter. That is a special forte of theirs. Every little while some "fool scheme" is broached, but never is the grower made to help himself; rather is he to receive aid from sumptuary legislation. And such aid! He will have nothing less on his coffee plantation than a gold mine paying several hundred per cent. That was once his happy fortune and he now complains that the world is robbing him of his perquisites as a Croesus. So he is in a crisis, but it may be well to show again that he is rather alone in this. Coffee-growers in other nationalities, stating the case broadly, are not complaining, as may be gleaned from the report of coffee-growing conditions in Mexico, whose delegate in the recent coffee congress officially reported that "Coffee, in reality, is one of the products which at present is yielding larger profits in our country, despite the present crisis in the coffee industry."

## TEA NOTES.

*Tea, Coffee and Sugar* remarks:—Dr. C. U. Shepard, who is the special foster father of American tea and but for whose patience and persistence the industry would long ago have gone into innocuous desuetude and the India and Ceylon planters been spared much worry, gets not a little amusement out of his labour of love besides the rewards of his interest in an unusual and somewhat costly experiment. He has accrued some fame which some base on a senseless fatuity, and his tea gardens have achieved a reputation world wide to the degree that they are not a little subject to aspersions by the envious. Against the flings and arrows of outraged tea-growers the worthy doctor now and then rises to fling an arrow back, doing execution effectively enough, as might be expected from Dr. Shepard's sarcastic humour. Lately he and his gardens have been under review in India where they try to laugh the American experiment out from threatening Asiatic planters with extinction, and he has come back at his Eastern critics by sending the information telling them in a biting way just what he is doing and how after all they need not immediately expect to be driven from their markets. The "Pinehurst undertaking," he tells them "has been experimental from the start until now; at first and until within a few years at my own expense, but latterly it has received generous and welcome aid from the U. S. Department of Agriculture after Official investigation had shown that its object was not commercial, but an attempt to prove the feasibility of establishing a new and profitable industry in the Southern States, with all of the attendant benefits. It would be superfluous to inform you that the experiments although on a small scale (none of my gardens are larger than a few acres in extent), have been directed so as to cover as many sorts of tea-seed and as different types of soil and exposure as possible. It was expected that success—measured pecuniarily—might attend very few of the experiments, but it was hoped that some of them might result favourably. I will leave to your own judgment whether the following returns for this season may be regarded as promising especially as the limit of production does not yet appear to have been reached."

He then enumerates the successes of his gardens in teas grown from China, Indian, and Ceylon seeds, and shows such superiority in production over Asiatic production that his readers may well feel disquieted. However, the doctor calms them by dismissing himself thus: "Yield of Pinehurst tea for 1902 (don't laugh, please) about 8,500 lbs. It is neither expected nor desired to exceed double that amount (don't be alarmed, please). As to that little, cheap rotary sterilizer for the Green tea manufacture, it does its work so well that the product sells very readily in the American market at a price which my respect for your feelings forbids me to quote."

It is doubtful whether detractors of the kind the doctor demolishes will ever be absolutely silenced. Perhaps it is just as well that they write their little "mess." Even disparaging notice is better than none at all, and we all know the value of the strength gained in overcoming such obstacles as opposition and depreciation. Who will gainsay that it is so very improbable that sometime, somewhere a monument will stand erect by the American tea-growers in appreciation of their great forerunner, Dr. Shepard?

\* \* \*

**The U. S. Tea Market.**—The tea market was quieter last week, says *Tea, Coffee and Sugar* of 25th ultimo, but prices

were well maintained. Green teas, inclusive of Japans, remain the feature of the market. They are exceedingly scarce. First hands are entirely out of them, and indeed second hands also. Still the demand continues, and a new supply cannot be had for six months. The market for them, hence, must continue very firm.

There is more movement in Congous and Foochows, but at no perceptible appreciation in prices. This cannot very well take place until the more-sought-for teas have more or less disappeared from the market. The better grades of Congous are scarce and therefore the prices of them are firmly held. Indias and Ceylons are in fair demand at unchanged rates. Inquiry for Formosas is still frequent and what sales are made are at full quoted prices.

\* \* \*

China, the original home of tea, imported 4,689,428 pounds of Ceylon tea during 1902; in 1901 the amount was 2,694,819. The importation seems to be increasing by leaps and bounds. It is as if China has not got enough tea of her own growing content being beholden to "barbarians" for an extra cup or two on a pinch.

\* \* \*

**U. S. Tea Standards for 1903.**—The United States Treasury Department has issued and distributed the regulations governing the importation and inspection of tea for the current year, to go into effect May 1, 1903. The tea standards for the year are declared to be as follows: No. 1. Formosa Oolong; No. 2. Foochow Oolong; No. 3. North China Congou; No. 4. South China Congou; No. 5. Ceylon tea (use for India tea); No. 6. Pingsuey green; No. 7. Country green; No. 8. Japan pan-fired (use for sun-dried); No. 9. Japan basket-fired; No. 10. Japan dust or fannings; No. 11. Capers (use for Scented Orange Pekoe); No. 12. Canton Oolong, and No. 13. Scented Canton (use last year's standards). The standards as selected for 1903 are practically the same as those in vogue in 1902.

\* \* \*

**The Ceylon Tea Crop.**—An up-country planter writes to to say that "the Ceylon tea crop this season is likely to be shorter than most people think, quite apart from the question of green tea and short shipments to Great Britain. The weather has quite stopped flush, and the amount of pruning being done is astonishing." It is probable that March exports will be very short, and that the first quarter of the year will show a falling-off of nearly 2,000,000 lbs. from last year's figures. Altogether, with increasing demand at home, and short supplies, the tea industry has not been in such a satisfactory condition for many years.

\* \* \*

Mr. F. G. Guthrie, Assistant of Messrs. Tarrant, Henderson & Co., on his return from South Africa, observed that Natal tea was not so good as Ceylon tea. People did not seem to be able to grade it. Still the local tea had a strong hold in its own country, although inferior to Ceylon tea, and this, perhaps, might be accounted for by the fact that 6d. duty a lb. had to be paid on all tea sent into South Africa. The planters in that part of the world do not yet make green tea. Kaffir labour is not used on the Natal tea estates. It all comes from India, and is much more costly than the Ceylon planter finds his labour.

Discussing the prospects of South Africa generally, Mr. Guthrie said, that if a man was a specialist in any particular line he might stand a chance of getting a fairly good billet;

but, although his salary might appear very high, it would not really be so, because one had to take into account the cost of living. "There are a tremendous number of young fellows down there now out of billets, and the ordinary 'man in the street' seems to have no chance at all."

At the same time Mr. Guthrie thinks the day is bound to come, when, as the country develops, the expenses of living will be considerably reduced.

\* \* \*

**California.**—A letter has been received by a Colombo merchant from Mr. O. H. Greenslade, formerly of Dehiowita, Kelani Valley, dated "Kern County, California, January 30th." He says:—Tea sells retail from 50 to \$1.00 per lb.; it can be landed here for under 25 cents.

\* \* \*

The following telegram has been despatched by the "Thirty Committee" to the Secretary, Ceylon Association in London:—"Prompt payments green tea bonus will cease 20th March; payments must then be made up to the 7 millions voted (at the 4 cents rate) as funds available."

\* \* \*

**The Ceylon Tea Cess.**—The Tea and Produce Committee of the Ceylon Association in London passed on Monday, the 23rd ultimo, a Resolution recommending proprietors to agree to the increase of the Cess to  $\frac{1}{2}$  a cent per lb. for the last eight months of this year. The Resolution, which was very warmly debated on both sides ere being put to the Meeting, runs as follows:—

"The Committee, having considered Mr. Kingsford's letter of 21st January, recommend proprietors to agree to the increase of the Cess to  $\frac{1}{2}$  a cent per lb. for the last eight months of the current year, on the understanding that the increase be not continued beyond that time. The Committee are of opinion that it would have been better to reduce expenditure on the American and Continental campaigns, to set free funds for the Green Tea bonus, or—failing that—to carry forward any unsatisfied claims for bonus on Green Tea, incurred during 1903, against the 1904 Revenue. The Committee fear, however, that if this view is pressed at the present time, it might result in restricting the expected output of Green Tea, which would, in their opinion, be most undesirable."

#### THE CIRCULAR TO HOME PRODUCERS.

DEAR SIR,—I am instructed by the Tea and Produce Committee of this Association to hand you the annexed copies of letters from Mr. A. C. Kingsford, Chairman of the Planters' Association of Ceylon, dated 21st ultimo, and from Mr. K. Rutherford dated 6th instant, and to ask whether you are prepared, on behalf of the interests that you represent, to agree to the proposed increase of the Tea Cess from 30 cents to 50 cents per 100 lbs., from 1st May to December 31st next.

At a Meeting of the Tea and Produce Committee, held on the 23rd instant, the following Resolution was passed, and is now communicated for your information:—

"That the Committee, having considered Mr. Kingsford's letter of 21st January, recommend proprietors to agree to the increase of the Cess to  $\frac{1}{2}$  cent per lb. for the last eight months of the current year, on the understanding that the increase be not continued beyond that period.

"The Committee are of opinion that it would have been better to reduce expenditure on the American and Continental campaigns to set free funds for the Green tea bonus, or, failing that, to carry forward any unsatisfied claims for bonus on Green Teas incurred during 1903 against the 1904 Revenue.

"The Committee fear, however, that, if this view is pressed at the present time, it might result in restricting the expected output of Green Teas, which would, in their opinion, be most undesirable."

Answers to this circular should be sent in on or before the 10th March next.

61 & 62, Gracechurch Street,  
LONDON, E.C.,  
February 27th, 1903.

I am, Dear Sir,  
Yours faithfully,  
WM. MARTIN LEAKE,  
Secretary.

#### THE REPLIES.

A special cablegram, dated 16th instant, to the *Times of Ceylon* says:—

The final voting in the matter of the proposed temporary increase of the Cess is 59 in favour, and 56 against, the latter, including ten who support the compromise.

The correspondence is being forwarded to Ceylon.

The Tea and Produce Committee, at its Meeting to-day, did not pass any further Resolution.

\* \* \*

The tea transactions at the port of Boston for January are reported by the Collector of Customs to have been as follows:—

	Pounds.
Balance January 1...	3,955,446
Amount Entered ...	35,384
Quantities ...	3,990,830
Withdrawn in January ...	3,955,446
Balance February ...	35,384

\* \* \*

**Japan Tea Exports in 1902.**—M. J. Brandestein & Co. report the following tea shipments from Japan for 1902 with a comparison with 1901; significant is a decrease of tea exports to Japan:

	1902. Pounds.	1901. Pounds.	Increase. Pounds.
Shipped to—			
New York ...	13,380,917	12,674,321	706,596
Chicago ...	17,259,409	12,771,965	4,487,444
San Francisco ...	3,693,323	3,209,967	483,356
Canada ...	3,919,066	6,329,591	*2,410,525
Total ...	38,252,715	34,985,844	3,266,871

\* \* \*

**Tea in the United States.**—India and Ceylon teas are becoming more in favour with grocers, as the latter find these grades suitable for mixing purposes. There are practically no supplies held here by importers with the exception of English Breakfast sorts. Prices of these sorts have not advanced like other grades, and as a lower market is not expected; the purchase of above kinds is considered good. Offerings of fine jobbing lots were made, including Formosa at 19 to 40 cents; Pingsuey at 17 to 32 cents; Japan at 21 to 35 cents, and English Breakfast at 11 to 20 cents, according to grade. The stock of English Breakfast sorts on the spot is large. During the past month the supply showed a fair decrease, principally due to large exports having been made to England. The stock of tea at New York on January 1, 1903, was about 60,000,000 pounds, and since the removal of the war tax it is said that fully 35,000,000 pounds have been delivered. Owing to the high prices of low grades of India and Ceylon sorts, compared with China grades, and a steady demand for export from England for English Breakfast kinds, the stock of the latter will show a further large reduction. This will shortly be felt here, and an advance in price will follow. Private cables from China noted a firm market and prices asked were too high to interest importers here; consequently invoice sales were limited to small lots only. The feature of the market was the unprecedented heavy distribution in the United States. The total withdrawals from warehouses are placed at from 45,000,000 to 50,000,000 pounds. Owing to the satisfactory results obtained by mixing Formosa, Congou, and Foochow sorts, which blend, the grocer is marketing readily at a profitable price, these grades are much in demand. Jobbers are offering small lots at 19@19½ cents for Formosa, 8½ cents for Congou, and 13@13½ cents per pound for Foochow. In the absence of the regular auction sales of tea an improved jobbing trade was noted. Many in the trade—that is, if they were in power—say they would have the public tea sales abolished for ever, thus removing a disturbing element which has heretofore hampered business materially. The arrivals here have been, and will be, very small in the future, due to the crop being practically at an end. It is stated that the China qualities sell best in the East, and the Japan in the West, Formosa included in the China teas. The demand for India and China qualities is increasing, and is chiefly for the cheaper grades. In the New York market the proportion of green tea sold compared to black is 1 to 5.—*American Grocer*, New York, February 11.

\* Decrease.

Not disheartened at the satisfaction general in the trade over the death of the tea duties, the *Charleston News and Courier*, which is near to the Pinehurst Tea Gardens, returns to its plea for some protection for the American infant tea industry now being nursed in South Carolina and about to be in Texas. In doing this, the journal is not without embarrassment. Its natural inclinations are for Democratic free trade or "tariff for revenue only," as becomes a leading exponent of a great party in that party's stronghold, and so it coyly remarks that although it would prefer no tax on tea at all, yet inasmuch as protection pap is the policy of the country, it is not averse to have some of it distributed in South Carolina near the tea gardens. To quote it in part :

"As long as the Republicans are in control of the Government and the Republican policy of protection prevails, that party cannot, without rank sectional discrimination, refuse protection to the tea-growing industry of the South, while insisting upon protection for the beet sugar industry of the West, and the iron manufacturing and textile infant industries of the Middle States and New England. In the opinion of Dr. Shepard and those who have made a practical study of the question, the tea-growing industry can never become national in its scope and importance (except by the imposition of such a duty on foreign teas as shall counterbalance the difference in American and Oriental labour). That has a familiar sound to our ears, and it is a plea which certainly should not lack support among the Republican statesmen at Washington.

"There is another fact which is also worthy of note in connection with the tea-growing industry. A number of moneyed men have been seriously entertaining the thought of embarking in tea-planting to a very large extent, but on the revocation of the duty immediately dropped all consideration of the subject. These people were Northern capitalists, New England men many of them, and they were proceeding with their plans upon the New England idea that the Government would aid in the establishment of any industry which would vary the products of this country.

"The tea farm at Summerville is not dependent upon Government bounty ; but possibly tea farms in other parts of the country will not be established unless they are to have the support unusually extended by the Government at Washington to infant industries."

The pity of it is, says *Tea, Coffee and Sugar*, that the New England capitalists did not take hold of their contemplated enterprise early enough to have made it something substantial by the time the repeal of the tea duty naturally suggested itself. Thus fortified, the industry might have made some impression on Congress and obtained some concessions. Indeed, assistance would not have been improbable. At present, matters having formulated themselves so that the tea trade in the United States is now free from the burden of a heavy tax, protection in the form of a duty tax is next to impossible. The forces at work in opposition are too strong, and will become stronger. A bounty seems the only possible help obtainable, and shaping its editorial to attain that end, seems the only way in which the *New and Courier* may be of real service to the American tea grown under its eyes ; besides, it could do so without straining its political conscience too much.

\* \* \*

**A Tea Moses Needed.**—Nearly two hundred members of the tea trade have consented to become charter members of the proposed National Tea Association, which will probably take shape in the early Spring, but unless this federal organization can reach down to the extreme fringe of the business and control the actions of the retail cutters who have a weakness for cheap tea, with an "inducement" thrown in, the tea puddle will hardly be disturbed by any ripple the National Association can cause. It is not "getting together" that the tea trade needs so much as an active competition between packers of fine blends, assisted by extensive and expensive advertising. It is "up to" any wholesale or retail

grocer with fair capital to be the tea trade's Moses and lead it out of the house of bondage—the bondage to "tea for price," with trading stamps, a cup and saucer or  $3\frac{1}{2}$  pounds of sugar thrown in.

Who'll be the trade's Moses? Not Uncle Sam, with his tea standards and board of inspectors ; not the blender of "something just as good" ; not the tea-store chain-system, with its cut prices and very ordinary goods ; not the tea peddler, who goes from house to house ; not "Lancelot nor another," but just the plain old-fashioned family grocer, who has the wit to see the possibilities in the tea department when it is properly developed and pushed. — *Merchants' Review*.

## NOTES.

### Cocoa in the U. S.

behind that of tea.

The consumption of cocoa in the United States is only 25,000,000 lbs.

### Ramie in Jamaica.

According to official reports small plantation of Ramie is maintained in Jamaica. The plants had begun to become exhausted and a new ground was planted out.

### Labour for Ceylon.

Messrs. Edgar Turner and John Hill have been appointed by the Ceylon Planters' Association as Commissioners to South India to report on the matter of labour supply in connection with Mr. Westland's Labour Scheme.

### Vanilla in Jamaica.

Several of the Vanilla plants growing on divi-divi trees (*Caesalpinia coriaria*) flowered and were fertilised last year. Those that were planted to grow on Physic-nut (*Jatropha curcas*) have not done nearly so well.

### Sale of a Tea Estate.

At Calcutta on the 20th instant Messrs. Mackenzie, Lyall & Co. sold by public auction the Satagura Tea Estate for Rs. 4,500. The estate, which is situated in the Hazaribagh District at an elevation of some 2,000 feet above sea-level, found a purchaser in a gentleman from up-country.

### Vanilla.

The *Agricultural News* of February 14 says:—An item that will have some interest to vanilla growers is the following:—A consignment of about 300 kilos. of vanilla cultivated in German East Africa arrived in Hamburg a short time ago. The beans are said to be of fine dark chocolate colour and are commencing to crystallise. They are of various lengths, and are reported to compare favourably with the best Bourbon quality.

### Vanilla in Mexico.

The *B. and C. Druggist*, of February 27, says:—Only 43,991 pounds of vanilla were exported from Mexico in 1901, with a value of £57,426, as against 64,921 pounds in 1900 valued at £62,565, due to a failure of the crops by heavy frosts in the early part of the year. The value of the exports as here given makes the value of each £1 6s. whereas in the previous year it was only £1 0s. 6d., a difference which coincides with the silver value declared at the custom-houses.

### Cocoa in Jamaica.

Some of the old cocoa trees in Hope Experiment Station have borne a large crop, one tree yielding as many as 127 ripe pods. The young plants put out in May 1897 have done exceedingly

well; one tree, having over 40 pods on it, is 13 feet high and 11 feet across. Nowhere in what are usually considered the best cocoa districts, has cocoa done better than in the plain of Liguanea where it gets abundance of water, yielding often 12 to 14 lbs. of cured cocoa per tree per annum. These facts suggest that even in banana plantations on the southside, cocoa should be grown simultaneously.

#### Spinsters Turning from Tea to Coffee?

Along with other characteristics of spinsterhood that have gone glimmering down the aisles of memory and tradition is that of devotion to tea, says the New York *Herald*. The spinsters of to-day drink coffee, good and strong, much more frequently than tea. Not a few of them demand even stronger beverages but for none of them would the tea-pot be an appropriate emblem. Tea no longer serves, perhaps is not needed, to soothe wounded vanity or console those women who are outside the matrimonial palace of bliss. "Afternoon tea" still stands as a convenient term, but it includes almost everything except tea, and when the harmless beverage is served it is so doctored that the tea-drinking old maid of tradition would not recognize it.

#### London Tea Market.

Weekly special telegram dated March 19 from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally

is weak and that the market for medium liquoring Pekoes and Broken Pekoes shows a slight decline while the market for common Pekoes and Broken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 7¾d. (½d. up). The average for the same period last year was 7d. Reuter reports that the tone of Ceylon tea is generally quiet but steady, and that medium qualities are irregular. Fair Pekoe Souchongs are quoted at 6½d. (½d. up) and the average for the week is 7¾d. (½d. down). 20,000 packages of Ceylon tea were offered for sale and 18,000 disposed of; while of the 28,000 packages of Indian tea offered, 24,000 were sold at an average of 8¼d. (the same as last week).

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,

*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

### GENERAL ARTICLES.

#### PRODUCE AND PLANTING.

The opponents of forced labour in South Africa profess to see in Assam a condition of things which enables them to point a moral, and the recent reports of the case of alleged cruelty to a coolie in Cachar have unfortunately materially assisted in the adornment of the tale. We notice that Sir Henry Cotton, speaking at Bradford on Saturday, drew an analogy between the labour problem in South Africa and the labour problem in Assam. "He had had," he said, "to deal with a system of legalised semi-slavery in Assam, and was pleased to say that he had assisted in mitigating the evils to a large extent. To the tea gardens of Assam were imported large numbers of coolies from Bengal and other parts of India. The men were advertised for sale in the columns of the newspapers, just as property was in England, and planters bought them in batches of 100 or 150 each. He noticed that the *Manchester Guardian*—an admirable newspaper which all Liberals should read—recently gave the details of a terrible case which had occurred in Assam under this system, which, however, still existed, though it was checked and kept under control. Now the labourers were induced to work in the tea gardens, and not forced, and as the work was not very pleasant it followed that the planters had to pay more for it. The problem was therefore settling itself in a right and proper way, and he was convinced that that was the policy which ought to be adopted in South Africa."

Sir Henry, lately from the scene of the recent controversy on the labour question, no doubt had some difficulty in dealing with so delicate a question, though he admitted that things in Assam were not quite so black as they were and that the labourers were now "induced" to work rather than "forced." But this was not quite to the point, and the *Manchester Guardian's* report of the

Cachar case he referred to was more illustrative of the evils of forced labour. In its account of the Cachar case the Manchester paper, by way of preface, said: "The protest in the Resolution to be moved at the General Committee Meeting of the National Liberal Association, denouncing the adoption of any system of veiled slavery in any part of the British Empire, will be strengthened by the news of one of those scandalous occurrences which appear to be the inevitable accompaniment of any such system. In the tea districts of India penal laws are in force under which labourers, if they should venture to strike, are sentenced to imprisonment with hard labour, and under which the employers of labour are authorised to arrest an absconding coolie without a warrant." The journal then gave particulars of the recent case of the coolie, Lalsu, in Cachar. These were, by the way, quoted in an evening paper, which in reproducing them asked: "Is it possible that such things can be done under the Union Jack? Yes, it is, and what is worse, the Landlords want to establish a similar state of slavery in South Africa. In Assam the coolie is bound to his master by penal laws. He can be arrested without a warrant, and can be brutally punished. Perhaps this tale from India will arouse the slumbering conscience of the British people, which hitherto has been far too tolerant of its Beits, Albus, Rudds, and other advocates of Imperial slavery."

These extracts from the *Star* were headed "Legree in India." When the enterprising philanthropist is not occupied elsewhere he is ready to turn his attention to India, where the planter is made to serve as the most useful example of the iniquities of British rule. If in the pursuit of his ordinary business a planter meets his death at the hands of his servants or his labourers, as was unfortunately the case the other day in Ceylon, the tragic circumstance does not serve to illustrate anything in particular, so we do not find that any professional humanitarian is desirous of calling special attention to it. But should one member of a community either prove an offender, or have the offence of cruelty alleged against him, a whole province is anathema, at any rate by inference. We protest on behalf of men living in remote parts of India, who can have but limited opportunities of publicity, against the assumption, when arguments are needed bearing on a South African question, that planters as a class are less humane than other men, or that they are not equally abhorrent of cruelty when it is proven. It is easy to rail against cruel laws and inhumanity on the part of those who regulate their labour by them, but it is not a sign of charity or overwhelming kindness when people at home are ready to assume that their fellow-countrymen in India cannot be trusted with the management of their labourers without abusing the trust, and that given the opportunity an employer of labour on a tea garden in India is necessarily a tyrant. Yet if the general drift of the argument in the extracts quoted is not in this direction we should be glad to be enlightened as to its real meaning.

On the subject of certain unfavourable comments on green tea which we quoted recently as appearing in the correspondence columns of a contemporary we have received a communication from Messrs. Heatley and Gresham, of Calcutta and London. They remark that "green tea earned a bad name in the old days solely on account of the adulterations with coloring matter practised by the Chinese and Japanese. By the use of the Drummond, Deane, and Judge machines, of which we are the sole manufacturers in India, green tea is produced mechanically throughout like our black teas, and the Judge-Deane panning and coloring machine produces the required colour and finish entirely by mechanical means without foreign admixture of any kind." They mention that "nine-tenths of the green tea going forward from India is made on these machines. The best proof of its purity is the sample which we herewith send. We should be happy to have it submitted to any London analytical expert. We have sent rather a coarse grade somewhat highly coloured for the purpose, in order to take no advantage. If this coarse tea colours pure, it follows that our fine grades will give no trouble. With regard to green tea generally, it is well to note that Indian and Ceylon planters have only taken up the manufacture after long and fruitless attempts to cause the Americans to accept black tea instead of it. Having at last convinced themselves by expensive proceedings that the Americans are solid in their adherence to the green article, our planters have at last decided to try and give them what they want, instead of forcing on them what they do not want." We may add

that the sample of green tea sent to us appears excellent, and we will invite an expert opinion upon it.

Grocers are taking an active interest in the tea duty question, for they recognise that the present impost is injurious to their trade. At a recent Meeting of a Grocers' Association in the West of England, at which Mr. Giles, the Federation Secretary, delivered an address, one of the members asked if the Federation was doing anything to bring about a reduction in the duty on tea. In his opinion the tea trade had altogether altered since the 6d. duty was put on. If the Federation could do some thing towards getting the duty reduced to 4d. grocers would greatly benefit. Mr. Giles said wholesale tea dealers had brought the matter before the Chancellor of the Exchequer, and there had been one or two remarkable rumours on the subject, but he could not hold out any great hope. He was not in the secret, but as far as he could gather, and speaking as a man in the street, there seemed to be but little prospect of anything coming off the duty this year.

A Consular report on the trade of Brazil for the first half of the year 1902 points out that Brazilian trade is mainly dependent on coffee values, the emission of paper and exchange, and, naturally, while coffee suffers from over-production and currency is depreciated, imports are adversely affected. Coffee exports continue low, but there has been a large increase in the exports of monazite sands and manganese. The world's consumption of coffee is about 16,000,000 bags; the visible supply of coffee on January 1, 1903, was 13,213,000 bags, against 10,871,000 bags in 1902; the Rio and Santos coffee crops of 1901-02 were the largest known, amounting to 15,500,000 bags; the present crop, 1902-03, is calculated at about 11,000,000 bags; the future crop of 1903-04 is very uncertain owing to frosts, and estimates range from 10,000,000 to 12,500,000 bags. —H. & C. Mail.

## TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, February 19, 1903.

There is nothing particularly new to report. Prices at the different points of export remain practically unchanged. A fair business has been doing on the local markets in Ceylon and Indians, wherever particularly good value is offering. Japan teas seem to be meeting with more inquiry.

MONTREAL, February 19, 1903.

There has been little change in the local situation of teas since our last report, and no quotable change whatever. Trade is quiet with country points at present, on account of the bad roads, but dealers report the demand for future shipment very good, and judge from it that stocks throughout the country are rather light on all lines. It is expected that the first importations of new Japan teas will command a top price. United States buyers can handle big quantities of good liquoring May teas, and if Canadian buyers want them they will have to pay a very big price for them. As to the lower grades which will reach here about October next, advices from Japan do not give sufficient data as yet for forming an opinion as to approximate prices either one way or the other. Ceylons and Indians are moving fairly well.

## THE NATAL TEA INDUSTRY.

### ITS FUTURE PROSPECTS.

Few people are aware, notwithstanding the ever-increasing flow of immigrants to South Africa from all the world over, what small strides the Natal tea industry is making. Bearing in mind that Natal is the only tea-producing Colony in South Africa, the large and steadily growing market for tea, and the absence, up to now, of any keen competition from other countries, by reason of the protective duty of 6d. a lb. on imported produce, there are, says the *Natal Mercury*, only a dozen estates, or thereabouts, of any importance, and all of these manufacturing coarse, rough tea. So far, the public have had very little choice in the purchase of tea, and the local planter has taken advantage of this fact to turn out of his factory the greatest possible quantity, with little or no pretension to quality. This line of action, however, is at last beginning to tell on the industry,

for, apace with the growth of the Colony, imported teas, from India and Ceylon chiefly, are fast making their way in every other household, while import statistics prove that year by year the quantity imported is largely increasing, and local planters cannot sell off their stocks as easily as in days gone by. Beside this, Government can hardly be expected to protect these few estates at the expense of the tea-drinking public, and, sooner or later, the duty will either be abolished or at least greatly reduced, unless the industry makes more rapid strides to increase both quantity and quality of its produce. There is absolutely

#### NO REASON WHY NATAL CANNOT PRODUCE AS FINE TEAS AS ANY OTHER COUNTRY.

The labour conditions are precisely the same, while the wages paid are not much more than is customary in Assam and Ceylon, and, if these countries can produce, ship, and, after paying a big duty, sell their teas at a profit, it does not speak very highly for the energy or enterprise of our Colonists. There is a big future for tea in Natal, and, if more capital was put into the venture, care taken to produce as near as possible teas like either the Indian or Ceylon manufactured leaf, and at a price within reach of all, there is little fear of imported teas finding room in our market, especially as it has been proved scientifically that a good Natal tea contains less tannic acid, is less pungent, and therefore more easily digested, than the produce of any other country. The indentured

COOLIE IN NATAL DOES TWICE AS MUCH AS HIS BROTHER IN INDIA, and gets a third as much again as wages for his work, so that, theoretically, Natal planters ought to produce their teas about as cheaply as their Indian or Ceylon competitors.

A further hindrance to the progress of the Natal tea industry has been the marked absence of men with the necessary experience as proprietors or managers. Not one of the owners of any Natal tea estate has had any practical training in a large tea-producing country, and few employ Indian men. Most owners have become so puffed up with their own importance by being able to make, so far, a good thing of their tea, that they are jealous of any Indian or Ceylon planter about the place, preferring, should they need a manager, or assistant, to select a candidate who knows nothing about tea, and less about Indian labour, and set up to teach him a profession they know little about themselves. This narrow-mindedness can hardly be expected to improve what promises to become a big source of income to the country, and it is to be hoped men with broader views start more estates on better lines. If men from India and Ceylon were imported, well paid, and properly treated and freely employed, and a better class of coolie than the weeds being brought into this country now indentured with all the facilities tea-growing offers in Natal, there is no reason why the finest quality tea should not be made, at prices everybody can afford.

#### THE SOIL IS EMINENTLY SUITED

to the plant, and every condition favourable to its growth. The writer has seen and tasted samples of Natal tea, specially manufactured by a firm of tea-planters employing an experienced manager with Indian training, which cost 4½d. per lb. to manufacture and which compared very favourably with a fine Assam Broken Pekoe selling in London at 8d. to 9d. per lb. Allowing, say, 1d. for packing and handling before it reaches the customer, surely there is big enough margin for a profit when there is no duty to pay. More experience and more capital is needed to give this pleasant and paying industry the impetus it requires, and we ought easily, with both these conditions to back us, be able to produce in Natal every ounce of tea consumed in South Africa. The life of a tea-planter will appeal to many, and the pure country air and congenial employment has a charm peculiar to itself which must be experienced to be understood. Coffee production went to ruin here because no one thoroughly understood the venture, and the trees, delicate at best and fond of light shade, were expected to crop out in the open, with no pruning, or any other attention so necessary to this tree. The result was: every known blight and disease soon made their appearance, and presently exterminated every plantation and then the country was blamed for the failure.

LUCKILY FOR NATAL, THE TEA-PLANT IS HARDY, being an evergreen of the camellia family, so that it can stand to a large degree the rough usage it receives. Pruning of tea bushes—an art in itself, and the most important work on an Indian or Ceylon estate—is reduced to mere hacking down the bush with the

largest-sized pruning knife obtainable, and often in the hands of a raw coolie; and as a result a heavy mortality usually ensues on some estates. Plucking, another very important work, is done in a most primitive fashion, and it is a wonder the trees “flush,” or send out new shoots again, after the handling they get. By careful plucking—i.e., by removing two or three leaves with the “bud,” or topmost unformed leaf, and leaving an “eye” or embryo shoot below, carefully protected by the stalk of the last leaf picked, a new shoot soon forms, and springs out ready to be gathered in seven to ten days. The local fashion is to tear off the “flush” in handfuls and in some cases the writer has counted no less than eight leaves on a single stalk, the stalk being torn away from the parent branch, and every chance of a succeeding flush lost. It can easily be understood, therefore, that, by careful and fine plucking, and nursing the next gathering—though the amount for the day be less than if picked by the local way—the former and correct method produces more flushes for the season than the latter, and in the long run a greater quantity is obtained per acre, while the quality is of course, incomparable.

#### SUITABLE LAND CAN BE HAD IN ANY QUANTITY

at moderate prices, and a capitalist starting on a holding of, say, 500 acres, with 50 Indians as a beginning, and an experienced manager, if he is not one himself, could easily commence his tea garden, and by ordinary perseverance and imitating Indian and Ceylon methods of production, would soon develop it into a very paying concern, and the source of a very comfortable income.

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.** *Saturday, 31st January, 1903.*—Ninety days' Bank rate on London opened on Monday at 11½d. and closed this evening at 11⅞d.

At present two powerful currents of speculation are struggling for the mastery so far without any decided advantage though the ascendancy of one or the other for the moment determines the rate.

In favour of the “bulls” is the probability always latent, which some, however, believe to have been already largely discounted by the Bank of the sale of the Sorocabana coming off and the product being drawn for at any moment.

The prospect of the possible intemperate drawing of £3,000,000 so excites imagination that sanguine “bulls” foretell a rise of 2, 3, and even 6d. and even the “bears” are overawed and kept anxiously on the string, whilst Melhoramentos, Municipal Loans, and the £2,000,000 lying to account of Guarantee fund all serve to heighten effect and keep the shaky rate from falling.

How long the Bank will be able to work the Sorocabana oracle without actually drawing, as the best “bulls” assert, or how long it will continue to draw without covering, as the “bears” believe, are questions that interest both alike but only time will reveal. At the Bank itself they say that they are not overdrawn at all and that abundant cover has been found in the market without utilizing Sorocabana or any other extraordinary resources, which are all there still a rod in pickle for bears who venture too far.

*Saturday, 7th February, 1903.*—Monday being a holiday, ninety days' Bank rate on London opened on Tuesday, 3rd instant, at 11½d. and closed this evening at 11⅞d.

That in spite of the Acre trouble and prospects of a costly and tedious expedition, and in the face of a formidable speculation for the fall, rates should have suffered so little that the Bank felt itself strong enough to not merely let things slide but to rig the market in order to draw on better terms proves two things pretty conclusively, first, that the supply of bills is at present quite on a par with demand, and secondly, that the Bank has complete control of the market.

The balance of the Bank on 31st January shows an increase of deposits since 31st December of 7,819,000\$ partly on private and partly on Government account. Against this must be put an increase of 3,555,000\$ in Contas Correntes Garantidas and of 357,000\$ in Letras Descontadas, in all 3,912,000\$, besides which the Bank has improved its position with its Agents by 1,686,000\$ and, moreover, has in hand 2,221,824\$ more cash than in December. The conclusion being that the Bank has not only covered all its

operations during January, but has managed to pay back 1-686 contos to Agents as well.

The returns for the first week of February at the Rio Customs as well as those of many other Customs districts for January seem to show that the shrinkage of imports we have foretold some time back has really set in and that the demand for bills on this account will soon fall off, if, as is believed, the market is already overtaken. The pacification of the Acre will perhaps bring forward some of the rubber retained in the interior but will be outweighed by the foreign expenditure for military stores, that, in view of possible contingencies, must be considerable.

Another disturbing feature that keeps the market in suspense is the uncertainty regarding the proposals of the Planters' Congress. If 20 % of the coffee is to be burned without issuing paper money there will be a rise of sterling coffee prices and of exchange. But, if it is to be accompanied by an issue of paper money, the improvement in gold prices will probably be outweighed by the local depreciation of the currency and, instead of rising, exchange would fall.

With so many conflicting and contingent factors to allow for it is impossible to foretell what the course of exchange may be; but for the present and so long as the Bank of the Republic can count on the necessary elements it is evident that the intention is not to allow the rate to fall to 11½d. The most prudent policy, under such circumstances, must be to live from day and circumscribe operations to the absolutely requisite, otherwise operators may be surprised at any moment by a slump or a big rise. Both are on the cards, but which will win the day depends on factors that no one can exactly appreciate at present.

During the week ended February 7th the value of coffee shipped here and at Santos was £315,000 as against only £252,000 for the previous week and £339,000 last year.

Declared sales were 19,000 as against 188,000 the previous week and 163,000 bags of coffee last year.

N.B.—As we go to Press we hear that the offer of the S. Paulo Railway for purchase of the Sorocabana has been refused.

Coffee, 31st January.—The value of coffee cleared in January was £1,393,167 giving a weekly average of £348,292 against clearances of £1,213,419 and the weekly average of £303,355 last year.

During the past week ended January 30 the value of *embarques* was only £252,000 against £327,000 in the previous week and £384,000 last year.

Declared sales also fell off from 228,000 bags the previous week to only 188,000 bags, but even so were larger than the same week last year when they only reached 160,000 bags.

A satisfactory feature, too, is the continual rise of rubber prices. Pará fine being quoted as high as 3s. 10d. on January 8th, a rise of nearly 30 per cent. since July of last year. On the other hand foreign quotations for Sugar, Cocoa, and Cotton are all lower.

Imports seem to be falling off in spite of large receipts at the customs, the number of consular invoices received in January being only 10,844 as against 11,416 in November and 15,426 in December.

As we have said before, the economic balance seems at present to be almost even and its disturbance upwards or downwards to depend, just at present, on purely artificial conditions. During the second quarter March-June, the balance of trade will be certainly against us, but as a jobber rightly observed is quite possible that by that time the natural reaction to the present "bear" speculation may have set in, and heavy selling of futures for account of the new crop steady the rate or even send it up at its weakest period.

Entries at Rio and Santos for the week ended January 30th were 15,617 less than the preceding week's and 83,691 less than for the corresponding week last year, of which they represent only 67½ per cent.

For the crop, entries to 30th January were 2,595,782 bags less than last year on the same date.

Shipments (*embarques*) were smaller, being 30,190 less than the previous week's and 29,745 less than for the corresponding week last year.

Declared sales were also smaller, being 50,000 bags less than the previous week's, but 28,000 more than for the corresponding week last year.

Joint stocks at Rio and Santos showed a slight increase of 4,094 bags.

Local prices improved a little, the average for No. 7, being 4\$391, against 4\$337 for the previous week, and 4\$743 last year.

Spot prices at New York, showing no alteration from 5·25 c. as against 5·8 c. last year.

The f. o. b. value of the coffee cleared from Rio and Santos during the crop up to 30th January shows a shrinkage of £4,105,341 compared with last year.

Santos, 30th, January 1903.—A regular business was done during the past week at 4\$100 to 4\$200 commissarios basis on a steady but quiet market. Term markets on the other side showed only very small fluctuations and in consequence orders were not plentiful and sales to Europe and States did not come up to expectations. Good average was sold at 26/ to 26/6 and Superiors from 27/6 to 28/. The disparity between Europe and our market amounts to between 100 réis and 200 réis on the general market qualities.

The qualities most enquired for were again Superiors and Goods but also Regulars. Primes continue on a slow demand at 4\$600 to 4\$800. Superiors were sold at 4\$300 to 4\$500. Goods 200 réis to 300 réis below Regulars from 3\$600 to 3\$800. Lower qualities down to ordinary found readier buyers. Ordinary fetched at an average 3\$000 to 3\$200. Fine Bourbons are plentiful and their prices rule from 4\$700 to 4\$900. Washed coffees and washed Peaberry continue neglected. For really fine washed 6\$200 could be obtained. Washed Peaberry do not command a premium over flat bean washed. Lower qualities of washed are difficult to sell. Peaberry continue on a slack demand. Really fine green peas, flinty, are sought for and up to 5\$300 obtainable. For fine old yellow coffees not much interest is shown and for really fine qualities, large bean only 6\$000. is paid.

Entries for the week show again a small decrease of about 8,000 compared with the previous week. The shrinkage is chiefly due to smaller entries on the Paulista and Mogyana railways. Sorocabana entries were practically unaltered and when the Sorocabana Railway really receives the engines and waggons promised by the Paulista Company, as reported, we may expect larger entries from the Sorocabana districts.

Shipments for the week were small and about 83,000 less than last week. Of the about 142,000 despatched during the week only 81,000 were shipped. The stock, in consequence, shows again a small increase and amounts to 1,203,927, i.e. 40,000 and more against last week.

The *Panta* went up 10 réis on Saturday last.

A good deal is talked about the new bill establishing a surtax of 20 per cent. payable in low-grade coffees, not below *esc lha limpa*, in addition to the usual 11 per cent. payable in money.

The drop in exchange on Thursday from 11½d. to 11¼d. affected coffee scarcely at all, and only occasionally were offers bettered by 50 réis.

The average estimate of receipts for next month does not exceed 400,000 bags.

On the whole it may be said that the month of January has not been a profitable one for the exporters in general and that business during the month has been very difficult.

The total entries by the different S. Paulo Railways for the crop to February 6th, 1903, were as follows:—

	Past Jundiahy.	Per Sorocabana and others.	Total at S. Paulo	Total at Santos.	Remaining at S. Paulo.
1902-1903 ..	4,823,592	1,440,673	6,264,265	6,302,320	<i>nil.</i>
1901-1902 ..	6,267,375	1,648,415	7,865,790	7,846,252	19,538

Entries at Rio and Santos during the week ended 6th February were again smaller, being 20,890 bags under the previous week's and 99,650 under those of the corresponding week last year, of which they represent only 60½ per cent. Crop entries up to the 6th February were 9,141,236 and should they continue at the same percentage as last week to the end of the crop will give a total of about 11,800,000 bags for the two ports.

Shipments (*embarques*) were 45,404 bags larger than the previous week's and 13,261 over the corresponding week's last year whilst stocks on 6th instant consequently showed a shrinkage of 95,027 compared with the previous Friday's.

Prices slightly improved, the average for the week for No. 7 here being 4\$459 as against 4\$391 the previous week and 4\$767 last year and at New York average spot 5·31c. as against 5·25c. the previous week and 5·72c. last year.

Declared sales also increased, being 8,000 more than the previous week's and 33,000 more than the corresponding week last year.

**Santos, 6th, February 1903.**—The main point of interest during the week was the advice of the very appreciable decrease of the world's visible, being, according to the New York Exchange 444,000 and Daring and Zoon's statistics 290,000 tons, a diminution larger than expected. This, together with better orders from the other side (that is, Superiors 28s. 6d. to 29s. and Good Average 26s. 9d. to 27s. 6d.) which came forward more freely, caused a better demand and the feeling in our market was a far better one. Commissarios were holding out for higher prices and obtained about 200 réis more than last week. Sales were very fair and more coffee was sold than declared (135,000). The States also showed more inclination to come into the market and American houses were good buyers, although the disparity between the New York and our market is rather a big one yet say about 300 réis.

The demand for the various qualities is practically unchanged: Goods and Superiors, specially the former, are mostly looked for, but also Regulars and Low Regulars show a very fair demand. Primes rule between 4\$700 to 4\$900, Superiors 300 réis below and Good 200 to 300 réis below Superior, Good Regulars 3\$700 to 3\$900 and Low Regulars up to 3\$500. Exporters have disposed, during the last fortnight, of a fair amount of their holdings of lower grades from 3\$000 to 3\$500. Washed continue practically unchanged. Fine old Peaberry fetched up to 5\$600 and Superior Peaberry showed also a better demand at 4\$500 to 4\$600.

Receipts and *Passagens* continue on their old level, being, with one holiday this week, only about 15,000 bags less than last week. It is very doubtful whether, if receipts continue as at present, the late benefit in prices will last long.

The small shipments in the beginning of the week were due to the fact that only a few steamers were in port. During the last few days shipments were fair, amounting to 164,000 bags and our stock decreased by 46,000 bags to 1,157,094.

Exchange fluctuated between 11½d. and 11¾d. and did not really influence coffee.

As regards the general position of our market, it may be said, that there are not as many lots at sale with money conditions, as a few months ago. Commissarios accompany the market well and the whole situation is a sounder one.

The Congress, held by the planters in S. Paulo, which was looked forward to with great interest last week, disappointed to a certain extent and practically nobody considers the discussions and Resolutions arrived at by the Congress of importance, as no one believes they will be carried through.

The idea of burning 20 per cent. of the coming coffee crop seems to be making steady way amongst official classes at Sao Paulo, as the President of the Chamber is reported to have gone to Minas so interview the Governor of that State as to his ideas on the subject, whilst Dr. Mello Peixoto, the Minister of Finance, has arrived here to sound the President Dr. Rodriguez Alves.

A correspondent at Ribeirao Preto writes as follows:—"The crop on the Dumont estate was very small this year, only 42,9303 cwt. as against 143,390 last season. The coming crop is expected to be better and to give 100,000 cwt."

"With regard to the coming S. Paulo crop it may be anything from 7 to 9 million bags but will certainly be very early and probably a million bags will be counted into current crop's entries."

**Sao Paulo.**—In the Municipal district of Ribeirao Preto there are said to be 29,380,996 coffee trees. The population of the district is estimated at 54,000, including 32,811 agricultural labourers, of whom 28,083 are foreigners, and 4,728 Brazilians.

**Minas.**—In the district of S. Manoel a farm with 330 acres of fertile land, 14,000 coffee trees, brickyard, grist mill, comfortable dwelling-house and other buildings has been sold at auction for 1:000\$, about £250.

**Para.**—In a report on the prospects of the Brazilian rubber trade, the United States Consul at Pará says the political troubles in the Acre territory have had a serious effect upon the rubber trade throughout that region, and will undoubtedly result in largely reducing the crop. The rubber produced on the Beni and the Acre is considered the best that comes to Pará, and its loss will, therefore, be felt by shippers and importers alike. It is said that the caoutchouc forests of Peru, from which nearly the whole supply of this product has heretofore been drawn, are practically exhausted, as the result of the wasteful methods pursued by the gatherers. It appears, however, that there is an almost inexhaustible supply of caoutchouc in the little-known regions about the

Upper Madeira. In the near future, gatherers must look to Bolivia for their supply of this gum. It is understood that a strong effort will be made to prevent their destroying the trees, as in Peru. Experts state that the tree can be tapped in a special manner and its gum extracted year by year for a long term before it becomes exhausted.

A serious obstacle to the successful production of rubber on the head waters of the Madeira is the system of taxation now in effect. Rubber merchants are charged 23 per cent., *ad valorem* export duty by the State of Matto Grosso. The State of Amazonas also charges 23 per cent. duty.

The supply of balata in sight is said to be so great that no fears of a shortage need be entertained for years to come, if the business is properly and intelligently handled. Experts report that there is not a tributary to the Amazon which does not show forests of this tree upon its banks. The importance of this new industry in Brazil may be realised when it is known that the market price of balata is equal to that of the best rubber and the cost of production is less than one-tenth that of rubber.

Balata has another advantage in that it does not necessitate the risk of life attendant upon the gathering of rubber. The balata grows upon high ground, as well as on the margins of the swampy streams, where the fevers lurk. It is a common saying in Pará that every ton of rubber from the upper river costs two lives. This can never be said of balata, for men work at this industry with no greater risk than usually attends any labour in the Tropics; and four men will gather as many kilograms of balata per day as thirty men can obtain of borracha.

## IMPERIAL LEGISLATIVE COUNCIL.

### THE TEA CESS BILL.

At a Meeting of the Council held at the Council Chamber, Government House, on Friday, the 20th instant, the Hon'ble Sir Montagu Turner said: My Lord, before moving that the Report of the Select Committee on the Bill to provide for the levy of customs duty on Indian tea exported from British India, be taken into consideration, I will refer briefly to the alterations which have been made by the Select Committee. It is recommended that one of the Members of the Tea Cess Committee, to whom will be entrusted the management of the funds, shall be nominated by the Madras Chamber of Commerce, while clause 5 of the Bill, referring to the application of the proceeds of the tea cess, has been amended so as to allow of moneys received from the Native States of Cochin and Travancore being dealt with by the Committee of twenty. It has been provided that an appeal shall lie to the Governor-General in Council should the Government Auditors disallow any item of expenditure by the Committee, and finally it has been laid down in clause 7 that rules to be made under the Bill shall be referred to the Committee for their remarks before being passed into law. I regret that our Hon'ble colleague Mr. Bolton has found it necessary to record a note of dissent on this last proposal on the grounds—first—of inconsistency with the new sub-clause 2 of clause 7 which provides for the making of rules relating to the nomination and appointment of members of the Committee. Second—that it is undesirable to introduce an amendment which might seem to place the Governor-General in Council in some degree of subordination to the Committee and that such a precedent may be embarrassing in the future. But I contend there is no inconsistency. The Tea Cess Committee must first come into existence before they can be consulted. They will, in terms of clause 4, be appointed by the Governor-General in Council on the recommendation of various public bodies referred to in sub-clause (2) of that clause. After the Committee has been appointed the necessary rules for the working of the Bill will have to be considered and amongst them the rules for nomination and appointment of members to fill up vacancies in the Committee as they may occur. Further, the suggested procedure of referring proposed rules to the Tea Cess Committee before publication only follows out the idea already adopted in the case of the Mines and Electricity Acts where it has been provided that rules to be issued by the Government of India or by the Local Governments shall first be considered by the Boards appointed under those Acts respectively. The intention in both cases is to take advantage of

the expert knowledge or experience of the members of the Boards or Committees as the case may be. The idea of subordination need not come into consideration at all. I now move that the Report of the Select Committee on the Bill to provide for the levy of customs duty on India tea exported from British India, and to amend section 5 of the Indian Tariff Act, 1894, be taken into consideration.

The motion was put and agreed to.

The Hon'ble Sir Montagu Turner then moved that the Bill as amended be passed. He said: My Lord,—It has been argued that this Bill, which I hope will now pass into law, will form an awkward precedent for the taxation of other industries by the Government of India, and that possibly the Government of India at some future date may attempt to divert the proceeds of the tea cess Imperial purposes. As regards the latter point, before this could happen, a new Bill would have to be introduced, and an opportunity would be given to those interested to express their views on the subject. As regards the forming of a precedent for similar legislation, it has been made clear by the Government of India, in their correspondence with the Committee of the Tea Association, that they only agree to the legislation in view of the very special circumstances attaching to the case, one such circumstance being an assenting majority of over three-fourths of the payers of the levy. Nor is it likely that exactly similar circumstances will arise in regard to other industries. The Bill simply gives the active support of Government to the co-operative principle of advertisement and other measures tending to the advancement of an industry affording employment to a considerable number of Europeans and to native labourers, some 650,000 of whom are employed in the tea districts. This principle and these measures are not new in themselves and the novelty—novelty to India but not to the Empire—of which so much is made is confined to the method of collecting the tax. The effect of the operation of the Tea Cess Fund, it is hoped, will be the opening out of new markets and further developing the areas already occupied, all of which will be effected not at the expense of the general taxpayer, but by collections made from the members of the industry concerned. The part to be played by Government is simple enough. It will be to collect the funds and return them to the Tea Cess Committee. The object is simple and so are the provisions of the Bill, and further there is this advantage, the legalised cess being shared in by all will be much fairer than the voluntary fund which has been made at the expense of only a proportion of those engaged in the tea industry, although the benefits arising from the working of that Fund have been shared in by all. The legalised cess will secure a regular revenue for the working of foreign markets; it enables the Committee to lay down definite lines on which they can shape their forward policy, and at the end of the term for which the Bill will be passed into law, it will show, I trust, that the results of the working of the Tea Cess Committee have fully justified those who have memorialised the Government to pass this Bill, and Government in meeting the prayer of the memorialists. On a previous occasion I referred to the advantage gained in Ceylon by the imposition of a similar tea cess in that Island, and I may perhaps quote a few words from a letter addressed some months ago by a Ceylon Merchant to the Committee of thirty when the question was discussed as to whether the rate of the cess should be increased. This gentleman wrote as follows:—"Dealing with the further argument that no increase in the Ceylon Cess should be made until India gets her cess, Ceylon's reply to this should be, the longer India is short-sighted enough not to have a cess the better Ceylon men should be placed. Instead of being partners, India and Ceylon are competitors, and the present advantage held by Ceylon is entirely due to its cess. Why therefore ask your competitor to share in this trade rather do what we can to prevent their having a cess." Now that the cess will be introduced into India, may we not express the hope that India and Ceylon should join hands and work together for the development of the tea industry both of India and Ceylon in all parts of the world?

The Hon'ble Mr. Charlu said:—There is indeed a considerable plausibility about this measure. I may even say a seductiveness, promising, as it does, the development of an industry in a country where, seeing what a pass it has come to, growth and multiplicity of industries seem to be at a tremendous discount and yet the only saving grace. But I must confess to serious misgivings as to this particular industry and as to the particular form of stimulating it.

To develop is rather an ambiguous phrase, and results might follow which are of dubious benefit. If it be to put tea in the place of what Your Excellency forcibly called the vile stuff which goes down the throats of men, it would do decided good. It might do a still greater good and even prevent crimes and brutal misdeemeanours, if it would materially minimise the use of the viler stuff which may or may not soothe but, too surely, inebriates. I am quite clear that every encouragement should be given to quicken consumption in both these two ways. But if action is to be taken to throw tea broadcast so as to make it to insinuate itself excessively into village life and into places where neither the vile stuff nor the viler stuff is now the fashion, then the result will be the reverse of beneficial; for it would introduce expensive habits by necessitating an additional jug of milk and an additional lump of sugar—possibly to these articles being stinted where they are more necessary and in respect of members of family for whom they are primarily essential. There is already a growing disposition to be little the credit which has traditionally belonged to masses of this country—the credit for thrift which in many cases is carried to the borders of parsimony. The acquaintance with, and the taste for, this fresh beverage may emphasise that disposition and lay them open to a real charge of extravagance. I will not speak here of its enervating effects and the danger of its bringing in its wake by insensible degrees, other and more expensive and deleterious potations, which are unhappily coming into fashion with a few but happily beyond the ken of many as yet. Thus, it seems to me that, so far as pushing tea into the country internally is concerned, the result will be either meagre or harmful. As to extending its range outside this country the bulk of exporters will have but a modest share in it, and they will have to pay all the same, possibly for the benefit of those who are smitten with a more speculative spirit of enterprise and who have over-produced or may over-produce and may yet grudge that all the cost of forcing it into distant and yet unopened markets should come from them alone as it should rightly do. If the modest and unambitious exporters are to be laid under contribution towards a cost of this sort, they will naturally demur if left free to agree or disagree. In such a case, a tax upon them would virtually be to coerce the cautious many into paying for the benefit of the adventurous few. I cannot, do what I may, get rid of these objections to which the Bill seems to me only too open. But I should indeed be glad if this Bill, which is to become law to-day, would, in practice, undo my fears and prove me to have been false prophet.

The motion was then put and agreed to.

## PLANTING IN BRITISH CENTRAL AFRICA.

### A FORTUNE TO BE MADE IN TOBACCO AND TEA.

A young Ceylon planter, who recently went across to the Nyassaland districts, sends the *Ceylon Observer* a letter from which we quote:—

25th January, 1903.—I arrived in Chinde after a fortnight's pleasant journey from Ceylon. The river Zambesi being so low, the paddle boat could not travel farther than the first Wooding Station, after which I had to go by small barge—no house boats being available. It took 10 long weary days from there to Chiromo. 13 natives paddled the barge, stopping at night time at different villages en route. The river got worse and worse until at Chiromo, I was told that I should have to travel by *Machilla team*:—that is, being carried by natives to Blantyre. I did not care for the idea, as the forests were swarming with lions, leopards and other wild beasts and only a short time since Mr. Ray the Manager of Messrs. Sharer's Zambesi Traffic Company had a visit paid to his house by a full-grown lion. Well, I travelled all night through the forest—walking every now and again to stretch my legs; the natives meanwhile made as much noise as possible and imitated the lion to scare them away. They carry varieties of skins made into water bottles across their shoulders and run with great speed.

Thankful I was when "Chiromo" was reached after a journey lasting six weeks from the time I left Colombo. On the way up the Zambesi river I visited Mrs. Livingstone's grave: she is buried near the Jesuit Missionary Station but they had not attempted to keep the grave in good order. It took 2½ days from Chiromo to Blantyre. The river has never known to be so low before by the oldest inhabitants and the river is swarming with Crocodiles and

Hippopotami, but they did not prevent me from having my swim every evening coming up, a rather unwise thing to do, but after sitting huddled up in a barge all day in a sweltering hot sun one would risk anything, for a cool bath. I am 45 miles from Blantyre, up the hills and not far from Henry Brown, who used to be in Ceylon. Coffee, as you no doubt know, has had its day. Many firms have been ruined by it and are now all going in for *tobacco* and *tea* which pay a large profit at present. As for the land and soil, it is simply marvellous—not like Ceylon “clay,” but rich dark soil. To give you an idea, the tea that Mr. Brown planted two years ago I said at once when asked was “*five years old*.” Another Ceylon man who saw it said the same thing. The labour is so cheap I could hardly believe the wages the natives receive. As for the climate being made out to be so treacherous, that is simply ridiculous. Where I am at present is quite equal to Hatton. The only thing is: food is very scarce; but when British Central Africa is properly known it will I am sure be the centre of Africa for growing Tobacco and Tea Men with capital, not afraid to speculate out here, can I think make a fortune in a short time—very different from Ceylon in labour and competition. Although I was laughed at for coming over here to grow *coffee*, let me tell you at once that *coffee* is not reckoned on in future: *tobacco* and *tea* only. The tobacco grows here like a weed and I am planting 50 acres up this year and also *tea* is coming on splendidly, in fact better than I ever saw it in Ceylon. All that is required is machinery and that is coming as soon as enough tea is in bearing. At present I have to manufacture this estate's tea by hand and a steady sale is 3s. per lb.—Not so bad.

### COFFEE IN LONDON.

The terminal market, which is mainly influenced by the daily receipts in Rio and Santos, gave way in the early part of the week to the extent of about 6d. per cwt., says the *Produce Markets' Review* of February 28, 1903, but since then, influenced by rumours of a combine, this was more than recovered. In our opinion the enormous weight of stocks in all parts of the world will prove too much for any such operations, and must remain so while Brazil continues to produce more than the consumption requires. Judging by the amount already received, it looks as if this crop will turn out from 11 to 12 million bags, or from 1 to 2 millions more than is necessary, and the silence as to expectations for the next crop is ominous of another large one. At the auctions rather heavier supplies have led to a slight reduction in all but the finest qualities. At the decline there is a steadier tone and more general buying, which tends to the opinion that the interior stocks on the Continent are unduly small.

### TEA IN LONDON.

INDIAN TEA.—At the opening public auctions on Monday, says the *Produce Markets' Review* of 28th ultimo, the market developed increased strength, and in some cases an advance of  $\frac{1}{4}$ d. was established. This rise has been firmly supported in the later sales, particularly in the medium and lower descriptions, the larger quantity brought forward having been readily bid for, while the proportion of withdrawals was comparatively small. The well-sustained strength of the market is due to a more general enquiry, the favourable statistical position, and to the opinion more generally entertained that the supplies will not be in excess of requirements. Those who held aloof from the market a short time back, hoping to purchase on more favourable terms, have been disappointed, and are now buying freely to replenish their much-reduced stocks. This, coupled with the shorter stocks in first hands and the smaller quantity held by the trade, are the principal causes of the rise, which is more justified than any similar advance for many years past. Of the 35,000 packages brought forward at the public auctions only 3,200 failed to pass the hammer, and these have since changed hands at full rates. There was active competition for the medium and lower sorts at the rise noted above, while the finer grades were not so freely bid for, excepting for the stand-out teas, but no change of importance in values took place.

CEYLON TEAS.—With only moderate supplies on offer, an active demand again prevailed for all kinds, while some descriptions marked a further advance. Whole Leaf Teas up to 7d. continued

to be most sought after, and were readily taken at a rise of  $\frac{1}{4}$ d. to  $\frac{1}{2}$ d. on last week's prices, very little being sold under 6 $\frac{1}{2}$ d. per lb. Good Medium Pekoes were firm, exporters having come in more freely and stimulated competition. In Broken Pekoes the lower grades met with a keen demand at hardening rates, and 7 $\frac{1}{2}$ d. was practically the lowest quotation for these descriptions, but the finest kinds were not so well supported, and values were slightly lower. At the public sales 20,900 packages were brought forward, of which about 2,590 were withdrawn.

CONGOU TEAS.—The market continues firm with a good demand chiefly for the lower kluds of Moning. The quantity available is now reduced to such a small compass that prices for even the very commonest have advanced considerably. There has been a better enquiry for Red Leaf kinds, and, consequently, firm prices have been realised. At the public auctions 790 packages were offered.

OTHER CHINA TEAS.—Owing to the poor quality of the Gun-powders brought forward for public auction, but little animation was shown in the bidding, and somewhat lower quotations resulted. Fair liquoring teas with any style, however, were well competed for, and these descriptions remain very firm. There is a steady demand for Capers, and the market remains unchanged. Of the 1,500 packages of Green Tea offered on Thursday only a small proportion failed to find buyers.

### COFFEE DISEASE.

#### BUG AND ROTTEN BERRY.

Mr. James Dempster writes in the *Central African Times*:—Some three years ago, when the coffee industry was threatened with disaster, a slight gleam of deliverance was ushered in which was to solve the difficulty and arrest the inevitable in the form of a Cameron bug. No doubt it came as a glad surprise to the unfortunate planter, when the gifted horticulturist dropped across this tiny insect which he declared to the planting world to be the sole cause of the spread of contagion and death among the coffee trees, and that the wheels of the principal industry of this country could only be kept moving by the extermination of this beautiful creature. The future success of coffee rested on the destruction of this Cameron bug, and, of course, the slaughter of the helpless was freely indulged in, bringing with it such success which will be best told by the struggling planters themselves. About the same time, or probably two or three years prior to this remarkable discovery, a mighty boom burst like a peal of thunder, and found an audience with every planter in B. C. A., that shade was one of the essentials to successful coffee growing; and with the production of shade, combined with the extermination of the Cameron bugs, lay the untold millions for the toils and pains of the dreaming planter. These two subjects, *viz.*, shade and Cameron bug, must therefore of necessity occupy the bulk of this paper. At the outset it may, with every propriety, be asked how many tons of increase per annum have those five years or more of anxious shade planting produced on the country's export of crop, or how much of an increase has been brought about by the last three or four years of anxious hunting? These are questions probably painful to touch upon, and I had better leave them to be answered by the planter himself. Shade has been got up, bugs have been eagerly sought for and killed, still the cherry, as it passes through the pulper, is as rotten as ever. Agriculture, in common with most things, requires a very careful training, and it has long since been recognised that if a man passes the first eighteen years of his life apart from the rural calling, his chances are slight, indeed, of ever making his mark in the world of agricultural lore. There is blank for ever after, which he feels unable to fill up. It is one of the few things a man can never teach himself. To attribute a cause to a certain effect has long been the business of human kind. Everything must be accounted for in some form, so it was when the planters of B. C. A. found themselves brought face to face with difficulties of agricultural life—difficulties which they found themselves unable to overcome—that they had to assign some cause of the destruction of sometimes a very promising crop, which resulted in cloaking their ignorance with the theory of a Cameron bug. The amount of money spent annually in the hope of eradicating this insect cannot be well calculated, but may probably run into a few figures. The statement that the virus of bug, or of any other insect, is the cause of bastard wood and rotten berry, seems to me to wear absurdity on the very face of it when all evidence

is brought to bear upon the point. Why is it, may I ask, that bastard wood and rotten berry never occur on some plantations, or rather in some districts, notwithstanding the fact that the insects are in great numbers? Why is it that the half of a garden may be sound and the other half rotten, while bug is equally plentiful all over? How is it that those parts remain absolutely sound and the other parts continue absolutely rotten? How is it that a young garden bearing maiden crop can be entirely rotten and where a single bug is never found to exist? To the foregoing questions I hope to be able to give one satisfactory reply and point to the main source of mischief, which has hitherto lain wrapt in the mist of inexperience, and where the light of agricultural lore has not as yet laid it open to their dimmed vision. I do not wish to cast aside too lightly this erroneous notion regarding bug merely on the ground of its being common belief and that it is not backed up with the principles of science, but I wish to prove that bastard wood and rotten berry originate from quite a different source that has hitherto been supposed. Rotten berry is a disease, arising from a certain character of subsoil and from this cause only. Unfortunately, most of the plantations are laid out on this notorious subsoil, especially in the Cholo district, and whenever the roots penetrate it, then the long train of difficulties follow—bastard wood and rotten crop. Certain kind of surface soil seem to modify the action of the under soil, and if deep enough a sound crop may be looked for under certain external circumstances. A dry year has often been lamented, and yet if statistics were to hand it would be found that those dry seasons yielded a much better return in districts such as Cholo. Unless the trees are already of a bastard nature and no more rains falls than what those surface soil can deal with until the crop has reached a half mature stage, a practically sound crop will result. Every planter admits that the first round of picking at the commencement of crop is fairly sound and the next round of picking is not just so sound. The third round is probably three parts rotten and the successive pickings absolutely so. Under those circumstances early blossom is desirable, and if there is plenty of energy in the trees no damage to any serious extent will occur from any ordinary drought. From the present reasoning, it is evident, on the certain surface soils referred to, that early blossom hurried forward to a fairly matured stage, before excessive wetness sets in, will result in a fairly round crop, while later blossom will be entirely rotten. To the observing mind, those plantations which possess some repute as to their adaptability for coffee growing will be found to have a subsoil either of a chalky or unretentive character, and where such conditions exist both early and late blossoming will be a thoroughly sound crop. On a subsoil composed of a chalky substance I venture to contend that neither bastard wood nor rotten berry will be found, and that under almost any external conditions the trees will not fail to give their annual return provided the roots be protected against the ravages of borer, which is the only detriment those plantations have to contend with, the effects of which being ignorantly attributed to sun. Now, this brings us to a most important point, *viz.*, the benefits of shade as a protection against sun. After many years of shade planting as a drought protection, as well as with a view of its exterminating borer, we find that the export of crop has rapidly gone down, while drought is as much lamented as ever, and if borer is no worse it is certainly by no means any better. Probably it may take the advocates of shade as many years as they have already been advocating it to rise to the knowledge of the infinite amount of damage done by it. Sunlight and root space are two things essential to the full development of plant-life, and where over-crowding takes place there begins the struggle for existence and the survival of the fittest, hence the reason that those rapid-growing shade trees are seen towering in triumph over their weaker fellows—the coffee. It has been well remarked that shade trees and coffee cannot grow in the same garden. Directly under shade only about one-tenth of the crop will be found compared with the trees in the open, while it seems almost impossible to rear supplies within reach of the lateral or feeding roots of shade trees. The fine texture of primary supposed to be found under shade is most undoubtedly mistaken for dwarfishness, a detriment to all future bearing, and highly prejudicial to its use for seed purposes. Its principal purpose seems to be a protection in time of drought, but I am unwilling to believe that damage to any great extent will accrue from drought if the trees are in form for bearing—that is to

say, if they have not been undermined in previous years by borer. Trees in the open, if sound at the roots and the capillaries of the soil broken to prevent escape of moisture before the hot season sets in, will not suffer inconvenience from any ordinary drought, not even from such a drought as we experienced towards the end of 1902. As a remedy to eradicate borer it has not as yet given any great results; besides, it is in my eyes not only futile but quite unnecessary, as no pest is easier exterminated than borer, if only proper means are employed. It may be contended that a proper shade should be a deep feeder, in which case the moisture which it must obtain is derived from a deeper source than we might reasonably expect the coffee roots to dip to, and therefore its roots can absorb no moisture which should go to maintain the coffee. The idea seems to me but an empty one, and certainly not one based on any practical or scientific principle. If a thorough understanding existed as to the law of capillary force, the contention, I fear, would meet with many difficulties.

As all moisture rises by that special force from very great depths, it seems but a matter of little concern whether the shade roots are deep or shallow. If deep, then the coffee can only receive such supply as the deeper feeding roots are unable to absorb.

In conclusion, I venture to predict that shade must ere long become a thing of the past, and the Cameron bag—like tsetse fly will have its day, and in some years hence, the likelihood of planter's bug-hunting will be as improbable as the present day stockowners betaking themselves to the bush in quest of tsetse fly. In a word before closing, I wish to impress upon the planter that his predominating enemy is that notorious character of subsoil already referred to, and that its action can be modified by artificial means. An application of lime or chalk in proper quantity and skilfully applied will modify, if not altogether counteract, its present action; but it must be remembered that there is a right as well as wrong method in applying it. Measures such as these, however, seem a bit impracticable when so much land abounds, possessing the very elements in its sub-soil that we would seek to remedy.

### THE RISE IN TEA.

It is some time, says the *Grocer* of 28th ultimo, since the main conditions of supply and demand were so favourable for a rise in tea as they are now, and there is reason to believe that the upward tendency of the market which has set in this month will be maintained. Within the last two or three years various circumstances have operated adversely against a solid and permanent improvement in the tea trade; and all persons concerned—from the planters in India and Ceylon to the importers and dealers at home—have been heavily handicapped in one way and another in growing the tea, shipping, and distributing it in the United Kingdom and other places. During the greater part of 1901 and 1902 there was such an exceptional glut of tea through superabundant crops in India that it became increasingly difficult to effect sales and work off the excessive stocks in first hands, especially as a large proportion of them consisted of common and undesirable qualities, thin and poor in cup, and which could be got rid of only at correspondingly low rates. In short, both the quality and price of tea of British growth were lower than ever before known, and the consequences were financially disastrous to most tea companies, no less than to many proprietors of private gardens.

Thus matters went on time after time until about the opening of the present month, when it was clearly seen that the statistical position of the article had vastly improved from what it was five or six months ago. Confidence, nevertheless, has been extremely slow in developing itself, the home trade generally, in their efforts to keep down prices, refusing to recognise to the full the altered situation, and often abstaining awhile from purchasing freely, in the hope that during the interval the market would take a downward turn. As a rule, however, they were disappointed in accomplishing their object, for the struggle between buyers and importers has all along been a tough one—the former striving to get teas “for price” at the lowest level possible, whilst holders, by strictly limiting the quantities to be put up by auction every week, have invariably kept the supply rather below than the least above the average requirements of the dealers. In fact, the conditions of buying and selling tea got so completely reversed that, instead of

forcing off different breaks at rates under their limits, as had been done scores of times previously, the brokers frequently ignored bids that did not come up to the required standard of value by withdrawing numerous lots in succession, knowing that they were sure of getting their own price, if not more, for the same teas, from purchasers who would wait upon them privately after the auctions were over, and perhaps clear off other parcels besides in anticipation of having further urgent orders to fulfil prior to the holding of the next public sales. These, in their natural course, passed off better than had been expected, being occasionally marked by more tone, assisted by a livelier competition, until now the demand has become quite brisk at hardening prices. At first the advance was so trifling as to be almost imperceptible, but recently it has been both rapid and important, and common leaf teas at this moment are quoted 1½d per lb. higher than they were in Autumn last.

There are, moreover, good grounds for the smart reaction that has taken place of late, chief among them being the report that the Indian tea crop for the current year is not reckoned to yield a greater quantity than will admit of 145,000,000 lbs. being shipped direct to the United Kingdom, in contrast with 156,000,000 lbs. for the season 1901-02, which latter total included 3,000,000 lbs. from Travancore. The general outlook for tea is therefore eminently satisfactory from the standpoint of holders, who are hardly likely to be losers, even if they were for a time to half starve the market until all doubts respecting the contents of the next Budget were entirely dissipated. Further, it may be stated, on the authority of Messrs. Gow, Wilson & Stanton, tea-brokers, that not only is the bonded stock in London some 11,000,000 lbs. less than in 1902, but that there were then very heavy stocks of duty-paid tea on hand; while this year, in view of a possible reduction in the duty, these will doubtless have been reduced to a minimum, which may mean a difference of several millions of pounds. Thus the supplies henceforth to be drawn upon are considerably less in proportion than would at first sight appear, owing to the shortness of both visible and invisible stocks in public and private warehouses.

### THE "TEA KING OF AMERICA."

The *American Grocer* gives an interesting talk with a tea trade authority:—"The Tea King of America"—that is the title that has been aptly bestowed upon modest Mr. P. C. Larkin, head of the Salada Tea Company, the main office of which is located at Toronto, Canada, and which has branch offices at Montreal, New York, Buffalo, Boston, Detroit, Pittsburg, and several other large cities on the North American Continent.

It's a pretty big sort of title, but the business done by this Company in so capably marketing its unsurpassed Ceylon teas, rather leads one to the use of large words. There is a temptation in them—they seem the only ones that adequately serve the purpose.

An *American Grocer* representative recently called at the offices of Mr. James A. McGuane, the courteous and able New York manager for the "Salada" teas, and was fortunate in there meeting Mr. Larkin, who happened to be in town on one of his periodical runs to the States.

"How's the 'Salada' trade getting on?" was a direct but natural inquiry.

"Splendidly," was the not unexpected answer. "We do, of course, a packet tea business exclusively, and have made our product well known all over this country and Canada within a comparatively short space of time, by all kinds of judicious advertising, to reach both the consumer and the grocery trade, besides giving demonstrations in suitable places, etc."

The position of black teas in the market was mentioned. "In Canada," remarked Mr. Larkin, "the black tea sold is nearly all that of India and Ceylon, and though at one time the China black tea trade was very large, it has of late years greatly diminished."

"Ceylon green tea, however, has given us greater difficulty, I must admit. People have been devoted to China and Japan greens, and a great deal of effort on the part of the Salada Company has been required to introduce Ceylon greens."

"Ceylon Green Teas have only been on the market two or three years, but have made wonderful progress, and wherever Japan teas are sold, there delicious uncolored and unadulterated teas will quickly capture the market."

"It possesses the same flavour and all the meritorious qualities of the Japan teas but is of infinitely finer flavour, of more delicacy, and yet of far greater strength."

"There is no doubt in my mind that the advent of these teas will displace the Japans in a very short time."

The *American Grocer* man ventured to remark that Americans are still partial to Japans.

"True," replied Mr. Larkin. "But the only difficulty we experience is in getting them to drink our 'Salada' brands for the first time. After that it is pretty clear sailing. The teas are really wonderfully good, and a trial or two is usually quite sufficient to make a convert even of the most confirmed devotee of the Japan teas. Had it been otherwise, our teas would hardly have made the progress they admittedly have in the estimation of the general public, which is, after all, the final judge of a thing's success. But, there, I have to rush over to Newark, get back, get dinner, and catch a train for Toronto"—and Mr. Larkin arose from his chair to do these several things.

"Salada" teas are being carried pretty generally now, especially by the better class of grocers. The introduction of them has not been noisy, but persistent—more like the steady, quiet, but irresistible rush of a deep river than the froth and bustle and hulla-baloo of a quick running, but shallow, stream. That's the way P. C. Larkin and his capable aides believe in doing business.

### DISTRICT ASSOCIATIONS.

#### PLANTERS' ASSOCIATION OF CEYLON.

The following is from the Minutes of Proceedings of a Meeting of the Committee of the Planters' Association of Ceylon, held at the Victoria Commemoration Buildings, Kandy, on Friday, the 13th March, 1903:—

*Prize Essay on Pruning Tea in Ceylon.*—Read letter from Messrs. George Steuart & Co, suggesting that the time should be extended for the receipt of the essays on pruning to a date not less than three months from the date of which notice of the alteration of date shall be given. Submitted correspondence. *Resolved*:—"That the time for receiving Essays be extended to 15th June, 1902; (ii) that any gentlemen who have sent in essays be allowed to withdraw or revise them; (iii) that the Committee desires that the essays should be typewritten or at least not in essayist's own handwriting; (iv) that the essay be signed with a *nom de plume* and accompanied with a sealed envelope with the *nom de plume* outside and the name of writer inside." Read letter from Messrs. Capper & Sons offering a second prize of Rs.200 to the writer of the second best essay on the pruning of Tea in Ceylon. *Resolved*:—"That Messrs. Capper & Sons be thanked for their generous offer and that the same be accepted."

*Cardamom Committee.*—Submitted correspondence with Mr. Wm. Sinclair. Read the following Interim Report:—At a Meeting of cardamom-growers held to-day, the following Resolutions were passed and are submitted as an Interim Report by the Cardamom Committee.—"That the money promised be now called up from the subscribers as per list and that meantime information be procured from Messrs. J. A. Spence, J. H. Renton, M. Rogivue, J. Royden Hughes, J. A. Elmsley, R. V. Webster and locally regarding the best means of making known cardamoms in Australia, France, America, and other countries. (11) That the Committee of the Planters' Association of Ceylon be asked to obtain for Mr. J. A. Spence a letter from Government accrediting him to the official authorities in the Australian Commonwealth, with a view to his being afforded facilities for acquiring desired information regarding the Cardamom Imports into Australia." *Resolved*:—"That the Interim Report be noted and the request made in the second Resolution be acceded to."

*Java Tea Industry.*—Read letter from the Secretary, Ceylon Chamber of Commerce, forwarding for information copy of letter, etc., on the subject of Tea Industry in Java, and mentioning that with the exception of news which is still awaited from Annam, all that can be learnt from correspondence has now been obtained as regards Tea Industry of China, Java, and Annam, at the same time regretting that for obvious reasons it has not been possible to be more successful in obtaining the desired data. *Resolved*:—"That the thanks of the Committee be conveyed to the Chamber."

# THE THIRTY COMMITTEE.

[From the Minutes of Proceedings of a Meeting of the "Thirty Committee" held at the Victoria Commemoration Buildings, Kandy, on Saturday, the 14th day of March, 1903.]

"That the matter be deferred till next Meeting."

**Members of Committee.**—Read letter from the Secretary, Ceylon Chamber of Commerce, intimating that the following had been elected Chamber of Commerce representatives on the "Thirty Committee" during 1903. Messrs. W. Shakspeare, J. F. Headrick, H. J. Scott, G. H. Alston, A. J. Denison, and Hon. Mr. Stanley Bois. Read letter from Mr. Wm. Forsythe resigning his seat on the "Thirty Committee," having temporarily left Ceylon. **Resolved:**—"That Messrs. W. C. Braybrooke and J. C. Dunbar be elected members of the "Thirty Committee" vice Messrs. Wm. Forsythe and Fred. Hadden, resigned.

**Proposed Increase of the Tea Cess.**—Considered the present position. **Resolved:**—"That the following telegram be sent to London: 'Prompt payments green tea bonus will cease 20th March, payments must than be made up to the 7 millions voted as funds available'." Read letter from Mr. H. K. Rutherford to Mr. A. C. Kingsford on the subject of the Proposed Increase of the Tea Cess. **Resolved:**—"That the Committee would ask the Chairman to point out to Mr. Rutherford that his original suggestion was to guarantee a bonus of 4 cents a lb. on all Green Tea made during 1903, and if funds should be insufficient to make the payment a first charge on 1904 funds and not to approach Government direct as indicated in his letter of the 6th February, 1903.

**Ceylon Green Teas Grant, 1903.**—Submitted Sketch Return from estates of estimate of Green Teas for 1903. Read letter from Mr. H. Drummond Deane in reference to an experiment which he believes would prove of some value to the Green Tea Industry of Ceylon.

# MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated March 6th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

		Indian.	Ceylon.	Java.
		Pkgs.	Pkgs.	Pkgs.
1902-1903	...	1,193,654	861,972	59,867
1901-1902	...	1,316,297	903,141	62,523

34,774 pkgs. INDIAN } Total 59,348 packages were offered in public auction  
21,895 " CEYLON } this week.  
2,679 " JAVA }

It seems now a certainty that there cannot be more than about 145 million lbs. of the Northern India Tea crop available for the United Kingdom, against 152½ millions last season, and 162 millions in the previous season. Ceylon is also short;—and Southern India is so far only sending us a slight increase over last season's quantity.

With deliveries proceeding at a normal rate in face of a possible reduction in the duty, it is evident that stocks of duty-paid tea are comparatively light. This is borne out by the considerable buying business which is taking place in spite of higher prices; hence there can be no doubt that the natural result of shorter supply is becoming apparent, and that sellers are consequently in a better position to control the market than for many years past.

**INDIAN.**—The slightly reduced auctions passed with good competition for all teas over 6½d. per lb., medium and better teas tending towards harder rates. For inferior kinds competition was not up to last week, and as importers were disinclined to give way in face of the strong position, several parcels were taken out. Exports to U. K. second half February 990,000 lbs., against 1,540,000 lbs. same period 1902, making from 1st April 144,556,000 lbs., against 152,251,800 lbs. The following averages are worthy

**"All Sorts and Conditions of Men"**

USE

**ST. JACOBS OIL**

Week's av. of tea sold on Garden Account 1903, 28,851 pkgs., av. 8·20d. 1902, 37,103 pkgs., av. 7·45d.

Tea sold on Garden Account 1st June to date 1902-3, 907,735 pkgs., av. 7·39d. 1901-2, 1,031,498 pkgs., av. 7·78d.

CEYLON.—There was a generally strong market at fully up to last week's rates for all teas over 6d per lb., commonest grades alone showing a slightly weaker market. Exports to U. K. for February 7,750,000 lbs., against 8,000,000 lbs., 1st January to end February 15,750,000 lbs., against 17,250,000 lbs. Estimate for March 8 $\frac{1}{2}$  to 9 millions, against 8 $\frac{1}{2}$  millions, 1902.

Average for week 7·83d, against 7·12d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 172,274 pkgs., av. 7·61d. 1902, 216,616 pkgs., av. 7·19d.

JAVAS—met with a ready sale at full valuations, nearly everything selling in the room.

### CINCHONA.

The parcels that were bought in at last week's Amsterdam sales have since been sold at full prices. At the London auction next week comparatively large quantities will be offered, a certain proportion of which consists of soft Colombian bark imported about 1880 and 1882, and for which 5s 9d per lb. was refused at the time of arrival; the present value is about 1 $\frac{1}{2}$ d per lb. The London stock of bark consists of 8,010 packages, of which only about 3,000 are manufacturing descriptions, the remainder being druggists' bark, soft Colombian, etc. The N. V. Nederlandsche Veem at

Amsterdam reports the shipments from Java to Europe during February as under:—

Year.	Amst.lbs.	Year.	Amst. lb
1903 ...	661,000	1897 ...	456,000
1902 ...	524,000	1896 ...	460,000
1901 ...	748,000	1895 ...	460,000
1900 ...	641,000	1894 ...	460,000
1899 ...	539,000	1893 ...	355,000
1898 ...	700,000		

### Total Shipments January-February.

Year.	Amst. lbs.	Year.	Amst. lbs
1903 ...	1,254,000	1897 ...	846,000

1898 ...	1,656,000		

### QUININE.

As a result of the 27 per cent. advance in bark at Amsterdam last week, the German makers announced an increase of  $\frac{1}{2}$ d per oz. in their official price, and now quote 1s 2d per oz. in bulk. Messrs. Howards have also advanced their quotations 1d, to 1s 3d in bulk and 1s 5d in vials in 1,000 oz. lots. Whiffens quote 1s 2d in bulk and 1s 4d in vials. French make (P. & G.) is 1s 2 $\frac{1}{2}$ d. Quinine salts are also higher. In the second-hand market a considerable demand prevailed on Friday of last week at from 1s 1d to 1s 1 $\frac{1}{2}$ d, spot, closing sellers at the latter price; May delivery sold at 1s 1 $\frac{1}{2}$ d and August at 1s 1 $\frac{3}{4}$ d. This week the market has been quiet, with small sales of B. & S. and for Brunswick at 1s 1 $\frac{1}{8}$ d.

In these tables all packages are chests unless otherwise stated.  $\frac{1}{2}$ c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, APRIL 4, 1903.

[No. 14.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Wednesday, the 8th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*Weather*—A small shower fell on Wednesday, hardly 3 cents, but there is a promise of more. *Wind* strong, West to North-West. *Crop*—is generally finished and pruning and manure is going on. *Coffee*—Remarkably healthy, the show of leaf for this time of year being extraordinary. *Spike*—forward, and trees in good heart for rain. *Health*—Fair. *Labour*—Abundant. *Interesting item*—The Telugu new year was kept last Monday, it is a sign for the ryot to prepare his fields for sowing. It is lamentable to see the decline of the coffee industry in the steady departures of superintendents.

#### Coorg.

*POLLI BETTA, 1st April.*—Rain on Monday night, the 30th. Slight in most parts ranging from 15 to 50 cents. It seems to have been heavier in parts out West. It is to be hoped this rain will be soon followed up; but the backwardness of the bud may help the trees to stand its being deferred. *Interesting item*—Volunteer Camp at Mercara and Races. Inspection held on 28th ultimo and went off with great success.

### THE FERMENT OF THE TEA-LEAF.

IN Part II. of Mr. HAROLD H. MANN's treatise on this subject the planter will find much interesting information. The work of investigation cannot be said to have been completed, but it is well advanced. What is chiefly necessary is a series of similar investigations to those already conducted in one or two districts, in every important tea district in India, followed by a comparison of results. In the first part

of Mr. MANN's treatise we had the first results of his investigation into the cause of the fermentation or change of colour and flavour that occurs during the manufacture of tea-leaf. It was shown that this fermentation is not due to the intervention of any living organism, but to the action of an enzyme or unorganised ferment occurring always in the leaf of the tea-plant. The function of this ferment consists in adding the oxygen of the air to one or more of the products contained in the plant juices. It was established that a relationship exists between the amount of enzyme present and the quality of the tea. There was reason for the belief that the amount of the enzyme is, to some extent, determined by the percentage of available Phosphoric Acid in the soil; and the question naturally suggested itself whether, if the quality of the tea depended on the quantity of enzyme, it would not be possible to add this enzyme from the outside, prepared either from older and less valuable leaves from other parts of the plant, or indeed from other entirely different plants. This notion was based, says Mr. MANN, on the false idea that the increase of the ferment was itself desirable, while the probabilities were very great that it only increased in the leaf as the products increased which it is designed to oxidise. In Mr. MANN's opinion it seemed more valuable to turn one's attention in other directions, and this has been done. An application for a patent for the preparation of an oxidase with a view to its addition to the leaf during the manufacture of tea was made, he is informed, during the year, and this oxidase was prepared from the roots of other plants. The success which has attended experiments in this direction has not, however, been so considerable as was anticipated by the promoters, and so, though one hardly cares to definitely say that such addition might not possibly improve the quality of tea, yet we may, he thinks, conclude safely that in this line the probability of success is rather remote.

This reminds us that one of the most striking results obtained in 1901, was the discovery of the fact that after the leaf was plucked and spread out to wither, the amount of

enzyme increased enormously, in some cases doubling in amount before the leaf became fit to roll. It is evident that this has a great deal to do with the quality of the tea afterwards produced. We might say, indeed, that withering occupies the same important position in regard to the manufacture of tea as pruning does in respect of the cultivation of the plant. Mr. MANN observes that it may be said that while no further process can much improve badly-withered material, it is due to culpable neglect if leaf, in a proper condition up to this point, fails to produce, in the end, as good tea as it is capable of making. He puts two important questions:—If the time necessary to make the leaf ready for rolling is much reduced, as, for instance, by fans, do the chemical changes in the leaf also go on faster, and are they complete more quickly in the quickly-withered than in the normally withered leaf, or are they arrested before being finished when the quickly-withered leaf is rolled? Or to take the opposite case. If the withering of the leaf is unduly prolonged, as it often is in wet weather, are the chemical changes, involving the increase in the quantity of ferment, also taking place more slowly, or are they carried *beyond the proper place* before the leaf is ready to roll? Mr. MANN remarks:—“The question seems vital to any understanding of the withering process, for it at once introduces a new element into the matter if these processes do not necessarily go on at the same speed, and it may be that we ought not to be merely trying to obtain a soft leaf fit to roll, but also one in which the chemical changes have reached their most satisfactory stage.”

As a result of his investigations Mr. MANN draws the conclusion that there is a point in the withering of the leaf when the active enzyme, which causes the fermentation of the leaf, is present in greatest quantity. Further, in a good withering atmosphere, when the leaf is ready at 18 to 20 hours after spreading, this maximum of ferment coincides with the point at which the leaf is in the best condition for rolling. It is remarked that too rapid withering, while it may arrest the development of ferment (owing to the leaf drying) at an earlier stage than would be the case otherwise, *does not allow the normal and proper amount to be produced by the time the leaf is ready to roll.* Hence one reason, at any rate, why rapidly-withered leaf makes poorer tea than a natural wither would give from the same material. He concludes (1) That, during withering, the amount of oxidising enzyme or ferment in the leaf increases up to a certain point corresponding under normal withering conditions with the point at which the leaf is ready for rolling. (2) That the two processes of loss of moisture and production of ferment by no means necessarily take the same length of time, and that the leaf may be withered (in very dry weather) long before it is *chemically* ready to roll, and in very wet weather may be ready, *chemically*, to roll long before it is withered. (3) That, at the temperature studied (76°—86° F.) the normal time which the leaf requires in order to be *chemically* ready for rolling is 18 to 20 hours with normally withered and over-withered leaf, and several hours longer (it may be up to 25 hours) with leaf prevented from withering by a very wet atmosphere. (4) That the object of the tea manufacturer should be not merely to get his leaf in the best physical condition for rolling, but also in the best chemical condition, and for this purpose he should arrange, so far as is possible, to have the leaf soft for rolling when the chemical constituents of the leaf are at their best.

## U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

### “AUXILIARY PRODUCTS” IN MYSORE.

Part II. of the Annual Report on Government Parks and Gardens in Mysore for the year 1901-02 deals with Cultivation and Experiment, and runs as follows:—

**Paspalum diataltum.**—Progressive experiment with this new forage grass has shown that, although no growth is made in the dry season, the roots sustain life until the rains return. With irrigation and good culture, the yield of green grass is heavy at all seasons. A little hay made from the matured grass did not look very inviting, being of a dirty straw colour without the pleasant smell of good hay. The quantity was, however, very small, and may have been badly made. As far as can be judged at present, the grass is most valuable when green. For ensilage it would afford much bulk. Cattle graze upon it with avidity. Roots and seeds have been freely distributed to the public.

**Sisal Hemp.**—*Agave rigida* var. *Sisalana*. This useful plant has now become reproductive in the gardens. At the close of the year the nursery plot gave one pole, bearing about 2,000 bulblets, worth at the present market value Rs.5 per 100. Now, a couple of months later, seven poles have appeared, which shortly mean about 14,000 bulblets. This should be good news to the South Indian Fibre Company, who are fortunate in having a good stock of the best fibre plant so close at hand. During the next few years the gardens can supply a very large quantity of young plants.

**Mauritius Hemp.**—*Furcraea gigantea*. Being longer established and found in quantity in various centres, this plant is easily propagated. It has poled very freely of late, and the Department could supply one or two lakhs of young plants if six months' notice is given. The cost without packing would be 3 to 4 rupees per 1,000. The advantage of getting such plants from the Lal-Bagh is that they are true to name.

Several other aloes have poled freely during the past season, a result brought on, possibly, by the drying up of the land.

**Bhabar grass.**—*Ischæmum augustifolium*. This valuable grass, which affords the best indigenous material for making paper, and very largely used for that purpose in Northern India takes kindly to the climate of Mysore. It is readily propagated both from seed and by the division of roots and the Department is now in a position to raise any number of seedlings, should they be required, within a few months' time. Capital invested in such an industry can hardly fail to succeed, as the amount of official paper consumed in the country is enormous.

**Central American Rubber.**—*Castilloa elastica*. Three trees seeded during the months of April and May, bearing collectively about 3,000 seeds. Of the latter number a thousand seeds were sold to the Conservator of Forests in Travancore, at Rs.5 per 100. This tree will succeed well on coffee estates throughout the Province, and it is recommended that abandoned estates may be planted up with it. In the matter of supplying rubber hereafter, it should do for the malnad what the *Ceará* rubber tree is expected to do for the maidan.

**Ceara Rubber.**—*Manihot glaziovii*. Tapping experiments made on this tree have continued to prove instructive not only in gauging the approximate yield of caouchouc from a given tree, but also in recording the best season, time, and manner of tapping. It has also been noted very clearly that some trees yield much more copiously than others. This result may in some cases be due to the position of the tree as regards shade, soil, and moisture. But irrespective of these important factors there can be no doubt but certain trees are physically more productive than others under any condition of growth. The tappings recorded in Table A were made on a tree of the latter class, only ten years old. The tree has not diminished in vigour, nor would it have done so

had 5 lbs. of caouchouc been extracted instead of  $2\frac{3}{4}$  lbs. It will be observed that the flow of milk-sap from the trunk of the tree was best during the months of October, November, and December, very heavy rain having fallen in the latter part of September. Only five tappings of the root-limbs were made in this experiment, which is an insufficient test. Root-tappings are most productive during the first half of the calendar year, when the tree is deciduous and the ground dry. During the remainder of the year the trunk should be more productive than the root.

TABLE A.—Tapping experiments on a single tree (*Manihot glaziovii*) ten years old.

		Do.	Do.	..	1 $\frac{1}{2}$	
Total ..					43 $\frac{3}{4}$ ozs.	

Table B gives the result of tapping a number of trees at different periods and in different ways throughout the year. It is of value in showing how irregular the flow of sap is when tapped at the wrong season and in the wrong place. It also shows that 14 root tappings produced 17 ounces of caoutchouc against 12 ounces in the same number of trunk tappings.

In making these experiments the Curator had to work with primitive materials and unskilled labour, so that the percentage of waste was considerable.

TABLE B.—Tapping experiments made on *Ceará* rubber tree throughout the year.

14 root tappings 17 ozs. | 14 trunk tappings 12 ozs.

**Medicinal Herbs.**—This collection now contains about 150 species and varieties of the rarer sorts of native medicine plants. It is very popular, and freely resorted to by all classes.

The propagation of new economic plants has been successfully

*Manihot Glaziovii*, Ceará rubber tree.  
*Castilloa elastica*, Cen. American rubber tree.  
*Agave rigida* var. *Sisalana*, Sisal hemp plant.  
*Furcraea gigantea*, Mauritius hemp plant.  
*Ischaemum augustifolium*, Bhabar grass.  
*Swietenia Mahagoni*, Mahogany.  
*Caesalpinia coriaria*, Divi Divi.

carried on, while experiments made to test the utility of some have been encouraging. It is believed that the marginally noted plants will have a

great economic future in the Province, hence departmental effort is being made to propagate them in quantity.

## COFFEE NOTES.

Balzac was addicted to the use of strong black coffee and depended upon it as a nervous stimulant during the hours which he devoted to composition. Its effect he has himself described in these words: "The coffee falls into your stomach. Immediately everything starts into action. Your ideas begin to move like grand army battalions on the battlefield, and the battle opens. Memories arrive at a run, standards flying; the light cavalry of comparisons breaks into a magnificent gallop; the artillery of logic dashes up and unlimbers; thoughts come rushing up as sharpshooters; characters spring up on all sides; the paper becomes covered with ink, for the struggle has begun and ends in torrents of black water like the battle in black powder."

\* \* \*

*Tea, Coffee and Sugar* of 25th ultimo says:—Although coffee is reputed to be near to bankruptcy, there are millions, nay billions, to be made in the industry if an international coffee trust be formed to control its production and consumption. The recent coffee congress is responsible for this vision and recommends it to the earnest consideration of the next congress. It was conceived in the brain of Senor F. de la Madriz, delegate from Venezuela, who has thought it out that should the coffee-producing nations enter into a union or trust to which together they shall subscribe \$180,000,000 capital to buy the respective coffee crops, by also controlling the prices of the bags, on an estimate of an ownership of 20,400,000 bags this union will profit the first year \$63,000,000 if \$12 per bag of coffee shall be charged, \$131,000,000 if \$16 per bag shall be charged, and \$205,000,000 if \$20 per bag shall be charged. It is all as clear as day, and the proposition may be read now, set out in full with no detail lacking, in the report of the congress. Here is a chance for South American and Central American republics to realize their most exalted schemes in money raising and revolutions and such things as Venezuelan imbrolios could be afforded every year. Of course, the matter of providing the initial \$180,000,000 is the rub. Brother Jonathan, who is entitled to membership in the union, might provide the sum, as he has the bank account, or at any rate good credit. But he is not at present chasing rainbows so brilliantly radiant, and besides his constituents are averse to paying \$20 a bag for their coffee, or \$16 or \$12, when they can get it so much cheaper at the instance of the obliging Brazilians. Why rob Peter to pay Paul?

\* \* \*

The *New York Sun* gave prominence recently to a letter from Walter J. Ballard, who advocates a reimposition by the United States of a duty on coffee from Brazil. This prior to 1870, was five cents a pound, was reduced in that year to three cents a pound, and abolished in 1872. Since then coffee has been admitted free. Mr. Ballard states at length the reasons for the faith that is in him, and they are worth while reading, if for nothing else than to satisfy curiosity. Let us hear him:

"Have our people got cheaper coffee from Brazil since the duty was abolished? Let us see. Senator Dietrich of Nebraska said in the Senate on February 13, 1903 (*Congressional Record*, page 2281): In 1871 we paid Brazil  $9\frac{3}{4}$  cents per pound for 257,472,708 pounds of coffee collected three cents per pound duty, thereby turning \$7,724,181 into our treasury, making the coffee cost our importers  $12\frac{3}{4}$  cents per pound, duty paid. In 1872 (the year we abolished the duty) we paid Brazil  $15\frac{3}{4}$  cents, or more than double the duty taken off; in 1873,  $14\frac{1}{8}$  cents; in 1874, 19 cents, and in 1875,  $15\frac{1}{8}$  cents per pound, showing that putting coffee on the free list did not decrease the cost of coffee to the American consumer, but that coffee constantly advanced in price. Immediately after we took the duty off of coffee Brazil put on export and other taxes; approximating (and more) the duties we had been collecting, thus transferring our revenue on coffee from our treasury to the Brazilian treasury, and our people were not helped one iota. In passing, we may note that this result on coffee from Brazil is only one of the many examples of 'all lost and no gain' of

the Democratic programme of free trade. The old cry of 'a free breakfast table' is a delusion and a snare. Since 1872 our treasury has lost in duties on Brazilian coffee alone at three cents per pound the gigantic sum of \$353,522,751 (about the cost to us of the Spanish American War), and the Brazilian treasury has gained just that much at our expense.

"Even if we were getting an equitable share of Brazil's import trade, it might be different. But we are not. In this thirty years of our giving millions upon millions of help to Brazil, she has only given us 18 per cent. of her import trade. Our purchases from her have amounted to \$1,762,622,527, while her purchases from us only figure up \$303,813,166 leaving a balance of trade against us of \$1,458,809,361.

"Is it not time to stop this national loss and grow our own coffee? We are doing it in Porto Rico, but not yet to an extent anywhere near our consumption, and unfortunately so far, our people are not calling for Porto Rican coffee to anywhere near the quantity the island is already producing. Let us call for more of it. Porto Rico is a member of our family and should receive a full share of the family patronage. Increased demands will cause increased and better production and help to build up the island and American fortunes instead of building up Brazil and Brazilian fortunes. Why not restore the three-cents-a-pound duty against all but our possessions (and our ward, Cuba), and thus encourage coffee-growing in those possessions, particularly the Philippines? The soil there is rich and suitable and is our own. Why build other nests when our nests need building up? Let us grow our own coffee."

Coffee is in such general use among us and really tantamount to a necessity, that we doubt very much, says *Tea, Coffee and Sugar*, whether consent can be obtained from the people to be taxed in their coffee-drinking. Coffee-drinkers will pay the tax after all, no matter what specious logic, statistic, balance of trade or sentiment is adduced in behalf of the suggested coffee tax. The matter is so accepted by our national legislators. Although the coffee trade is not at all organized, morally it was strong enough to deter the imposition of a tax at the time of the Spanish war. Tea succumbed to the suggestion and other important interests, but coffee escaped unscotched. It is, hence, altogether improbable that a taxation of coffee would ensue when the revenues of the United States are overburdened with a surplus, and all just for a sentiment, which, no doubt, was entertained at the time of the imposition of the war taxes in 1897 and rejected as inexpedient.

\* \* \*

Coffee Day is an event on the calendar of San Francisco dealers. One large cash store there observed the day by making an elaborate display of coffee in the show window and by offering coffee at a reduction of 10 cents a pound.

\* \* \*

**Transfer of Spot Coffee Contracts Explained.**—Reviewing the coffee transactions of last week, says *Tea, Coffee and Sugar* of 4th March, the leading bear interest declared the following: "The heavy tenders of March contracts on the Coffee Exchange were nearly all returned to the issuers, showing that the buyers of options prefer paying a heavy premium to transfer spot contracts into later months rather than take delivery of the unsaleable high grade Rio coffees tendered. There is an enormous stock of these coffees in all markets, eating up expenses, and this feature of itself will weigh upon the option markets for a long time to come."

\* \* \*

It is, says the *Merchants' Review*, a peculiar quality of certain kinds of coffee of showing traces of the odour or flavour of the most conspicuous natural products of the district or country whence they come. Thus Bolivian coffees produce a more

or less intoxicating effect, said to be due to the growth of the coffee in the vicinity of cactus plants, from which pulque, an intoxicant, is distilled; Costa Rica coffees have a flavour of hides, Singapore coffee tastes of spices, Honduras coffee often has a flavour of chocolate, and so on. Perhaps, however, these foreign flavours are acquired while the coffee is being transported across the ocean in the hold of a ship, with other strongly smelling merchandise, for coffee is one of the most absorbent of substances so far as odours or flavours are concerned.

\* \* \*

A grocery journal prints this and more besides:

"The best coffee in South America is grown in the vicinity of Caracas, says the *Philadelphia Evening Telegraph*, but most of the natives do not know how to roast it properly. They burn it, and frequently ruin it by mixing with it brown sugar. Then 'to add insult to injury,' it is served at table with boiled milk, as no cream is to be had from the poor milk of the cows of that country."

The "washed Caracas" coffee is certainly a fine grade, says the *Merchants' Review*, being heavy and rich in body and superior in flavour, but has the *Telegraph* man ever drunk the best Bogota coffee, which is reminiscent of Blue Mountain Jamaica and plantation Ceylon, or Bucaramanga Maracaibo? The latter coffee furnishes several grades that are considered superior to most of the Java grades. It may not be out of place here to mention the circumstance that the district producing the Bogota and Bucaramanga Maracaibo coffees is capable of supplying more than three times the total wants of the United States, if it were properly developed.

\* \* \*

The deliveries of Java coffee by the Dutch Trading Company in Holland during February were unusually heavy, comprising 18,570 bags, against 13,400 bags last year, and 22,380 bags in 1901; thus giving a total for the two months of 21,800 bags, as contrasted with 18,780 bags in 1902, and 25,700 bags in the same period of the year preceding.

\* \* \*

Prices of Brazil coffee showed a slight decline, with the undertone weak, and quoted on the basis of 5½c. per pound for invoice lots and 6c. for jobbing lots of Rio No. 7 on the spot. Several parcels of fancy colored bean Mocha coffee was placed on offer at 14c. Supplies of this grade are scarce on the spot.—*American Grocer*.

\* \* \*

The Salvador coffee crop, it is estimated, will reach 600,000 quintals.

\* \* \*

Some fine colored large bean Java Liberian coffee was offered at 8c. per pound.

\* \* \*

Advices from Brazil stated that through legislation a renewal of the proposition to destroy 20 per cent. of the coffee crop is being made. Brokers and dealers here were disinterested in the above report, as it is generally considered impracticable.

\* \* \*

Latest advices from Java state that the East India Government crop is estimated at 205,000 piculs; private crop, 292,000 piculs, and Liberian crop, 80,000 piculs. One picul equals 133 pounds, English.

## TEA NOTES.

Fair lines of India and Ceylon teas were placed on offer at 14c. for Pekoe and 16c. for Pekoe Souchong grades. India Pekoe was offered at 16c. These grades sold readily, being mostly used for blending purposes.—*American Grocer*.

\* \* \*

**Admitting Tea into the United States.**—Following are regulations published by the United States government bearing on the inspection and admission or rejection of tea imported into the United States:

In comparing with standards, examiners are to test all the teas on these points, namely: For quality, for any foreign matter on the surface of the infusion, sometimes called scum, and for quality of infusion. Quality shall be ascertained by drawing according to the custom of the tea trade with the weight of a half dime to the cup. The quality must be equal to standard, but the flavour may be that of a different district as long as it is equal in sweetness. As an illustration, a Teenkai may be equal to a Moyune, but a distinctly smoky or rank Fychow, or Wenchow of sour character, must not be considered as equal to the two first mentioned.

In examining Japans, Green Teas, and Congous, while limiting the comparisons in the matter of infused leaf and scum to the specific standard called for, examiners are to admit tea upon the question of quality, in the three kinds above cited, provided they are equal, in the case of Japans, to either the Pan-Fired or the Basket-Fired standard; in Greens to either the Country Tea or the Pingsuey standard, and in Congous to either the North China or the South China standard.

In order to test for floating color-matter or scum, and also for the quality of infusion, a second drawing should be made of double the foregoing weight. Before disturbing the infusion, examination should be made for any floating substance, and after pouring off the water the infused leaf should be taken out so as to exhibit the lower side which rested against the cup. Should the mass show a larger quantity of exhausted or decayed leaf or foreign substance than the standard, it shall be considered inferior in quality, and the tea must be rejected. In Greens and Japans particularly the brightness of the leaf should be considered as an evidence of quality.

Should a tea prove, on examination, to be inferior to the standard in any one of the requisites, *viz.*, quality, scum, or quality of infusion, it shall be rejected, notwithstanding that it be superior to the standard in some of the qualifications. No consideration shall be given to the appearance or so-called style of the dry leaf.

Macao or Canton Congous should be compared with the standard for South China Congou, and Brick tea compared with the standard for the district whence it comes. The mustiness or damaged flavour exhibited in certain Canton teas imported for Chinese consumption shall be considered as sufficient cause for rejection. Amoy Oolongs will be tested by the Foochow standard.

The dust and fannings in all Formosa, Foochow, and Amoy, Oolongs, Canton teas, Congous, Indias, and Ceylons must be restricted to 20 per cent. when sifted through a sieve of No. 16 mesh made of brass wire. In order that the needle leaf and Pekoe tips may not be confounded with dust, they must be returned with the dust to the sieve for a second and third sifting until separated.

In the case of Ceylon and India teas, the needle leaf and Pekoe tips shall be separated by passing them together with the dust through a No. 26 sieve of No. 30 brass wire, after the tea has been first sifted through a No. 16 sieve.

Dust and fannings in Japanese teas must not exceed 4 per cent. when tested by a No. 30 sieve of No. 31 brass wire. Before condemning any tea for dust, examiners shall sieve at least two packages.

\* \* \*

**Tea Areas in Japan.**—For the following statistics and intelligence, we are indebted, says *Tea*, to "Commercial Japan in 1900," recently published by the Bureau of Statistic (Treasury Department), United States, America, and an article on "The Natural Resources of Japan," by Mr. F. Schroeder, editor of the *Eastern World*, Yokohama, Japan. Rice for home use, cocoons for silk, and tea for export, are the most important and staple products of Japan, and many areas are cultivated in all parts of the country. The cultivated area under tea is, approximately, 150,000 acres.

#### PRODUCTION OF TEA IN JAPAN.

(From official reports of the Japan Government.)

Year.	Kwan.*
1892	7,211,865
1893	7,640,368
1894	7,883,232
1895	8,698,781
1896	8,500,745
1897	8,470,182
1898	8,443,726
1899	7,543,726

In Japan there are only a very few really extensive tea estates, which, at the best, cannot be compared with the majority of British ones, being for the most part small plots owned by individual farmers, who sell the little surplus, over and above their own wants, to merchants, for foreign export.

\* \* \*

Prices of fine quality of country greens and Pingsuey were firm in tone, with holders asking 40c. and 45c. respectively. The supply of green teas is very light, and prices are one cent. per pound higher than in January. Offerings of green teas were readily absorbed at 15c. per pound up, but owing to light offerings business was restricted.—*American Grocer*, February 25.

\* \* \*

**The Ceylon Tea Kiosk in London.**—Miss Parkinson reports that though business was very quiet about Christmas time, during February the Kiosk has been well patronised, and given good weather she expects a busy season. During the Winter, part of the premises has been frequently let out for private "At Homes," and it is now suggested that during the season the Kiosk may be utilised for the holding of evening receptions and parties. When other than light refreshments are required people engaging the rooms could furnish their own caterers. Miss Parkinson considers the Kiosk is now well-known and both she and Mr. Saunders are sanguine of a prosperous year.

\* \* \*

**The U. S. Tea Market.**—Compared with the activity that has prevailed during the last two months, says *Tea, Coffee and Sugar* of March 4, the tea market is now rather quiet. The volume of business has shrunk fully 50 per cent, but the situation is a matter of course, and the wonder is that the volume has remained so large for so long. Supplies are now well in for most houses, and the

stocks they have on hand and to contemplate and plan any foray that may suggest itself on teas that have not been much in demand and stocks in which are heavy. The importations during February seem to equal the consumption of the country, and that means that the month of March has been begun with a stock of tea in the country of at least 100,000,000 pounds, a pretty high figure.

Whether this will mean a decided easing of the market in the immediate future remains to be seen. Lower prices have been predicted for some time, but the prophets have had to postpone their "I told you so," and have had to pay more and more for their teas. The optimists assert that the country was so barren that it has absorbed all the tea in the market and conditions will remain in this manner for a year or two before a surplus of teas will accumulate. All of which remains to be seen.

Meantime, the prices, so staunchly maintained, are unchanged. The world has been scoured for Country Greens and Pingsueys but none, it has been learned, has been discovered anywhere, and so stocks here cannot be added to.

#### NOTES.

##### Java and Quinine.

The exports from Java in 1902 were 1,986 cases; 1901, 2,255; 1900, 1,921; 1899, 1,600; and 1898, 1,172 cases.

##### U. S. Tea Standards.

The U. S. Treasury Department has issued regulations for 1903 in accordance with the requirements of the Tea Act and established standards which are practically unchanged from last season. The Board of Experts consists of George H. Hewitt and George H. Macy, of New York; George McMurray and Frank Hellyer, of Chicago; Charles B. Platt, of San Francisco; Herbert G. Woodworth, of Boston, and A. P. Irwin, of Philadelphia.

##### London Tea Market.

Cabling to Colombo on the 20th ultimo Messrs. Gow, Wilson & Stanton reported a fractional advance; teas for price, dearer. Ceylon Pekoe Souchong was quoted at 6½d., average for the week 8d. (¼d. up). Reuter gave the same average and stated that 16,000 packages Ceylons had been sold out of 18,000 offered. Of Indians 32,000 packages were offered and 27,000 sold, the average being 8d. (½d. down). The rates are certainly more encouraging, on the whole, than any that have been seen for many months.

##### Over-supply of Tea.

At the last Meeting of the Indian Tea Association (Calcutta) a London letter was read with a request to continue the regulation of sales to the end of the season and to continue the present regulation for the two weeks ending 14th March, with an addition of 10 per cent., and further not to sell any tea privately except so long as the regulation lasts. With regard to Plucking for 1903, the following was adopted:—"That London importers view with serious concern the disastrous results that would follow a large crop and strongly urge all producers to impress their managers with the necessity of continuing a finer system of plucking than has been followed in the past season, so as to avoid the production of a large quantity of coarse tea."

##### Tea in the U. S.

The *American Grocer* comments on the non-success of present methods in the United States, where the *per capita* use of tea has steadily declined. It dropped from an average of 1.44 pounds for the three years 1895—97 to 1.07 pounds for the three years 1899—1901, and last year was just about one pound *per capita*.

[\* 1 Kwan equals 8.28 lb. (avoirdupois).]

Our contemporary adds :—" Here it would seem that coffee, beer, and cocoa were curtailing the use of tea, for the quantity of the three articles named has increased steadily. Since 1885 the use of beer has gone from 10.62 gallons to about 17 gallons *per capita* ; coffee from 9.36 to nearly 12 pounds. There is a great field for work in stimulating the demand for tea. The blender dot only must consider the taste of the consumers in different sections, but the quality of the water in the district."

GENERAL ARTICLES.

COFFEE IN LONDON.

Considering the very heavy receipts still coming to hand in Brazil, says the *Produce Markets' Review* of 7th March, it is surprising that the terminal market has kept as firm as it has done, the features that have helped to keep it so being, a steady rise in the exchange, doubt as to what will be the outcome of the special meeting of Congress this week to consider the destruction of 20 per cent. of the crop, and a reduction of the world's visible supply of about 20,000 tons. This last might be the most important item of all, but it must not be overlooked that the stock is still 80,000 tons more than at this date last year and 300,000 tons more than the year before. Whatever is done to alleviate the position, nothing can be permanent but the question of supply and demand, and until the latter overtakes the former, as at present it is not doing, prices must remain on the low basis they have reached. At auctions the supply has consisted almost entirely of Costa Rica, which is coming to hand much earlier than last year. Prices have been very steady, the margin between low and fine becoming more marked. Such is likely to be the case, as, owing to the poor quality of East India, buyers of fine are driven on to this kind, and will be unless the next arrivals show a distinct improvement.

TEA IN LONDON.

INDIAN TEA.—In the earlier public auctions the bidding was of a hesitating character, says the *Produce Markets' Review* of 7th March, but as importers continue to have confidence in the statistical position, they refused to accept the lower bids, and a large quantity was withdrawn. Most of the withdrawals, however, were readily disposed of later by private contract at fully last week's rates, and on Wednesday, when the balance of the tea printed in Monday's catalogue was offered, a much stronger tone prevailed and nearly the whole of the offerings changed hands. This improvement was manifest for all grades, and as the quantity in print for next week is about the same as this, present rates will probably be well maintained, although the trade are buying but moderately. It will be noticed that the deliveries of all growths are smaller by 1,011,000 lbs. than the same month last year, which is mainly accounted for by the uncertainty prevailing in 1902 with regard to an increased duty and the heavier clearances in consequence, while a similar doubt exists now as to the probability of a reduction. During the next few weeks, therefore, a further shrinkage in the duty payment is likely, as buyers are evidently neither purchasing nor clearing beyond their immediate requirements, but, in the meantime, the market is gradually gaining in strength. The following is the statistical position of all teas for the past month as compared with last February. The bonded stock was 100,981,000 lbs. against 113,296,000 lbs., and as the duty-paid teas in 1902 probably amounted to at least 7,000,000 lbs. in excess, this would make the deficiency about 20,000,000 lbs. The deliveries in the same period were 21,866,000 lbs and 22,877,000 lbs. respectively, while the imports only reached 17,642,000 lbs. as compared with 21,236,000 lbs. The quantity submitted at the public auctions was 34,774 packages and 8,300 were withdrawn, nearly the whole of the latter changing hands after the sales.

CEYLON TEAS.—With small supplies again on offer the market was well supported, and last week's rates were maintained for all descriptions. The auctions contained a larger proportion than usual of Colombo bought teas, and as many of these were of very inferior quality a few lower quotations resulted in Whole Leaf

importers and jobbers have now leisure to examine just what kinds, but generally the merchants refused to sell at any reduction. In Broken Pekoes there was a greater demand for the medium kinds from about 8½d. to 10d., which have been showing particularly good value of late, and in some cases a hardening tendency was noticeable, slightly higher prices being occasionally paid. At the public sales 21,890 packages were brought forward, of which about 3,400 were withdrawn. The following are the figures for the past month compared with February last year:—The imports were 6,765,000 lbs. against 8,137,000 lbs, the deliveries being 7,078,000 lbs. and 7,425,000 lbs. respectively, while the stock stands at 19,482,000 lbs. as compared with 22,350,000 lbs.

CONGOU TEA.—The market continues firm for all descriptions, with a good demand especially for the cheaper kinds of Moning. At the public auctions only 680 packages were offered and these realised fully recent rates.

OTHER CHINA TEAS.—The market for Green tea remains quiet with but little business to report. A slightly easier tone was noticeable for all descriptions at the public sale held on Thursday, and some very cheap parcels changed hands. Capers are unchanged, excepting among the lower sorts, which show a further slight advance, and good Oolongs below 1s. are still very scarce. At the public auction 1,365 packages of Green tea were brought forward, of which 166 were withdrawn.

BRAZILIAN NOTES.

(From the *Brazilian Review*.)

Exchange.—Extremes during the week ending February 13th were 11½d.—11¾d. for 90 d/s Bank paper and 11½d.—11¾d. for private.

The average Bank 90 d/s counter drawing rate for the week comes out at 11¾d. the corresponding sight rate being 11¾d. against 11½d. the average sight rate of the *Camara Syndical*.

The average depreciation for the week, calculated on the basis of the Banks sight rate, is 57.11 per cent. and the premium on gold 133.20 per cent. against 56.24 per cent. and 128.58 per cent. last week. At these rates :

1 £ ...	... was worth	20\$728	against	20\$317	last week.
1 shilling	...	1\$036	"	1\$015	"
1 penny	...	\$086	"	\$084	"
1 Franc	...	\$823	"	\$807	"
1 Mark	...	1\$016	"	\$996	"
1 U. S. Dollar	...	4\$269	"	4\$185	"
1 20\$000 coin	...	46\$639	"	45\$714	"

14th February, 1903.—Ninety days' Bank rate on London opened on Monday, the 9th inst. and, at 11¾d. and closed this evening at 11½d. to 11¾d.

For over two months rates have oscillated between 11½d. and 11¾d. and, though on some occasions speculative selling or buying seem to have determined a decisive movement, immediately the pressure was removed rates have recovered. On the one side we have had a strong bear deal, counteracted later on by a bull operation founded on the sale of the Sorocabana, which the Acre trouble neutralized to some extent, and afterwards the natural reaction, when fear of absolute hostilities was removed was counterbalanced by the announcement of the postponement of the Sorocabana, Melhoramentos and other business, that were to bring so much grist to the mill. But just as things began to look black, a new or rather refurbished providence puts in its appearance, begins buying coffee and putting up prices in a most, apparently, reckless manner. As long ago as November we foretold a probable attempt in New York to put prices up as soon as it could be justified by smaller receipts, and now it seems to have come. Lewisohns being again reputed as the *Deus ex machinâ*. At the same time the S. Paulo government has decided to summons the State Congress to special sessions to determine the best means of executing the recommendations of the planters' congress to reduce supplies 20 per cent. by eliminating lower types of coffee altogether.

Left to themselves the factors of demand and supply of bills seem at present pretty evenly balanced, so that speculation really determined the oscillation upwards and downwards and, as we said last week, no possible forecast can be made of the course exchange may take in the immediate future, though the general tendency in a month or so would be unmistakably downwards. When the position is one of unstable equilibrium, clearly any factor, however temporary, that gains the upper hand for the moment will determine rates, and the

impossibility of calculating the drift of speculation, specially when two currents so evenly balanced are at work, or the manner in which coming events may influence opinion was what we had in mind when we said either a rise or fall was on the card.

The somewhat sudden change in the coffee market is a case in point, but one that no one could predetermine or appraise precisely until it actually occurred. Coming as it does towards the end of the crop, when most of even the coffee in stock has been sold, it will not be of much immediate material use to us, except so far as it will reduce stocks, give confidence and, perhaps, prevent something silly or reckless from being done.

Supplemented, perhaps, by Government action of some kind tending to reduce supplies, it is possible that prices may not only be driven up but maintained, so that we may yet enter on a new crop with happier prospects than have been known for years. In that case it is likely that speculation will be very active and that speculative selling during the next two or three months, in spite of the otherwise weak position, may supply the market with all the bills it requires or more.

Unless some change occur, natural or artificial, such as from a rise of prices or negotiation of a loan or something to draw against, we believe, as we have maintained for months, that the economical situation is at present level but in March or April will be adverse and that a fall of exchange might then be looked for. But with factors so numerous and undeterminable acting and reacting continually upon the rate, it is impossible to foretell anything for certain.

The market rate depends on the supply of and demand for bills, but one and the other may be artificially inflated at any moment. Left to itself, we repeat, rates would fall in April and perhaps before, but against that must be placed the possibility of (1) Government or other drawing on a large scale, (2) of a rise of sterling prices in coffee, and (3) of speculative selling on account of the new crop. All these are possible, but who can tell whether any one of them will really come off? No one!

During the past week there has been a decided effort to talk the rate down in quarters as busily engaged a fortnight ago in talking it enthusiastically up, the apparent object being to corner the bulls who succumbed to the glowing accounts of the millions to be shortly drawn on Sorocabana account. It is, however, probable that this deal is largely liquidated at the present moment and that something else will now have to be invented to keep rates down.

Judging from the number of consular invoices the value of imports, though considerably less than for the closing month of 1902, is about on a par with the same month last year and, should exchange keep up and coffee prices continue to improve, it is possible that, instead of falling off, imports may increase and exchange rise too.

During the week ended February 13th coffee shipments were very large and furnished bills to the value of £432,000 as against £315,000 previous week and £354,000 last year. From the 1st to the 13th February the value of coffee shipments was £747,000 as against £616,000 last year. Declared sales were likewise enormous and, indeed, unsurpassed in any former week since 13th November, being 299,000 bags as against 196,000 the previous week and 118,000 last year, the increase being chiefly at Rio.

**Coffee.**—Joint entries at Rio and Santos during the week ended February 13th were large again, being 28,532 over the previous week's but 30,546 less than for the corresponding week's last year, of which they represent 85.5 per cent. the improvement, which is probably the result of better prices, being especially noticeable at Rio. For the crop, entries on 13th instant were 2,725,097 bags less than last year's of which they represent 77.4 per cent.

Shipments (*embarques*) were very large again, being 62,803 more than the previous week's and 48,783 over last year.

Declared sales were enormous, the largest since November being 299,000 bags as against 196,000 the previous week and 118,000 last year.

In spite of the large entries stocks fell off slightly being 90,690 less than the previous week's.

Average prices for the week show further improvement to 4\$556 per 10 kilos. for No. 7 and 4\$217 for good average. At New York the average rose to 5.45c.

In consequence of heavy buying, especially at Rio, where stocks in first hands are most depleted, the price per arroba last week reached 7\$100. Speculation has been very active and is stimulated by the proposal of the S. Paulo Government to take up in some

form the proposals of the planters. There are, however, great difficulties in the way; the principal being the want of money to pay the planters, for the coffee withdrawn or destroyed. It is said that the Governments of Rio and Minas have agreed to common action, but the practical difficulties in the way of such a measure must be very serious. Espirito Santo coffee, for example is nearly all No. 7 and under.

SANTOS, 13th February. 1903. Since the days after the frost we have not seen our market so firm and even excited as during the last three days.

Better news from Europe and, specially from the States firmed the market up daily advantage being taken by commissarios of shortness in qualities on the part of exporters, to hold out for relatively high prices, selling however freely.

In consequence, our market to-day is fully 300 rupees above last week. Declared sales for the week amount to 190,000, and represent a large business for the time of year. The reasons for the firmness of foreign markets generally advanced is that "bears" are short for March. Messrs. Prado, Chaves & Co., estimate of 6 million bags for the next Santos crop may have helped to strengthen markets and an important factor, in any case, was the fact that no cheap offers could be made from Santos and that Exporters were forced to raise their limits with other side.

Regulars, Good, and Superiors are still the qualities in demand. Primes fetched 5\$ to 5\$00, Superiors 300 rs. below, Goods 300 rs. below Superiors, and Regulars 300 rs. below Goods.

Low coffees are well attended to and are getting scarcer exporters having disposed of their holdings in these grades to a good extent. Low Regulars fetched up to 3\$800 and ordinary up to 3\$400.

Fine Peaberry show a fair demand specially old Yellow and green flinty. Superior Peas are worth about 4\$700 to 4\$800.

Washed Coffees did not practically accompany the late rise, nor did old yellow coffees. The limits for Superiors from Europe ruled between 29/ and 29/6 and for Good average from 27/6 to 28/.

Entries for the week 122,000 show very little difference against those of last week, but the *passagens* during the last few days show a small decrease which may, however be due to the heavy rain in the interior some five days ago.

The shipments during the week were large amounting to 212,000 bags (60,000 more than last week) and our stock came down to 1,066,145. It is probable that shipments will continue large next week and that we shall soon see our stock below a million bags.

The "Pauta" went up 20 rs. on Saturday last.

The New York *Journal of Commerce* says that the coming crop will be from fourteen to fifteen million bags. A cable from Prado and Chaves "Santos crop estimates greatly reduced. We expect small crop," the *Journal* says, had no influence on the market. In fact, people in the consuming markets now pay little or no attention to crop advices from this side and stick to statistics as their guide.

One of the proposals and, perhaps, the most sensible, at the Planters' Congress was to introduce the *medianeira* system of working the plantations so common in Minas, under which half of the produce goes for payment of labour and half to the owner. The proposal was scornfully rejected by the Congress but has since been privately adopted on more than one large estate.

## PRODUCE AND PLANTING.

An interesting and important departure is, we understand, being made in connection with the insurance of the new season's Indian tea crop. The risk of damage from the time the tea is plucked until arrival in the United Kingdom has always been readily undertaken by marine underwriters at reasonable rates, but injury to the leaf before plucking, from whatever cause, has had to be borne by the planter. Hail storms are amongst the worst enemies which threaten the growing crops, and extensive damage can be done by a visitation of this nature. Cases are on record where over 20 per cent. of a whole crop has been destroyed in a few minutes, and instances of damage amounting to 10 per cent. are legion. So urgent has the matter become that the Tea Association, having been appealed to, took steps with a view to find a workable basis for the insurance of the risk. It circularised the trade asking for statistics to enable a comparison to be made between total outturn and losses due to hail, and the immediate response

of a large section sufficiently indicated their appreciation of the importance of the matter. A number of concerns, however, had to refer to Calcutta, as the required figures were not available in London; meantime, the statistics which had been secured covered sufficient ground to enable inquiries to be made in the insurance world, with the result that a favourable rate of premium has been obtained with a workable clause to govern the assessment of losses. We should imagine the industry will largely avail itself of the new facilities, especially as the statistics of losses due to hail prove without any doubt that no district or garden can consider itself safe from a visitation, whatever may have been its experience in the past; the figures show that the longer the immunity the greater the disaster when it arrives. Under such circumstances no prudent planter can afford to ignore such an opportunity to replace, in his calculation, the very real risk of a calamity with a reasonable annual charge in the form of an insurance premium. The rate is of necessity experimental to some extent, but should experience show it to be too high, competition will no doubt afford a ready and effective remedy. In any case the Tea Association, by its efforts which have led to the establishment of insurance facilities, has earned the thanks of the tea-producing industry.

From the following figures, compiled, as usual, by Mr. George Seton, of the Indian Tea Share Exchange, 120, Bishopsgate Street, E.C., it will be seen, says the *Financial Times*, that the market value of the shares of the forty-five representative companies has again advanced to a moderate extent. With one or two exceptions, the advance has been "all along the line":—

	£
Face value of 45 companies' shares ..	9,500,000
Market value July 1, 1897 (top point) ...	12,000,000
" January 1, 1902 ..	7,000,000
" September 1, 1902 (lowest point) ...	6,050,000
" January 1, 1903 ..	6,600,000
" February 1, 1903 ..	6,800,000
" March 1, 1903 ..	7,000,000

So that the recovery has been just to about the level of the beginning of 1902. As the grand total of the share and debenture capital of the one hundred and seventy tea companies registered, with sterling capital, in the United Kingdom (exclusive of private-owned estates and companies registered, with rupee capital, in India and Ceylon) amounts to about £19,000,000, the fluctuations of the entire volume, based on the above figures, may be thus roughly estimated:—

	£
Face value of (about) 170 companies ...	19,000,000
Highest market value, July 1, 1897 ...	24,000,000
Lowest market value, September 1, 1902 ...	12,100,000
Present market value, March 1, 1903 ...	14,000,000

This shows a rise in value from the lowest point of nearly 16 per cent., but there is still a depreciation from the highest point of nearly 42 per cent., or, taking 100 as representing the top value, the lowest level would be represented by just over 50 and the present level by 58.

Notwithstanding the present rather uncertain outlook as regards dividends for the producing year 1902, Mr. Seton considers that, with the restoration, or partial restoration, of public confidence in the stability of the industry, a further moderate hardening of values is to be expected. It may be noted, however, that the better prices now ruling in Mincing Lane, coming, as they have done, late in the selling season, are just barely compensating for the very low prices at which the first half or two-thirds of the crops were sold during the Summer and Autumn of last year.

From reports which appear in the Indian and Ceylon papers to hand by last mail we see that both the Indian Tea Association and the Ceylon Planters' Association have held their annual Meetings. At the Calcutta meeting the Chairman, referring to the cess, stated that he hoped that the Act would be in force in the coming season. The Committee would probably receive many suggestions as to the best means of utilising the funds. Care would have to be taken to avoid having too many irons in the fire. The funds available might not be sufficiently large to admit, with any hope of success, of indiscriminate attack on all markets. He therefore thought it would be better to concentrate effort on markets recognised to be "tea-drinking," such as America and Russia. The increase there lately showed how much might yet be done. Every-

thing pointed to increasing demand from Russia. The manufacture of Greens, he understood, was to be taken up in earnest this year. This should assist the Committee in its work in America with greater certainty of success. At the Meeting held at Kandy resolutions proposed for sending two Commissioners to India to report on the coolie districts with regard to the labour supply for Ceylon and for forming a fund for pushing Ceylon cardamoms in foreign countries were carried. Commenting on the report of the "Thirty Committee," the *Ceylon Observer* says: "Mr. Renton sends a very interesting report on his work as Commissioner for the Continent of Europe. He affords certain information which must be taken to heart as to the deterioration of the quality in Ceylon teas. At the same time the sale of 'pure Ceylon tea' of miserable blends, mostly inferior China valued at 2d. a pound, shows the difficulties in the way of extending the trade in the real article. Mr. Renton's success in getting our tea placed in several of the best cafés and refreshment rooms in Berlin is especially notable, and his various demonstrations at leading centres constitute most commendable work. Altogether we have here a remarkable report from the Ceylon Commissioner for the Continent of Europe.

According to the Board of Trade return for February the imports of tea show a very considerable decline. The value fell off by £138,000, cocoa by £126,000, and tobacco by £40,000. Refined and unrefined sugars show very heavy falls amounting in quantity to 56.1 per cent. and 68.3 per cent. respectively, the diminution in each case being principally due to smaller receipts from Germany. The import of coffee increased by £162,000.

Some particulars given during the hearing of a compensation case at the Westminster High Bailiff's Court are interesting as showing that, notwithstanding the competition in the tea and coffee shop business, there is still money to be made. A widow claimed from the London County Council £3,200 compensation for the compulsory acquisition of her leasehold interest in a coffee

shop in Wych Street, Strand, in which she and her late husband had carried on business since 1887. Mr. Dickens, K.C., who appeared for the claimant, said his client's premises occupied a most important position, being surrounded by printing and other works, and near Drury Lane Theatre. In addition to the business done in the shop the proprietress sent out a very large number of meals, and she made enormous profits. Having shown that 870 lbs. of tea, costing £78 16s. 10d., would yield 125,000 cups of tea, producing about £783, the learned Counsel said the profits were equally large in other respects. During the year 1901 his client's purchases amounted to £1,104 7s. 5d., and the sales realised £2,383 18s. 11d., showing, after allowing for all outgoings, a nett profit of £947 per annum. On behalf of the County Council it was contended that the profits had been exaggerated, and the jury gave the claimant £1,300 compensation only, but if the statement that 9 gallons of water were used to 1 lb. of tea represented the facts it is evident that there are many more unprofitable businesses than that of proprietor of a tea-drinking shop.—*H. & C. Mail.*

### THE LONDON TEA SHORTAGE.

The *Canadian Grocer* remarks:—Many people are at a loss to know what is causing the present stringent condition in the tea market. They are aware that both in the London market and other markets, prices have lately been advancing very considerably. In fact, recent advices would seem to indicate that there has been almost a panic in the English capital.

Teas which could be sold here at 15 and 16c. per lb. last year, could not possibly be secured to-day to sell below 18½c. Buyers are exercising their keenest judgment in securing teas at reasonable prices, and they are daily being confronted with a more complicated situation. The explanation of it all apparently is that the supply has failed to keep pace with the demand.

The situation to-day in London will give some inkling of what is meant. The figures here given have been derived from a reliable source and are trustworthy. From June 1 last, until January 31 last, it is found that the imports into London of all teas were 11,400,000 lbs. less than in the corresponding period 12 months previously. This in itself is not so serious a shortage, but, on the other hand, we must take into account that the deliveries during the same period were 3,300,000 lbs. in excess of what they had been during the period under comparison. Add to this, again, the fact that on January 31, last, the stock in London stood at 105,200,000 lbs., while on January 31, 1902, it totalled 114,800,000 lbs., and it is readily seen that the situation is decidedly stronger at the present day than it was 12 months ago.

In the matter of Ceylon tea alone, the same condition is to be noted. During the five months ending January 31, the imports of Ceylon tea were under 35,000,000 lbs., while the deliveries stood at 42,000,000 lbs. If this does not alarm those interested in teas, it would be hard to find what would.

### THE FERMENT OF THE TEA-LEAF.

*Indian Planting and Gardening* says:—Mr. Bamber, asked for his views to-day on the observations of the Scientific Officer to the Indian Tea Association, courteously gave his opinions, though somewhat reticent at first about offering any criticism.

Mr. Bamber had read the pamphlet, and remarked that it contained a great deal of interesting matter.

What do you think of Mr. Mann's arguments about withering?

Well, the remark that enzyme increases during the withering process is new; but, as Mr. Mann in his first page says, it is a false idea that the increase of the ferment is itself desirable, it seems difficult to reconcile his tabular statements which point to an increase of the ferment as giving a better tea. For some years now the planter has tried to get his wither during the first 24 hours, by arranging the thickness of spreading—according to the weather; but it has been found in practice that a two days' wither, or even longer, frequently gives a thicker tea, which fetches a higher price on the present market; and for the last year or two Messrs. Davidson & Co. have been guaranteeing, I believe, a wither in from 15 to 20 hours by the use of the fans which do not unduly dry the leaf.

Mr. Mann holds that rapid withering is not good?

Yes, the tables and active and total enzyme given by Mr. Mann are instructive; but on comparing them it will be seen that practically the same amount of enzyme was found in 4 hours' rapid withering as in 18 hours' ordinary withering—in fact in one case rather more. I think Mr. Mann is quite right in stating that too rapid a wither is not good; but I don't think his figures conclusively prove that the tea manufactured after a 4½ hours' wither would not have been so good as the tea manufactured after an 18 hours' wither. I think we can hardly say that the quantity of enzyme alone is as yet a measure of quality, and Mr. Mann's result would have been more conclusive had samples of tea been manufactured upon the same leaf with which he tested the enzyme.

Can Mr. Mann's experiments in any way be applied to Ceylon estates?

Well, I think the conditions are somewhat altered. In Ceylon the conditions range from practically sea-level to 7,000 feet, and that makes it more difficult to draw deductions from experiments from one estate only.

Mr. Mann advises that the tea manufacturer should have his leaf soft for rolling when the chemical constituents of the leaf are at their best. Do you agree with this?

Mr. Mann's conclusion as to the chemical and physical condition of the leaf is no doubt theoretically correct; but practically I think that it would be found that the tea manufacturer will have to depend more on the physical than the chemical condition, even when the correct state of the latter is known. Withering in Ceylon is very largely under control, except perhaps during two or three months, when there is an undue rush of leaf, and large amounts have to be taken into the factory daily.

IS IT PREFERABLE TO WITHER IN LIGHT OR IN DARKNESS?

With regard to the experiment as to the amount of enzyme in leaf plucked late in the evening or early in the morning, according to Mr. Mann's table the leaf plucked in the morning, contains 2½ to over 3 times more enzyme than that plucked in the evening, and this should therefore produce a much better tea. But planters are disagreed as to which tea manufactured is the better. It would have been interesting if an estimation of tannin and other soluble matters in the leaf at these times had also been made, as this would probably have given him a better indication of the character of the tea.

ASEPTIC FERMENTATION.

What do you think of Mr. Mann's conclusion about aseptic fermentation?

With regard to aseptic fermentation, I quite agree with Mr. Mann that the bacteria found on the tea-leaf should be destroyed, or their action prevented; and I believe in the absolute necessity of having everything perfectly clean. For the last two or three years I have recommended that cloths, tables, and everything connected with fermentation should be kept clean by washing daily, or at frequent intervals, with a solution of permanganate of potash, with, I think, beneficial results. The fermenting leaf has occasionally been sprinkled with a dilute permanganate solution in addition, sometimes with an increased brightness of the colour, and at other times apparently with little marked effect. All cloths have been kept for some time out of contact with the fermenting leaf, so as to prevent contamination of the different rolls.

What about the effect of temperature on fermentation?

With regard to the effect of temperature on fermentation, although the action of the enzyme, as Mr. Mann says, is greatest at a 120° F., this can hardly be recommended, as the liquors would almost invariably be wanting in point, or be too soft. Cold fermentation, with the temperature as low as 56°, has been carried out in Ceylon for some time, with the result that the fermenting leaf obtained a good colour, and the liquors retained their pungency. But it is hardly safe yet to say what is the best temperature.

FERMENTATION WITH ANTISEPTICS.

What about the use of antiseptics, Mr. Bamber? Have you made any experiments?

Yes. I have personally obtained exceptionally bright colours by oxidising the rolled leaf in an atmosphere of chloroform, which entirely prevented bacterial action, and it was possible to keep the leaf for some days without its undergoing putrefaction. In Mr. Mann's experiment he apparently left the unrolled leaf in contact with chloroform vapour when he found that the ferment was destroyed.

## THE USE OF SALICYLIC ACID NOT ADVISABLE.

Do you recommend the use of salicylic acid for cleansing?

As regards the use of salicylic acid, Mr. Mann recommends that it should be dusted on the leaf immediately after rolling. Now although the tea manufactured by it was reported on as superior to that manufactured in the ordinary way, I do not like to advise its employment. It is largely used as a preservative both for foods and drink such as beer and wine; but it is not recommended in a greater proportion than one grain per pint in liquids, and one grain per lb. in solid food, and its presence in all cases has to be declared.

Mr. Mann states that it would be entirely removed when the tea has been fired?

Yes. But unless a high temperature was employed I think this is rather doubtful, as, although with steam it would volatilize at a lower temperature, its own volatilizing point is about 200 degrees Cent. or twice the temperature of boiling water—a temperature to which tea never attains. But, even should it entirely volatilize I don't think it is wise to give the impression that antiseptics are used in the manufacture of tea. There are, besides, two kinds of salicylic acid—one derived from certain plants and one manufactured artificially from sodium phenate in a current of carbonic acid gas. Although the latter form is chemically identical with the natural salicylic acid, bacterially as well as physiologically they are quite distinct.

Is the cost the same?

The cost of natural salicylic acid is 1s. 6d. an ounce. The artificial costs 3d. an ounce. The permanganate of potash that I have recommended for cloths, etc., costs about 10d. a lb., or less.

Mr. Bamber indicated that he did not think there was anything more to say. Mr. Mann's paper made some excellent suggestions, some of which might possibly be investigated here with regard to their applicability in Ceylon.

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,

*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

## TEA IN AUSTRALIA.

The *Australasian Grocer* reports:—

SYDNEY, February 18.

Tea has had a fair share of attention, but up to the present this market has by no means visibly responded to the excited conditions prevalent at Colombo. Holders, however, are exceedingly firm in their ideas, and for this reason the volume of private business has somewhat slackened, as buyers have been content to devote their attention almost exclusively to auction sales.

The early days of the month witnessed a distinct improvement in this market. It soon became evident, however, that the vigour experienced with the advent of the new year was not sufficient to last to St. Valentine's Day, and during the last week private business has fallen into the same dull state which characterised the trade during the latter part of last year. Buyers are turning their attention almost exclusively to auction sales, and the eyes are picked out of each catalogue as it makes its appearance. Notwithstanding this, however, importers regard results as more favourable than they were a month ago. Almost daily cables are being received confirming the strength of the Colombo market, and at the moment of writing intimation is to hand stating that cost is high, and that common Pekoe Souchongs show a selling equivalent of 7½d., and common Broken Pekoes 8½d.

MELBOURNE, February 19.

The tea market has also been firm, and it should be advantageous for storekeepers to secure stocks, as in all probability a general shortage will be experienced during the next few months. Eastern produce has also firmed up considerably.

Prime costs at producing centres are reported to be very high, and the local market has responded to some extent. All classes of Indian and Ceylon teas are firm, and Chinas also have been bought for blending purposes. Good Ceylons have sold up to 1s. 5d., and several lots have brought 1s. 2d and 1s. 3d. Nothing under 6½d. is on the market. Indians also have been in demand, and good sales have taken place at an advance of fully 1d. on rates of two months ago. The Chief demand seems for a good leafy tea, without special regard to liquoring quality.

ADELAIDE, February 18.

Teas have seen active business since last writing. The "Cooney-anna" brought down some 700 packages of Indians and Ceylons, and these were eagerly taken up to cover orders in hand. Every desirable line offered on the open market found buyers at margins satisfactory to importers.

BRISBANE, February 17.

In teas a strong demand has been the means of firming prices, and good value at 8½d. to 10d. is now hard to get. Some fine teas at 1s. to 1s. 3d. are offering.

## MR. YUILLE AND CEYLON TEA.

### PRAISE FOR OUR PRESENT METHODS.

The *Times of Ceylon* (March 25) says:—

Mr. Yuille, well-known in connection with Indian green tea, and who has recently joined the firm of Messrs. George White & Co., brokers, London, leaves for England to-morrow by the *Oceana* after a very pleasant stay in the island. He will carry away many recollections of the Ceylon planters' hospitality. To a representative of the *Times of Ceylon* this morning Mr. Yuille remarked that he had visited a great many estates, and, though he had seen plenty of green tea, he had naturally come across a good deal more black tea. As to his opinion of our tea he observed: "I think the finished teas are very good; but I noticed that just now less tea is being made everywhere. I noticed that the planters were making black tea very carefully."

"You mean they are not plucking coarse?"—"Not exactly. They are plucking carefully, but you could hardly call it fine plucking. I further noticed that there was much more attention paid to cultivation than was the case a year or two ago. I saw a great deal of manuring being done, and I was very much struck by the attention paid to this. In India manuring is not carried on so extensively, partly because the influence of the climate is different. But at the same time I think manuring will be taken up more extensively in parts of India before very long."

## NO LARGE INCREASE IN CROP.

Speaking of the output of tea, Mr. Yuille observed: "There is not likely to be a very large increase in the crop this year, although there is no likelihood of a tea famine, so far. The weather and the state of the bushes are against a large crop; and, moreover, the present method of plucking does not induce to a large crop."

## THE DUTY ON TEA.

Mr. Yuille thinks the situation as regards the tea duty at home has been somewhat modified by the recent defeats of Government in bye-elections. "There is more prospect now of Government revising the Budget and making it a popular one; and the tea duty will probably be one of the first to be reduced." Alluding to the present price obtained for Ceylon tea, he said: "Of course it is satisfactory, and I think the present range is likely to continue. There do not seem to me to be any prospects in the coming season of any excess of tea in any way from any country. I don't see where the excess would come from at all."

## THE CESS.

As regards the cess question, he had nothing to say, except that "the cess purely a matter for the planters to settle amongst themselves. I don't wish to say anything controversial," he added with a laugh.

## MARKETS FOR CEYLON TEA.

Like many other people Mr. Yuille is of the opinion that "America is the best field for Ceylon tea at present, especially with reference to green teas. America and Russia are the countries where you should look for expansion."

## THE PERSIAN TARIFF.

On recent telegrams with regard to the new Persian tariff, Mr. Yuille made the following statement:—"I think that the Persian tariff will have a detrimental effect on the Indian tea output. Before this we imported between four and five millions of tea into Persia direct, and now it will be impossible to say by how much that amount will be decreased. It is a fortunate matter, however, that this has happened at the end of the season, because matters will have an opportunity of righting themselves before the new season opens."

## TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, February 26, 1903.

Flavouring Ceylons were  $\frac{1}{2}$ d. dearer on Tuesday at London. This marks an advance from the lowest point on medium-priced flavouring tea of 2d. per lb. The same thing may be said of common teas. Spot stocks in first hands are now practically nil. Any wholesale house that has to come on the market for teas, it is said, will have to buy on the basis of foreign quotations.

MONTREAL, February 26, 1903.

The market is quiet. Arrivals of Ceylon greens on this market have been fair, and cheapest Japans have also been coming in. There is very little movement in the latter, however, the price being too high; in a small jobbing way, 18 to 18½c. is about the lowest. Small exports to the United States are still in progress, and it is reported that 400 packages of Oolongs and 100 packages of Ceylons have been sold to a Chicago house.

## DRAWBACK ON COFFEE AND CHICORY MIXTURES.

The following memorial, which has been signed by leading firms in London, Liverpool, Manchester, and Glasgow, has been sent to the Chancellor of the Exchequer through the London Chamber of Commerce:—

To the Right Honourable C. T. RITCHIE, M.P.,

Chancellor of the Exchequer, Downing-street, S.W.

The memorial of the undersigned merchants, dealers, brokers, distributors, and manufacturers of coffee and chicory, members of the London Chamber of Commerce, and others, humbly sheweth that your memorialists are actively engaged in various branches of the coffee and chicory trade, and are desirous of extending the exports of such articles. That they are unable to extend their business in exporting or supplying for ship's stores these articles on terms which will enable them to successfully compete with the traders of other countries, primarily because no drawback is granted

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

on mixtures of coffee and chicory. That it is submitted that the circumstances connected with the trade are such that it ought to be possible, consistently with the interests of the Revenue, to roast, grind, and mix coffee and chicory and export the same, subject to a drawback. That in view of the convenience and great advantage which the trade would gain from the suggestion in the foregoing paragraph, your memorialists, being aware of the different scale of duty levied, would be satisfied if the drawback on mixed coffee and chicory were assessed on the lower rate of duty, viz.:—13s. 3d. per 100 lbs. of mixture, and not 14s. per 100 lbs. as allowed on pure coffee, thus obviating the necessity of any declaration being made as to the proportion of chicory in the mixture, or any necessity for a Government analysis to check such declaration. That it may be pointed out that, if the facilities indicated were granted, a considerable export trade might confidently be expected with foreign countries and British Colonies (in particular those of South Africa), where it is well-known there is a large and growing demand for coffee and chicory, which is at present largely supplied from the Continent. That your memorialists are aware that many articles coming under the imperial tariff have the advantage of facilities of the kind which are asked for in regard to coffee and chicory mixtures, and they venture to affirm that no practical difficulties will arise if similar facilities of the kind they propose are granted. That chicory is recognised as beneficial, and as a legitimate article to mix with coffee, and is actually required by the Admiralty in their contracts for supplies. That while your memorialists are aware that coffee and chicory can be roasted, ground, and mixed under bond, the existing regulations and expenditure of capital upon a bonded factory for this sole purpose make the trade unremunerative, and were the proposed drawback granted the same would be unnecessary. Your memorialists therefore pray that you will give their representations your most favourable consideration, and give effect to their proposals in connection with the forthcoming Budget. And your memorialists will ever pray, etc.

### TEA IN NATAL

The article by "Nemo" in the *Natal Mercury*, quoted recently in our columns has elicited criticisms, from which we extract the following:—

"PLANTER" writes:—

I was much struck with the article on the "Natal Tea Industry" by "Nemo," in your issue of the 26th ultimo. Wholesome criticism from those who have been connected with industries attempted in Natal will at least show those who have the conduct of these affairs that there is still room for improvement in their products, while the facilities of climate, labour, soil, and proximity to markets are nine-tenths as great as the countries whence the whole world has obtained its supply for a century.

No Indian or Ceylon tea-maker would accept the carelessly-picked leaves that are sent in from the field here, and the class of machinery will have to be very much improved, and looked after by experienced men, before Natal can approach the standard these other countries attained ten years ago. I do not mean to say that it will take ten years to attain this standard—it need not take ten months—but both the field and the tea-house must be under the control of competent men, and your field will then produce more and your machines will turn out better quality. What "Nemo" has pointed out was patent to me when I came to Natal three years ago, and I have had the opportunity of comparing notes with the sons of brother-planters from India and Ceylon who have been brought up on tea and coffee estates, and know their business thoroughly: and they have gone back with little fear of any competition from Natal while the present state of things lasts.

"ASSAM PLANTER" writes:—

With "Nemo's" article on "Natal Tea," as a planter of long experience with one of the largest tea companies in Assam, I fully agree. Natal planters will not have an experienced Assam. Indian, or Ceylon planter on their estates as I found to my cost when I arrived, thinking that with long and up-to-date experience and first-class references I should have no difficulty in obtaining a billet. I was offered the handsome salary of £8 per month! Having a trade to fall back upon, I preferred to work at it, rather than

give my experience and knowledge for such pitiful competence. The methods of pruning and plucking, as described by 'Nemo,' would not be tolerated even on a native garden in Assam, and might well be described as murdering the bushes. To hack at a tea bush with the 'largest size pruning knife available' can only result in a large percentage of the 'new wood dying back,' and forming knots, which it should be every planter's object to do away with. Plucking eight leaves and a bud is absurd, as the lower end of the shoot will have formed 'wood' by the time eight leaves are out, and it is not usual to make tea out of wood, although, of course, it will make up the bulk, and help to swell the quantity. Tea, with the quantity of 'sticks' that most Natal teas show, would be almost unsaleable on the London market. I have before me some Natal tea, styled 'Pekoe'; it should be styled Pekoe Souchong, a much inferior grade. Pekoe should be a clean, whole-leaved tea, free from 'sticks' and red leaf, and with a few 'tips'; this is partly made up of sticks and red leaf, the balance being a broken and coarse Souchong leaf—it would not be considered on the London market even a fair Pekoe Souchong. 'Nemo' is quite right in stating that, by plucking two or three leaves and a bud, the quantity is not sacrificed; this has been proved by experience, and the old custom of plucking four or five leaves and a bud has long been discontinued by up-to-date planters.

### COFFEE IN DISTANT LANDS.

**Jamaica.**—The annual report of the Jamaica Board of Agriculture and Department of Public Gardens and Plantations for 1901-02 states:—

A number of different varieties of coffee are grown (in Hope Experiment Station) rather from the interest attaching to them than from any expectation of their being of economic importance. The plantation of common coffee is maintained chiefly for purposes of instruction

### CINCHONA IN JAVA.

The yearly report of Government cinchona plantations in Java for the year 1901 states that the expectations that after a number of years remarkable for the amount of the rainfall the year 1901 would prove a dry one were disappointed. The quantity of rain was indeed below the average for the previous four years, but the number of wet days was very nearly equal. The easterly, monsoon can hardly be said to have set in at all. From the beginning of January to the end of February heavy winds prevailed, and on the 12th and 13th of the latter month a storm of unparalleled violence raged throughout the whole of the island, and created great havoc in the plantations by the uprooting of trees and the breakage of branches, besides doing much damage to the nurseries and buildings on the various estates. In the report a number of photos are given showing the disastrous effects of the great storm. The unusual violence of the tempest caused the greater portion of the natives to desert some of the plantations, so that there was not sufficient labour to collect the broken branches immediately after the storm, though this was very desirable. In order to give some idea of the damage done the report states that 203,343 half-kilos. of wet bark were gathered. The year was, on the whole, too wet, and the nurseries suffered from the excess of rain.

The number of plants in the ground amounted at the end of the year to 2,609,000, compared with 2,567,000 and 2,562,000 for the two previous years 1899 and 1900. This is an increase of 47,000 upon the number of the year before. In the nurseries there was estimated to be about 17,465,000 plants, compared with 1,707,000 and 1,731,000 for the two years that preceded. The whole of this number of plants will be transplanted by 1904. Owing to the unfavourable weather the blossom was scant, so that only a comparatively small quantity of seed could be put upon the market.

During the year under consideration fresh ground was not opened; on the contrary, owing to some of the plantations being dug up the land under cultivation diminished to the extent of about 18 hectares. The total area cultivated was 1,162 hectares (= 2.47 acres). The cinchona bark gathered in 1901 amounted to 1,426,953 half-kilos. Of this quantity 738,177 half-kilos. were shipped to Holland, 685,577 half-kilos. were delivered to the factory

at Bandoeng to be utilised for the manufacture of sulphate and hydrochlorate of quinine, and 3,159 half-kilos. were supplied to the army medical service of the Dutch East Indies. Of the total quantity delivered to the factory 124,827 half-kilos. were used to make 3,112 kilos. of sulphate of quinine, and 600 kilos. of the hydrochlorate, both destined for the Government stores. The remainder of the bark was employed for the manufacture of quinine to be sold by auction at Batavia by the firm of Tiedeman and van Kerchem. The amount of bark gathered in 1900 was 1,123,530 half-kilos., so that the year 1901 showed an increase of 303,423 half-kilos. Of the total shipped to Holland 602,371 half-kilos. consisted of *Cinchona ledgeriana*, with an average contents of sulphate of quinine of 6.63 per cent.; for the previous year the quantity was 558,149 half-kilos., and the quinine contents 7.04 per cent. The average contents of the bark used for the quinine sold publicly was 4.88 per cent., and for that supplied to the Government it was 7.06 per cent. The average contents for the whole of the bark consumed was 5.32 per cent., compared with 4.37 per cent. in 1900. The total crop of *Cinchona ledgeriana* was 1,182,156 half-kilos., with an average contents of 6.27 per cent., which is equivalent to about 37 metric tons of sulphate of quinine, compared with 26 metric tons in 1900 and 25 tons in 1899. The land devoted to the culture of this species of bark was 885 hectares (2.47 acres), and taking the average about 42 kilos. of sulphate of quinine were obtained per hectare, the average yield of bark being 1,335 lbs., of which the quinine contents were estimated at 6.27 per cent. Of *Cinchona succirubra*, or pharmaceutical bark, 135,806 half-kilos. were shipped to Europe, and 3,159 half-kilos. delivered to the army medical service in Java. About 275 hectares of land are devoted to this variety, and the yield was about 240 lbs. per hectare. Of the consignments shipped to Holland of *C. ledgeriana*, the highest quinine contents was 9.10 per cent., and the lowest 3.10 per cent. For the goods supplied to the Bandoeng quinine factory the figures were 10.70 per cent. and 3.10 per cent. respectively. As in former

years, the plantations at Tjibeureum produced the largest quantity of bark, supplying Europe with 194,575 half-kilos. and Batavia with 125,723 half-kilos. The total, therefore, was 320,298 half-kilos., equal to 1,840 lbs. per hectare, or 61.7 kilos. of sulphate of quinine, compared with 1,285 lbs. per hectare, or 44 kilos. of quinine, in 1900. In the 10 public auctions in Holland during the year 1901, of the bark gathered in the previous twelvemonth the average price realised was 0.51fl. (= 1s. 8d.) per half-kilo., compared with 0.68d. in 1900 and 0.48fl. in 1899, and the total gross receipts on sales effected was 395,933fl., compared with 437,919fl. the year before. The report states that a large American firm has entered into a contract for five years with the Bandoeng quinine manufactory for a supply of cinchonidine at 24fl. per kilo. During the year in question, notwithstanding the extra arrivals from Java at all the public auctions held at Amsterdam, the bidding was brisk, and the prices, though slightly lower than last year, were fairly satisfactory. The total amount sold was about 6,599 metric tons of bark, which was 1,362 tons more than was disposed of the previous year. Of this quantity less than 400 tons were consigned by the Government cinchona plantations in Java. The latter cannot, therefore, be accused of glutting the market or lowering prices, as the bulk of the bark sold was shipped by private planters. During the year nine public sales were held in Java of the quinine manufactured by the Government manufactory. The average price realised was 21.31fl. per kilo. At London, during the same period, the markets' rates fluctuated from 22.92f. (= 1s. 1d. per oz.) to 28.66f. (= 1s. 4½d. per oz.). The prices obtained at Amsterdam were practically nearly the same. The report, in conclusion, states that the manufacture of quinine in Java is to the advantage of the private planters, since an equivalent quantity of cinchona bark is kept off the European market, and the diminution of the exports from Java has a tendency to cause prices to rise abroad. The Government therefore proposes to increase the capacity of production of the Bandoeng quinine factory.

## AFTER DINNER

thirty drops of Seigel's Syrup ensure complete digestion, and prevent the pain and torpor consequent on indigestion. Seigel's Syrup builds health on good digestion, for 'tis not what you eat, but only that which you digest nourishes your body and sustains your life.

# SEIGEL'S SYRUP

"For several years,"  
says Miss Ethel Williams,  
of 9, Wemyss St., Sydney,

N.S.W., "my life was rendered miserable by indigestion and general debility. I could not sleep at night and was often afflicted with severe sick headaches and bilious attacks.

An old friend recommended Mother Seigel's Syrup.

Within a week I discovered it was doing me substantial good. Eight bottles completed my cure."

## AIDS DIGESTION.

MARKET REPORT.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated March 13th, 1903, says :—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903 .. ..	1,225,738	885,225	61,263
1901-1902 .. ..	1,356,973	928,065	63,935

32,084 pkgs. INDIAN } Total 56,824 packages were offered in public auction  
23,253 „ CEYLON } this week.  
1,487 „ JAVA }

Now that practically the whole of last year's Indian Tea crop has been shipped and we know the extent of it, the industry is naturally concerned with the probable size of next season's supply, not only from India but also from Ceylon. In considering this it must be borne in mind that very little increase has taken place in the cultivated area since the year 1899. The total acreage in the two countries in the former year was 893,658, and in 1901—911,767, and it is probable that a good deal of that may at the present time comprise many vacancies. It must also be remembered that there will probably be from 10 to 20 million lbs. of Green tea manufactured during the coming season, and as this is supplied mainly by estates at low elevations, the supply of common tea will be proportionately reduced. In addition, the labour difficulty in India may tend to reduce the outturn.

Taking all the above points into consideration, and remembering that consumption has steadily increased both at home and abroad, it seems doubtful whether we shall be overweighted with tea next season, unless planters make the fatal mistake of going in for coarse plucking, a system which was attended with such disastrous results some two or three years ago.

INDIAN.—The slight reduction in the auction has had a somewhat beneficial effect, the weakness noticed in common teas having disappeared, while there was also improved competition for other grades, finest kinds especially marking firm prices. 20 “last of the season” invoices have already been sold.

Week's av. of tea sold on Garden Account 1903, 27,177 pkgs., av. 8-28d. 1902, 35,909 pkgs., av. 7-48d.

Tea sold on Garden Account 1st June to date 1902-3, 934,912 pkgs., av. 7-42d. 1901-2, 1,067,721 pkgs., av. 7-77d.

CEYLON.—The market was perhaps a trifle less animated than last week, although there was no quotable alteration in price, bidding being fairly well distributed; the quality of some invoices showed a tendency to fall off. Average for week 7-60d, against 7-02d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 194,481 pkgs., av. 7-61d. 1902, 238,909 pkgs., av. 7-17d.

JAVA.—The auction passed steadily with good general competition.

CINCHONA.

Rather larger supplies than usual were offered at the London auction on Tuesday, of which about half consisted of South American bark, chiefly Calisaya. There was a brisk demand, and practically everything was sold at a further advance compared with the last London sale, the average unit being fully 1½d, against 1¾d per lb.

The following table shows the quantity of bark offered and sold:—

	Packages Offered.	Packages Sold.
Calisaya cinchona .. ..	1,272	1,272
Soft Colombian cinchona .. ..	557	511
East Indian cinchona .. ..	601	530
Java cinchona .. ..	317	190
Ceylon cinchona .. ..	69	60
	2,816	2,563

The following were the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
American factories .. ..	114,322
Messrs. Howards & Sons .. ..	59,904
Imperial quinine factory .. ..	52,560
Frankfort and Stuttgart factories..	44,508
Brunswick factory .. ..	27,596
Mannheim and Amsterdam factories	25,624
Paris factories .. ..	3,000
Druggists, brokers, etc. .. ..	29,134
Total quantity sold .. ..	356,648
Bought in or withdrawn .. ..	111,690
	468,338

The prices paid for sound bark were as under:—

JAVA.—Ledgeriana, original stem chips, 5½d to 9¾d, and root 7¾d to 7½d per lb.; Succirubra, 4¾d to 8½d, and root 4½d to 7½d.

CEYLON.—Succirubra, original stem chips, 3d to 3½d, root 3½d; Crown, original stem chips, 6¼d, and branch 3d.

SOUTH AMERICAN.—Soft Colombian (511 bales) imported in 1882 and 1883 (Z.O. and UU) sold at from 2d to 4d per lb., 46 bales being bought in. Bolivian cultivated Calisaya quill sold at from 4½d to 10½d, and broken quill and chips 3½d to 7½d per lb.

EAST INDIAN.—Red stem chips and shavings 2½d to 3¾d, renewed ditto, 3d to 5¾d, root 3¼d to 5d, and siftings 2½d; Ledgeriana, original stem chips and branch, 3¾d; Officinalis, stem chips and shavings, 2¾d to 5¾d; renewed 5½d to 7½d; root 6½d to 7¾d; and branch 4d to 4¾d per lb.

We understand that the soft Colombian bark (Z.O.) referred to above was valued at 4s per lb. when imported in July 1882, and contained 3 to 4 per cent. quinine sulphate. The UU's were

Agents for LEA & PERRINS'

WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S LTD.

By Special Warrant  
Purveyors to

His Majesty  
The King.

CELEBRATED OILMAN'S STORES.

valued at the same time at 2s to 2s 6d, and contained  $1\frac{1}{2}$  to 2 per cent. q.s

At the end of the month it is expected the London stock will have been reduced to about 5,000 packages, only half of which is manufacturing-bark, the remainder being druggists' grades, etc. The shipments from Java for the first half of March amount to 646,000 Amsterdam lbs.

### QUININE.

The market closed flat and lower last week with sales of second-hand Germans sulphate in bulk at 1s  $0\frac{3}{4}$ d per oz, the depression being due to "bear" influence. This week prices opened firmer, with moderate sales of the usual German brands at 1s 1d to 1s  $1\frac{1}{4}$ d, spot, May delivery at 1s  $1\frac{1}{4}$ d, and August 1s  $1\frac{1}{4}$ d. Since then no transactions of importance have occurred, spot value being 1s 1d. To-day the market is quiet, owing to rather heavy shipments of bark from Java.

### CARDAMOMS.

There has been a better demand than is usually the case between the auctions, especially for the larger sizes. For good seed up to 1s 6d is wanted. The annual report of the Planters' Association of Ceylon for the year ending February 17, 1903, states that the crop shipped during 1902 was 615,922 lbs., and, but for the prolonged wet weather during the last quarter, it would in all probability have been much larger. The difficulty of curing on the estates in wet weather delayed despatch, and led to large quantities being cured in Colombo. The shipment during the earlier months of 1903 will be heavier, and, in consequence, add considerably to its crop-despatch account. Prices have been generally lower than last year, but growers, who are fully aware of the danger of the supply exceeding the demand, will, it is expected, take steps for making their produce better known throughout the world. The estimate of crop for 1903 is 650,000 lbs.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, APRIL 11, 1903.

[No. 15.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 17th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

**Coorg.** POLLI BETTA, 8th April.—*Weather*—It has been constantly cloudy, but no more rain on this side, though other parts seem to have got some. *Crop*—The rain already reported has brought out a sprinkling of blossom to-day which appears quite healthy. There is more labour than is required in the District. *General Health*—Very fair.

#### CLEAN TEA.

AFTER dealing with the subject of withering and its influence on enzymes, Mr. MANN remarks in his latest treatise that his investigations have shown that there exist, in practice, in fermenting tea-leaf two classes of fermentation. Of these the first is the natural fermentation caused by an enzyme, which is that which it is desired to obtain; the other is caused by microbes, which is harmful, causes the souring or putrefaction of the leaf, and which results from the introduction of organisms from the air, from the hands of the coolies during the various manipulations which the leaf has to undergo, and from dirty benches, cloths, floors, etc., with which the leaf may come in contact. These, he observes, "it is wished to eliminate as far as possible, if not entirely, as to these microbes the various taints which the tea may take on are due." The reason assigned is a good one, but there is another quite as forcible. In these days of dread germs and microbes anything that is suggestive of dirt is suggestive also of disease. Mr. MANN states that there are three possible methods of eliminating or very largely eliminating this latter class of fermentation, while retaining the former.

The first of these is either by reducing the temperature of fermentation, or by raising it; the second by the addition of antiseptics which can be afterwards driven off in the firing, and which will prevent one and not the other; the third is by such careful manipulation that the minimum of organisms are introduced from various sources. If it were possible, he says, the third or *aseptic* method is infinitely the best. But under present conditions of working, a complete avoidance of microbes is impossible. Nevertheless, he thinks most strongly that a great deal more might be done than is done to obviate the introduction of outside organisms.

"Right here," as our American cousins would say, comes the suggestion of dirt, and this in terms that do not quite harmonise with advertised announcements as to the cleanliness of Indian (and Ceylon) methods of manufacture, as contrasted with the dirtiness of the Chinese process. Mr. MANN states that from the time the leaf is plucked it is open to contamination from various sources. The bags which are hung round the waists of the coolie women, during plucking, are a fruitful means of contamination, which can be and *is* avoided on some properties by the use of baskets instead of bags to pluck with. That is all right, if the baskets are kept clean. However well done, washing will not always remove objectionable germs entirely. Boiling, at this stage, is out of the question in regard to the leaf, but not so in regard to the various articles used during the process of manufacture. As Mr. MANN remarks, "if a roller, if a fermenting floor, if a wheelbarrow used to carry leaf from one part of a factory to another be merely washed, however thoroughly, it will retain enough microbes to carry the taint on for any length of time. That such a remark should be deemed necessary, is evidence that Mr. MANN has seen that cleanliness is not always seen to as it should be in tea factories. He says that periodically, say once a week at least, during the season all the articles mentioned above, and others of a similar sort, should be scalded and scrubbed with boiling water. Then he goes on to say that the most fruitful sources of taints are the wet cloths that are still used to cover the fermenting leaf in many tea-houses. These cloths he describes as one of the most abominable institutions in a tea factory. After a single day's use they become simply putrid owing to the tea juice, which they absorb, forming a breeding ground for numberless

bacteria. In some places they are scalded and cleaned every day, but although this removes a large part of the objection, it does not entirely eradicate it. The reason for their use, of course, is the necessity of keeping the atmosphere round the fermenting leaf saturated with moisture, and this the wet cloths undoubtedly accomplish. But the same object would be served by keeping the cloth right away from the tea by a slight bamboo framework as was first suggested three years ago by Mr. BAMBER.

A still better system for those factories is that the fermenting beds are separated by cement partitions, the frame with its wet cloth being simply supported on the cement. The same purpose would be served by having wet cloths or "tatties" hung round the outside of the walls of the fermenting house, these walls, of course, being partly open, so that a draught is always playing through the wet hangings. Whichever method is adopted, says Mr. MANN, the wet cloths in contact with the tea, should be regarded as things of the past which can have no place in a factory which aspires to make the best possible tea out of its grade of leaf. What he pleads for is *clean* methods, and any planter who thinks the matter over will admit that the plea is a sound one. No taints are wanted in tea; nothing is wanted that may affect adversely either the flavour or the purity of the leaf. From beginning to end the manufacturing process should be of the cleanest, and the practice of absolute cleanliness should be so universal in Indian tea factories as to justify every statement made to the public, to the effect that the methods adopted are above suspicion. In many factories this is fully understood, but it should be so in all. Hence we venture to lay special stress on Mr. MANN's remarks on this point, which is one that may easily have escaped the notice of a few, at least, among tea-planters.

## THE BOARD OF TRADE RETURNS.

FEBRUARY 1903.

**Cocoa (raw).**—There was a sudden contraction of supplies of cocoa in the United Kingdom during February, and the bonded stock ceased to accumulate.

In the first two months.		1903.	1902.	1901.
Imports	...	11,200,785	17,511,895	10,363,440

## A TEA CESS IN TRAVANCORE.

**A Tea Cess.**—It is officially notified for general information that His Highness the Maharajah of Travancore has been pleased to sanction the levy of a cess of one-fourth pie per pound on all tea exported by sea from the 1st April, 1903.

We must compliment the Travancore Government upon their promptitude. Presumably, it is intended that the proceeds of the cess shall be placed at the disposal of the Tea Cess Fund Committee that is to be formed in Calcutta.

## COFFEE NOTES.

**The Coffee Market.**—The coffee market is quiet all around, says *Tea, Coffee and Sugar* of March 11. The volume of business has diminished very much, and as the present time naturally is a season of dullness the lull need surprise no one. Besides, it is only a natural reaction from the excessive activity that prevailed during January and February. Meantime, prices remain unchanged, and should remain so. The lower grades are quite scarce and in demand, and hence warrant the confidence that they will approximate more and more to the price demanded for the higher grades, which are so superabundant.

The market this week has been paying considerable attention to affairs in Brazil. Sterling Exchange has shown an upward tendency and there seems much dissatisfaction among the planters. It is thought now that the proposition to destroy one-quarter of the coffee crop in Sao Paulo by legislative order may be seriously entertained. The enforcement of it, much doubted, would be interesting to watch.

In Brazil the market closed firm at Santos and easier at Rio, where Rio No. 7 was offered at 6 $\frac{3}{4}$ c. c. and f. In spot invoices in New York the market closed firm for Rio No. 8 at 5 $\frac{3}{4}$ c. and Rio No. 7 at 5 $\frac{1}{2}$ c. Rio No. 4 closed 6 $\frac{1}{4}$ c. and Santos No. 4 6 $\frac{1}{2}$ c.

The option market has been under the influences noted above. Transactions have been moderate in volume and at the close at rising values, especially for July. The expectation is that the world's visible supply will show a considerable reduction at the end of the fiscal year in June. Bull sources estimate it at 1,250,000 to 1,500,000 bags.

In Milds a slow business has been noted. The expectation is that presently much mild coffee must come forth from Mexico, Columbia, and Venezuela. But on top of this belief comes the report that Venezuelan growers are indisposed to send out their coffee because of the high export duty the Government has imposed upon coffee. They say that this is prohibitive. So, all in all, the limited supplies in the market find no eager buyers. Good Cucuta last week was to be had from 8 $\frac{1}{2}$  to 8 $\frac{3}{4}$ c. East India coffees are unchanged.

\* \* \*

**A Coffee Trust.**—An international coffee trust, containing Brazilian, English, and Italian capital, is said to be in process of formation, says the *Merchants' Review*. Its object is the increase of the value of coffee, as a consequence of a reduction of the production. At the back of the trust will be the Brazilian Government, and the promoters hope to advance prices 30 per cent.

It is a large programme the trust has been set, and we fear that many a day will go by before success perches upon its banners. About \$60,000,000 would be required to permit any combination to control a year's production of coffee, and about \$50,000,000 more would be required for the control of the visible supply. Of course as soon as it is known that a combine with abundant capital is in the field for the purpose of bulling coffee prices, there will be a series of hot races between the planters of the various kinds of coffee for the honour of turning out the greatest possible quantity every season. There will be every inducement for planters all over the world to double their output, for will not a heavily-financed syndicate be standing ready to absorb the supplies as fast as they come to market?

We believe that the people who are anxious to see something done for the coffee market will have to "guess again."

\* \* \*

**U. S. Coffee Tax Advocated.**—A correspondent of the *Sun*, writing from Schenectady, argues in favour of a reimposition of the coffee import tax, which finally disappeared in 1872. The correspondent is, says the *Merchants' Review*, one of those Bourbonian intellects that believe that a nation is never so well off as when it is well taxed, and he has a notion that our sacrifice of the duty all these years was a simple-minded move which caused the transfer of the duty from the treasury of Uncle Sam to the Brazilian treasury. It is strange how ill-informed people are so eager to rush into print. A little knowledge is indeed a dangerous thing.

The duty on coffee prior to 1870 was five cents a pound; the average import price in this country is about six cents—and that includes all kinds. Now, according to the *Sun's* Schenectady correspondent, Brazil took advantage of the repeal of our coffee duty to slap an equal tax on the export outlet, and consequently the Brazilian planters are furnishing their product free. If five cents goes to the Brazilian Government, at least one cent must be set aside for bagging and freight charges, hence it is obvious from the Schenectady view that the coffee-growers of Brazil have been for years producing coffee free of charge. It is up to the Schenectady genius, a Walter Ballard, to tell the waiting world how the planters manage to live.

\* \* \*

**Coffee 250,000 Bags Less.**—The world's visible supply of coffee March 1 was, says *Tea, Coffee and Sugar*, 12,517,266 bags, and decreased, therefore, 251,148 bags, the visible supply February 1 having been 12,769,414 bags. The decrease was accurately gauged as March 1 drew near, but is far from the guess ventured February 1. It was then expected that the shrinkage would be fully as large as that during January, but it develops that it is 200,000 bags short of the January shrinkage. It would have been 300,000 bags short had not the Arbuckle Bros. at the end of the month come into the market purchasers of 100,000 bags of coffee.

The coffee movement on the whole was satisfactory. Europe, however, has never before held such a supply of coffee in stock. In the eight principal ports this was 7,451,662 bags on March 1, against 7,346,873 bags on February 1, a top notch figure. The arrivals during February were only 803,587 bags against 961,069 bags during January. The deliveries of coffee during February were 698,798 bags, against 782,345 bags during January. The deliveries during February 1902 were 418,155 bags.

In the United States stocks March 1 were not so large as on February 1. There has been a decrease of 175,000 bags during the month closed. The figures are 2,324,304 March 1 and 2,500,241 February 1. The arrivals were 359,158 bags Brazil and 86,621 other kinds, a total of 445,779 bags; the arrivals during January were 524,593 bags. The deliveries were 541,619 bags Brazilian, 80,097 bags other kinds, a total of 621,716 and very nearly reaching the totals for January, which were 624,778 bags.

The Brazil receipts during February increased from 9,170,000 to 9,770,000 bags. The 10,000,000 bags mark will be passed very soon.

In options, while there was a considerable advance in prices during the month, occasioned by the large movements in actual coffee trading, prices on March 2 were exactly the

same as on February 2, March for instance on either date being 4.30 to 4.35.

In invoice lines Rio No. 8 has advanced from  $4\frac{7}{8}$  to  $5\frac{3}{8}$ ; No. 7 from  $5\frac{1}{4}$  to  $5\frac{5}{8}$ ; No. 5,  $5\frac{3}{4}$  to  $6\frac{1}{8}$ ; No. 3,  $6\frac{5}{8}$  to  $6\frac{7}{8}$ . Brazil package coffee roasted has become 1 cent dearer.

The visible supply of coffee on March 1 in detail, as compiled by the New York Coffee Exchange, was

Against February 1	...	...	12,769,414
Against March 1, 1902	...	...	11,179,643

Duuring & Zoon, Rotterdam, Holland, estimate the decrease in the world's visible coffee supply at 327,000 bags. They exceed the American estimate by 75,000 bags.

\* \* \*

Coffee does not appear to be doing well in Cochin. From the Administration Report for the year 1901-02 (August 16 to August 16) we learn that the total area assigned for Coffee cultivation in the State is 8,502 acres, of which only  $3,937\frac{1}{4}$  acres were under cultivation during the year. Of the cultivated area  $2,901\frac{1}{4}$  acres were under mature coffee, as against  $3,232\frac{1}{2}$  acres in the previous year. The most depressing feature of the report is, however, that which relates to production. The total yield of coffee in 1901-02 was 197,020 lbs., which represents an average of only 67 lbs. per acre of mature plants. In 1900-01 the average yield was 394 lbs. Seeing that in 1901-02 a quit-rent of Rs.12,700 was paid, planters cannot have had a happy time.

\* \* \*

Reporting on the trade of Brazil for the first half of the year 1902 the British Consul-General observes that coffee exports continue low. He adds that the world's consumption of coffee is about 16,000,000 bags; the visible supply on January 1, 1903, was 13,213,000 bags, against 10,871,000 bags in 1902. The Rio and Santos crops of 1901-02 were the largest known (yet), amounting to 15,500,000 bags. The 1902-03 crop is calculated at about 11,000,000 bags. The 1903-04 crop is very uncertain owing to frosts, and estimates range from 10,000,000 to 12,500,000 bags.

\* \* \*

In consequence of the representations of the Brazilian Government, who threatened to impose the maximum tariff on Italian goods landed in Brazil, the import duty on coffee in Italy, which was formerly £6 has been reduced to £4-15-3 per 100 kilos. (220.4 lbs.)

\* \* \*

Messrs. Hills Bros., dealers in fine coffee on Market street, note that San Francisco has been receiving lately some particularly fine coffee, grown on American soil, *i.e.*, the Hawaiian Islands. These coffee are called Kona or Hawaiian and have been held on the island and aged as Javas are. They are particularly fine in the cup, similar to Private Estate Java coffee in flavour, but much heavier bodied, as they do not become flat by standing after being drawn, and are better for blending than Private Estate Java. They are commanding almost as much money as the latter coffee, but they are fully worth it in actual intrinsic value in addition to being American coffee.

\* \* \*

Messrs. Werlin & Willits, San Francisco, report that trading in coffee for the past month has been light. The arrivals of coffee in this port from Central America have been much larger than usual this year and dealers are

holding off, believing that when stock accumulates they will be able to buy to better advantage and make better selection. Good, unwashed Salvadors as well as Superior Salvadors are in demand, and are being taken up as quick as they arrive.

\* \* \*

**Split Sales Vetoed.**—Recent frequent violations of important rules of the New York coffee exchange impelled President O'Sullivan to ascend the rostrum to announce that the sins of omission, which the trespasses in the main were, would not be countenanced. It seems that sales effected have not always been reported, to the vexation of the executive management of the exchange, and that there have been not a few "split" sales made on another basis than the official one founded on 5 points. A change in this basis has been agitated but is not generally favoured. It has been practised in a quiet way however. The rules which will now be enforced rigorously are as follows:

"Rule 3.—All offers to buy or sell coffee for future delivery shall be on cents and decimal fractions of a cent, and no transactions in contracts shall be permitted wherein the difference in price shall consist of a smaller fraction than five-hundredths of one cent per pound for each pound of coffee represented by such contract or contracts, nor shall any additional moneyed consideration whatever be allowed.

"Rule 4.—All contracts for the future delivery of coffee, under sections 88 or 89, shall be reported promptly to the Superintendent of the exchange, giving the exact time and terms. It shall be the duty of the seller to see that this report is made."

\* \* \*

**Values of January Importations.**—The value of the coffee imported into the United States during January last was \$4,567,077 compared with \$7,423,648 in January 1902; tea was valued at \$1,271,876; January 1902, \$1,105,564; spices, 722,659; January 1902, 720,675; cocoa, \$1,023,416; January 1902, \$624,090; sugar, \$4,582,254; January 1902, \$3,154,612.

Total stock in United States March 1, 2,324,314 bags against 2,188,974 bags March 1, 1902. Brazil stock in the United States March 6, in store and afloat, 2,737,787 bags against 2,437,368 bags at the same time last year. Other than Brazilian, 219,077 bags, against 264,623 bags last year.

Brazil coffee in New York March 6, 2,093,387. Stock in New York in other coffees March 6, 154,956, in San Francisco, 58,959 bags and in New Orleans, 5,162 bags. Visible supply in the world of all coffees, March 1, 12,517,266 bags.

\* \* \*

**The U. S. Coffee Market.**—The coffee market is rather mixed says *Tea, Coffee and Sugar* of March 4. For the better grades a flat market is noted but for the lower grades there is better tone and even higher prices. The recent improvement in the prices of package coffees, amounting in all to one cent, is sufficient evidence, as also that Rio No. 8 has advanced to within  $\frac{1}{8}$ c. of Rio No. 7. The consuming demand in this grade of coffee is in consequence interpreted to be large. It has, apart from its own immediate sphere, no profound influence in the market, for the surplus of the great world's surplus of coffee is in the higher grades, which are practically unsaleable. There quantity is so overwhelming. Relatively, then, these coffees are cheap and are the specially discouraging feature of the trade.

They are also the special bane of the speculative market, and were the cause last week of the heavy switching of March contracts to the more distant months. About 70,000 bags were tendered but they were nearly all returned to the issuers, who preferred to pay the heavy premium, 50 to 55 points for September, rather than accept the tenders of spot high grade Brazil coffee, which cannot be sold very well. The speculative market closed quiet and easier. Abroad the markets have no special strength, and Brazil continues to report receipts daily above 40,000 bags, and not infrequently the Santos interior receipts are above 20,000 bags. Brokers wish them to be near the 15,000-bag mark at this time.

Interest now is centered in the probable world's visible supply as it shall be proved to be on March 1. The deliveries in the United States have been about 575,000 bags and those in Europe

have been normal. The supplies from Venezuela still having to come in, it is expected that the visible supply of the world will have shrunk about 250,000 bags, which is 200,000 less than the shrinkage during January. Unless the visible supply shall show a marked change from the estimates stated, the report as it shall finally prove to be will have been discounted in the market.

In invoices the Brazil market closed with no changes of any moment. Santos, averaging No. 6, was offered at 6c. c. and f. In spot the market closed firm for the lower grades. The quotations for Rio No. 7 were  $5\frac{5}{8}$  to  $5\frac{11}{16}$ c., for Rio No. 8  $5\frac{3}{8}$ c. Rio No. 4 was  $6\frac{3}{8}$ c. and Santos No. 4  $6\frac{3}{4}$ c.

In Milds buyers are waiting for developments expected on the arrival of coffees from Venezuela this week. The market was flat. Good Cucuta was to be had for  $9\frac{1}{2}$ c. Coffees of East India growths are showing an upward tendency. Again the demand seems to have crept up to production.

\*                      \*                      \*

**The Blending of Coffee.**—Mr George P. Power writes in *Tea, Coffee and Sugar*:—"Do not some coffees need blending?" This is a large question to answer and for the sake of an argument I answer "yes."

Any one plantation will produce in different years many different characters of coffee owing to the climatic changes of each year being different. A buyer of a certain chop mark of coffee under that same chop mark another year, but should buy in the cup from his stock sample. Granting also that some coffees are too rough and others of the same nature or section too insipid. In the hands of the expert they are properly balanced and put out for what they are. But the patented or flim flam blender forgets its arithmetic as learned in school and instead of saying 1 Bogota and 1 Bogota equal Bogota, says 1 Bogota and 1 Bogota equals Java and sells to the grocer at Java price. In fact his arithmetic gets so bad that he figures that 1 Santos and 1 Bourbon equals Mocha and Java and away he goes to the Grocery Trade with his *ne-plus-ultra* Mocha and Java but remembers his arithmetic well enough to ask the Mocha and Java price. I could quote numerous examples on this subject but these two will do. An actual case I will quote: A certain retail firm asked me to come, draw and grade their line of (5) five coffees. I did so and stated to the head of the firm that I should judge the five coffees to be all about the same nature, four of them being of a Santos nature, the other being Santos and Bourbon, all ought to cost about  $12\frac{1}{2}$ c. roasted. Mr. Buyer flew mad at once and said he paid 26-20-17-15 and  $12\frac{1}{2}$  for the different grades. My answer to him was: My dear man, you did not send for me to have me tell you what you paid for your coffees as that is beyond the power of any mortal, but what you ought to have paid for the coffees I can tell you and that is from 12 to  $12\frac{1}{2}$ c. roasted." Give my grocer a chance and he can sell coffees but when he is flim-flammed when he gets his goods how can he develop business. Some firms even try and foist their product into the public at a fictitious price because their being wiser than there fellow men have removed all the poisonous elements from the coffee bean.

How anyone with any brains can be deceived with such an argument puzzles me. Green coffees I grant contain certain elements of a decidedly purgative nature when treated with cold water and let stand twelve hours, in fact, this being an old French remedy for constipation, 1 cup coffee to 6 cups water being the proportions. But remember the dose is only 1 tablespoonful if you wish to try it. Green coffees after they pass the fire and become roasted contain nothing injurious except what will be brought out by hard boiling more than five minutes.

All anyone in making coffee wishes to extract from the ground bean is the essential oil which mingling with the boiling water produces the so-called coffee used at the table. By hard boiling you go farther and extract what you do not wish, the acid or alkaloid which nature placed there to protect the germ from the ravages of insects during the process of reproduction. It is a well known scientific fact that nature surrounds the germ of any seed with acids or alkaloids to protect it from insects or worms during the time which it is placed in the ground to reproduce or germinate again, and when by misuse you bring these down into your solution you find the result bitter and unpalatable and condemn the coffee. Then also poor, aged cream will spoil any cup of coffee. The majority, in fact all coffees are more or less acid and combined with cream of course are very palatable, but let anyone who is under

the impression that coffee is injurious to their system educate their taste to *café noir* or clear coffee and they will find it just what it is guaranteed to be, a light stimulant and decidedly not a detriment to any system, no matter how delicate. Combine the acid coffee with poor semi-sour cream and of course it curdles in the stomach and will produce harmful results. All grocers should provide themselves with special bags for their coffees with practical directions for making coffee and the care and cleaning of the utensils used, plainly printed on them.

TEA NOTES.

**Tea Consumption in the United States in 1902.**—The *American Grocer* says:—The following statement shows the quantity of tea imported, re-exported, and in warehouse at the beginning and end of the year 1902:

		Pounds.
In warehouse January 1, 1902	...	47,606,789
Imports	...	108,750,464
Exports	...	927,544
Nett imports, 1902	...	107,822,920
Total supply	...	155,429,709
In warehouse, December 31, 1902	...	90,971,210
Deliveries, counted as consumption	...	64,458,499

The above shows the extent to which tea was held in warehouse prior to the removal of the duty January 1, 1903. Evidently, stocks in the hands of jobbers and retailers were unusually small toward the close of 1902.

The average annual consumption for three years ending June 30, 1902, was 80,501,993 pounds.

That statement, showing requirements, taken in connection with the very small deliveries during the latter part of 1902, makes it certain that the actual consumption of tea in the United States is less than one pound *per capita*; it used to be over  $1\frac{1}{2}$  pounds. There is plenty of chance for an active campaign for the restoration of tea to its former standing.

Foreign and colonial markets continue to take increasing quantities of India and Ceylon tea. The increase last year, as reported by Gow, Wilson & Stanton's London circular, was nearly 11,000,000 pounds over 1901, which in turn was 12,000,000 over 1900; in fact, ever since 1890, when only 14,000,000 were used, the quantity has steadily increased every year. The exports compare as follows:—

	1902.	1901.	1900.
Indian	41,496,070	36,080,151	33,442,970
Ceylon	64,146,967	58,797,549	49,259,693
Total lbs.	105,643,037	94,877,700	82,702,663

Probably now that green tea is being largely manufactured, the field abroad will be still wider, and may lead to the development of additional markets.

\*                      \*                      \*

In a supplementary report on the trade of Odessa in 1901 the British Consul-General states that the tea-packeting industry has been fully established, and that Odessa is now a centre of distribution. Tea reaches there both from London and the East. In 1901 there was a considerable increase in the quantity of tea that passed through Odessa to Moscow. This was due to the fear of complications in China. The main increase in the tea import was in Ceylon tea, which now forms from 25 to 30 per cent. of the whole quantity imported at Odessa. The total amount of tea that passed the custom house was 4,100 tons, of which 3,900 tons was cleared at Odessa.

The tea supply in Japan this season to date runs about equal to the total for last year during corresponding period, but there is a heavy shortage in low and medium grades, with of course a corresponding increase in the supply of fine Japans. A shortage in low grades is felt in this market, where nine out of ten dealers are continually tempted to buy "tea for price." Dynasties and empires may change, but there is no variation in this custom of preferring the low-priced teas to the better kinds. To the average grocer a tea-leaf by the tea cup's rim a simple tea-leaf is to him, and it is nothing more or less, one tea-leaf being as good as another. A change would put many dollars into grocery pockets.—*Merchants' Review*.

\* \* \*

**The U. S. Tea Tax.**—The *Merchants' Review* observes:—The use of the taxing power for the protection of special interests, as illustrated by the treatment of the oleomargarine industry at Washington, came up for discussion in the meeting-room of a transatlantic grocer's association recently, being brought to the surface by a resolution favouring the taxing of tea-dealers. In the discussion that ensued it was suggested that a nominal impost would fail to effect the purpose of the friends of the scheme, namely, a reduction of the number of retailers of tea, and that a considerable tax would hurt the grocers. It appears that there is a perfect saturnalia of tea-selling in nearly all walks of life in Great Britain, impoverished professional men, widows, tobacconists, the Salvation Army, workmen in factories, and several other classes of people, taking up the sale of tea either as a last resort or as a side issue to eke out their regular earnings. Whether the grocers have sufficient influence to prevail with the Government in the matter of a tea tax is doubtful, but there is more chance of their triumph over the opposing hosts by the exercise of legitimate competition than by appeals to a grandmotherly government. The British grocers must reduce the margin of profit sufficiently to squeeze out the parasites in the trade, and must also see that the quality of their own blends is, if anything, a little better than that of the tea peddled by superannuated clergymen, disconsolate widows, and workmen in factories who act as agents for tea companies.

\* \* \*

**The U. S. Tea Market.**—More business but at as firm prices as heretofore is the description of the tea market for the past week, says *Tea, Coffee and Sugar* of March 11. The noticeable lull of a fortnight ago surprisingly lifted itself, and there was more to do. The inquiry was chiefly for the teas that are so hard to obtain, the greens, Formosas, Japans and the like. The absorption by the country of the vast stock imported is astonishing and the continued call for more tea amazing. It is apparent that not all consumers have fared the same. The early bird seems to have caught the worm. We have heard recently several reports of traders out in the country having supplies of tea on hand to last nine months and greens at that. Evidently they have the teas others intended having and now have to do without except on payment of fancy prices. Moreover, the holders have confidence that their large stock will in no way be injured in value by whatever may be the price of next season's teas. They even think that they will own a cheap commodity in comparison with these teas.

There has been no change of importance in the quoted prices of the teas mentioned. Being scarce, the prices of them are always well maintained.

The Congous have been much on the carpet lately. The country has been absorbing more than usual of them, but notwithstanding they do not tend to become dearer. The talk of heavy exports has not in the least moved the tea to demonstrate an upward tendency. It is a comfort, however, to note that the tea is at last receiving some attention worthy the name. It will not require much now to start a considerable movement.

In Foochow there has also been more doing. The tea has been poor in quality this year, and hence not a little avoided by buyers. Indeed, the United States Government has been not infrequently called upon to exercise its authority in rejecting for entrance the tea offered, and in the past fortnight has shut out some 12,000 packages. This has tended to improve the market for Foochow teas but at no advance of course. Indias and Ceylons are in fair demand. More and more encomiums are heard for the green teas and it is evident these have established a reputation which should serve them well next season. The prospect is that India and Ceylon will increase their exports some 300 per cent. next season and this should have a decided impression on the green tea market in general.

\* \* \*

**Tea Consumption in France.**—Mr. J. J. Marcel writes from Havre to the *Ceylon Observer*:—Mr. Renton's method of dealing with figures is as fantastic as that which he employs when describing the sayings and doings of Ambassadors whom he has never seen. In his report of 31st December, 1902, he gives a table of the imports of tea into France per French returns, from which he makes it appear that the imports from British India and Ceylon were

1899	1900	1901
124,698 kilos.	144,002 kilos.	152,943 kilos.

He makes two egregious mistakes. The first is that the figures quoted are not the quantities imported but the quantities "mises en consommation"—taken into consumption—i.e., the quantities upon which duty has been paid. The quantities imported are very different, viz.:—

1899	1900	1901
kilos.	kilos.	kilos.
Indes Anglaises.—317,855	336,629	728,815

(N.B.—The kilo. is equal to about 2.2 lbs.)

This brings me to his second mistake.

The disparity between these figures and the quantities actually sent to France as shown by his letter, viz.:—

1899	1900	1901
From Ceylon.—98,952 lbs.	326,800 lbs.	317,866 lbs.
Do. India.—17,759 „	23,983 „	23,983 „
116,709 „	350,783 „	341,849 „

is sufficiently striking to arrest the attention of the man in the street and a careful statistician would have inquired into the cause of such extraordinary differences. Mr. Renton finds it more convenient to discard them and he puts in their place a set of figures which apply to a different matter altogether. I have been at the trouble of investigating the question and I give you the explanation. It is this. The section "Indes Anglaises" in the French statistics includes all the British Possessions in Asia, not India and Ceylon only, but also the Straits Settlements, Hongkong, and British Borneo, so that China and Java teas shipped from Hongkong or Singapore are placed to the credit of that section.

It follows, firstly, that the quantities which he represents as the importations are in reality the quantities taken into

consumption, and, secondly, that they do not refer to India and Ceylon teas alone, but include the teas from Hongkong and Singapore.

The inference which he draws therefore, *viz.* :—"That India and Ceylon are the only countries that show an increase in imports in 1901 over 1899 and 1900" is absolutely unfounded and misleading.

Bearing the above facts in mind, *viz.* that the exports of British-grown teas to France were about the same in 1900 and 1901 it must be evident that what the French statistics really do reveal is that the enormous increase in the importations under the heading "Indes Anglaises"—in 1901, 728,815 kilos, as against 336,629 kilos. in 1900—must represent China teas shipped at Hongkong, and, perhaps, some Java shipped at Singapore.

I wonder if Mr. Kingsford will consider this piece of intelligence as "encouraging" as the famous Reuter telegram which he quoted in his letter of 22nd of September last, to the effect that the use of tea was steadily increasing in France. The French official figures of the total consumption of tea *from all sources* do not bear out that view, *viz.* :—

	1899	1900	1901
	kilos.	kilos.	kilos.
Total consumption ..	884,926	1,093,326	861,818

The spasmodic increase in 1900 may be explained by the Paris Exhibition of that year, but in 1901 the consumption fell below even the normal year 1899. The figures for 1902 have not yet appeared.

\* \* \*

**Grow Tea to Chew it.**—Tea trees grow spontaneously in Siam and on large areas in most of the higher valleys of the chain that divides the waters of the Meping and the Me-Lao and Woung, as well as between these rivers and the Me-Ing and the Mekong. These forests of tea trees, known as "Va-Mieng," are cropped principally between the Me-Ing and the Me-Lao. But everywhere the natives crop only a small quantity, for which they pay a slight due, by no means legal, to the village chiefs.

\* \* \*

Importations of tea at San Francisco during the month of January were 248,954 pounds; China, 90,978 pounds; Japan, 94,666; British East India, 63,310 pounds. The withdrawals for consumption were 5,910,403 pounds. The amount remaining in warehouse January 31 was 387,000 pounds.

\* \* \*

**China Tea Trade.**—No more interesting statistics regarding China have been published than those relating to the export of tea during the year 1901, says Boyd's *Commercial Guide for China*. The figures reveal a parlous state of affairs and show plainly that unless active measures be immediately taken the once staple industry of China will be catalogued among the things of the past. Several reasons are advanced to account for the enormous falling-off in the exports of this once eagerly-sought-for product, the prime reason being, of course, the live competition of tea from Assam, Ceylon, Japan, and Java. Everyone is aware that the supremacy in the world's markets of tea from the two first-named countries is in the main due to judicious advertising and the employment of up-to-date machinery in the manipulation and preparation of the leaf. This has been an acknowledged fact for years, yet those whose interests are immediately concerned in the production and export of China tea have been content to let things take their course with a complacency that is deserving of the severest censure. There seems to be a touch of fatalism in the way the industry has been allowed to work out its ruin.

A recent retrospect of the gradual decline of the industry has been cleverly sketched by an expert recently, from which we learn that 30 years ago the exports of tea from China aggregated 141,000,000 lbs. From that time it has gradually diminished until

it is estimated, and with very good reason, that the figures of the present year will barely reach 12,000,000 lbs. Prices, too, during the last 20 years have fallen nearly 50 per cent. Almost simultaneously with the publication of these facts Mr. Playfair, the British Consul at Foochow, sounds a note of alarm regarding the almost moribund state of trade, and urges with an earnestness that is highly commendable the necessity for remedies being applied without delay towards revivifying the dying industry. So that it is with no small degree of pleasure that we have received evidence within the last few days that at last a really live effort is being attempted in this direction.

\* \* \*

High-priced tea which has lost its bouquet and has otherwise become flat from long storage either at home or in warehouse is made pungent again and the delicious aroma restored by spreading the tea thinly on a flat tray and laying it before a fire for a few minutes.

### NOTES.

#### German Quinine.

The exports of quinine and quinine salts from Germany during the twelve

months—

		1900.	1901.	1902.
Kilos.	...	184,800	195,400	232,200
Marks	...	8,316,000	8,207,000	9,752,000

#### Ceylon Tea Shipment.

Estimate of Ceylon's tea shipments last month was 8,500,000 to 9,000,000 lbs. Total shipments were only 7,500,000 lbs., as compared with 8,198,179 lbs. in the corresponding period of 1902, and 7,932,090 lbs. in 1901. Estimate for the current month is 8½ to 8¾ millions.

#### Otto of Rose.

From Bulgaria it is reported that a few delegates from Eastern Roumelia have presented a Bill to the National Assembly now in Session, proposing the protection of Bulgarian otto of rose from adulteration. It is also proposed to obtain the legal regulation of the production, sale, and export of the article.

#### Coffee and Tea in Java.

In the Districts around Batavia coffee-planting is said to be on the down-grade owing to low prices, disease among the plants, and exhaustion of the soil. Should prices continue to be low for the next few years, very few estates will be left to profit by any considerable rise in quotations. Tea-growing has met with a check owing to low prices and over-production. Rubber-growing is extending there, and bids fair to prove profitable.

#### China's Tea Exports.

The season is closed, and it appears that exports for the last two years

compare as follows :—

		1902-03.	1901-02.
		lbs.	lbs.
Europe	...	8,771,036	12,761,212
Australasia	...	1,138,697	2,169,218
North America	...	11,229,821	6,643,262
South Africa	...	1,016,423	1,741,639
Coast	...	8,727,203	8,249,449
		30,883,180	31,564,780

The North American (United States and Canada) figures show a rapid recovery in China's trade with that part of the world.

#### Indian Tea Exports.

The following figures of tea exports taken from the Calcutta Customs daily entries, and received periodically from Chittagong, are issued

by the Indian Tea Association : Quantity of tea entered for export to United Kingdom for the second half of March 1903 : Calcutta, 364,863 lbs ; Chittagong, *nil* ; quantity entered during the corresponding period last year : Calcutta, 264,423 lbs.; Chittagong, *nil* ; total from 1st April 1902 to 31st March, 1903 : Calcutta, 125,522,243 lbs.; Chittagong, 19,987,100 lbs.; total 145,509,343 lbs.; total from 1st April, 1901, to 31st March, 1902, 152,631,147 lbs.

#### West Indian Kola.

The January Bulletin of the Department of Agriculture, Jamaica, states that inquiries made in well-informed sources with regard to the low range of prices for kola, show that the chief cause of the decline is the fact that France (formerly a large buyer in London) now imports direct from Africa. Another fact is that kola has not "caught on" either in Great Britain or the U. S. A. to the same extent as in France. It is stated that the larger proportion of the kola received from Jamaica is mouldy, so that it is necessary to impress upon shippers from Jamaica the fact that kola should be prepared in such a way that it arrives in London absolutely sound. At the present time good sound West Indian nuts are very scarce in London, and up to 5d. per lb. would probably be paid for them.

#### London Tea Market.

Weekly special telegram dated 2nd instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for good liquoring Pekoes are easier, while the market for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (the same as last week) and the average 7¾d. (¼d. down). The average for the same period last year was 7d. Reuter reports that the tone of Ceylon tea is firm and that Broken Pekoes and Orange Pekoes are rather irregular, while Pekoe and Pekoe Souchongs are firm and steady. Fair Pekoe Souchongs are quoted at 6½d. (same as last week) and the average for the week is 7¾d. (¼d. down). 25,000 packages of Ceylon tea were offered for sale and 23,000 disposed of ; while of the 36,000 packages of Indian tea offered, 32,000 were sold at an average of 8½d. (¾d. up). Common qualities of Indian tea are rather dearer, and Broken Pekoes irregular.

#### The St. Louis Exposition.

The contract for the completion of the Agriculture building at the St. Louis World's Fair, where will be shown the tea, coffee, sugar, and spice exhibits, has been let for \$529,940. This building is to be fifteen per cent. larger than any other building at the Exhibition and is to be the largest structure erected for the reception of a single department. It is to be 500 x 1,600 feet, thus containing a floor space of nearly 20 acres. This building and that to be built for Horticulture will probably be the only ones in the Exposition bearing colour on the outer walls. The Agriculture building will have used upon it green with points of brighter colour. The building will probably be the best lighted on the grounds. Its front are practically successive series of windows each 75 feet long and 27 feet high. These windows are placed 14 feet from the floor so as to allow the use of the wall space inside for exhibits. The grand nave 106 feet wide, which runs through the 1,600-foot length of the building, rises to a height of 60 feet and supplies the grandest vista of installation space of any building ever designed for exposition uses. The building is to be completed by September 1st.

#### Java Government Cinchona.

The official report of the Government cinchona-plantations in Java for the December quarter of 1902 states that the phenomenal drought of 1902 continued without interruption until the middle of November, when a few showers gave rise to the hope that at last the monsoon would burst, but these expectations were not realised. The number of days on which rain fell remained considerably below the average of the last five years. The continued drought proved far from advantageous for the young plants, and the plantations laid out in January and February 1901 have suffered greatly. The growth in the older plantations also left much to be desired, but here an improvement rapidly followed the showers which fell in November. The harvest of 1902 amounts in all to 757 tons of bark, of which 392 tons were shipped to Europe, 364 tons were sent to the Bandong quinine factory, and about one ton was supplied to the Medical Service of the Dutch East Indies. The small quantity of seed which was available was disposed of at one single auction, when a total amount of 2,145*l.* was realised. The series of analyses made with the view of ascertaining what, if any, effect the weather conditions had on the alkaloid-content of the bark—that is to say, in what season the bark is richest in alkaloid—were continued, without, however, yielding any definite result. For this reason these experiments, which had been carried on since 1898, have now been concluded, and it may be accepted as an established fact that the harvest-time is a factor which exerts no influence either way on the higher or lower content of alkaloid. The "Combination of September 22"—by which several planters agreed to limit the unit-price to 6*c.*, as in their opinion there existed no over-production of bark—had the desired effect, as has been proved by the result of the bark-auctions held at Amsterdam on October 2, November 6, and December 11 last

### GENERAL ARTICLES.

#### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Ninety days' Bank rate on London opened on Monday 16th at 11¼*d.* and closed this evening at 11¾*d.* to 11¾*d.*

There is nothing new to chronicle about exchange. The situation is evidently that of equilibrium between the natural factors of demand and supply, and as speculation has not been particularly active oscillations have been unimportant. Until the end of March shipments of rubber on a large scale may usually be counted on, whilst coffee-continues to go forward satisfactorily, on an unexpectedly heavy scale, the value of shipments being £485,000 last week as against £432,000 on the previous week and £371,000 last year.

Something is evidently going to be tried at São Paulo to help coffee-planters which may give a fillip to prices and exchange if only for a time.

Forecasts are particularly difficult just at present. On the one hand we have natural factors pretty evenly balanced but threatening disequilibrium very shortly, and war expenditure for arms, ammunition and other stores to be provided for. On the other, some loan or credit at any moment may be arranged in London, where our credit is steadily improving and as a last resource Government could draw against part, at least, of the Guarantee Fund, whilst a rise in coffee prices is not impossible. Any one of these might readjust the threatened equilibrium or turn it decidedly favourable. For these reasons we think that though a fall of exchange in April or May might be looked for, if no outside

influence be brought to bear, it cannot be counted on with any certainty, though of the two a fall and not a rise is the most probable.

Declared sales fell off heavily being only 197,000 compared with 299,000 the previous week and 117,000 last year.

**Coffee.**—RIO DE JANEIRO, *February 21, 1903.* Joint Entries at Rio and Santos fell off somewhat, chiefly at the latter, being 15,654 bags less than the previous week's and 42,796 less than the corresponding week's last year, of which they represent 14.5 per cent. For the crop entries up to 20th instant were 2,768,774 bags less than last year's of which they represent 77.4 per cent.

Shipments (*embarques*) were 88,724 bags over the previous week's and 94,401 more than last year's.

Consequently, stocks fell off again and were 59,657 smaller than on the previous Friday.

Declared sales, however, were 102,000 bags under the previous week's, but still 80,000 more than for the corresponding week last year.

It is very doubtful what measure will be ultimately adopted, but the Government of São Paulo seems sincere in its determination to meet the views of planters. How the idea of reducing stocks can be licked into practical form so as not to be evaded we confess we are at a loss to understand and will, therefore, wait for something more definite before offering an opinion. At first sight however, proposals seem to us utterly impracticable. Still something must be done. Planters on some plantations are practically prisoners of their colours and, in addition to an economical and financial crisis we are threatened with a social and international one, unless some measures be found to satisfy their claims and save the planters.

SANTOS, *February 20, 1903.*—Weaker advices and smaller orders from consuming markets brought about a decline here of about 200 réis and limited transactions during the week. Commissarios gave way but slowly as their holdings have been greatly reduced and business for the exporters was very difficult. The declared sales are 56,000 less than last week and the coffee market was not much interesting. The demand here is specially for soft coffees which are principally Superiors and Goods and are relatively scarce. These command a premium of about 200 réis above hard coffees. European markets are also offering up to 1s. more for the description *Soft*. Qualities also very scarce are ready good roasters. Primes fetched from 4\$900 to 5\$100. Superiors 300 réis and Goods 600 réis below. The latter two qualities being still most in demand. Regulars rule between 3\$800 to 4\$100. Low coffees are quiet again and about 300 réis lower than last week. A good business was done in fine Peaberry but also lower qualities down to Goods find ready buyers, Superior Peaberry at 4\$700 to 4\$900, according to types and Good Peaberry about 300 réis less. Washed coffees still continue neglected. Low washed are really difficult to sell at all at reasonable prices, and only for fine washed color a few orders are in the market, but these orders are, with great difficulty, obtainable. Orders for Superiors ruled between 29s. and 30s. and for Good Averages 1s. 3d. to 1s. 6d. less. Receipts and *Passagen* do not show much difference against last week and are not likely to fall off much in the immediate future. Shipments were considerably smaller than expected amounting only to 64,000. This is evidently due to the delay which some steamers, specially for New York, had. Our stock came down to 1,008,000 bags, being 58,000 less than last week. It is taken for granted that not more than 400,000 bags are in first hands.

The Pauta went up 20 réis on Saturday last, and is now 460 réis. The new crop is expected early and if the weather is favourable we may have now coffee in Santos in May.

**Profits.**—A correspondent of the *Jornal do Commercio* makes out the roasters' and retailers' profits on coffee in France, Italy, and Spain to be as follows:

Per 60 kilos. (bag).	France frs.	Italy lira.	Spain pes.
Cost f. o. b. ...	39	42	50
Duties and Expenses ...	124	128	130
Selling Price ...	240	240	300

The only wonder is, with such profits, how retailers and roasters are not all millionaires!

A correspondent writes from Santos as follows:

"Unless your market is very oversold on account of Sorocabana, I do not believe in a great fall just yet although I think the supply of coffee will a good deal fall short of expectations, but meanwhile the Sorocabana ought to be disposed of and drawn for. Coffee is picking up at last and it seems to me the whole position of the article has been put in a false light for many weeks through bear sales here and at Rio. Fortunately they have been caught and I should not be surprised if the month of March prove to be badly covered in both Europe and the States. Havre is evidently the leading market and will be so for many months if not years, no other market, our own included, holding much of the current qualities generally sought after. A large part of the 2,000,000 bags forming the New York stock and the 1,000,000 bags at Hamburg consists of the accumulated rubbish of years which the trade will take only on compulsion.

Here in Santos the bulk of the unsold stock consists of fancy qualities and low grades, current goods getting scarcer day by day. As regards your Ribeirao Preto correspondent's estimate of 7 to 9 million bags, they seem to be based exclusively on experience of that district, and not even the whole of it, as reports from other parts of the country are very different. With regard to marketing 1,000,000 bags of next crop during the current season, he is altogether wrong as though every year we hear of crops being abnormally early, only on one occasion, 1896-1897, did it really happen and even then entries were nothing like that figure.

One or two weeks of rain during gathering will upset all calculations, and retard preparation by 3 or 4 weeks. Besides premature maturity is often a sign of disease and realized at the expense of development.

## SOUTH CAROLINA TEA GROWING.

Mr. T. R. Tighe writes in *Tea, Coffee and Sugar* :—

I.

Among the most attractive points in the South to the intelligent tourist in search of knowledge as well as entertainment is the tea gardens of Pinehurst, just beyond the corporate limits of Summer-ville. The enterprise operated there, and success attendant thereon, has fascinated and attracted the attention of tea growers, not only in this country, but throughout the British Indies, Ceylon, Japan, and the remote Orient. The gardens have been visited by the Chief Magistrate of the land, members of the Cabinet, the observant and interested Takihari, minister of Japan; Chinese and Japanese students, and by distinguished representatives of the American press who, with two exceptions, have sung their praises and lauded the efforts of the man who, in the face of almost insurmountable difficulties and adverse conditions, has achieved success for one of the most important undertakings in behalf of the American people. The interest manifested has not in the least abated and Dr. Charles U. Shepard, the owner of the tea gardens, has just cause to be proud of the results of his labours and researches. He has begun work for the coming year with renewed hope and vigour. Many of the obstacles to the establishment of a productive tea farm have been removed through continuous labour and unremitting attention.

When I visited the gardens, the avenues were crowded with tourists admiring the beautiful growth there in mid-winter. The tea plant attracted the visitor by its healthy look and peculiar, verdant foliage.

The season of 1902 at the Pinehurst tea gardens, it may be stated, was not only agriculturally successful, but has furnished much valuable information. In point of production—more than 8,000 pounds of dry tea—a notable advance was made by almost doubling the crop of 1901. That this was not wholly due to the coming into bearing of new gardens is shown by a comparison of the yield of tea gardens of different ages in 1902 with that of 1901, the season of 1901 having been generally disappointing, not only for tea but other crops.

Thus a group of five of the oldest gardens (about 10 years old) gained 42 per cent. in two seasons; three gardens of middle age (about 7 years old) 90 per cent., and five younger gardens (about 5 years old) 215 per cent. Nor is the comparison of the Pinehurst crops with those of the Orient unfavourable. Thus, in leaf from the Assani hybrid variety the Rose gardens afforded in

1902 at the rate of 460 pounds dry tea to the acre, which is decidedly above the average in British India and Ceylon; from the highly-prized Darjeeling sort, the Lincoln garden yielded at the rate of 290 pounds to the acre, which fully equals the out-turn of the Himalayan provinces, and from the choice Chinese Dragon's pool seed, the South Fraser garden gave over 250 pounds of dry tea to the acre, which would be regarded as quite extraordinary in China or Formosa. The Japanese and Kangra gardens have not as yet attained a production of one ounce of dry leaf to the bush per annum; but they are doing as well as at home, and with a reasonable prospect of a decided improvement in both varieties.

These results are entitled to greater weight in estimating the success of the Pinehurst experimentation than an off-hand comparison of the total acreage and yield, as the conditions of many of the local gardens are far from being ideal. And necessarily so, as it seemed at the beginning of the work most desirable that the experiments should cover as wide a range as possible not only as to varieties of tea seeds, but also as to differences in sort of soil, exposure and surface and cultivation. It was known in advance that many of the conditions were unfavourable for a large production, but in the absence of all experience as to whether quality or quantity should be aimed at in a future American tea industry, impossible to avoid the trial of all conditions.

### COFFEE IN LONDON.

The bulk of the coffee offered at auction this week has been East India, says the *Produce Markets' Review* of March 14, and, as a whole, may be described of such poor quality that the home trade were not interested in it. The few marks of really fine quality fetched more than correspondingly high prices, but as has been before mentioned, the quantity of fine is so small that there is very keen competition for it. Even the commoner sorts are not being taken freely for export, and consequently there is greater difficulty in disposing of them. Values are, however, too low to allow the merchants to accept any reduction. Rather more Central American descriptions are coming forward, but this week only a few have been offered. Good prices were obtained, and we look for a better business in them during the next few weeks if rates continue at the present moderate range. In the terminal market the tendency is to higher quotations, but the interest shown last week has very much diminished, and only a moderate business has been done.

### TEA IN LONDON.

INDIAN TEA.—The *Produce Markets' Review* of 14th ultimo reports:—The bidding was less animated at the public auctions this week, with an easier tendency prevailing, but, with few exceptions, no quotable change in values was established. Importers are evidently still of opinion that the visible supply of teas is only about on a par with the consumption, and, as they refuse to entertain any concession in prices, there is not likely to be any immediate change in values. The demand from the retailers is, and has been for several weeks, only of a moderate character, and it is fair to assume that the stocks held in the country are much smaller than is usual at this period. When, however, the Chancellor of the Exchequer's statement is made known, which will probably be at the beginning or the middle of April, a considerably improved demand will follow, and, should there be a reduction in the duty, an upward movement in prices is practically certain. Of the 31,947 packages catalogued for auction, 7,069 failed to change hands, and a small quantity of the latter has been sold by private contract since the public auctions. For the teas of a fine autumnal character and for some fine Darjeelings there was brisk competition, and high prices were paid, while the other grades show no change of importance, although the market was inclined to be easier.

CEYLON TEAS.—At the public sales on Tuesday the quantity brought forward was again moderate, and, although a quieter tone prevailed, no material alteration can be quoted. Teas for "price" remained firm, and where bids were made under recent rates the lots were withdrawn, but occasionally the better Pekoes, about 7d. to 7½d. sold in favour of buyers. Broken Pekoes under 7½d. are still diffi-

cult to obtain, but the medium kinds from about 8d. to 9½d. were a little easier, and now show exceptional value, as most of the teas were of very good quality and style. The supply of Dusts remains small, and very little sold under 5½d. per lb. At the public sales 23,250 packages were brought forward, of which about 2,400 were withdrawn.

CONGOU TEA.—At the public auctions held on Wednesday some 1,132 packages were brought forward, the bidding was slow and prices offered were in some cases slightly easier; holders, however, refused to sell anything except at rates fully equal to those previously ruling.

OTHER CHINA TEAS.—The market for Green Tea continues firm for all descriptions, and a fair business is reported. Capers are unchanged, with only a limited enquiry. At the public sale of Green Tea held on Thursday 1,521 packages were brought forward, of which 165 failed to find buyers.

### PRODUCE AND PLANTING.

On the subject of green teas generally and a sample of Indian green tea recently made by the Drummond, Deane, and Judge machine, sent to us from Calcutta by Messrs. Heatley and Gresham, we have received the following from Messrs. Gow, Wilson, and Stanton. We invited the opinion of this firm on the tea, and they write: "We have carefully examined and tasted the sample of green tea that you have to-day submitted to us. We have given it special consideration in connection with the remarks contained in your issue of last Saturday. It is truly said in that article that the tea has not been made from selected leaf, as it certainly has a somewhat bold appearance. In liquor we find it a fairly representative parcel of the bulk of British-grown green tea now coming forward. It possesses pungency, good flavour, and fine quality, and, above all, it appears to us to be absolutely pure. The only point against the liquor is that it is scarcely strong enough. The good qualities of the tea are quickly discerned when tasting it against the green teas from China, which are now realising some 30 per cent. or 40 per cent. higher price than those from India and Ceylon. It is then that the coarse, common character of the great majority of the Chinese article presents itself, and on examining the leaves after infusion one cannot be always certain as to their purity, besides which a visible scum frequently comes over the liquor as it cools down, and this is attributed to the colouring matter employed. After these remarks one would wonder why the superior British-grown article should be realising 30 per cent. less price than the inferior China article. The reason is to be summed up in one word—prejudice, or, shall we call it 'trade usage?' The prejudice would, to a certain degree, be overcome if traders felt confident that they could replace their purchases by a similar article, similarly packed, and delivered in their warehouses under similar conditions, or, as they term it, 'a follow.' Until quite recently the packages of British-grown green teas have been of all sizes and shapes, with an entire want of uniformity. On the other hand, China packages are all about the same size and similarly 'got up.' It should be easy to obviate disadvantages such as these. Prejudice was rife twenty-five years ago against Indian tea in this country, but the superiority of the article told in the end. The green tea trade in America is now in much the same position as the black tea trade was in this country about that time."

The visit to India in December last of the Hon. John Barrett, Commissioner-General for the Louisiana Purchase Exposition of 1904, is being followed up by a visit from Mr. Palmer R. Bowen, one of the Commissioners for Europe, who is now on his way to Calcutta. Mr. Bowen will endeavour to visit the native states and chief centres of population with a view to obtaining exhibits for the St. Louis Exhibition. Should any subscriptions on behalf of the leading industries of India be forthcoming Mr. Bowen will, we understand, endeavour to get the Government to supplement the amount subscribed, and by this means to arrange for an Indian pavilion at the Exhibition. Mr. Bowen is anxious to get the Government to assist in the same manner as the Ceylon Government has done, and to arrange to have Indian tea served at the Exhibition as well as Ceylon tea. The fact that St. Louis is the centre of the green tea trade will, he believes, indicate its fitness for a demonstration of the superior merits of the green tea now being made both by India and Ceylon.—*H. & C. Mail.*

## TEA IN CANADA.

The *Canadian Grocer* reports :—

TORONTO, March 5, 1903.

The markets are remaining decidedly firm. London is showing a disposition to further advance. The strong statistical position described in our last issue, is having a marked effect on the markets. An active demand has revealed itself, resulting in an advance of  $\frac{1}{4}$  to  $\frac{1}{2}$ d. per lb. on some grades, in both Indian and Ceylons. We learn that British-grown greens and Oolongs are receiving more attention in the London markets and are meeting with ready sales. It is expected this will appreciably influence the imports of black tea into that market from now on. The local markets are low in both Indian and Ceylon greens on spot, for which there is some demand. Business on the street is somewhat slow, wholesalers being reluctant to increase their stocks until further exhausted.

MONTREAL, March 5, 1903.

The tone of the market for teas is strong, though prices locally are unchanged. In Ceylons and Indians on the primary market an advance of over 1c. is reported, and this is likely to be followed here. Wholesalers are quoting from 18c. up for green Ceylon and Indian teas. Japans are firm and unchanged in price, jobbers here quoting 18c. for mediums and 24c. for finer grades. It is as yet early to prognosticate anything in regard to the next crop of Japans, though one authority points out that in view of the favourable weather conditions, and of the fact that growers are taking better care of the plants than in former years, a larger crop is looked for, and better quality than last year is likely. The market, our informant added, is bound to open high, since the demand for the finer grades for United States account is very great.

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,

*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

## THE PRODUCTS OF THE BEE.\*

By S. T. FROST.

Propolis is a substance employed by bees for stopping cracks and crevices in the hive, and generally as a cementing medium. It is of a very dark-green, almost black, colour, of a highly resinous and tenacious character, and is collected by the bees principally from the buds of plants and the horse-chestnut, and from the bark of certain other trees. "Propolis" was the name given to an old galenical preparation made from the leaf-buds of poplars, birches, and other trees. This preparation was found to be extremely useful in the diarrhoea of children, and it was also employed for the treatment of wounds, for anointing various eruptions of the skin, and in seborrhoea and other complaints; but propolis in its crude state, as a by-product of beekeeping, does not appear to have been adapted to modern therapeutical requirements. Recently, however, a preparation made from crude propolis had been introduced under the name "Propolisine." This new preparation is an oily liquid of characteristic and pleasant odour, which was reported to have gained considerable recognition in therapeutics as a disinfectant and antiseptic.

## HONEY

In the first instance a sweet liquid—nectar—secreted by flowers, is extracted from the nectary of flowers by the bee and is passed from its mouth to the honey-sac, and in passing receives the secretions of a system of glands at the root of the tongue, which convert the cane-sugar of nectar into the grape-sugar of honey. On returning to the hive the bee disgorges the honey and stores it in the cells of the honeycomb. The heat of the hive causes a certain amount of water to evaporate, and the ripe honey contained in the cell is then sealed over with a thin cap of wax. The author having referred to the composition of honey and the characteristics of the pure and sophisticated articles, also to its properties as a food and a medicine, quoted the following formula for making *mead*, recommended by the Rev. Gerard W. Bancks, M.A., of Hartley Rectory, Kent, who has made a special study of honey and its uses :—

To every gallon of water put 2 lbs., 3 lbs. or 4 lbs. of honey (according to quality of mead desired), with the peel of two lemons. Boil for half-an-hour, and then pour into a cask. When lukewarm add a little yeast, and to a 9-gal. cask 2 oz. each of ammonium phosphate and cream of tartar. Tack cream-cloth or muslin over bung-hole. When it has ceased working bung up tightly, and let it remain in the cask six months; bottle and cork at once.

With regard to the ferment, Mr. Bancks states that it is important that a suitable one be introduced immediately the temperature of the liquid reaches about 90° F., and that it should develop as quickly as possible, so as to prevent the possibility of undesirable ferments making any progress. "Honey-vinegar," which is more wholesome and of far superior flavour to ordinary vinegar, was also described. Dealing with the commercial side of the subject, Mr. Frost pointed out that the honey and wax market of the United Kingdom is largely dependent upon foreign countries for an adequate supply. The amount of honey imported during the past five years had been roughly estimated at about 2,250,000 cwt., value about 31,000l., or about 3½d. per lb. Among the principal countries supplying the British markets or the United States of America (chiefly California), Chili and Peru, British West Indies, France, Italy, Australia, and Germany. Occasionally honey is also imported from New Zealand.

California comes easily first as a honey-producing country, the crop in 1886 (the last date quoted) being 4,500,000 lbs. With its opulence of bloom, practically all the year round, California is an ideal home for apiculture, as many as three crops of honey being available. Beekeeping is carried on most extensively along the southern coast, where the sage brush hills furnish the whitest, most delicate honey in the market. By moving the bee-colonies about three crops of honey are secured, the bees being kept active during nine months of the year. Notwithstanding the large yields of honey that are obtained in California, adulteration is sometimes practised, and Californian, as well as honey from other countries, is often mixed with glucose. One method, said to be adopted in California, is to fill the 4-gal. can in which honey is shipped about

\* Abstract of a paper read to the Chemists' Assistants' Association.

one-quarter full with glucose of a fairly thick consistency, and the honey is then poured on the top of the glucose.

Chili probably ranks next to California as a honey-producer, although the industry there is only about twenty-five years old. Good thick white Chilean honey is especially esteemed for medicinal purposes. Chilean and Peruvian honey and wax are much of the same class. The principal markets in Europe for Chilean honey are Hamburg and Liverpool, it being very rarely offered in London. Hamburg has, of late years, considerably developed as a port for Chilean and Peruvian wax and honey. For instance, of 2,178,000 kilos. (1,000 kilos. = 1 ton) of honey imported into Hamburg, more than half was shipped from Chili and Peru, while of beeswax 1,376,000 kilos. was imported in 1899, against 1,262,300 kilos. in 1898. The imports of Chilean honey and wax into Liverpool during the past few years are shown in the following table of figures, supplied by Mr. T. H. Wardleworth, of Liverpool:—

	1897.	1898.	1899.	1900.	1901.
Chilian honey :—	Brls.	Brls.	Brls.	Brls.	Brls.
Stock, December 31 ...	910	1,545	790	600	5,750
Imports ...	3,163	5,995	4,422	5,257	11,515
Chilian beeswax :—	Pkgs.	Pkgs.	Pkgs.	Pkgs.	Pkgs.
Stock, December 31 ...	170	60	80	190	117
Imports ...	723	755	914	734	995

French honey is mostly shipped to London from Dieppe, and the new crop generally comes in about August and September. About 6,000,000 kilos. is an average crop, the bulk of it being consumed in France. It is seldom offered for sale in Mincing Lane, as the imports usually go into the hands of wholesale druggists direct.

Dealing with Jamaica honey, Mr. Frost said it had been much in evidence in the London market of late years, where it has become one of the cheapest varieties of honey sold. In Cuba it is said to be produced at a cost of 2c. per lb. Mr. A. J. Root (an American), one of the greatest authorities on the subject, had expressed the opinion that Jamaican "logwood" honey compares favourably with anything that can be produced in America. The author also referred to Mr. W. K. Morrison's pamphlet, recently discussed in the *C. & D.* (April 5, 1902, page 532.)

Australian honey is frequently offered in Mincing Lane, but its flavour is not greatly appreciated, probably owing to the bees having gathered nectar from eucalyptus-flowers; it is also flavoured, sometimes said to be perfumed. In South Australia beekeeping and honey-production are rapidly growing. The amount of honey produced in 1899-1900 was estimated at 523,000 lbs., while in 1900-1 that amount was more than trebled, the total output being 1,700,000 lbs. Most of this honey is consumed locally, very little finding its way to Mincing Lane. If the colour and flavour of South Australian honey can be got to suit the requirements of buyers in the European markets, it ought to be possible to work up a large trade, as sufficient could be obtained to supply all the honey-importing countries.

New South Wales is also a large producer of honey, but very little comes to London.

Russian honey is never seen in the London market, although there is an estimated production of about 320,000 cwt. annually. That amount, however, is evidently not sufficient for home consumption, as both wax and honey are imported into Russia.

The Emperor Menelik, it is said, has a garden planted with kousso-plants, and stocked with beehives. After the flowering season, some of the honey is taken from the hives. A teaspoonful of this honey dissolved in water is said to be a very effective remedy for tapeworm, and free from any objectionable effects.

The price of honey depends upon flavour and colour. If the honey is light in colour, the chances are—speaking particularly of Californian and Jamaican honey—that it has been gathered from the right class of flowers. The amount of honey used in pharmacy is insignificant in comparison to the total consumption.

The author, having dealt with poisonous honey, proceeded to speak about

#### BEEWAX,

which is formed in the body of the working bee of fluid honey and pollen—not involuntarily, as well-nourished animals form fat, but whenever the bees wish to form it. When they take fluid honey and

pollen, in a larger quantity than they needed for their own nourishment, the surplus is retained, further digested, and allowed to pass into the blood-vessels, in order to be chemically distilled there, and to exude upon what are termed the ventral plates, on the under part of the abdomen. The wax leaves the secreting glands in a fluid state, and solidifies in the form of small transparent white scales, five-cornered, resembling mica, and shining like mother-o'-pearl. The variation in the colour of the comb has been found to be due to the pollen used by the bees. The pollen from different flowers gives the wax its distinctive colour.

It is generally considered that in order to produce 1 lb. of comb from 10 to 20 lbs. of honey is consumed. This is the reason why the modern beekeeper endeavours to keep his combs in good condition from year to year in order that the bees may commence to store honey as soon as the season begins.

Mr. Frost next dealt with the various ways of melting down the comb and clarifying the wax. Coming to adulterants, he stated these to be chiefly resin, tallow, stearin, goats' fat, paraffin, and vegetable and other inferior waxes. The only satisfactory test for beeswax is to determine the amount of cerotic acid and the non-volatile fatty acids present, but the following simple tests suggested by Mr. J. Dennler, are useful:—

1. When wax is chewed there should be no unpleasant taste and it should not stick to the teeth. If wax is adulterated with other ingredients the taste alone will detect them. If it sticks to the teeth the admixture of resin can be assumed.

2. Pure beeswax may be distinguished from adulterated by dropping a small piece of beeswax, of known purity, on a hot iron plate. The odour given off is noticed. Then a piece of the suspected wax is burnt in the same way. If it contains ceresine a disagreeable fatty white smoke is given off, which differs the more from the smell of wax the more ceresine there is mixed with it.

Having described the uses of wax in pharmacy its commercial sources were mentioned.

Imported wax varies greatly in colour and quality, ranging from white, through all the shades of yellow and brown, to black. Perhaps the article for which there is the greatest demand in the open market is Jamaican wax, which is shipped in barrels, casks, and cases weighing from 2 to 4 cwt., and always finds an unlimited sale in London on account of its, undoubted purity. The prices range from 7l. 10s. to 8l. 15s. per cwt. and occasionally there is very active competition for it. The total exports from Jamaica in 1898 were valued at 10,294l., against 4,823l. in 1888, while the value of the honey exported from Jamaica during the same years was 2,103l., against 1,341l. The United States has increased her imports of wax from Jamaica, while the amount coming to the United Kingdom has decreased.—*Chemist & Druggist.*

## ECONOMIC ENTOMOLOGY.

### THE SCALE INSECTS AND METHODS OF COMBATING THEIR ATTACKS.

Mr. E. P. Stebbing wrote some little time ago in the *Pioneer* :—

During the last eighteen months and perhaps more especially during the past season, a considerable advance has been made in our knowledge of the *Monophlebus* scale insects and their methods of operation. Owing doubtless to a mild and dry cold weather they increased in enormous numbers in many parts of the country between January and April last and committed considerable havoc amongst fruit trees in orchards, etc. It was not, however, until the attack was culminating that any steps were taken by owners and others towards obtaining the identification of the insects with a view to introducing means of combating the infestation. It was then too late. The damage for that season had been done and the ensuing monetary loss was a certainty. It is with the object of affording the owners of orchards an opportunity of making an effort to rid their trees of these pests that I propose writing a simple account of the insects with a few notes on methods of combating them.

The *Monophlebus* scale insects belong to *Monophlebinae*, a sub-division or sub-family of the family *Coccoidea*—insects whose mouth

parts consist of a sucking tube or proboscis, with which they first pierce into the tissues of plants and then suck out the sap from them. As far as is at present known, the *Monophlebinae* confine their attacks to woody plants. Until recently but five species of the sub-family had been recorded from the Indian region. Of these, four had been described from the male insects alone, the females being still unknown. Now, as we shall see, it is the female insect which does the damage to the tree and therefore it may be said that up to the commencement of last year, but one species of the group was known as a pest in the Indian region. It might have been, and probably was, thought by scientists that these scale insects were rare on this continent, and yet this is by no means the case. From forest, orchard, desert scrub and jungle, specimens of these scales have been received or personally obtained, and the information collected has shown that the part they are capable of playing in localities infested by them is one of very considerable importance and one which can by no means be neglected. Four new species have been added to the group, the females of all of which are known, as is also the damage they do. In addition several other females, which may prove new species, with the trees they live upon, have been found.

During the past season mango orchards in various parts of the country have been reported as infested with the scales, and this note is confined to the consideration of the protection of orchards from the scales. From the Shalamar mango gardens in the Panjab and the public gardens at Bareilly, to mention two instances, insects were reported which on examination proved to be a variety of one of the *Monophlebus* scales which has appeared in large numbers during the last few years in the sal forests of the Siwaliks and adjacent areas. The life history of this insect, as well as that of a predacious ladybird beetle which feeds upon it, has been worked out sufficiently during the past eighteen months to enable the knowledge so gained to be made practical use of in orchards infested with closely allied species of this group. Before stating how this can be attempted it will be necessary to consider shortly the life history of a *Monophlebus*. The active and aggressive period of life of a *Monophlebus* scale in Northern India may be said to occur between November or December and April; but the period will of course vary to a certain extent in different parts of the country. Early in the cold weather in Northern India a careful examination of infested trees will show very minute yellow objects, the size of a pin's head, clustered round the brims or ribs of the leaves, generally upon the underside. With a lens it will be seen that these minute dots of colour are insects, each being furnished with two pairs of short legs, two yellowish feelers and each having its beak or proboscis buried in the tissue of the rib of the leaf. These are the young immature *Monophlebus* female scales, which have already commenced their attack. Some six to eight weeks are thus spent feeding upon the leaves, the insects only moving but little at this period of their existence. It is probable, however, that whilst in this very minute condition they are a good deal blown about and spread by wind, thus infesting fresh areas. The insects feed almost continuously whilst on the leaves and the latter become thickly coated with a sticky sugary material which is exuded by the scales. In fact these latter may be looked upon as animated siphons, the sap of the leaves passing in a continuous stream through their bodies, where it probably undergoes some modification before being exuded. Late in January or in early February leaves and twigs begin to look as if they had been highly varnished and owing to the successive coats of sticky liquid poured out upon them all the transpiration pores are clogged up. Thus even when quite young the scale has already made its presence felt upon the tree, although the damage is small as yet since the trees are not actively growing and the leaves affected are only the old ones. Somewhere about February the little scales, which have already shed their first skins upon the leaves, descend to the young twigs and from this time onward till they have attained full growth they spend their time sucking the sap of the branches. They collect in masses round the twigs, several inches being often closely covered with the insects, and remain on them till they have drained out most of the sap, or the best of it, and then proceed to a fresh twig when they again congregate together. It is this power of moving about at will (at no time does the insect come to rest permanently on the tree and secrete round itself a covering or scale as do many of the *Coccidae*), added to its enormous fertility, which renders the *Monophlebinae* most dangerous pests

and renders it imperative that their life histories should be understood. March, April, and perhaps a portion of May are spent upon the twigs and branches, the insects moving down to the latter as they increase in size, and at least two further moults or sheddings of the skin take place. In the shedding of the skin the latter splits down in front both above and below, a certain distance and the insect then crawls out of the old covering. The cast skins are white and papery and will be found sticking to the leaves, twigs, and bark of the infested trees, being attached thereto by the sugary excretion. From the minute yellow dot of colour found upon the leaves in December, the insect will have grown to about  $\frac{1}{8}$ th inch in size and have changed to a dark orange or orange-brown in colour when leaving the leaves for the twigs and after the 2nd month it begins to get covered with a dry white powdery substance which can be rubbed off with the finger. The female scale may be now from a quarter to half-an-inch in size, elliptical in shape, white, flattish, with transverse ridges running across it marking the segments of the body. At its front end it has a pair of black feelers and beneath 3 pairs of black legs will be visible. Between the feelers and pressed close to the under surface of the body the long black proboscis or sucking tube, by means of which all the damage is done, will be observable. No further change in appearance takes place save in size and by the end of March or middle of April when the insect, which, as I have said, is the female, will be full grown, it may be from one half to three quarters of an inch in length and about half this at its greatest width, i.e. across the middle. It is wingless and no wings ever develop. At this stage of their life history there is no mistaking the pest, the large, white, thick, puffy-looking scales being very conspicuous. During bad infestations they are to be seen in numbers marching about up and down the trees or feeding in serried masses upon the twigs and branches, giving to these latter the appearance of being encrusted with snow. The exudation of the sugary liquid from these insects is at this period enormous and coats leaves, twigs, and branches, dropping like rain or heavy dew on to the ground beneath. It is this stage of the insect which has been observed and sent from various parts of India. As I have said, it is easily recognised and the falling off in the condition of attacked trees or the non-ripening of fruit is at this period rightly attributed to the scales. The damage done by it in its earlier stages has been, however, generally attributed to more easily visible insects which may have happened to be in the orchard at the time and it is therefore to their earlier stages that it is necessary to draw attention. In April, when the mature insect is seen walking up and down the trees or on the ground below, it has finished its feeding operations, has paired with the male, and is on the lookout for a suitable place in which to lay its eggs. The damage in the orchard has been done for that year and all that can be then attempted is to prevent its re-occurring in the succeeding one. This obviously can only be effected by preventing the insect laying its eggs or by destroying them when laid. So far, present observation has shown that these are deposited in a loose silken net-like bag, considerably over a hundred being laid by each female, crevices under bark at the foot of the trees, or stones, pieces of wood or bark, etc., on the ground being chosen for this purpose. The eggs are dry, shining and pink in colour and oval in shape, being  $\frac{1}{32}$ nd of an inch in length.

The female dies after laying her eggs. I have said little about the male insect as it is not of importance in the attack except of course for the part it plays in the perpetuation of the pest. It is totally unlike the female, being a little two-winged fly having a reddish body, one pair of small black wings, two long feelers set with whorls of hair, and some small tassels at the end of the body. No mouth parts are present. It pairs with several females and is often covered to a certain extent with the white powdery substance from contact with the female. It is only about  $\frac{1}{8}$ th inch in length but has a wing expanse of  $\frac{1}{2}$  an inch. It appears about the end of March and may be seen flying over serried rows of females on the branches. Its black appearance makes it easily recognisable. It is not improbable that there may be a second or rains stage of this insect, a subcortical one in which the insect lives in tissues of the bark layer of the tree. This stage, however, does not particularly concern us here. After egg laying the female scales die, and the insect completely, or almost completely, disappears from the orchard about the middle of May, if not sooner. The damage has been done for that year and the attack is over. It behoves us now to consider what can be done

towards combating the pest next season so as to prevent its re-occurrence in ever increasing numbers in future ones. Should the present cold weather not prove an exceptionally bad one and so kill off a large number of the young larvæ which are now, or will shortly be appearing upon the trees, the insect is likely to re-occur in infested localities in numbers and will not improbably spread to new ones.

Two methods are worthy of consideration here. The one involves calling in the aid of another insect, the other the employment of man's aid alone. The first method is to introduce a predacious ladybird beetle (the small oval beetles, generally bright shining red or yellow in colour, with a series of black spots on their wing covers, are ladybird beetles) into the orchards affected, and this method, which if carried out on the proper lines, is assured beforehand of success, involves the short description of the life history of such an insect before the manner by which it can be impressed into the service of man can be considered. The beetle we will consider, a species of *Coccinella*, is predacious upon the *Monophlebus*, whose life history has been described above, and its life history has been worked out in connection with that of the scale. On issuing from the egg towards the end of February or beginning of March (it may be later) the beetle grub is about  $\frac{1}{8}$ th of an inch in length, black in colour and narrow. After two moults of its skin, it becomes more elliptical in shape and the colour changes to a white and black or reddish, later on becoming purple. When full grown it is broadest in the middle, pointed at both ends, with four rows of small tubercles down its back, the colour varying from white and black in streaks to red or dark purple-blue; length  $\frac{1}{3}$ rd inch. It is exceedingly active, running rapidly over the trees in search of its food. The last segment of the body is formed into a kind of sucker-pad and this is of great use in its feeding apparatus. When on the feed it dashes at its prey, the female scale, with great velocity and buries its mouth parts in the soft skin, at the same time attaching itself to the twig by means of the sucker-pad. Although the scale insect is several times its bulk, its struggles to escape from the deadly grip of the larva are quite futile and the grub remains in its position for several hours without moving, being only attached to the twig by the sucker-pad at the end of the body, until it has sucked out completely the soft juices of the coccid and only a shrivelled skin remains behind. From three to four weeks are spent by the grub in this stage, and the number of scales got rid of in this time is considerable since it is a voracious feeder. When full-fed it attaches itself to a leaf or twig by means of the sucker-pad and remains sticking out at an angle from the surface. Within 24 hours the larval skin splits down at the top and shrivels or gets drawn back upon either side and the bright red, almost spherical, chrysalis is disclosed, sessile upon the leaf or bark; it is about  $\frac{1}{4}$ -inch in size. Eight to nine days are spent in the pupal stage and then the crimson skin bursts at the upper end and the beetle crawls out. The beetle is a small, almost spherical, orange-red insect covered with white down at first, but soon loses this and changes to a darker red, having six black spots on each wing cover. It is convex above and flat beneath; length  $\frac{1}{4}$  inch. The ladybird beetle spends some days, perhaps as much as a fortnight, in this state before pairing. It also feeds upon the female scale insect. Although equally voracious it has not the swallowing capacity, strength or staying power of the grub and it never kills off a scale at one meal. The scale insect does not appear to feel the beetle's attacks either to the same extent, as the former may be seen walking about or feeding unconcernedly upon the twigs, whilst a beetle is sucking out its juices. The ladybird beetles may in fact be said to 'tap' the scales, never feeding for more than half-an-hour at a time. Scales so tapped show numbers of small white and yellow spots, the places where the beetles have pierced them and in time they become much shrivelled, are dirty-brown or whitish-black in colour, and move slowly. Even if they do not eventually die as a direct result of the attacks, there can be little doubt that their egg-laying capacity must be considerably reduced and it is more than probable that eggs laid by these 'tapped' scales do not hatch out. The ladybird beetle commences egg-laying at about the same time that this operation is being performed by its host.

From the above short account of the life history of this beetle it will be seen that we have in it a powerful ally and one which if properly made use of, should enable us to rid our orchards of these

*Monophlebus* scale pests. It will be asked how this is to be done. The answer is simple.

(1) By a careful inspection of all orchards infested with the *Monophlebus* scales in order to ascertain whether the predacious ladybird beetle is present in them or not and, if so, whether it is in sufficient numbers to be able to keep the scale in check and so reduce the damage done by it.

(2) By the introduction, either in the form of eggs, grubs, chrysalids, or beetles (the two first being of course the most useful), of the predacious ladybird beetle into gardens when it does not exist with a view to clearing the orchards of the scale pest.

Once sufficient collections have been made of the beetle grubs their distribution over the Continent would not be a matter of difficulty since it would always be possible to enclose with them a sufficiency of scale insects to provide them with enough food for the journey, as the former will live for days without feeding. Of course all scales remaining alive on reaching their destination would be killed as soon as the box was opened and the coccinellid larvæ liberated upon the infested trees.

The other remedy I have alluded to consists in painting each infested tree, or all the trees of an infested orchard, with a broad band of some sticky substance at a height of four feet from the ground. A good material is a mixture of tar and glue as, if properly mixed, it will remain sticky for several months. Any convenient and easily procurable substance may, however, be used it being remembered that the desideratum is that the band should retain its stickiness and be well put on. If the substance now used quickly, the band must be continually renewed. The trees should be banded in this way about the middle of March or when the scales begin to obtain their white covering. The object of the sticky rings, which should be about 2 feet deep, is to entrap all the wandering scales. These endeavouring to cross, the band, will stick fast and eventually die. The band is, however, more especially useful later on when the female scales, having paired, descend the trees in search of suitable places of concealment in which to deposit their eggs and die. With good sticky bands on all the trees it should be possible to capture and kill off a large percentage of these females before they egg-lay. It is very probable that many when they find themselves entrapped by the band will oviposit there. It will be advisable therefore to visit the bands fairly often and remove and burn the scale insects sticking to them. In the case of a severe attack it will be necessary to visit the bands daily and clear off the insects sticking to them; if this is not done they may in time bridge the band with dead bodies over which the living will cross. In putting on the bands deep furrows or inequalities in the bark should be scraped down so that the sticky substance used may form a continuous ring round the tree. This is absolutely essential as any channel left unbanded will certainly be found out and used by the insects to escape the ring. When the attack is over the bands should be carefully scraped off and the scrapings burnt. The reason for this is that each band will almost certainly contain a number of eggs laid by the entrapped females. As long as these eggs remain in the band they are safe, but it is probable that the monsoon rains would soon wash them out and many might thus reach a place of safety and hatch out in the ordinary course.

My recommendations for the coming year therefore are:—

(1) Examine the orchard carefully at the commencement of January and have identified any minute insects on the leaves at all resembling the early stages of a *Monophlebus* scare.

(2) Keep a sharp look out for any grubs or beetles resembling the ladybird grub and beetle described above and if any appear have them identified. To find out if they are feeding upon the scale insect put some of the latter into a box with the beetle grubs and beetles. If these latter are predacious upon the scale they will not long leave you in doubt.

(3) Take steps to procure a consignment of a ladybird beetle predacious upon the *Monophlebus* scale if you have not one in your orchard.

Without fail band all the trees in your orchard at the time stated if they are badly infested with the scale. This will not diminish much the attack of the year in which it is done, but it will, if properly carried out, reduce to a minimum subsequent ones in succeeding years by killing off a large percentage of the females in the orchard before they have laid their eggs.

## DISTRICT ASSOCIATIONS.

## SHEVAROY.

Proceedings of a Committee Meeting of the Shevaroy Planters' Association, held in the Victoria Rooms, on Monday, the 6th April, 1903, at 1 p.m. PRESENT:—Rev. T. M. Kempff, Messrs. C. Lechler, W. J. Lechler, W. Rahm, and R. Gompertz, *Honorary Secretary*.

1. The notice calling the Meeting was taken as read.
2. Read letter from Messrs. Jules Karpeles & Co. enquiring whether we require any more dried blood manure.

*Resolved*, that they be informed that the trees manured with it here showed no effect whatever and therefore we regret that we do not require any more.

3. Read Secretary's Circular No. 23/03 of 11th ultimo saying that Chairman requests the opinion of the Committee on the New Labour Bill as passed.

*Resolved*, that as the Secretary is about to supply printed copies of the Act as passed, their receipt be awaited.

4. Read Secretary's Circular No. 30/03, dated 31st March, 1903, in which Chairman suggests that Honorary Secretaries should open a subscription list in their districts towards the expenses of the Brazil delegate.

*Resolved*, that Honorary Secretary be requested to reply that this Association has already agreed to subscribe and that the list will be started as soon as we hear that the idea has been accepted by other Associations.

5. Read Secretary's Circular No. 31/03, dated 1st April, 1903, enquiring whether the 3rd August would be a convenient date to open the next Annual General Meeting.

*Resolved*, that the Honorary Secretary be requested to say that that date will do as well as any other.
